enumext

ENUMERATE EXERCISE SHEETS

v1.0 2024-10-13*

©2024 by Pablo González†

CTAN: https://www.ctan.org/pkg/enumext
https://github.com/pablgonz/enumext

Abstract

This package provides enumerated list environments compatible with LaTeX tagging PDF for creating *"simple exercise sheets"* along with *"multiple choice questions"*, storing the *"answers"* to these in memory using multicol and scontents packages.

1 Introduction

Motivation and acknowledgments

Usually it is enough to use the classic enumerate environment to generate *"simple exercise sheets"* or *"multiple choice questions"*, the basic idea behind enumext is to cover three points:

1. To have a simple interface to be able to write *"lists of exercises"* with *"answers"*.
2. To have a simple interface for writing *"multiple choice questions"*.
3. To have a simple interface for placing *"columns"* and *"drawings"* or *"tables"*.

This package would not be possible without Phelype Oleinik who has collaborated and adapted a large part of the code and all LaTeX team for their great work and to the different members of the TeX-SX community who have provided great answers and ideas. Here a note of the main ones:

1. Answer given by Alan Munn in \topsep, \itemsep, \partopsep, \parsep - what do they each mean (and what about the bottom)?
2. Answer given by Enrico Gregorio in Understanding minipages - aligning at top
3. Answer given by Ulrich Diez in Different mechanics of hyperlink vs. hyperref
4. Answer given by Enrico Gregorio in Minipage and multicols, vertical alignment

License and Requirements

Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License (lppl), version 1.3 or later (https://www.latex-project.org/lppl.txt). The software has the status "maintained".

The enumext package loads and requires multicol[?] and scontents[?] packages, need to have a modern TeX distribution such as TeX Live or MiKTeX. It has been tested with the standard classes provided by LaTeX: book, report, article and letter on 10pt, 11pt and 12pt.

The minimum requirement is LaTeX release 2024-11-01.

1 Introduction

In the LaTeX world world there are many useful packages and classes for creating *"lists of exercises"*, *"worksheets"* or *"multiple choice questions"*, classes like exam[?] and packages like xsim[?] do the job perfectly, but they don't always fit the basic day to day needs.

In my work (and in the work of many teachers) it is common to use *"simple exercise sheets"* also known as *"informal lists of exercises"*, as an example:

1. Factor $x^2 - 2x + 1$
2. Factor $3x + 3y + 3z$
3. True False
   (a) $\alpha > \delta$
   (b) LaTeX2e is cool?
4. Related to Linux
   (a) You use linux?
   (b) Usually uses the package manager?
   (c) Rate the following package and class
      i. xsim-exam
      ii. xsim
      iii. exsheets

Sometimes we are also interested in showing the *"answers"* along with the questions:

*This file describes a documentation for v1.0, last revised 2024-10-13.

†E-mail: «pablgonz@educarchile.cl».

1. Factor $x^2 - 2x + 1$
   * $(x-1)^2$
2. Factor $3x + 3y + 3z$
   * $3(x+y+z)$
3. True False
   (a) $\alpha > \delta$
      * False
   (b) LaTeX2e is cool?
      * Very True!
4. Related to Linux
   (a) You use linux?
      * Yes
   (b) Usually uses the package manager?
      * Yes, `dnf`
   (c) Rate the following package and class
      i. `xsim-exam`
         * doesn't exist for now :(
      ii. `xsim`
         * very good
      iii. `exsheets`
         * obsolete

Or we are interested in referring to a specific question and its *"answer"*, for example:

The answer to **??** is "Very True!" and the answer to **??** is "very good".

Or we are interested in printing all the *"answers"*:

1. $(x-1)^2$ ※
2. $3(x+y+z)$ ※
3. (a) False ※
   (b) Very True! ※
4. (a) Yes ※
   (b) Yes, `dnf` ※
   (c) i. doesn't exist for now :(※
      ii. very good ※
      iii. obsolete ※

Another very common thing to use in my work is *"multiple choice questions"*, for example:

1. First type of questions

   A) value
   B) correct
   C) value
   D) value

2. Second type of questions

   I. $2\alpha + 2\delta = 90°$
   II. $\alpha = \delta$
   III. $\angle EDF = 45°$

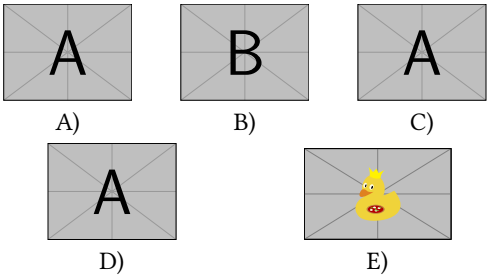
   A) I only
   B) II only
   C) I and II only
   D) I and III only
   E) I, II, and III

* 3. Third type of questions

   (1) $2\alpha + 2\delta = 90°$
   (2) $\angle EDF = 45°$

   A) value
   B) value
   C) value
   D) value
   E) value

4. Question with image and label below:



5. Question with image on left side:

   A) value
   B) value
   C) value
   D) correct
   E) value

Where what we are interested in the ⟨*label*⟩ and a *"short note"* that we leave as an explanation, and then print them:

1. B) $x = 5$ ※
2. D) ※
3. C) some note ※
4. E) A duck ※
5. D) "other note" ※

The enumext package was created and designed to meet these small requirements in the creation of *"simple worksheets"* and *"multiple choice questions"*.

These *"simple worksheets"* or *"multiple choice questions"* appear to be easy to obtain using a combination of the `enumerate`, `minipage` and `multicols` environments, but like many things, what *"looks simple"* is not so simple.

1.1 Description and usage

The enumext package defines enumerated environments using the `list` environment provided by LaTeX, but *"does not redefine"* any internal commands associated with it such as `\list`, `\endlist` or `\item` outside of the *"scope"* in which they are defined.

This package is NOT intend to replace the `enumerate` environment nor replace the powerful `enumitem`[?], the approach is intended to work without hindering either of them.

This package can be used with `xelatex`, `lualatex`, `pdflatex` and the classical `latex»dvips»ps2pdf` and is present in TeX Live and MiKTeX, use the package manager to install. For manual installation, download enumext.zip and unzip it, run `lualatex enumext.dtx` and move all files to appropriate locations, then run `mktexlsr`. To produce the documentation run `lualatex enumext.dtx` two times.

```
enumext.sty  »  TDS:tex/latex/enumext/
enumext.pdf  »  TDS:doc/latex/enumext/
README.md    »  TDS:doc/latex/enumext/
enumext.dtx  »  TDS:source/latex/enumext/
```

©2024 by Pablo González L

The package is loaded in the usual way:

```
\usepackage{enumext}
```

1.2 The concept of left margin

There is a direct relationship between the parameters \leftmargin, \itemindent, \labelwidth and \labelsep plus an *"extra space"* that makes it difficult to obtain the desired *horizontal spaces* in a list environment. Usually we don't want the list to go beyond the left margin of the page, but since these four values are related, that causes a problem.
The enumitem[?] package adds the \labelindent parameter to solve some of these problems. A simplified representation of this in the figure ??.

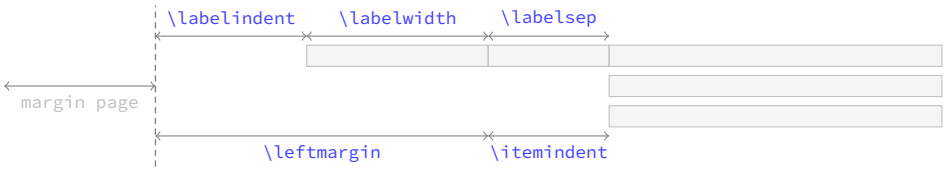


Figure 1: Representation of horizontal lengths in enumitem.

The enumext package does NOT provide a user interface to set the values for \leftmargin and \itemindent, instead it provides the keys list-offset and list-indent which internally set the values for \leftmargin and \itemindent. The concepts of \leftmargin and \itemindent are different in enumext. The figure ?? shows the visual representation of idea.

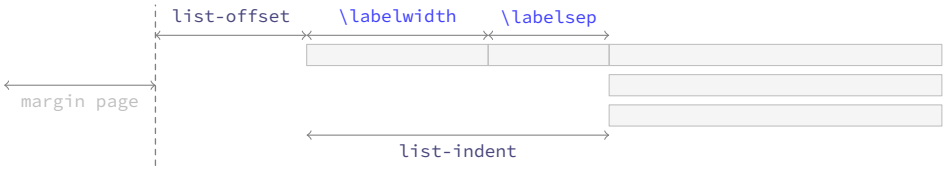

Figure 2: Representation of horizontal lengths concept in enumext.

In this way we reduce a *little* the amount of parameters we have to pass. With the default values of keys list-offset, list-indent, labelwidth and labelsep the lists will have the (usually) expected output for *"simple worksheets"*. The figure ?? shows the visual representation.

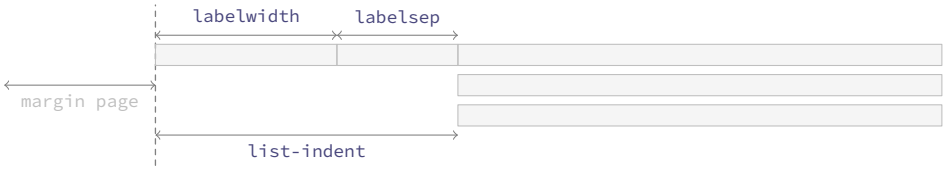

Figure 3: Default horizontal lengths list-offset=0pt, list-indent=\labelwidth+\labelsep in enumext.

1.3 User interface

The user interface consists of two main list environments enumext (vertical) and enumext* (horizontal), the environment anskey* and the command \anskey to *"store content"* and the environments keyans, keyans* and keyanspic for multiple choice. It also provides the commands \getkeyans to print individual *stored content*, \printkeyans and \foreachkeyans to print all *stored content*, \miniright for minipage, \setenumext and \setenumextmeta to config [⟨*key* = *val*⟩] options.

1.3.1 Internal counters

The package enumext uses internally the enumXi, enumXii, enumXiii, enumXiv counters for the four nesting levels of the enumext environment, the enumXv counter for the keyans environment, the enumXvi counter for the keyanspic environment, the counter enumXvii for enumext* environment and the counter enumXviii for keyans* environment.

If any package defines these counters or they are user-defined in the document, the package will return a fatal error and abort the load.

1.3.2 Public dimension

The package enumext only provides a single public dimension \itemwidth and is intended for user convenience only and is not for internal use as such. The dimension \itemwidth is *rigid length* and contains the *"width of the content"* of each \item regardless of labelwidth and labelsep.

If any package defines \itemwidth or they are user-defined \itemwidth in the document, the package will overwrite it without warning.

1.3.3 Support for multicol

The package provides direct support for using the multicol[?] package. This allows to obtain directly a two-column output as shown in the figure ??.

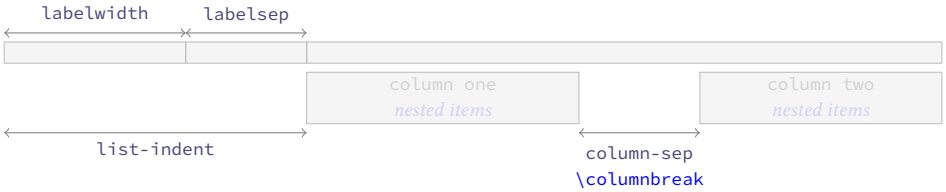

Figure 4: Representation of the two column output for a nested level in enumext environment.

The *"non starred"* version of the multicols environment is always used together with the \raggedcolumns command and is controlled by columns and columns-sep keys. It can be used in all nesting levels of the environment enumext and the environment keyans and can together with the mini-env key. If you need to force a start a new column \columnbreak must be used (see §??).

The \columnseprule command is not available as a key and is set to *"zero"* for the inner levels and the keyans environment. If the value of this is set inside the document, it will affect *"all environments"* that use the columns key.

1.3.4 Support for minipage

The package provides direct support for minipage environment, this allows you to obtain an output like the one shown in figure ??.

Figure 5: Representation of the mini-env output for a nested level enumext environment.

The minipage environments on *"left side"* and *"right side"* is always used with *"aligned on top"* [t]. It can be used in all nesting levels of the environment enumext and the environment keyans and is controlled by mini-env and mini-sep keys. In order to switch from the *"left"* side minipage environment to the *"right"* side one must use the command \miniright (see §??).

1.3.5 The \label and \ref system

This package provides a user interface like the enumitem[?] package to customize the references which is activated by the ref key (§??), the standard LaTeX \label and \ref commands work as usual. It also provides an *"internal reference"* system for the *"stored content"* by means of the key save-ref (§??) when the key save-ans (§??) is active.

1.3.6 Support for \footnote

The enumext* and keyans* environments and the mini-env key use the minipage environment in their implementation but in a transparent way for the user, i.e. it is only used for typesetting and not directly. The enumext package provides an *internal implementation* for the command \footnote compatible with the hyperref package to work in the same way as if it were used anywhere in the document.

©2024 by Pablo González L

Unfortunately, if *tagging* PDF is not enabled, it will not produce the expected *"links"* because the internal implementation uses \footnotetext[⟨*number*⟩] and \footnotemark[⟨*number*⟩]{⟨*text*⟩} and support for these is limited by the hyperref package.

The best way to solve this if *tagged* PDF is NOT active is to use Jean-François Burnol footnotehyper[?] package, it will support keeping the *"links"* if hyperref is loaded with the hyperfootnotes=true option (default). Load it is as follows:

```
\IfDocumentMetadataTF{ }
  {
    \usepackage{footnotehyper}
    \makesavenoteenv{enumext}
    \makesavenoteenv{enumext*}
  }
```

At the moment the footnotehyper package is not compatible with *tagged* PDF.

2 The environments provided

The package enumext provides two main list environments, the *vertical* environment enumext and the *horizontal* environment enumext*.

enumext
enumext*

```
\begin{enumext}[⟨keyval list⟩]
  \item ⟨item content⟩
  \item [⟨custom⟩] ⟨item content⟩
  \item*[⟨symbol⟩][⟨offset⟩] ⟨item content⟩
\end{enumext}
```

```
\begin{enumext*}[⟨keyval list⟩]
  \item ⟨item content⟩
  \item [⟨custom⟩] ⟨item content⟩
  \item*[⟨symbol⟩][⟨offset⟩] ⟨item content⟩
\end{enumext*}
```

2.1 The environment enumext

The enumext is an environment that works in the same way as the standard enumerate environment provided by LaTeX, \item and \item[⟨*custom*⟩] commands work in the usual way. The environment can be nested with at most *"four levels"* and the options can be configured globally using \setenumext command and locally using [⟨*key* = *val*⟩] in the environment.

Example with columns=2

1. This text is in the first level.
   (a) This text is in the second level.
      i. This text is in the third level.
   A. This text is in the fourth level.
X This text is in the first level.
* 2. This text is in the first level.

2.2 The environment enumext*

The enumext* is a *horizontal list environment* similar to the shortenumerate or tasks environments provided by the shortlst[?] and tasks[?] packages, \item and \item[⟨*custom*⟩] work as usual. The options can be configured globally using \setenumext command and locally using [⟨*key* = *val*⟩] in the environment.

Some considerations to take into account for this environment:

- The environment cannot be nested within itself or in the environment keyans*, but it can be nested within enumext and vice versa.
- Each *"item content"* in the environment is placed within a minipage environment whose *width* is stored in the dimension \itemwidth that NOT includes labelwith, labelsep, only the *width of the content.*
- You cannot have floating environments like figure or table but \footnote with hyperref support is supported if the footnotehyper package is loaded (see §?? for full support).
- You cannot have any standard list environments like itemize, enumerate, description, quote, quotation, verse, center, flushleft, flushright, verbatim, tabbing, trivlist, list and all environments created with \newtheorem.

Example with columns=2

1. This text is in the first level.
X This text is in the first level.
2. This text is in the first level.
* 4. This text is in the first level.

2.3 The command \item*

\item*

```
\item*[⟨symbol⟩][⟨offset⟩]
```

The \item*, \item*[⟨*symbol*⟩] and \item*[⟨*symbol*⟩][⟨*offset*⟩] works like the numbered \item, but placing a ⟨*symbol*⟩ to the *"left"* of the ⟨*label*⟩ separated from it by the ⟨*offset*⟩ set by the the *second optional argument.*

The *starred argument* '*' cannot be separated by spaces '␣' from the command, i.e. \item* and the *first optional argument* does "NOT" support *verbatim content.* Can be configure with the keys item-sym* and item-pos* locally in the environment or globally using \setenumext command (§??).

The behavior of \item* in the enumext and enumext* environments is NOT the same as in the keyans and keyans* environments.

©2024 by Pablo González L

2.3.1 Keys for \item*

item-sym* = {⟨*symbol*⟩} default: *\textasteriskcentered*

Sets the *symbol* to be displayed in the *"left"* of the box containing the current ⟨*label*⟩ set by labelwidth key for \item* in enumext and enumext*. The *symbol* can be in *text* or *math* mode, for example item-sym*={$\star$}.

item-pos* = {⟨*rigid length*⟩} default: *by levels*

Sets the *offset* between the box containing the current ⟨*label*⟩ defined by labelwidth key and the ⟨*symbol*⟩ set by item-sym* key. The default values are set by labelsep key at each level. If positive values are passed it will *offset to the left* and if negative values are passed it will *offset to the right*.

2.4 The command \item in enumext*

The \item command for the enumext* environment provides an *"first optional argument"* \item(⟨*columns*⟩) which *"joins items"* between columns. Let's consider the following examples adapted directly from the task package:

```
\begin{enumext*}[widest=10,columns=4]
  \item The first
  \item* The second
  \item The third
  \item The fourth
  \item(3)* The fifth item is way too long for this and needs three columns
  \item The sixth
  \item The seventh
  \item(2)[X] The eighth item is way too long for this and needs two columns
    (\the\itemwidth)
  \item The ninth
  \item[Z] The tenth (\the\itemwidth)
\end{enumext*}
```

1. The first
* 2. The second
3. The third
4. The fourth
* 5. The fifth item is way too long for this and needs three columns
6. The sixth
7. The seventh
X The eighth item is way too long for this and needs two columns (196.17749pt)
9. The ninth
Z The tenth (89.28171pt)

3 The command \setenumext

\setenumext

\setenumext{⟨*key = val*⟩}
\setenumext[⟨*enumext, level*⟩]{⟨*key = val*⟩}
\setenumext[⟨*enumext**⟩]{⟨*key = val*⟩}
\setenumext[⟨*keyans*⟩]{⟨*key = val*⟩}
\setenumext[⟨*keyans**⟩]{⟨*key = val*⟩}
\setenumext[⟨*print, level*⟩]{⟨*key = val*⟩}
\setenumext[⟨*print, **⟩]{⟨*key = val*⟩}
\setenumext[⟨*print**⟩]{⟨*key = val*⟩}

The command \setenumext sets the ⟨*keys*⟩ on a global basis for environments enumext, enumext*, keyans, keyans* and the \printkeyans command. It can be used both in the preamble and in the body of the document as many times as desired.

The ⟨*keys*⟩ set in the *optional argument* of environments and commands have the *highest precedence*, overriding both options passed by \setenumext. If the *optional argument* is not passed, the first level of the environment enumext will be taken by default.

The key save-ans that activate the *"storage system"* must NOT be passed through this command and must be passed directly in the *optional argument* of the *"first level"* of the environment in which they are executed.

4 The command \setenumextmeta

\setenumextmeta

\setenumextmeta {⟨*key name*⟩}{⟨*key-one = val, key-two = val, ...*⟩}
\setenumextmeta*{⟨*key name*⟩}{⟨*key-one = val, key-two = val, ...*⟩}
\setenumextmeta [⟨*enumext**⟩]{⟨*key name*⟩}{⟨*key-one = val, key-two = val, ...*⟩}
\setenumextmeta [⟨*enumext, level*⟩]{⟨*key name*⟩}{⟨*key-one = val, key-two = val, ...*⟩}

The command \setenumextmeta adds a new *"meta-key"* for the environments enumext and enumext*, the {⟨*key name*⟩} must be different from those defined by the package. If the *optional argument* is not passed, the new *"meta-key"* will be created for the *"first level"* of the environment enumext.

The *starred argument* '*' will create the new *"meta-key"* for the environment enumext* and for all levels of the environment enumext. For example: \setenumextmeta*{midsep}{topsep=3pt, partopsep=0pt} will create a new key midsep available for all levels of the enumext environment and the enumext* environment and we can use it like any other key so \begin{enumext}[midsep] and \begin{enumext*}[midsep] will be valid.

©2024 by Pablo González L

5 The keyval system

The ⟨*key = val*⟩ system used by the enumext package is implemented using l3keys so it must be taken into consideration that those keys marked as *"value forbidden"*, that is ⟨*key*⟩ is different from ⟨*key=*⟩.

All ⟨*keys*⟩ described in this section are available for the enumext, enumext*, keyans and keyans* environments with the exception of the keys series, resume, resume* which are only available for the *"first level"* of the environments enumext and enumext*; and the keys mini-right, mini-right* which are only available for the enumext* and keyans* environments.

All ⟨*keys*⟩ related to vertical or horizontal spacing accept a *"skip"* or *"dim"* expression if passed between braces, i.e. you do not need to use \dimeval or \dimexpr to perform calculations.

It should be kept in mind that using any ⟨*key*⟩ that sets a *rubber lengths* or *rigid lengths* for vertical or horizontal space on a level will influence the vertical and horizontal space for *inners levels* and keyans, keyans* and keyanspic environments.

5.1 Keys for label and ref

mode-box ⟨*value forbidden*⟩ default: *not used*

This is a *"switch-key"* that does not receive an argument and is "only" available for the *"first level"* of the enumext environment and the enumext* environment. When this is set the label, font, wrap-label and wrap-label* keys are executed within \makebox for the enumext and keyans environments.

This key is intended for compatibility with *tagged* PDF and is forcibly *"enabled"* when \DocumentMetadata is present. If you want to get the same document output whether \DocumentMetadata is active or not, you must enable this key.

In the enumext* and keyans* environments \makelabel are redefined using \makebox by default. If enumext or keyans is used in the enumext* environment the key must be activated manually.

label = {⟨\alph* | \Alph* | \arabic* | \roman* | \Roman*⟩} default: *by levels*

Sets the ⟨*label*⟩ that will be printed at the *current level.* The default value for the first level of the environments enumext and enumext* are \arabic*., for second level are (\alph*), for third level are \roman*. and for fourth level are \Alph*.. For keyans and keyans* environments the default value is \Alph*).

This key is intended to give the basic structure with which the ⟨*label*⟩ will be displayed, and the form in which it is used by standard *"label and ref"* and the *"internal label and ref"* system with the save-ref key. You cannot use commands with ⟨*label*⟩ as an argument, for example \emph{⟨\alph*⟩} will return an error. For full customization of how ⟨*label*⟩ is displayed use the font, wrap-label and/or wrap-label* keys.

labelsep = {⟨*rigid length*⟩} default: 0.3333em

Sets the *horizontal space* between the box containing the current ⟨*label*⟩ defined by label key and the text of an item on the first line. Internally sets the value of \labelsep for the current level.

labelwidth = {⟨*rigid length*⟩} default: *by label*

Sets the *width* of the box containing the current ⟨*label*⟩ set by label key. Internally sets the value of \labelwidth for the current level. The default values are calculated by means of the *width* of a box by setting a *value* to the current counter using '0' for \arabic*, 'M' for \Alph*, 'm' for \alph*, 'VIII' for \Roman* and 'viii' for \roman*.

widest = {⟨*integer* | *string*⟩} default: *empty*

Sets the labelwidth key pass the ⟨*integer*⟩ or converting the ⟨*string*⟩ of the form \Alph, \alph, \Roman or \roman to a *value* for the current counter defined by label key, then calculating the *width* by means of a box. For example widest={XXIII} or widest={23} are equivalent. This key is useful when the default values of the labelwidth key are smaller than those actually used.

font = {⟨*font commands*⟩} default: *empty*

Sets the *font style* for the current ⟨*label*⟩ defined by label key. For example font={\bfseries\small}.

align = {⟨*left* | *right* | *center*⟩} default: *left*

Sets the *aligned* of ⟨*label*⟩ defined by label key on the current level in the label box.

wrap-label = {⟨*code* {#1} *more code*⟩} default: *empty*

Wraps the *current* ⟨*label*⟩ defined by label key referenced by {#1}. The {⟨*code*⟩} must be passed between braces. This key does not modify the value set by the labelwidth key and is applied only on \item and \item*. When using it in the \setenumext command it is necessary to use the *double hash* '{##1}'. For example wrap-label={\fbox{#1}} or you can create a command:

```
\NewDocumentCommand \labelbx { s +m }
  {%
    \IfBooleanTF{#1}
      {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
      {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
  }
```

and then pass it through the key wrap-label={\labelbx{#1}} or wrap-label={\labelbx*{#1}}.

wrap-label* = {⟨*code* {#1} *more code*⟩} default: *empty*

The same as the wrap-label key but also applies on \item[⟨*custom*⟩].

©2024 by Pablo González L

ref = {⟨*code* {\alph*| \Alph*| \arabic*| \roman*| \Roman*} *more code*⟩} default: *empty*

Modifies the way *cross references* are displayed. The label key sets the default form of the *cross references*, by using this key you can define a different format, for example: ref=\emph{⟨\alph*⟩} is valid.

Internally it renews the command associated with each counter when it is executed, i.e., in the environment enumext the command \theenumXi is modified when the key is executed at the first level, \theenumXii when it is executed at the second level and \theenumXiii together with \theenumXiv when it is executed at the third and fourth levels.

This must be kept in mind, since the values set by the label and ref keys are not cumulative by levels, so if you have used the ref key in the first level and then want to associate the counter with label or ref in the second level you must use the direct commands, i.e. \arabic{eunumXi} to indicate the count of the first level instead of using \theenumXi.

5.2 Keys for spaces

show-length = {⟨*true* | *false*⟩} default: *false*

Displays on the terminal the values for *all list parameters* at the current level. For *vertical spaces* show the values of \topsep, \itemsep, \parsep and \partopsep. For *horizontal spaces* show the values of \labelwidth, \labelsep, \itemindent, \listparindent and \leftmargin.

5.2.1 Vertical spaces

topsep = {⟨*rubber length* | *rigid length*⟩} default: *by levels*

Set the *vertical space* added to both the top and bottom of the list. Internally sets the value of \topsep for the current level. The default value for the first level of the environments enumext and enumext* are 8.0pt plus 2.0pt minus 4.0pt, for second level are 4.0pt plus 2.0pt minus 1.0pt, for third and fourth level are 2.0pt plus 1.0pt minus 1.0pt. For keyans and keyans* environments the default value is 4.0pt plus 2.0pt minus 1.0pt.

parsep = {⟨*rubber length* | *rigid length*⟩} default: *by levels*

Set the *vertical space* between paragraphs within an item. Internally sets the value of \parsep for the current level. The default value for the first level of the environments enumext and enumext* are 4.0pt plus 2.0pt minus 1.0pt, for second level are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 0pt. For keyans and keyans* environments the default value is 2.0pt plus 1.0pt minus 1.0pt.

In the enumext* and keyans* environments this value is passed to \parskip within the minipage environment where *"item content"* is placed.

partopsep = {⟨*rubber length* | *rigid length*⟩} default: *by levels*

Set the *vertical space* added, beyond topsep, to the "top" and "bottom" of the entire environment if the environment instance is preceded by a *"blank line"* or \par command. Internally sets the value of \partopsep for the current level. The default values for first and second level in environment enumext are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 1.0pt minus 1.0pt. For the keyans environment the default value is 2.0pt plus 1.0pt minus 1.0pt, and for the keyans* and enumext* environments it is available but *without* effect.

The value of this parameter also affects the *inner levels* and the environments keyans, keyanspic and keyans*. Caution should be taken with *"blank lines"* or \par command *"before"* each environment or nested level when formatting the source code of document. TEX will enter ⟨*vertical mode*⟩ and apply this value to the "top" and "bottom" the environment or nested level.

itemsep = {⟨*rubber length* | *rigid length*⟩} default: *by levels*

Set the *vertical space* between items, beyond the parsep. Internally sets the value of \itemsep for the current level. The default value for the first level of the environments enumext and enumext* are 4.0pt plus 2.0pt minus 1.0pt, for the rest of the levels are 2.0pt plus 1.0pt minus 1.0pt. For keyans and keyans* environments the default value is 4.0pt plus 2.0pt minus 1.0pt.

In the enumext* and keyans* environments this value corresponds to the separation between rows.

noitemsep ⟨*value forbidden*⟩ default: *not used*

This is a *"meta-key"* that does not receive an argument. Set itemsep and parsep equal to 0pt the entire level of environment.

nosep ⟨*value forbidden*⟩ default: *not used*

This is a *"meta-key"* that does not receive an argument. Sets all keys for vertical spacing equal to 0pt the entire level of environment.

base-fix ⟨*value forbidden*⟩ default: *not used*

This is a *"switch-key"* that does not receive an argument available *only* for the *"first level"* of environment enumext. Fix the *baseline* when an environment enumext is nested in enumext* and there is no material between the \item and the start of the environment for example \item \begin{enumext} within the environment enumext*. Internally sets the keys topsep, above and above* at 0pt.

©2024 by Pablo González L

The following ⟨*keys*⟩ should be used with *"caution"*, they are intended to be used at the "top" and "bottom" of the environment when the `columns` or `mini-env` keys do not provide adequate *vertical spaces*. The values passed can be *rubber* or *rigid* lengths, the way they are applied is the way you differ, using the *star* '`*`' ⟨*keys*⟩ applies `\vspace*` so that LaTeX does *not discard* this space at page break.

`above` = {⟨*rubber length* | *rigid length*⟩} default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space *"above"* the environment without hindering the value of the `topsep` key. The space is added with `\vspace` so is *"discardable"*.

`above*` = {⟨*rubber length* | *rigid length*⟩} default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space *"above"* the environment without hindering the value of the `topsep` key. The space is added with `\vspace*` so is *"not discardable"*.

`below` = {⟨*rubber length* | *rigid length*⟩} default: *not used*

Set the *extra vertical space* space added, beyond `topsep`, to the bottom of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"below"* the environment without hindering the value of the `topsep` key. The space is added with `\vspace` so is *"discardable"*.

`below*` = {⟨*rubber length* | *rigid length*⟩} default: *not used*

Set the *extra vertical space* space added, beyond `topsep`, to the bottom of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"below"* the environment without hindering the value of the `topsep` key. The space is added with `\vspace*` so is *"not discardable"*.

5.2.2 Horizontal spaces

`list-offset` = {⟨*rigid length*⟩} default: `0pt`

Sets the *horizontal translation* of the entire environment level from the left edge of the box defined by the `labelwidth` key. Internally sets the values of `\leftmargin` and `\itemindent` for the current level.

`list-indent` = {⟨*rigid length*⟩} default: *labelwidth + labelsep*

Sets the *indentation* of the whole environment under the box defined by `labelwidth` and `labelsep` keys. Internally sets the value of `\leftmargin` and `\itemindent` for the current level. If `list-indent=0pt` is set in the environments `enumext` and `keyans` the ⟨*label*⟩ will be part of the text, separated by the value of the `labelsep` key and the *first word*, in simple terms it will look like a *"common paragraph"*.

The `enumext*` and `kenyans*` environments are implemented using `\makebox` and `minipage` which causes *"list indent"* to always be equal to the value passed to `labewdith` plus `labelsep`. Passing a value to this key is equivalent to setting the value for the `list-offset` key.

`itemindent` = {⟨*rigid length*⟩} default: `0pt`

Sets the extra *horizontal indentation*, beyond `labelsep`, of the *"first line"* off each `\item` that is not followed by a *"blank line"* or the `\par` command . This value must be greater than or equal to `0pt` and is applied internally using `\hspace` *without* modifying the value of `\itemindent`.

This key is intended for the `enumext*` and `keyans*` environments where, by their implementation, it is not possible to adjust `labelwidth` and `list-indent` *without* modifying the output. If you use `enumext` or `keyans` and want to get around the *blank line* limitation or the `\par` command followed by `\item` you can modify `labelwidth` and `label-indent` and get the same effect.

`rightmargin` = {⟨*rigid length*⟩} default: `0pt`

Set the *horizontal space* between the right margin of the environment and the right margin of the enclosing environment, the value it takes must be greater than or equal to `0pt`. Internally sets the value of `\rightmargin` for the current level.

`listparindent` = {⟨*rigid length*⟩} default: `0pt`

Sets the *horizontal space* indentation, beyond `list-indent`, for second and subsequent paragraphs within a list item. Internally sets the value of `\listparindent` for the current level.

In the `enumext*` and `keyans*` environments this value is passed to `\parindent` within the `minipage` environment where *"item content"* is placed.

5.3 Keys for add code

The following ⟨*keys*⟩ should be used with *"caution"*, they are intended to inject {⟨*code*⟩} into different parts of the defined environments. We must keep in mind that the defined environments are based on the `list` base environment provided by LaTeX which is defined (simplified) as plain form `\list{`⟨*arg one*⟩`}{`⟨*arg two*⟩`}`. Using the `before*` key does not allow access to the `list` parameters defined by `[`⟨*key* = *val*⟩`]`.

`before` = {⟨*code*⟩} default: *not used*

Execute {⟨*code*⟩} *"before"* the environment starts. The {⟨*code*⟩} must be passed between braces, is executed *"after"* performing all calculations related to the *list parameters* in the environment and the parameters sets by `[`⟨*key* = *val*⟩`]` that is, in the second argument of the list after setting all the parameters `\begin{list}{`⟨*arg one*⟩`}{`⟨*arg two*⟩`{`⟨*code*⟩`}}`.

©2024 by Pablo González L

`before*` = {⟨*code*⟩} default: *not used*

Execute {⟨*code*⟩} *"before"* the environment starts. The {⟨*code*⟩} must be passed between braces, is executed *"before"* performing all calculations related to the *list parameters* and [⟨*key* = *val*⟩] sets in the environment that is, before the arguments defining the environment are executed: {⟨*code*⟩}\begin{list}{⟨*arg one*⟩}{⟨*arg two*⟩}.

`first` = {⟨*code*⟩} default: *not used*

Executes {⟨*code*⟩} when *"starting"* the environment. The {⟨*code*⟩} must be passed between braces, is executed right *"after"* all *list parameters* are done, after the second argument of list, just before the first occurrence of `\item`: \begin{list}{⟨*arg one*⟩}{⟨*arg two*⟩}{⟨*code*⟩}\item.

Keep in mind that the code set in this key will affect the entire *"body"* of the environment and therefore the inner levels of the list and the `keyans` environment. It is recommended to set this key per level.

In the `enumext*` and `keyans*` environments this key is executed after the `listparindent`, `parsep` and `itemindent` keys within the `minipage` environment in which the *"item content"* is placed.

`after` = {⟨*code*⟩} default: *not used*

Execute {⟨*code*⟩} *"after"* finishing the environment. The {⟨*code*⟩} must be passed between braces.

5.4 Keys for `start`, `series` and `resume`

`start` = {⟨*integer* | *integer expression*⟩} default: `1`

Sets the *start value* of the numbering on the current level. The {⟨*integer expression*⟩} must be passed between braces, internally is evaluated and pass to the counter defined by `label` key on the current level, i.e. it is equivalent to enter `start={\dimeval{100*\value{chapter}}}` or `start={100*\value{chapter}}`.

`start*` = {⟨*integer* | *string*⟩} default: *not used*

Sets the *start value* of the numbering on the current level. Internally ⟨*string*⟩ is converted and passed as value to the counter defined by `label` key on the current level, i.e. it is equivalent to enter `start=5`, `start=E` or `start=v`.

The following ⟨*keys*⟩ are *"only"* available for the `enumext*` environment and the *"first level"* of the `enumext` environment and are ignored if set when nested within each other.

`series` = {⟨*series name*⟩} default: *not used*

Stores the *keys* of the *optional argument* of the *"first level"* of the environment in which it is executed in {⟨*series name*⟩} which is used as an argument in the key `resume`. The ⟨*keys*⟩ stored in {⟨*series name*⟩} are not cumulative and are overwritten if the same {⟨*series name*⟩} is used again.

`resume` = {⟨*series name*⟩} default: *not used*

Sets the *start value* and *options* for the *"first level"* continuing the numbering of the environment in which the `series={`⟨*series name*⟩`}` key was executed. If passed *without value* this will only set *start value* continue the numbering from the last environment in which `series={`⟨*series name*⟩`}` or `resume={`⟨*series name*⟩`}` is not present and if the `save-ans` key is active it will continue the numbering from the last environment in which it was executed. The *start value* can be overwritten using `start` or `start*` keys.

`resume*` ⟨*value forbidden*⟩ default: *not used*

Sets the *start value* and *options* for the *"first level"* continuing the numbering of the environment in which the `series={`⟨*series name*⟩`}` or `resume={`⟨*series name*⟩`}` keys are NOT present, if the `save-ans` key is active it will continue the numbering from the last environment in which it was executed. The *start value* can be overwritten using `start` or `start*` keys.

For security reasons the `series` key will never save in {⟨*series name*⟩} the keys `series`, `resume`, `resume*`, `save-ans`, `save-key`, `start*` and `start`. When using the key `resume={`⟨*series name*⟩`}` it will have hierarchy in the ⟨*keys*⟩ that are saved in {⟨*series name*⟩}, in order to establish the value of a ⟨*key*⟩ already saved in {⟨*series name*⟩} it must be placed to the *"right"* of `resume={`⟨*series name*⟩`}`, the same thing happens with the `resume*` key, the exception is the `save-ans` key that must be placed on the *"left"* if you want to start the numbering with its value. The `resume` key passed *"without value"* must be exactly *"without value"*, i.e. `resume=` cannot be used and if executed before `resume*` it will affect the *start value.*

5.5 Keys for `multicols`

`columns` = {⟨*integer*⟩} default: `1`

Set the *number of columns* to be used by the `multicols` environment within the environment. The value must be a positive integer less than or equal to `10`.

`columns-sep` = {⟨*rigid length*⟩} default: *by level*

Set the *space between* columns used by the `multicols` environment within the environment. Internally sets the value of `\columnsep`, by default its value is equal to the sum of the values set in the keys `labelwidth` and `labelsep` of the current level.

©2024 by Pablo González L

5.6 Keys for minipage

mini-env = {⟨rigid length⟩} default: *not used*

Sets the *width* of the minipage environment on the *"right side"*. This value added to the value set by the mini-sep key to determines the *width* of the minipage environment on the *"left side"*, taking \linewidth as the maximum reference value.

mini-sep = {⟨rigid length⟩} default: 0.3333em

Sets the *space between* the minipage environment on the *"left side"* and the minipage environment on the *"right side"*. This separation is applied together with \hfill.

5.6.1 The command \miniright

\miniright
```
\begin{enumext}[mini-env={⟨rigid length⟩}] ⟨item's before⟩ \item \miniright ⟨content⟩ \end{enumext}
\begin{enumext}[mini-env={⟨rigid length⟩}] ⟨item's before⟩ \item \miniright*⟨content⟩ \end{enumext}
```

The \miniright command close the minipage environment on the *"left side"* and opens the minipage environment on the *"right side"* by starting it with the \centering command. It must be placed *"after"* the last \item of the current environment and *"before"* starting the material to be placed on the *"right side"*.

The *starred argument* '*' inhibits the use of \centering command i.e. the usual LaTeX justification is maintained in the minipage on the *"right side"*.

5.6.2 The key mini-right

In the *horizontal list environments* enumext* and keyans* it is not possible to use the \miniright command and the mini-right key must be used instead.

mini-right = {⟨content⟩} default: *not used*

Set the *content* for the drawing or tabular to be placed in the minipage environment on the *"right side"* by starting it with \centering. The {⟨content⟩} must be passed between braces.

mini-right* = {⟨content⟩} default: *not used*

Same as above, but *without* starting with \centering.

6 The storage system

The entire mechanism for *"storing content"* it is activated according to save-ans key on the *"first level"* of enumext or enumext* environments and it is ignored if they are established when they are nested inside each other. Only when this ⟨key⟩ is *"active"* the \anskey command and the environments anskey*, keyans, keyans* and keyanspic are available.

```
\begin{enumext}[save-ans={⟨store name⟩}]
  \item Text \anskey{answer}
  \item Text
    \begin{keyans}
          ...
    \end{keyans}
\end{enumext}
```

```
\begin{enumext}[save-ans={⟨store name⟩}]
  \item Text \anskey{answer}
  \item Text
    \begin{keyanspic}
          ...
    \end{keyanspic}
\end{enumext}
```

By executing the key save-ans={⟨store name⟩} the entire *"structure"* of the environment (excluding the *first level*) including the *optional argument* passed to the inner levels or the environment nested in it, along with the ⟨content⟩ passed to \anskey or anskey*, the current ⟨labels⟩ for \item* and \anspic* in the environments keyans, keyans* and keyanspic will be *"stored"* in a *sequence* {⟨store name⟩} and at the same time will be *"stored"* (without the *"structure"* or *optional argument*) in a *prop list* {⟨store name⟩}.

For security reasons the *optional argument* of the inner levels or the nested environment are *filtered* by excluding all ⟨keys⟩ related to the *"storage system"* (§??) along with the keys mini-env, mini-sep, mini-right, mini-right*, series, resume and resume* when storing in *sequence* {⟨store name⟩} set by save-ans key.

6.1 Keys for storage system

The only ⟨keys⟩ available for all levels of the enumext environment and the enumext* environment are no-store and save-key, the rest of the ⟨keys⟩ described in this section must be passed directly in the *optional argument* of the *"first level"* of the environment in which the key save-ans is executed. The key save-ans should NOT be passed with the command \setenumext.

save-ans = {⟨store name⟩} default: *not set*

Sets the *name* of the *sequence* and *prop list* in which the {⟨contents⟩} will be *"stored"* by \anskey and anskey* in enumext and enumext* environments and the current ⟨labels⟩ for \item* and \anspic* in the environments keyans, keyans* and keyanspic. If the *sequence* or *prop list* {⟨store name⟩} does not exist, it will be created globally and will not be *overwritten* if the key is used again.

save-key = {⟨key list⟩} default: *not set*

This key *overrides* the default *"stored keys"* of the *optional argument* of the inner levels or nested environment that will be passed to the *sequence*. The ⟨key list⟩ passed to this key ignores any ⟨keys⟩ in the *"stored structure"* and must be passed between braces. For example, if we execute at a second level:

©2024 by Pablo González L

```
\begin{enumext}[save-ans={⟨store name⟩}]
  \item Text \anskey{answer}
  \item Text
    \begin{enumext}[nosep, columns=2, save-key={columns=3}]
          ...
    \end{enumext}
\end{enumext}
```

The *"stored keys"* by default in the *sequence* {⟨*store name*⟩} would be `nosep, columns=2`, but using the key `save-key={columns=3}` will overwrite and the *"stored key"* in the *sequence* {⟨*store name*⟩} are only `columns=3` ignoring all the others.

`save-sep` = {⟨*text symbol*⟩} default: *{, }*

Sets the *text symbol* that will separate the current ⟨*label*⟩ to the *optional argument* passed to the `\item*` and `\anspic*` in the environments `keyans`, `keyans*` and `keyanspic` and storing them in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. The {⟨*text symbol*⟩} must always be passed between braces, whitespace '␣' is preserved within the braces and only affects the *"stored content"* and not what is displayed when using the `show-ans` or `show-pos` keys.

6.1.1 Keys for `label` and `ref`

`save-ref` = {⟨*true* | *false*⟩} default: *false*

Activates the *"internal label and ref"* mechanism for referencing *"stored content"* in *prop list* {⟨*store name*⟩} set by `save-ans` key. To reference the location of the *"stored content"* within the environment you must use `\ref`{⟨*store name* : *position*⟩}, where ⟨*position*⟩ corresponds to the position occupied by the *"stored content"* in the *prop list* {⟨*store name*⟩} returned by the `show-pos` key. For example `\ref{test:4}` will return `3.(b)` which corresponds to the location of the *"stored content"* at position `4` in *prop list* `test` within the environment in which the key `save-ans=test` was set.

`mark-ref` = {⟨*symbol*⟩} default: *\※*

Sets the *symbol* that will be displayed by the `\printkeyans` command only if the `hyperref` package is detected and the `save-ref` key are active. This *"symbol"* is used as a *"link"* between the environment in which the `save-ans` key was used and the place where the command is executed.

6.1.2 Keys for `wrap` and `display`

`wrap-ans` = {⟨*code* `{#1}` *more code*⟩} default: *\fbox+\parbox{#1}*

Wraps the *argument* passed to the `\anskey` and the *body* in `anskey*` environment referenced by `{#1}` when using the `show-ans` or `show-pos` keys. The {⟨*code*⟩} must be passed between braces and only affects the *argument* or *body* and NOT the *"stored content"* in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. If this key is passed using `\setenumext` it is necessary to use double '`{##1}`'.

`wrap-opt` = {⟨*code* `{#1}` *more code*⟩} default: *[{#1}]*

Wraps the *optional argument* passed to the `\item*` and `\anspic*` referenced by `{#1}` in the `keyans`, `keyans*` and `keyanspic` environments when using the `show-ans` or `show-pos` keys. The {⟨*code*⟩} must be passed between braces and only affects the current *optional argument* and NOT the *"stored content"* in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. If this key is passed using `\setenumext` it is necessary to use double '`{##1}`'.

`show-ans` = {⟨*true* | *false*⟩} default: *false*

Displays the *argument* passed to the `\anskey`, the *body* for `anskey*` environment, the ⟨*label*⟩ for `\item*` and `\anspic*` at the place where it is executed. If the *optional argument* is present in `\item*` or `\anspic*` it will be shown using `wrap-opt` key.

`mark-ans` = {⟨*symbol*⟩} default: *\textasteriskcentered*

Sets the *symbol* to be displayed in the left margin for `\anskey`, `anskey*`, `\item*` and `\anspic*` in the place where they are executed when using the key `show-ans`.

`mark-pos` = {⟨*left* | *right*⟩} default: *left*

Sets the *aligned* of the symbol defined by `mark-ans` key. The *"symbol"* is aligned in a box with the same dimensions of the label box defined by `labelwidth` key on the current level and separated by the value of the `labelsep` key.

6.1.3 Keys for debug and checking

`show-pos` = {⟨*true* | *false*⟩} default: *false*

Displays the *position* occupied by the *"stored content"* by `\anskey`, `anskey*`, `\item*` and `\anspic*` in the *prop list* {⟨*store name*⟩} set by `save-ans` key. This position is used by the `\getkeyans` command and by the `\ref` command if the `save-ref` key is active.

`check-ans` = {⟨*true* | *false*⟩} default: *false*

Enables the *checking answer* mechanism displaying an appropriate message on the terminal. This key works under the logic that each `\item` or `\item*` that does not open an inner level or nested environment contains *"only one answer"* or *"only one execution"* of the `\anskey` or `anskey*`. It is intended to be used in conjunction with the `no-store` key.

©2024 by Pablo González L

`no-store` ⟨*value forbidden*⟩ default: *not used*

This is a *"switch-key"* that does not receive an argument and disables the *"stored structure"* in the *sequence* {⟨*store name*⟩} set by `save-ans` key at the entire level or a nested environment in which it runs. This key is intended for use in internal levels or nested `enumext` or `enumext*` environments in which you want to use `enumext` or `enumext*` but *"without"* using the `\anskey`,*"without"* use `anskey*`, *"without"* interfering with the `check-ans` key and *"without"* storing an unwanted structure in the *sequence* {⟨*store name*⟩}.

6.2 The command \anskey

`\anskey` `\anskey`[⟨*keys*⟩]{⟨*content*⟩}

The command `\anskey` takes a mandatory non empty argument {⟨*content*⟩} and *"stores"* it in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. By design the command cannot be nested or passed *verbatim material* in the argument and it is assumed that each *numbered* `\item` or `\item*` within the environment in which it is active it has a *"single execution"* of `\anskey` unless `\item` or `\item*` open a nested level or use the `no-store` key.

If `save-ref` key are active and the `hyperref`[?] package is detected, `\hyperlink` and `\hypertarget` will be used, otherwise the usual *"label and ref"* system provided by LaTeX will be used.

The `\anskey` command is available for all levels of the `enumext` environment and the `enumext*` environment, but is disabled for the `keyans`, `keyans*` and `keyanspic` environments.

6.2.1 Keys for \anskey

By default the {⟨*content*⟩} passed to `\anskey` when *"storing"* in the *sequence* {⟨*store name*⟩} has the form `\item` ⟨*content*⟩, the following ⟨*keys*⟩ allow modifying the way in which it is *"stored"* in the *sequence*.

`break-col` ⟨*value forbidden*⟩ default: *not used*

Stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form `\columnbreak \item` ⟨*content*⟩.

`item-join` = {⟨*columns*⟩} default: *not set*

Set the *number of columns* to be used for `\item`(⟨*columns*⟩) and stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form `\item`(⟨*columns*⟩) ⟨*content*⟩.

`item-star` ⟨*value forbidden*⟩ default: *not used*

Stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form `\item*` ⟨*content*⟩.

`item-sym*` = {⟨*symbol*⟩} default: *not set*

Sets the *symbol* for `\item*` when using the key `item-star` and stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form `\item*`[⟨*symbol*⟩] ⟨*content*⟩. The *symbol* can be in text or math mode, for example `item-sym*`={$\ast$} stores `\item*`[$\ast$] ⟨*content*⟩.

`item-pos*` = {⟨*rigid length*⟩} default: *not set*

Sets the *offset* for `\item*` when using the keys `item-star` and `item-sym*` and stores {⟨*content*⟩} in the *sequence* {⟨*store name*⟩} of the form `\item*`[⟨*symbol*⟩][⟨*offset*⟩] ⟨*content*⟩.

Example

```
\begin{enumext}[save-ans=test,show-ans=true]
  \item* Text containing our instructions or questions. \anskey{⟨first answer⟩}
  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.\anskey{⟨second answer⟩}
    \end{enumext}
  \item Text containing our instructions or questions. \anskey{⟨third answer⟩}
  \item Text containing our instructions or questions. \anskey{⟨fourth answer⟩}
\end{enumext}
```

1. Text containing our instructions or questions.
   * first answer
2. Text containing our instructions or questions.
   (a) Question.
   * second answer
3. Text containing our instructions or questions.
   * third answer
4. Text containing our instructions or questions.
   * fourth answer

6.3 The environment anskey*

`anskey*` `\begin{anskey*}`[⟨*key = val*⟩] ⟨*body content*⟩ `\end{anskey*}`

The environment `anskey*` takes a mandatory {⟨*body content*⟩} and *"stores it"* in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. If `save-ref` key are active and the `hyperref`[?] package is detected `\hyperlink` and `\hypertarget` will be used, otherwise the usual *"label and ref"* system provided by LaTeX will be used. By design the environment cannot be nested but full supports *"verbatim material"* in the body and it is assumed that each numbered`\item` or `\item*` within the environment in which it is active it has a *"single execution"* unless `\item` or `\item*` open a nested level or use the `no-store` key.

©2024 by Pablo González L

The anskey* environment is implemented using the scontents package, for the correct operation \begin{anskey*} and \end{anskey*} must be in different lines, all ⟨keys⟩ must be passed separated by commas and "without separation" of the start of the environment. Comments "%" or "any character" after \begin{anskey*} or [⟨key = val⟩] on the same line are NOT supported, the package scontents will return an "error" message if this happens. In a similar way comments "%" or "any character" after \end{anskey*} on the same line the package scontents will return a "warning" message.

6.3.1 Keys for anskey*

The anskey* environment uses the same ⟨keys⟩ as the \anskey command next to the keys inherited from package scontents. The environment is available for all levels of the enumext environment and the enumext* environment, but it is disabled for the keyans, keyans* and keyanspic environments.

write-env = {⟨file.ext⟩} default: *not used*

Sets the name of the ⟨external file⟩ in which the ⟨contents⟩ of the environment will be written. The ⟨file.ext⟩ will be created in the working directory, relative or absolute paths are not supported. If ⟨file.ext⟩ does not exist, it will be created or overwritten if the overwrite key is used.

overwrite = {⟨true | false⟩} default: *false*

Sets whether the ⟨file.ext⟩ generated by write-env from the anskey* environment will be rewritten.

force-eol = {⟨true | false⟩} default: *false*

Sets if the *end of line* for the ⟨stored content⟩ is hidden or not. This key is necessary only if the last line is the closing of some environment defined by the fancyvrb package as \end{Verbatim} or another environment that does not support a comments "%" after closing \end{Verbatim}%.

For security reasons the keys store-env, print-env and write-out they have been left disabled. It is recommended that you review the scontents[?] documentation to understand how the keys described here work.

Example

```
\begin{enumext}[save-ans=test,show-pos=true,start=5]
  \item* Text containing our instructions or questions.
    \begin{anskey*}[item-star]
      ⟨first answer⟩
    \end{anskey*}

  \item Text containing our instructions or questions.

    \begin{enumext}
      \item Question.
        \begin{anskey*}
          ⟨second answer⟩
        \end{anskey*}
    \end{enumext}

  \item Text containing our instructions or questions.
    \begin{anskey*}
      ⟨third answer⟩
    \end{anskey*}

  \item Text containing our instructions or questions.
    \begin{anskey*}
      ⟨fourth answer⟩
    \end{anskey*}
\end{enumext}
```

* 5. Text containing our instructions or questions.
[5] First answer with verbatim
6. Text containing our instructions or questions.
(a) Question.
[6] second answer
7. Text containing our instructions or questions.
[7] third answer
8. Text containing our instructions or questions.
[8] fourth answer

6.4 The environments keyans and keyans*

keyans \begin{keyans}[⟨key = val⟩] \item \item[⟨custom⟩] \item* \item*[⟨content⟩] \end{keyans}
keyans* \begin{keyans*}[⟨key = val⟩] \item \item[⟨custom⟩] \item* \item*[⟨content⟩] \end{keyans*}

The keyans and keyans* environments are *"enumerated list"* environments designed for *"multiple choice"* questions activated by the save-ans key. This environments can NOT be nested and must always be at the *"first level"* of the enumext environment, the commands \item and \item[⟨custom⟩] work in the usual and the command \item(⟨columns⟩) is available for the keyans* environment.

The behavior of \item* in keyans and keyans* environments is NOT the same as in the enumext or enumext* environments.

©2024 by Pablo González L

```
\begin{enumext}[save-ans=test]
  \item ⟨item content⟩
    \begin{keyans}[⟨key = val⟩]
      \item ⟨item content⟩
      \item [⟨custom⟩] ⟨item content⟩
      \item* ⟨item content⟩
      \item*[⟨content⟩] ⟨item content⟩
    \end{keyans}
\end{enumext}
```

```
\begin{enumext}[save-ans=test]
  \item ⟨item content⟩
    \begin{keyans*}[⟨key = val⟩]
      \item ⟨item content⟩
      \item [⟨custom⟩] ⟨item content⟩
      \item* ⟨item content⟩
      \item*[⟨content⟩] ⟨item content⟩
    \end{keyans*}
\end{enumext}
```

The ⟨*keys*⟩ set in the *optional argument* of the environment are the same (almost) as those of the `enumext` and `enumext*` environments and have *higher precedence* than those set by `\setenumext[⟨keyans⟩]{⟨key = val⟩}` or `\setenumext[⟨keyans*⟩]{⟨key = val⟩}`. If the *optional argument* is not passed or the ⟨*keys*⟩ are not set by `\setenumext`, the default values will be the same as the *"second level"* of the `enumext` environment with the difference in the ⟨*label*⟩ which will be set to `label=\Alph*)`.

6.4.1 The `\item*` in keyans and keyans*

`\item*`

`\item*`
`\item*[⟨content⟩]`

The `\item*` and `\item*[⟨content⟩]` command *"store"* the current ⟨*label*⟩ set by `label` key next to the *optional argument* ⟨*content*⟩ in *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key in the *"first level"* of the `enumext` or `enumext*` environments.
The *starred argument* '`*`' cannot be separated by spaces '␣' from the command, i.e. `\item*` and the *optional argument* does "NOT" support *verbatim content.* By design it is assumed that the `\item*` will only appear *"once"* within the environment.

Example

```
\begin{enumext}[save-ans=test,columns=2,show-ans=true]
  \item Text containing a question.

    \begin{keyans*}[nosep,columns=2]
      \item Choice
      \item* Correct choice
      \item Choice
      \item Choice
      \item Choice
    \end{keyans*}

  \item Text containing a question and image.

    \begin{keyans}[nosep,mini-env={0.4\linewidth}]
      \item Choice
      \item Choice
      \item Choice
      \item Choice
      \item*[⟨note⟩] Correct choice
      \miniright
      \includegraphics[scale=0.25]{example-image-a}
      Some text
    \end{keyans}
\end{enumext}
```

1. Text containing a question.
   A) Choice
   * B) Correct choice
   C) Choice
   D) Choice
   E) Choice

2. Text containing a question and image.
   A) Choice
   B) Choice
   C) Choice
   D) Choice
   * E) [note] Correct choice

Some text

6.5 The environment `keyanspic`

`keyanspic` `\begin{keyanspic}[⟨key = val⟩] \anspic*[⟨content⟩]{⟨drawing or tabular⟩} \end{keyanspic}`

The `keyanspic` environment is an *"enumerated list"* environment activated by the `save-ans` key that has the same configuration for *"spacing"* and ⟨*label*⟩ as the `keyans` environment that uses the `\anspic` command instead of `\item`. It is intended for placing *drawings or tabular* with ⟨*label*⟩ centered *above* or *below* in a *single line* or *upper and lower* layout style.

When the `keyanspic` environment is used *without keys* the ⟨*labels*⟩ are centered *below* the *drawings or tabular* in a *single line* layout style.

©2024 by Pablo González L

A representation of the output can be seen in the figure ??.

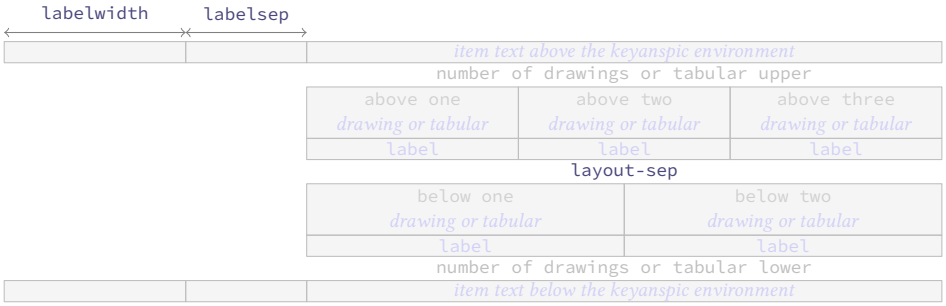

Figure 6: Representation of the keyanspic environment with layout-sty={⟨3, 2⟩} in enumext.

This environment cannot be nested and must always be at the *"first level"* of the enumext environment, the \item command is disabled and keys cannot be set using \setenumext.

6.5.1 Keys for keyanspic

label-pos = {⟨*above* | *below*⟩} default: *below*

Set the *position* of ⟨*label*⟩ to be centered "above" or "below" *drawings* or *tabular* when the \anspic command is executed.

label-sep = {⟨*rubber length* | *rigid length*⟩} default: *internal adjustment*

Set the *vertical spacing* between the ⟨*label*⟩ centered "above" or "below" and *drawings* or *tabular* when running the \anspic command.

layout-sty = {⟨*n° upper* , *n° lower*⟩} default: *not set*

Set the *number* of *drawings* or *tabular* that will be distributed "upper" and "lower" within the environment when executing the \anspic command. The value must be passed in braces and if not set or the ⟨*n° lower*⟩ is omitted the *drawings* or *tabular* will be put on a *single line.*

layout-sep = {⟨*rubber length* | *rigid length*⟩} default: *adjusted parsep from keyans*

Set the *vertical separation* between the number of *drawings* or *tabular* placed at the "upper" and "lower" within the environment when executing the \anspic command. Internally adjusts the parsep value taken from the keyans environment.

layout-top = {⟨*rubber length* | *rigid length*⟩} default: *adjusted topsep from keyans*

Set the *vertical space* added to both the top and bottom of the environment. Internally adjust the value of topsep taken from keyans environment.

6.5.2 The command \anspic

\anspic
\anspic{⟨*drawing or tabular*⟩}
\anspic*[⟨*content*⟩]{⟨*drawing or tabular*⟩}

The \anspic command take three arguments, the *starred argument* '*' store the current ⟨*label*⟩ next to the *optional argument* ⟨*content*⟩ in *sequence* and *prop list* {⟨*store name*⟩} set by save-ans key.

The *starred argument* '*' cannot be separated by spaces '␣' from the command, i.e. \anspic* and the *optional argument* does "NOT" support *verbatim content.* By design it is assumed that the *starred argument* '*' will only appear *"once"* within the environment.

Example

```
\begin{enumext}[save-ans=test,show-ans,nosep]
  \item Question with images and labels below.

    \begin{keyanspic}[layout-sty={3,2}]
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}

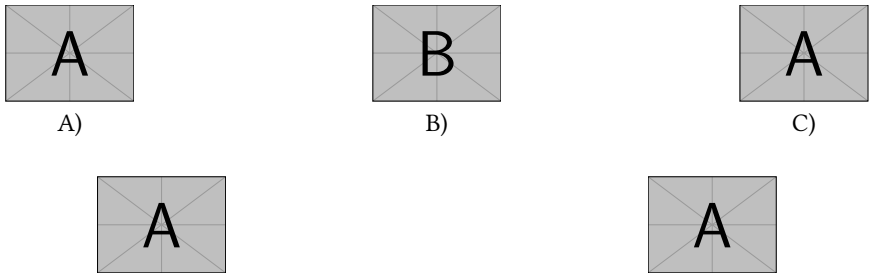
  \item Question with images and labels above.

    \begin{keyanspic}[label-pos=above, layout-sty={3,2},layout-sep=0.25cm]
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}
```

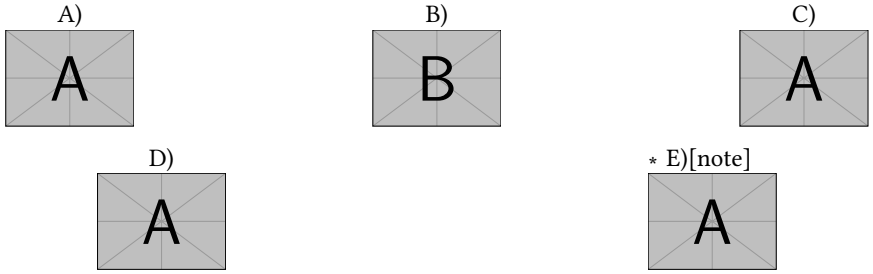
```
  \item Question with images and labels below on a single line.

    \begin{keyanspic}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}
\end{enumext}
```

1. Question with images and labels below.



2. Question with images and labels above.



3. Question with images and labels below on a single line.

Preferably use `label-pos=above` when creating a *tagged* PDF, this will preserve the reading order and navigation of the document.

6.6 Printing stored content

6.6.1 The command `\getkeyans`

`\getkeyans` `\getkeyans{`⟨*store name* : *position*⟩`}`

The command `\getkeyans` prints the *"stored content"* in *prop list* {⟨*store name*⟩} defined by `save-ans` key in the ⟨*position*⟩ returned by the `show-pos` key. The *"stored content"* can only be accessed *after* it is stored, if {⟨*store name*⟩} does not exist the command will return an error.

The form taken by the argument {⟨*store name* : *position*⟩} is the same as that used to generate the *"internal label and ref"* system when `save-ref` key are active, so to refer to a *"stored content"*. For example `\getkeyans{test:4}` will return the *"stored content"* at position `4` of the environment in which the key `save-ans=test` was set.

6.6.2 The command `\foreachkeyans`

`\foreachkeyans` `\foreachkeyans[`⟨*key* = *val*⟩`]{`⟨*store name*⟩`}`

The command `\foreachkeyans` goes through and executes the command `\getkeyans` on the contents in *prop list* {⟨*store name*⟩}. If you pass without options run `\getkeyans` on all contents in *prop list* {⟨*store name*⟩}.

Options for command

`sep` = {⟨*code*⟩} default: *{;}*

Establishes the *separation* between *"each"* {⟨*content*⟩} stored in *prop list* {⟨*store name*⟩}. For example, you can use `sep={\\[10pt]}` for vertical separation of stored contents.

`step` = {⟨*integer*⟩} default: *1*

Sets the *step* (increment) applied to the value set by key `start` for *"each"* {⟨*content*⟩} stored in *prop list* {⟨*store name*⟩}. The value must be a ⟨*positive integer*⟩.

©2024 by Pablo González L

`start` = {⟨*integer*⟩} default: *1*

Sets the *position* of the *prop list* {⟨*store name*⟩} from which execution will start. The value must be a ⟨*positive integer*⟩.

`stop` = {⟨*integer*⟩} default: *0*

Sets the *position* of the *prop list* {⟨*store name*⟩} from which execution will finish. The value must be a ⟨*positive integer*⟩.

`before` = {⟨*code*⟩} default: *empty*

Sets the {⟨*code*⟩} that will be executed ⟨*before*⟩ each {⟨*content*⟩} stored in *prop list* {⟨*store name*⟩}. The {⟨*code*⟩} must be passed between braces.

`after` = {⟨*code*⟩} default: *empty*

Sets the {⟨*code*⟩} that will be executed ⟨*after*⟩ each {⟨*content*⟩} stored in *prop list* {⟨*store name*⟩}. The {⟨*code*⟩} must be passed between braces.

`wrapper` = {⟨*code* `{#1}` *more code*⟩} default: *empty*

Wraps the {⟨*content*⟩} stored in *prop list* {⟨*store name*⟩} referenced by `{#1}`. The {⟨*code*⟩} must be passed between braces. For example `\foreachkeyans[wrapper={\makebox[1em][l]{#1}}]`{⟨*store name*⟩}.

6.6.3 The command `\printkeyans`

`\printkeyans`

`\printkeyans`{⟨*store name*⟩}
`\printkeyans[`⟨*keys*⟩`]`{⟨*store name*⟩}
`\printkeyans*[`⟨*keys*⟩`]`{⟨*store name*⟩}

The command `\printkeyans` prints *"all stored content"* in *sequence* {⟨*store name*⟩} defined by `save-ans` key placing this inside the `enumext` or `enumext*` environment if the *starred argument* '`*`' is used.

The *"stored content"* can only be accessed *after* it is stored in the *sequence*, if {⟨*store name*⟩} does not exist the command will return an error.

The *optional argument* allows managing the ⟨*keys*⟩ in the *"first level"* of the environment in which the *"stored content"* of the *sequence* {⟨*store name*⟩} will be printed, if the *starred argument* '`*`' is used it will be `enumext*` otherwise `enumext`.

The default values for the *"first level"* are the same as the default values for the `enumext` and `enumext*` environments along with the keys `nosep,first=\small,font=\small` and `columns=2`. For the inner levels of the environment `enumext` saved in the *sequence* {⟨*store name*⟩} the default values are the same as those established for the second, third and fourth levels plus the keys `nosep,first=\small,font=\small`. If the environment `enumext*` is saved within the *sequence* {⟨*store name*⟩} it will have the same default values plus the keys `nosep,first=\small, font=\small`.

Since the command encapsulates by default the `enumext` environment or the `enumext*` environment, we must take some considerations:

- If we execute `\printkeyans*`{⟨*store name*⟩} and the *sequence* {⟨*store name*⟩} already contains any `enumext*` environment an error will be returned as we cannot nest.
- If we execute `\printkeyans*`{⟨*store name*⟩} and the *sequence* {⟨*store name*⟩} contains any `enumext` environments, they will start with the ⟨*keys*⟩ set for the first level unless they are set in the *optional argument* or `save-key` is used to modify it.
- If we execute `\printkeyans`{⟨*store name*⟩} and the *sequence* {⟨*store name*⟩} contains any environment `enumext*`, they will start with the ⟨*keys*⟩ set by default unless they are set in the *optional argument* or `save-key` is used to modify it.

The default values for the *"first level"* of `\printkeyans` commands and `\printkeyans*` are established using `\setenumext[`⟨*print* , *1*⟩`]`{⟨*keys*⟩} and `\setenumext[`⟨*print**⟩`]`{⟨*keys*⟩}.

If we need to set the ⟨*keys*⟩ for the environment `enumext` "saved" in the *sequence* {⟨*store name*⟩} we will use `\setenumext[`⟨*print* , *level*⟩`]`{⟨*keys*⟩} and if we need to set the ⟨*keys*⟩ for the environment `enumext*` "saved" in the *sequence* {⟨*store name*⟩} we will use `\setenumext[`⟨*print* , ***⟩`]`{⟨*keys*⟩}.

Example

```
\begin{enumext}[save-ans=sample,columns=1,show-pos=true,nosep,save-ref=true]
  \item Factor $3x+3y+3z$. \anskey{$3(x+y+z)$}
  \item True False

    \begin{enumext}[nosep]
      \item \LaTeX2e\ is cool? \anskey{Very True!}
    \end{enumext}

  \item Related to Linux

    \begin{enumext}[nosep]
      \item You use linux? \anskey{Yes}
```

```
      \item Rate the following package and class
        \begin{enumext}[nosep]
          \item \texttt{xsim} \anskey{very good}
          \item \texttt{exsheets} \anskey{obsolete}
        \end{enumext}
    \end{enumext}
\end{enumext}

The answer to \ref{sample:4} is \getkeyans{sample:4} and the answers to
all the worksheets are as follows:

\printkeyans{sample}
```

1. Factor $3x + 3y + 3z$.

[1] $3(x + y + z)$

2. True False
   (a) LaTeX2e is cool?

   [2] Very True!

3. Related to Linux
   (a) You use linux?

   [3] Yes

   (b) Rate the following package and class
      i. `xsim`

      [4] very good

      ii. `exsheets`

      [5] obsolete

The answer to ?? is very good and the answers to all the worksheets are as follows:

1. $3(x + y + z)$ ※
2. (a) Very True! ※
3. (a) Yes ※
   (b) i. very good ※
      ii. obsolete ※

7 Full examples

Here I will leave as an example some adaptations questions taken from TeX-SX. The examples are attached to this documentation and can be extracted from your PDF viewer or from the command line by running:

```
$ pdfdetach -saveall enumext.pdf
```

and then you can use the excellent arara[1] tool to compile them.

Example 1

Adapted from the response given by Enrico Gregorio in Squares for answer choice options and perfect alignment to mathematical answers.

1. La velocità di $1{,}00 \times 10^2$ m/s espressa in km/h è:

   A 36 km/h.
   B 360 km/h.
   C $27{,}8$ km/h.
   D $3{,}60 \times 10^8$ km/h.

2. In fisica nucleare si usa l'angstrom (simbolo: $1\,\text{Å} = 1 \times 10^{-10}$ m) e il fermi o femtometro ($1\,\text{fm} = 1 \times 10^{-15}$ m). Qual è la relazione tra queste due unità di misura?

   A $1\,\text{Å} = 1 \times 10^{5}$ fm.
   B $1\,\text{Å} = 1 \times 10^{-5}$ fm.
   C $1\,\text{Å} = 1 \times 10^{-15}$ fm.
   D $1\,\text{Å} = 1 \times 10^{3}$ fm.

3. La velocità di $1{,}00 \times 10^2$ m/s espressa in km/h è:

   A 36 km/h.
   B 360 km/h.
   C $27{,}8$ km/h.
   D $3{,}60 \times 10^8$ km/h.

4. In fisica nucleare si usa l'angstrom (simbolo: $1\,\text{Å} = 1 \times 10^{-10}$ m) e il fermi o femtometro ($1\,\text{fm} = 1 \times 10^{-15}$ m). Qual è la relazione tra queste due unità di misura?

   A $1\,\text{Å} = 1 \times 10^{5}$ fm.
   B $1\,\text{Å} = 1 \times 10^{-5}$ fm.
   C $1\,\text{Å} = 1 \times 10^{-15}$ fm.
   D $1\,\text{Å} = 1 \times 10^{3}$ fm.

1. B 2. A 3. B 4. A

Example 2

Adapted from the response given by Florent Rougon in Multiple choice questions with proposed answers in random order — addition of automatic correction (cross mark).

   - C $1\,\text{Å} = 1 \times 10^{-15}$ fm.
   - D $1\,\text{Å} = 1 \times 10^3$ fm.

Example 3

A *"simple multiple choice"* test.

1. First type of questions

   A) value B) correct
   C) value D) value

2. Second type of questions

   I. $2\alpha + 2\delta = 90^\circ$
   II. $\alpha = \delta$
   III. $\angle EDF = 45^\circ$

   (A) I only (D) I and III only
   (B) II only (E) I, II, and III
   (C) I and II only

3. Third type of questions

   (1) $2\alpha + 2\delta = 90^\circ$
   (2) $\angle EDF = 45^\circ$

   (A) value (D) value
   (B) value (E) value
   (C) value

4. Question with image and label below:

   (A) (B) (C) (D) (E)

5. Question with image on left side:

   (A) value
   (B) value
   (C) value
   (D) correct
   (E) value

Test keys

1. B), $x = 5$ ※ 4. E, A duck ※
2. D ※ 5. D, other note ※
3. C, some note ※

Example 4

A *"simple worksheet"* using ducks :).

Factor $x^2 - 2x + 1$

Factor $3x + 3y + 3z$

The following questions need to be cuaqtified :)

True False

(a) $\alpha > \delta$

(b) LaTeX2e is cool?

Related to Linux

(a) You use linux?

(b) Usually uses the package manager?

©2024 by Pablo González L

(c) Rate the following package and class
   i. `xsim-exam`
   ii. `xsim`
   iii. `exsheets`

The answer to **??** is $(x-1)^2$ and the answer to **??** is False.

1. $(x-1)^2$ ※
2. $3(x+y+z)$ ※
3. (a) False ※
   (b) Very True! ※
4. (a) Yes ※
   (b) Yes, `dnf` ※
   (c) i. doesn't exist for now :(※
   ii. very good ※
   iii. obsolete ※

Example 5

Adapted from the response given by Stephen in SAT like question format.

1

Which choice best describes what happens in the passage?

A) One character argues with another character who intrudes on her home.
B) One character receives a surprising request from another character.
C) One character reminisces about choices she has made over the years.
D) One character criticizes another character for pursuing an unexpected course of action.

2

Which choice best describes what happens in the passage?

A) One character argues with another character who intrudes on her home.
B) One character receives a surprising request from another character.
C) One character reminisces about choices she has made over the years.
D) One character criticizes another character for pursuing an unexpected course of action.

3

Which choice best describes what happens in the passage?

A) One character argues with another character who intrudes on her home.
B) One character receives a surprising request from another character.
C) One character reminisces about choices she has made over the years.
D) One character criticizes another character for pursuing an unexpected course of action.

4

Which choice best describes what happens in the passage?

A) One character argues with another character who intrudes on her home.
B) One character receives a surprising request from another character.
C) One character reminisces about choices she has made over the years.
D) One character criticizes another character for pursuing an unexpected course of action.

1. A) 2. C) 3. B) 4. D)

8 Tagged PDF examples

This section is just to show the compatibility of enumext with *tagged* PDF using `lualatex`. The attached files here are just for testing and are intended as examples and, in a way, to simplify the time of Matthew Bertucci (`@mbertucci`) when he sees this excellent package and adds it to The LaTeX Tagged PDF repository.

To compile the tests with `lualatex-dev` the packages `multicol`, `scontents`, `unicode-math`, `geometry`, `graphicx` and `hyperref` are required.

- The file `enumext-01.tex` contains the basic tests for the `enumext` and `enumet*` environments and the nesting between them plus the use of the `label`, `labelwidth`, `labelsep`, `ref`, `align` and `wrap-label` keys. Source file and *tagged* PDF.
- The file `enumext-02.tex` contains the tests for the `enumext` and `enumet*` environments and the support for `minipage` and `multicols` environments using the keys `columns`, `columns-sep`, `mini-env`, `mini-right` and `\miniright` command. Source file and *tagged* PDF.
- The file `enumext-03.tex` contains the tests for the `enumext` and `keyanspic` environments activated by the `save-ans` key together with the `save-sep` and `save-ref` keys and the `\printkeyans` command. Source file and *tagged* PDF.
- The file `enumext-04.tex` contains the tests for the `\anskey` command and the `anskey*` environment activated by the `save-ans` key along with the `\getkeyans` and `\printkeyans` commands. Source file and *tagged* PDF.
- The file `enumext-05.tex` contains the tests for the environments `keyans`, `keyans*` and `keyanspic` activated by the key `save-ans` together with the keys `no-store` and `show-ans` and the commands `\setenumext`, `\setenumextmeta`, `\printkeyans` and `\foreachkeyans`. Source file and *tagged* PDF.

All examples have been checked using `veraPDF` together with `ngpdf`.

©2024 by Pablo González L

9 The way of non-enumerated lists

It is possible to use (or abuse) the `enumext` environment to mimic *non-enumerated* list environments such as `itemize` and `description`, clearly the ⟨*keys*⟩ to *"store answers"*, the `keyans` and `keyanspic` environments lose their sense and it is not the focus of the main of this package, but, why not to do it?.

Here I leave as an example other uses of the `enumext` environment that can be helpful for specific purposes. The *"trick"* to generate these *fake environments* is set `label={}` or `label={`⟨*some*⟩`}` and play with the `list-indent`, `list-offset`, `font` and `wrap-label` keys.

Fake `itemize` environment

Here we set the `label` key using the default settings in LaTeX for the four levels `\textbullet`, `\textendash`, `\textasteriskcentered` and `\textperiodcentered` together with the `nosep` key to reduce the vertical spaces in the left side example and set the `label` key in *mathematical mode* for the right side as `\ast`, `\diamond`, `\circ` and `\star` for the four levels together with the `nosep` key

- First level item
  - Second level item
    - Third level item
      - Fourth level item
- First level item

∗ First level item
  ◇ Second level item
    ◦ Third level item
      ⋆ Fourth level item
∗ First level item

Fake `description` environment

Here we set `label={}` and `list-indent=2.5em,font=\bfseries`.

SomeThing A short one-line description.
This is an entry *without* a label.
Something A short *one-line* description text.
Something long A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

If we add `list-indent=0pt` you get *widest style*:

SomeThing A short one-line description.
This is an entry *without* a label.
Something A short *one-line* description text.
Something long A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

The small space at the beginning of the *"unlabeled entry"* corresponds to `\labelsep` and can be removed using `\hspace{-\labelsep}` at the beginning of the line.

Description indented by label

Here we set `label={}` and we will give a convenient value to `labelsep` and `labelwidth`, for example we can take as reference our *longest label* and pass it as value using:

```
\newlength{\descitemwd}
\settowidth{\descitemwd}{\textbf{Something long}}
```

and then use `labelsep=4pt,labelwidth=\descitemwd,font=\bfseries`.

SomeThing A short one-line description.
This is an entry *without* a label.
Something A short one-line description.
Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

The environment can be translated so that the ⟨*labels*⟩ are on the left margin calculating the value passed to the `list-offset` key, in this case it will be equal to the sum of the values set by the `labelwidth` and `labelsep` keys finally resulting as `list-offset={-\descitemwd - 4pt}`.

SomeThing A short one-line description.
This is an entry *without* a label.
Something A short one-line description.
Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

If we add `align=right` it will look like this:

SomeThing A short one-line description.
This is an entry *without* a label.
Something A short one-line description.
Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

©2024 by Pablo González L

At this point we have used `list-offset={-\descitemwd - 4pt}` instead of `list-offset={-\labelwidth - \labelsep}`, this is because the parameters `\labelwidth` and `\labelsep` take the default values, as if we had not set `label`.

Description with multi-line labels

The `label` key does not accept *multiline material*, this is where the `wrap-label` and `wrap-label*` keys comes into play. Unlike the `enumitem` package, the `align` key only supports three options, so what we will do is create a command in the style `\parleft` of `enumitem` that allows us to place *multiline labels* using `\parbox`.

```
\NewDocumentCommand \labelbx { s +m }
  {%
    \IfBooleanTF{#1}
      {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
      {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
  }
```

Now we just need to set `wrap-label*={\labelbx{#1}}`.

SomeThing A short one-line description.
This is an entry *without* a label.

Something A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.
Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

SoMeThInG LoNg A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Final notes

The original implementation (if you can call it that) of the ideas that led to the creation of enumext were some macros using the `enumerate`[?] package for personal use created in early 2003, the code was quite questionable, but functional for these simple requirements.

With the great answers given by Christian Hupfer in Create a fake label ref using list and the answer given by David Carlisle in Change the use of label ref by data save in an array (list) I managed to create a more solid code than the original version, now using the `l3prop`[?] and `l3seq`[?] modules together with the `hyperref`[?] and `enumitem`[?] packages, which did the job, but with some limitations.

As time went by I took these limitations as a personal challenge which I called *"reinventing the wheel"*, since there were packages and classes that did more or less what I was looking for, but did not fit my simple requirements. This *"reinventing the wheel"* finally ended up becoming enumext.

Why list environments?

The answer is simple, first I love the beauty of its syntax and many of what I had already written used the `enumerate` environment or lists created using the `enumitem` package. In my mind I thought: how complicated could it be to write a package that looked like `enumitem`? It seemed simple enough, of course I didn't have in mind the mess I was getting into working with `list` environments, `minipage` and adding support for the `multicol` and `hyperref` packages.
Of course, seeing the final result of the experiment *"reinventing the wheel"* I am quite satisfied.

Why not random questions and other utilities

The *"random"* type questions I love and hate them at the same time, although they simplify a lot the work when creating a multiple choice test, but you lose the beauty of typesetting a document with LaTeX, that is to say the output does not always look as nice as it should, even if they are only alternatives these must follow a certain order when presented either numerical or presentation, that said handling that using *nested lists* is quite complicated so I do not classify to be implemented.

Why has it taken so long?

One of the setbacks, beyond my laziness, was including compatibility with *tagged* PDF. To be honest, it's something I never considered at any point, but I firmly believe that being able to create *accessible documents* provides a great opportunity in the world of mathematics education. From my perspective as a *high school* teacher, beyond theorems and deep mathematics, the use of exercise lists is one of the most common things. Being able to open the way to work in parallel with those who have different abilities is really important and I regret not having looked into this in the past. I hope that enumext serves this purpose and inspires more users and authors to follow this path.

13 Implementation

The most recent publicly released version of enumext is available at CTAN: https://www.ctan.org/pkg/enumext. While general feedback via email is welcomed, specific bugs or feature requests should be reported through the issue tracker: https://github.com/pablgonz/enumext/issues.

The documentation presented here is far from professional, it contains a lot of obvious information that to the eye of a TEXpert are superfluous, but, after so many years developing this project is the only way to remember what does what.

13.1 General conventions

Variables containing i, ii, iii and iv are associated by level with the enumext environment, variables containing v are associated with the keyans environment, variables containing vi are associated with the keyanspic environment, variables containing vii are associated with the enumext* environment and variables containing viii are associated with the keyans* environment.

To simplify writing and documentation some variables and functions that are common to the different levels of the environments are described using a capital "X".

The temporary function __enumext_tmp:n is used in different parts of the package code for variable creation or execution of other functions that are grouped into this one.

All variables and functions defined in this package are private and are NOT intended to work or be used by another package or module.

13.2 Initial set up

Start the DocStrip guards.

```
⟨*package⟩
```

Identify the internal prefix (LaTeX3 DocStrip convention) for l3doc class.

```
⟨@@=enumext⟩
```

13.3 Declaration of the package

First we will make sure we have a minimum (super updated) version of LaTeX to work correctly.

```
\NeedsTeXFormat{LaTeX2e}[2024-06-01]
```

Now declare the enumext package.

```
\ProvidesExplPackage {enumext} {2024-10-13} {1.0} {Enumerate exercise sheets}
```

Finally check if the multicol and scontents packages are loaded, if not we load it.

```
\hook_gput_code:nnn {begindocument} {enumext}
  {
    \IfPackageLoadedTF { multicol }
      {
        \msg_info:nnn { enumext } { package-load } { multicol }
      }
      {
        \msg_info:nnn { enumext } { package-not-load } { multicol }
        \RequirePackage{multicol}[2024-05-23]
      }
    \IfPackageLoadedTF { scontents }
      {
        \msg_info:nnn { enumext } { package-load } { scontents }
      }
      {
        \msg_info:nnn { enumext } { package-not-load } { scontents }
        \RequirePackage{scontents}
      }
  }
```

13.4 Definition of variables

Variables that do not appear in this section are created by means of \keys_define:nn or some function described below.

\l__enumext_level_int
\l__enumext_level_h_int
\l__enumext_anskey_level_int
\l__enumext_keyans_level_int
\l__enumext_keyans_level_h_int
\l__enumext_keyans_pic_level_int

Integer variables will control the nesting levels of the environments and \anskey command.

```
\int_new:N  \l__enumext_level_int
\int_new:N  \l__enumext_level_h_int
\int_new:N  \l__enumext_anskey_level_int
\int_new:N  \l__enumext_keyans_level_int
\int_new:N  \l__enumext_keyans_level_h_int
\int_new:N  \l__enumext_keyans_pic_level_int
```

(*End of definition for* \l__enumext_level_int *and others.*)

\l__enumext_starred_bool
\g__enumext_starred_bool
\l__enumext_starred_first_bool
\l__enumext_standar_bool
\g__enumext_standar_bool
\l__enumext_standar_first_bool
\l__enumext_anskey_env_bool
\l__enumext_keyans_env_bool
\g__enumext_start_line_tl
\g__enumext_envir_name_tl
\l__enumext_envir_name_tl

Internal variables used by functions `\__enumext_is_not_nested:`, `\__enumext_is_on_first_level:` and `\__enumext_keyans_name_and_start:` (§??).

```
\bool_new:N \l__enumext_starred_bool
\bool_new:N \g__enumext_starred_bool
\bool_new:N \l__enumext_starred_first_bool
\bool_new:N \l__enumext_standar_bool
\bool_new:N \g__enumext_standar_bool
\bool_new:N \l__enumext_standar_first_bool
\bool_new:N \l__enumext_anskey_env_bool
\bool_new:N \l__enumext_keyans_env_bool
\tl_new:N   \g__enumext_start_line_tl
\tl_new:N   \g__enumext_envir_name_tl
\tl_new:N   \l__enumext_envir_name_tl
```

(*End of definition for* `\l__enumext_starred_bool` *and others.*)

\l__enumext_counter_i_tl
\l__enumext_counter_ii_tl
\l__enumext_counter_iii_tl
\l__enumext_counter_iv_tl
\l__enumext_counter_v_tl
\l__enumext_counter_vi_tl
\l__enumext_counter_vii_tl
\l__enumext_counter_viii_tl

Variables to store the *"name of the counters"* `enumXi`, `enumXii`, `enumXiii` and `enumXiv` for `enumext` environment, `enumXv` for `keyans` environment and `enumXvi` for the `keyanspic` environment. The counters `enumXvii` and `enumXviii` are used by `enumext*` and `keyans*` environments.

The initial values of these variables are set by the function `\__enumext_define_counters:Nn` (§??) and then modified by the function `\__enumext_label_style:Nnn` used by `label` key (§??).

```
\cs_set_protected:Npn \__enumext_tmp:n #1
  {
    \tl_new:c { l__enumext_counter_#1_tl }
  }
\clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }
```

(*End of definition for* `\l__enumext_counter_i_tl` *and others.*)

\c__enumext_counter_style_tl
\l__enumext_ref_key_arg_tl
\l__enumext_ref_the_count_tl
\l__enumext_the_counter_X_tl
\l__enumext_renew_the_count_X_tl

Internal variables used by `ref` key (§??).

```
\tl_const:Nn \c__enumext_counter_style_tl
  { { arabic } { roman } { Roman } { alph } { Alph } }
\tl_new:N \l__enumext_ref_key_arg_tl

```

(*End of definition for* \l__enumext_wrap_label_X_bool *and others.*)

\l__enumext_store_active_bool
\l__enumext_store_name_tl
\g__enumext_store_name_tl
\l__enumext_store_anskey_arg_tl
\l__enumext_store_anskey_env_tl
\l__enumext_store_anskey_opt_tl
\l__enumext_store_current_label_tl
\l__enumext_store_current_opt_arg_tl
\l__enumext_store_current_label_tmp_tl

The variable `\l__enumext_store_active_bool` setting by `save-ans` key (§??) activates all the mechanism related to `\anskey`, `anskey*`, `keyans`, `keyans*` and `keyanspic` environments.

The variable `\l__enumext_store_name_tl` saves the {⟨*store name*⟩} set by the `save-ans` key of the *sequence* and *prop list* in which we will store, the variable `\g__enumext_store_name_tl` it's just a global copy of {⟨*store name*⟩} used by different functions.

The variable `\l__enumext_store_anskey_arg_tl` save the *argument* of `\anskey` (§??) and the variables `\l__enumext_store_anskey_env_tl` and `\l__enumext_store_anskey_opt_tl` save the ⟨*body*⟩ and the ⟨*keys*⟩ of the environment `anskey*` (§??).

The variables `\l__enumext_store_current_label_tl` and `\l__enumext_store_current_opt_arg_tl` save the *current label* and *optional argument* of `\item*` (§??) and `\anspic*` (§??) for the `keyans`, `keyans*` and `keyanspic` environments.

The variable `\l__enumext_store_current_label_tmp_tl` is a temporary variable used by `keyans`, `keyans*` and `keyanspic` at various points.

```

  }
```

(*End of definition for* `\__enumext_after_env:nn` *and* `\__enumext_before_env:nn`.)

`\__enumext_level:` Function for check current level in `enumext`.

```
\cs_new:Nn \__enumext_level:
  {
    \int_to_roman:n { \l__enumext_level_int }
  }
```

(*End of definition for* `\__enumext_level:`.)

`\__enumext_if_is_int:nT` `\__enumext_if_is_int:nF` `\__enumext_if_is_int:nTF` A conditional function to know if the variable we are passing is an integer used by `start` and `widest` keys. This function is taken directly from the answer given by Henri Menke in How to test if an expl3 function argument is an integer expression?.

```
\prg_new_protected_conditional:Npnn \__enumext_if_is_int:n #1 { T, F, TF }
  {
    \regex_match:nnTF { ^[\+\-]?[\d]+$ } {#1} % $
      { \prg_return_true: }
      { \prg_return_false: }
  }
```

(*End of definition for* `\__enumext_if_is_int:nT`, `\__enumext_if_is_int:nF`, *and* `\__enumext_if_is_int:nTF`.)

`\__enumext_regex_counter_style:` The internal function `\__enumext_regex_counter_style:` replace the '`*`' with the actual counter of the running level and is used by the `ref` key. It loops through the defined counter styles in `\c__enumext_counter_style_tl` and replace '`*`' by real command, for example, looking for `\arabic*` and replacing that by `\arabic{`⟨*counter*⟩`}` defined on the current level.

```
\cs_new_protected:Nn \__enumext_regex_counter_style:
  {
    \tl_map_inline:Nn \c__enumext_counter_style_tl
      {
        \regex_replace_once:nnN { \c{##1}\* }
          { \c{##1}\cB{\u{l__enumext_ref_the_count_tl}\cE} } \l__enumext_ref_key_arg_tl
      }
  }
```

(*End of definition for* `\__enumext_regex_counter_style:`.)

`\__enumext_show_length:nnn` Internal function used by `show-length` key to show *"all lengths"* calculated and use in `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```
\cs_new:Npn \__enumext_show_length:nnn #1 #2 #3
  {
    * ~ #2
    \prg_replicate:nn { 14 - \str_count:n {#2} } { ~ }
      = ~ \use:c { #1_use:c } { l__enumext_#2_#3_#1 } \\
  }
```

(*End of definition for* `\__enumext_show_length:nnn`.)

`\__enumext_unskip_unkern:` The function `\__enumext_unskip_unkern:` will remove the last ⟨*skip*⟩ or ⟨*kern*⟩ at execution time using the values `11` and `12` of `\lastnodetype` to apply `\unskip` or `\unkern` according to the case.

```
\cs_new_protected:Nn \__enumext_unskip_unkern:
  {
    \int_case:nnT { \lastnodetype }
      {
        { 11 }{ \unskip }
        { 12 }{ \unkern }
      }
  }
```

(*End of definition for* `\__enumext_unskip_unkern:`.)

13.5.1 Utilities for environments and levels

`\__enumext_is_not_nested:` `\__enumext_is_on_first_level:` The function `\__enumext_is_not_nested:` set the variables `\g__enumext_standar_bool` and `\g__enumext_starred_bool` to *"true"* only if the environments `enumext` and `enumext*` are NOT nested in each other and save the environment name in `\l__enumext_envir_name_tl`.

```
\cs_new_protected:Nn \__enumext_is_not_nested:
  {
    \str_case:en { \@currenvir }
      {
        {enumext}
          {
            \tl_set:Nn \l__enumext_envir_name_tl { enumext }
            \bool_lazy_and:nnT
              { \bool_not_p:n { \g__enumext_standar_bool } }
              { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
              {
                \bool_gset_true:N \g__enumext_standar_bool
              }
          }
        {enumext*}
          {
            \tl_set:Nn \l__enumext_envir_name_tl { enumext* }
            \bool_lazy_and:nnT
              { \bool_not_p:n { \g__enumext_starred_bool } }
              { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
              {
                \bool_gset_true:N \g__enumext_starred_bool
              }
          }
      }
  }
```

The function `\__enumext_is_on_first_level:` will set the variables `\l__enumext_standar_first_bool` (§??), `\l__enumext_starred_first_bool` (§??) and `\l__enumext_anskey_env_bool` (§??) to *"true"* only if the environment is not nested and we are in the *"first level"* of it . We will also save the *start line number* of each environment in the variable `\g__enumext_start_line_tl` and the *name* of each environment in the variable `\g__enumext_envir_name_tl` to use in messages related to the `check-ans` key and `.log` file.

```
\cs_new_protected:Nn \__enumext_is_on_first_level:
  {
    \bool_lazy_all:nT
      {
        { \bool_if_p:N \g__enumext_standar_bool }
        { \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
        { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
      }
      {
```

```
        \bool_set_true:N \l__enumext_standar_first_bool
        \bool_set_true:N \l__enumext_anskey_env_bool
        \tl_gset:Nn \g__enumext_envir_name_tl { enumext }
        \tl_gset:Ne \g__enumext_start_line_tl
          {
            on ~ line ~ \exp_not:V \inputlineno
          }
      }
    \bool_lazy_all:nT
      {
        { \bool_if_p:N \g__enumext_starred_bool }
        { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
        { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
      }
      {
        \bool_set_true:N \l__enumext_starred_first_bool
        \bool_set_true:N \l__enumext_anskey_env_bool
        \tl_gset:Nn \g__enumext_envir_name_tl { enumext* }
        \tl_gset:Ne \g__enumext_start_line_tl
          {
            on ~ line ~ \exp_not:V \inputlineno
          }
      }
  }
```

(*End of definition for* `\__enumext_is_not_nested:` *and* `\__enumext_is_on_first_level:`.)

`\__enumext_keyans_name_and_start:`

The function `\__enumext_keyans_name_and_start:` will save the start line number and name of the environments `keyans`, `keyans*` and `keyanspic` in the variables `\l__enumext_check_start_line_env_tl` and `\l__enumext_envir_name_tl` to use in the `\__enumext_check_starred_cmd:n` function.

```
\cs_new_protected:Nn \__enumext_keyans_name_and_start:
  {
    \str_case:en { \@currenvir }
      {
        {keyans}
          {
            \tl_set:Nn \l__enumext_envir_name_tl { keyans }
            \tl_set:Ne \l__enumext_check_start_line_env_tl
              {
                in ~ 'keyans' ~ start ~ on ~ line ~ \exp_not:V \inputlineno
              }
          }
        {keyans*}
          {
            \tl_set:Nn \l__enumext_envir_name_tl { keyans* }
            \tl_set:Ne \l__enumext_check_start_line_env_tl
              {
                in ~ 'keyans*' ~ start ~ on ~ line ~ \exp_not:V \inputlineno
              }
          }
        {keyanspic}
          {
            \tl_set:Nn \l__enumext_envir_name_tl { keyanspic }
            \tl_set:Ne \l__enumext_check_start_line_env_tl
              {
                in ~ 'keyanspic' ~ start ~ on ~ line ~ \exp_not:V \inputlineno
              }
          }
      }
  }
```

(*End of definition for* `\__enumext_keyans_name_and_start:`.)

13.5.2 Utilities for log and terminal

`\__enumext_reset_global_vars:`
`\__enumext_reset_global_int:`
`\__enumext_reset_global_bool:`
`\__enumext_reset_global_tl:`

The function `\__enumext_reset_global_vars:` will be passed to the function `\__enumext_execute_after_env:` and will return the global variables to their default values after being used.

```
\cs_new_protected:Nn \__enumext_reset_global_vars:
  {
    \__enumext_reset_global_int:
    \__enumext_reset_global_bool:
    \__enumext_reset_global_tl:
```

```
  }
\cs_new_protected:Nn \__enumext_reset_global_int:
  {
    \int_gzero:N \g__enumext_item_number_int
    \int_gzero:N \g__enumext_item_anskey_int
    \int_gzero:N \g__enumext_item_answer_diff_int
  }
\cs_new_protected:Nn \__enumext_reset_global_bool:
  {
    \bool_gset_false:N \g__enumext_check_ans_key_bool
    \bool_gset_false:N \g__enumext_standar_bool
    \bool_gset_false:N \g__enumext_starred_bool
  }
\cs_new_protected:Nn \__enumext_reset_global_tl:
  {
    \tl_gclear:N \g__enumext_store_name_tl
    \tl_gclear:N \g__enumext_start_line_tl
    \tl_gclear:N \g__enumext_envir_name_tl
  }
```

(*End of definition for* `\__enumext_reset_global_vars:` *and others.*)

`\__enumext_log_global_vars:`
`\__enumext_log_answer_vars:`

The function `\__enumext_log_global_vars:` will be passed to the function `\__enumext_execute_after_env:` and write to the `.log` file the number of elements saved in the *prop list* and *sequence* created by the `save-ans` key along with the value of the integer variable created for the `resume` key.

```
\cs_new_protected:Nn \__enumext_log_global_vars:
  {
    \msg_log:nneeee { enumext } { prop-seq-int-hook }
      { \g__enumext_store_name_tl }
      { \prop_count:c { g__enumext_ \g__enumext_store_name_tl _prop } }
      { \seq_count:c { g__enumext_ \g__enumext_store_name_tl _seq } }
      { \int_use:c { g__enumext_resume_ \g__enumext_store_name_tl _int } }
  }
```

The function `\__enumext_log_answer_vars:` will be passed to the function `\__enumext_execute_after_env:` and write to the `.log` file the number of items and answers along with the difference between them.

```
\cs_new_protected:Nn \__enumext_log_answer_vars:
  {
    \msg_log:nneee { enumext } { item-answer-hook }
      { \int_use:N \g__enumext_item_number_int }
      { \int_use:N \g__enumext_item_anskey_int }
      { \int_eval:n { \g__enumext_item_number_int - \g__enumext_item_anskey_int} }
  }
```

(*End of definition for* `\__enumext_log_global_vars:` *and* `\__enumext_log_answer_vars:`.)

13.6 Copying `list` and `minipage` environments

The `list` environment provided by LaTeX has the following plain form:

```
\list{⟨arg one⟩}{⟨arg two⟩}
  \item[⟨opt⟩]
\endlist
```

And `minipage` environment provided by LaTeX has the following (simplified) plain form:

```
\minipage[⟨pos⟩][⟨height⟩][⟨inner-pos⟩]{⟨width⟩}
  ⟨internal implement⟩
\endminipage
```

As a precaution we copy them using `\__enumext_at_begin_document:n` in case any package redefines the `list` environment or a related command.

For compatibility with *tagged* PDF we should use `\NewCommandCopy` and not `\cs_new_eq:NN` for `\item`. When *tagged* PDF is active `\item` is redefined using `ltcmd` (see `latex-lab-block`[?]).

`\__enumext_start_list:nn`
`\__enumext_stop_list:`
`\__enumext_item_std:w`
`\__enumext_minipage:w`
`\__enumext_endminipage:`

The functions `\__enumext_start_list:nn` and `\__enumext_stop_list:` correspond to copies of `\list` and `\endlist` from plain definition of `list` environment, the function `\__enumext_item_std:w` is a copy of the `\item` command.

```
\__enumext_at_begin_document:n
  {
    \cs_new_eq:NN   \__enumext_start_list:nn \list
    \cs_new_eq:NN   \__enumext_stop_list: \endlist
```

```
    \NewCommandCopy \__enumext_item_std:w \item
  }
```

The functions `\__enumext_minipage:w` and `\__enumext_endminipage:` correspond to copies of `\minipage` and `\endminipage` from plain definition of `minipage` environment.

```
\__enumext_at_begin_document:n
  {
    \cs_new_eq:NN \__enumext_minipage:w \minipage
    \cs_new_eq:NN \__enumext_endminipage: \endminipage
  }
```

(*End of definition for* `\__enumext_start_list:nn` *and others.*)

13.7 Compatibility with hyperref and footnotehyper

`\__enumext_after_hyperref:`
`\__enumext_hypertarget:nn`
`\__enumext_phantomsection:`

First we define the necessary rules using *"hooks"* to determine if the `hyperref` package is loaded.

```
\hook_gput_code:nnn { begindocument } { enumext } { \__enumext_after_hyperref: }
\hook_gset_rule:nnnn { begindocument } { enumext } { after } { hyperref }
```

The function `\__enumext_after_hyperref:` sets the state of the boolean variable `\l__enumext_hyperref_bool` to "true" if the package is loaded. At this point we will use the public macro `\IfHyperBoolean` to determine if the `hyperfootnotes=true` key is present, if so, we set the state of the boolean variable `\__enumext_footnotes_key_bool` to "true".

```
\cs_new_protected:Nn \__enumext_after_hyperref:
  {
    \IfPackageLoadedTF { hyperref }
      {
        \msg_info:nnn { enumext } { package-load } { hyperref }
        \bool_set_true:N \l__enumext_hyperref_bool
        \IfHyperBoolean{hyperfootnotes}
          {
            \bool_set_true:N \l__enumext_footnotes_key_bool
          }
          {  }
      }
      {  }
```

If the state of the variable `\l__enumext_footnotes_key_bool` is true we will check if the package `footnotehyper` is loaded, in case it is not present, we will set the value of `\l__enumext_footnotes_key_bool` to false and we will redefine `\footnote`.

```
    \bool_if:NT \l__enumext_footnotes_key_bool
      {
        \IfPackageLoadedTF { footnotehyper }
          {
            \msg_info:nnn { enumext } { package-load } { footnotehyper }
          }
          {
            \bool_set_false:N \l__enumext_footnotes_key_bool
          }
      }
```

The functions `\__enumext_hypertarget:nn` and `\__enumext_phantomsection:` correspond to the internal copies of `\hypertarget` and `\phantomsection`. If the boolean variable `\l__enumext_hyperref_bool` is false the functions `\__enumext_hypertarget:nn` and `\__enumext_phantomsection:` will be disabled.

```
    \bool_if:NTF \l__enumext_hyperref_bool
      {
        \cs_new_eq:NN \__enumext_hypertarget:nn \hypertarget
        \cs_new_eq:NN \__enumext_phantomsection: \phantomsection
      }
      {
        \cs_new_eq:NN \__enumext_hypertarget:nn \use_none:nn
        \cs_new_eq:NN \__enumext_phantomsection: \prg_do_nothing:
      }
  }
```

(*End of definition for* `\__enumext_after_hyperref:` , `\__enumext_hypertarget:nn` , *and* `\__enumext_phantomsection:` .)

`\__enumext_newlabel:nn`

The function `\__enumext_newlabel:nn` write the information to the `.aux` file when using the `save-ref` key. The arguments taken by the function are:

`#1:` `\l__enumext_newlabel_arg_one_tl`
`#2:` `\l__enumext_newlabel_arg_two_tl`

The trick here is to manage the number of arguments passed to \newlabel{#1}{#2} according to the presence of the hyperref package.

```
\cs_new_protected:Npn \__enumext_newlabel:nn #1 #2
  {
    \protected@write \@auxout { }
      {
        \token_to_str:N \newlabel {#1}
          {
            {#2}
            \bool_if:NT \l__enumext_hyperref_bool
              { { \thepage } {#2} {#1} }
            { }
          }
      }
    \__enumext_hypertarget:nn {#1} { }
    \__enumext_phantomsection:
  }
```

(*End of definition for* __enumext_newlabel:nn.)

13.8 Internal redefining \footnote command

To keep the correct numbering of \footnote and to make it work correctly in the enumext* and keyans* environments and mini-env key it is necessary to redefine the \footnote command. This implementation is adapted from the answer given by Clea F. Rees (@cfr) in footnotes in boxes compatible with hyperref.

__enumext_footnotetext:nn
__enumext_renew_footnote:
__enumext_print_footnote:
__enumext_renew_footnote_mini:
__enumext_print_footnote_mini:

Redefinition of the \footnote command using \footnotetext and \footnotemark for the mini-env key in the enumext and keyans environments.

```
\cs_new_protected:Nn \__enumext_footnotetext:nn
  {
    \footnotetext[#1]{#2}
  }
\cs_new_protected:Nn \__enumext_renew_footnote:
  {
    \RenewDocumentCommand \footnote { o +m }
      {
        \tl_if_novalue:nTF {##1}
          {
            \stepcounter{footnote}
            \int_gset_eq:Nc \g__enumext_footnote_standar_int { c@footnote }
          }
          {
            \int_gset:Nn \g__enumext_footnote_standar_int { ##1 }
          }
        \footnotemark [ \g__enumext_footnote_standar_int ]
        \seq_gput_right:Nn \g__enumext_footnote_standar_arg_seq { ##2 }
        \seq_gput_right:NV
          \g__enumext_footnote_standar_int_seq \g__enumext_footnote_standar_int
      }
  }
\cs_new_protected:Nn \__enumext_print_footnote:
  {
    \seq_if_empty:NF \g__enumext_footnote_standar_int_seq
      {
        \seq_map_pairwise_function:NNN
          \g__enumext_footnote_standar_int_seq
          \g__enumext_footnote_standar_arg_seq
          \__enumext_footnotetext:nn
      }
    \seq_gclear:N \g__enumext_footnote_standar_arg_seq
    \seq_gclear:N \g__enumext_footnote_standar_int_seq
  }
```

The enumext* and keyans* environments are implemented using minipage so we must also redefine \footnote to keep these numbering as if it were part of the document.

```
\cs_new_protected:Nn \__enumext_renew_footnote_mini:
  {
    \RenewDocumentCommand \footnote { o +m }
      {
        \tl_if_novalue:nTF {##1}
          {
```

```
            \stepcounter{footnote}
            \int_gset_eq:Nc \g__enumext_footnote_starred_int { c@footnote }
          }
          {
            \int_gset:Nn \g__enumext_footnote_starred_int { ##1 }
          }
        \footnotemark [ \g__enumext_footnote_starred_int ]
        \seq_gput_right:Nn \g__enumext_footnote_starred_arg_seq { ##2 }
        \seq_gput_right:NV
          \g__enumext_footnote_starred_int_seq \g__enumext_footnote_starred_int
      }
  }
\cs_new_protected:Nn \__enumext_print_footnote_mini:
  {
    \seq_if_empty:NF \g__enumext_footnote_starred_int_seq
      {
        \seq_map_pairwise_function:NNN
          \g__enumext_footnote_starred_int_seq
          \g__enumext_footnote_starred_arg_seq
          \__enumext_footnotetext:nn
      }
    \seq_gclear:N \g__enumext_footnote_starred_arg_seq
    \seq_gclear:N \g__enumext_footnote_starred_int_seq
  }
```

(*End of definition for* `\__enumext_footnotetext:nn` *and others.*)

`\__enumext_renew_footnote_standar:`
`\__enumext_print_footnote_standar:`
`\__enumext_renew_footnote_starred:`
`\__enumext_print_footnote_starred:`

We encapsulate the redefinition of `\footnote` to pass it to internal `__enumext_mini_page` environment used by the `mini-env` key in the `enumext` and `keyans` environments. We will run the redefinition when *tagged* PDF is active or when the `footnotehyper` package is not loaded.

```
\cs_new_protected:Nn \__enumext_renew_footnote_standar:
  {
    \bool_if:NT \g__enumext_standar_bool
      {
        \IfDocumentMetadataTF
          {
            \__enumext_renew_footnote:
          }
          {
            \bool_if:NF \l__enumext_footnotes_key_bool
              {
                \__enumext_renew_footnote:
              }
          }
      }
  }
\cs_new_protected:Nn \__enumext_print_footnote_standar:
  {
    \bool_if:NT \g__enumext_standar_bool
      {
        \IfDocumentMetadataTF
          {
            \__enumext_print_footnote:
          }
          {
            \bool_if:NF \l__enumext_footnotes_key_bool
              {
                \__enumext_print_footnote:
              }
          }
      }
  }
```

We encapsulate the redefinition of `\footnote` to pass it to the `enumext*` and `keyans*` environments. We will run the redefinition when *tagged* PDF is active or when the `footnotehyper` package is not loaded.

```
\cs_new_protected:Nn \__enumext_renew_footnote_starred:
  {
    \IfDocumentMetadataTF
      {
        \__enumext_renew_footnote_mini:
      }
```

```
      {
        \bool_if:NF \l__enumext_footnotes_key_bool
          {
            \__enumext_renew_footnote_mini:
          }
      }
  }
\cs_new_protected:Nn \__enumext_print_footnote_starred:
  {
    \IfDocumentMetadataTF
      {
        \__enumext_print_footnote_mini:
      }
      {
        \bool_if:NF \l__enumext_footnotes_key_bool
          {
            \__enumext_print_footnote_mini:
          }
      }
  }
```

In enumext* and keyans* environments we need to use *"hooks"* to print \footnote with support for *tagged* PDF.

```
\__enumext_after_env:nn { enumext* }
  {
    \__enumext_print_footnote_starred:
  }
\__enumext_after_env:nn { keyans* }
  {
    \__enumext_print_footnote_starred:
  }
```

(*End of definition for* `\__enumext_renew_footnote_standar:` *and others.*)

13.9 The internal minipage environment

`\__enumext_internal_mini_page:`
`__enumext_mini_env*`

The function `\__enumext_internal_mini_page:` creates a internal `__enumext_mini_page` environment (*custom version* of minipage) setting the \if@minipage switch to *"false"* to allow spaces at the *"above"* of the environment, plus we will add \skip_vertical:N \c_zero_skip to maintain alignment on *"top"* in the first part and \skip_vertical:N \c_zero_skip in the second part to allow spaces *"below"*. This environment will be used internally by the mini-env key, it is NOT documented in the user interface and is for internal use only. Within this environment we redefine \footnote to make them look the same as if they were elsewhere in the document. This function is passed to the function `\__enumext_safe_exec:` in the enumext environment definition (§??) and `\__enumext_safe_exec_vii:` in the enumext* environment definition (§??)

```
\cs_new_protected:Nn \__enumext_internal_mini_page:
  {
    \int_compare:nNnT { \l__enumext_level_int } = { 0 }
      {
        \DeclareDocumentEnvironment{__enumext_mini_page}{ m }
          {
            \__enumext_renew_footnote_standar:
            \__enumext_minipage:w [ t ] { ##1 }
              \legacy_if_gset_false:n { @minipage }
              \skip_vertical:N \c_zero_skip
          }
          {
              \skip_vertical:N \c_zero_skip
            \__enumext_endminipage:
            \__enumext_print_footnote_standar:
          }
      }
  }
```

(*End of definition for* `\__enumext_internal_mini_page:` *and* `__enumext_mini_env*`.)

13.10 Definition of public dimension

The package enumext only provides a single public dimension \itemwidth and is intended for user convenience only and is not for internal use as such. This dimension is set in all environments and is only used by the wrap-ans key at its default value.

```
\dim_zero_new:N \itemwidth
```

13.11 Definition of counters

__enumext_define_counters:Nn
enumXi
enumXii
enumXiii
enumXiv
enumXv
enumXvi
enumXvii
enumXviii

To create the necessary *"counters"* we must first make sure that they are not already defined by the user or a package such as enumitem, otherwise a error will be returned and the package loading will be aborted. The arguments taken by the function are:

#1 : A token list \l__enumext_counter_X_tl for *"store"* the counter's name.
#2 : The counter's name.

```
\cs_new_protected:Npn \__enumext_define_counters:Nn #1 #2
  {
    \cs_if_exist:cTF { c@ #2 }
      { \msg_fatal:nnn { enumext } { counters }{ #2 } }
      {
        \tl_set:Nn #1 { #2 }
        \newcounter { #2 }
      }
  }
```

The counters created here are enumXi, enumXii, enumXiii and enumXiv for enumext environment, enumXv for keyans environment, enumXvi for keyanspic environment, enumXvii for enumext* and enumXviii for the keyans* environments.

```
\__enumext_define_counters:Nn \l__enumext_counter_i_tl    { enumXi    }
\__enumext_define_counters:Nn \l__enumext_counter_ii_tl   { enumXii   }
\__enumext_define_counters:Nn \l__enumext_counter_iii_tl  { enumXiii  }
\__enumext_define_counters:Nn \l__enumext_counter_iv_tl   { enumXiv   }
\__enumext_define_counters:Nn \l__enumext_counter_v_tl    { enumXv    }
\__enumext_define_counters:Nn \l__enumext_counter_vi_tl   { enumXvi   }
\__enumext_define_counters:Nn \l__enumext_counter_vii_tl  { enumXvii  }
\__enumext_define_counters:Nn \l__enumext_counter_viii_tl { enumXviii }
```

(*End of definition for* __enumext_define_counters:Nn *and others.*)

13.12 Definition of labels

This part of the code is inspired by the enumitem package. The idea is to be able to access the counters using \arabic*, \Alph*, \alph*, \Roman* and \roman* to use them in the label key.

__enumext_register_counter_style:Nn

These ⟨*counters*⟩ will be used as default ⟨*labels*⟩ if the label key is not used for the different levels of the enumext, enumext*, keyans and keyans* environments, so it is necessary to get a default value for labelwidth from these ⟨*labels*⟩ at the same time.

```
\cs_new_protected:Npn \__enumext_register_counter_style:Nn #1 #2
  {
    \tl_const:cn { c__enumext_widest_ \cs_to_str:N #1 _tl } {#2}
    \tl_gput_right:Nn \g__enumext_counter_styles_tl {#1}
  }
\__enumext_register_counter_style:Nn \arabic { 0 }
\__enumext_register_counter_style:Nn \Alph   { M }
\__enumext_register_counter_style:Nn \alph   { m }
\__enumext_register_counter_style:Nn \Roman  { VIII }
\__enumext_register_counter_style:Nn \roman  { viii }
```

(*End of definition for* __enumext_register_counter_style:Nn.)

__enumext_label_width_by_box:Nn
__enumext_label_width_by_box:cv

The function __enumext_label_width_by_box:Nn set the default \labelwidth using a box width if no labelwidth key is passed.

```
\cs_new_protected:Npn \__enumext_label_width_by_box:Nn #1 #2
  {
    \hbox_set:Nn \l__enumext_label_width_by_box {#2}
    \dim_set:Nn #1 { \box_wd:N \l__enumext_label_width_by_box }
  }
\cs_generate_variant:Nn \__enumext_label_width_by_box:Nn { cv }
```

(*End of definition for* __enumext_label_width_by_box:Nn.)

__enumext_label_style:Nnn
__enumext_label_style:cvn

The function __enumext_label_style:Nnn is used by the label key to creates the variables containing the ⟨*label style*⟩ and will allow to use \arabic*, \Alph*, \alph*, \Roman* and \roman* as arguments. It loops through the defined counter styles in \g__enumext_counter_styles_tl (\arabic, \alph, \Alph, \roman, and \Roman) for example, looking for \roman* and replacing that by \roman{⟨*counter*⟩}, and doing the same for the \g__enumext_widest_label_tl to keep both in sync.

```
\cs_new_protected:Npn \__enumext_label_style:Nnn #1 #2 #3
  {
    \tl_clear_new:N #1
```

```
    \tl_put_right:Ne #1 { \tl_trim_spaces:n {#3} }
    \tl_gset_eq:NN \g__enumext_widest_label_tl #1
    \tl_map_inline:Nn \g__enumext_counter_styles_tl
      {
        \tl_replace_all:Nne #1 { ##1* } { \exp_not:N ##1 {#2} }
        \tl_greplace_all:Nne \g__enumext_widest_label_tl { ##1* }
          { \tl_use:c { c__enumext_widest_ \cs_to_str:N ##1 _tl } }
      }
    \__enumext_label_width_by_box:Nn \l__enumext_current_widest_dim
      { \tl_use:N \g__enumext_widest_label_tl }
    \tl_set_eq:cN { the #2 } #1
  }
\cs_generate_variant:Nn \__enumext_label_style:Nnn { cvn }
```

(*End of definition for* `\__enumext_label_style:Nnn`.)

13.13 Setting keys associated with label

When *tagged* PDF is active `\makelabel` is redefined using `\makebox` to work correctly (§??). From the user side it is convenient to have a key that allows using this redefinition with `\makebox` without having `\IfDocumentMetadataTF` active.

mode-box

We define the key `mode-box` only for the *"first level"* of `enumext` and `enumext*` environments.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
  {
    \keys_define:nn { enumext /  #1 }
      {
        mode-box .bool_set:N = \l__enumext_mode_box_bool,
        mode-box .initial:n  = false,
        mode-box .value_forbidden:n = true,
      }
  }
\clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }
```

(*End of definition for* `mode-box`.)

font
labelsep
labelwidth
wrap-label
wrap-label*

Definition of keys `font`, `labelsep`, `labelwidth`, `wrap-label` and `wrap-label*` keys for `enumext` and `keyans` environments.

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
  {
    \keys_define:nn { enumext / #1 }
      {
        font        .tl_set:c   = { l__enumext_label_font_style_#2_tl },
        font        .value_required:n = true,
        labelsep    .dim_set:c  = { l__enumext_labelsep_#2_dim },
        labelsep    .initial:n  = {0.3333em},
        labelsep    .value_required:n = true,
        labelwidth  .dim_set:c  = { l__enumext_labelwidth_#2_dim },
        labelwidth  .value_required:n = true,
        wrap-label  .cs_set_protected:cp = { __enumext_wrapper_label_#2:n } ##1,
        wrap-label  .initial:n  = {##1},
        wrap-label  .value_required:n = true,
        wrap-label* .code:n = {
                                \bool_set_true:c { l__enumext_wrap_label_opt_#2_bool }
                                \keys_set:nn { enumext / #1 } { wrap-label = {##1} }
                              },
        wrap-label* .value_required:n = true,
      }
  }
\clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(*End of definition for* `font` *and others.*)

align

The `align` key is implemented differently for *"starred"* and *"non starred"* environments. For compatibility with *tagged* PDF we must set `\l__enumext_align_label_pos_X_str`.

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
  {
    \keys_define:nn { enumext / #1 }
      {
        align .choice:,
        align / left    .code:n =
                          {
```

```
                          \tl_clear:c { l__enumext_label_fill_left_#2_tl  }
                          \tl_set:cn  { l__enumext_label_fill_right_#2_tl } { \hfill }
                          \str_set:cn { l__enumext_align_label_pos_#2_str } { l }
                        },
      align / right   .code:n =
                        {
                          \tl_set:cn  { l__enumext_label_fill_left_#2_tl  } { \hfill }
                          \tl_clear:c { l__enumext_label_fill_right_#2_tl }
                          \str_set:cn { l__enumext_align_label_pos_#2_str } { r }
                        },
      align / center  .code:n =
                        {
                          \tl_set:cn { l__enumext_label_fill_left_#2_tl  } { \hfill }
                          \tl_set:cn { l__enumext_label_fill_right_#2_tl } { \hfill }
                          \str_set:cn { l__enumext_align_label_pos_#2_str } { c }
                        },
      align / unknown .code:n =
                          \msg_error:nneee { enumext } { unknown-choice }
                            { align } { left, ~ right, ~  center } { \exp_not:n {##1} },
      align .initial:n  = left,
      align .value_required:n  = true,
    }
  }
\clist_map_inline:nn
  {
    {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {keyans}{v}
  }
  { \__enumext_tmp:nn #1 }

\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
  {
    \keys_define:nn { enumext / #1 }
      {
        align .choice:,
        align / left    .code:n = \str_set:cn { l__enumext_align_label_#2_str } { l },
        align / right   .code:n = \str_set:cn { l__enumext_align_label_#2_str } { r },
        align / center  .code:n = \str_set:cn { l__enumext_align_label_#2_str } { c },
        align / unknown .code:n =
                          \msg_error:nneee { enumext } { unknown-choice }
                            { align } { left, ~ right, ~  center } { \exp_not:n {##1} },
        align .initial:n = left,
        align .value_required:n = true,
      }
  }
\clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }
```

(*End of definition for* `align`.)

13.14 Setting `label` and `ref` keys

The implementation of the keys `label` and `ref` are part of the core of the package enumext, here the default values for ⟨*label*⟩, the value of the variables `\l__enumext_label_X_tl`, the default values for `\labelwidth` and the *"label and ref"* system.

13.14.1 Define and set `label` and `ref` keys for `enumext` environment

`label`
`ref`
`\l__enumext_label_i_tl`
`\l__enumext_label_ii_tl`
`\l__enumext_label_iii_tl`
`\l__enumext_label_iv_tl`

Here we set the default ⟨*labels*⟩ of the *four levels* of `enumext` environment, along with the default value for `labelwidth` key and `ref` key.

```
\cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
  {
    \keys_define:nn { enumext / #1 }
      {
        label .code:n    = {
                             \__enumext_label_style:cvn { l__enumext_label_#2_tl }
                               { l__enumext_counter_#2_tl } {##1}
                             \dim_set_eq:cN  { l__enumext_labelwidth_#2_dim }
                               \l__enumext_current_widest_dim
                           },
        label .initial:n = #3,
        label .value_required:n = true,
        ref   .code:n    = \__enumext_standar_ref:n {##1},
        ref   .value_required:n = true,
      }
```

```
  }
\__enumext_tmp:nnn { level-1 } {   i } { \arabic*.}
\__enumext_tmp:nnn { level-2 } {  ii } { (\alph*) }
\__enumext_tmp:nnn { level-3 } { iii } { \roman*. }
\__enumext_tmp:nnn { level-4 } {  iv } { \Alph*.  }
```

(*End of definition for* `label` *and others.*)

`\__enumext_standar_ref:n` `\__enumext_standar_ref:`

The `\__enumext_standar_ref:n` first we will pass the key argument to `\l__enumext_ref_key_arg_tl` and we will analyze its state, if it is not *empty* we will make a copy of the current counter in `\l__enumext_ref_the_count_tl` and we will execute the function `\__enumext_regex_counter_style:` which will return the modified `\l__enumext_ref_key_arg_tl` and we make the value of `\l__enumext_ref_the_count_tl` the same as that `\l__enumext_the_counter_X_tl` which contains `\theenumX` and finally we set `\l__enumext_renew_the_count_X_tl` with the renewed command.

```
\cs_new_protected:Npn \__enumext_standar_ref:n #1
  {
    \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
    \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
      {
        \msg_error:nnn { enumext } { key-ref-empty } { enumext }
      }
      {
        \tl_set_eq:Nc
          \l__enumext_ref_the_count_tl { l__enumext_counter_ \__enumext_level: _tl }
        \__enumext_regex_counter_style:
        \tl_set_eq:Nc
          \l__enumext_ref_the_count_tl { l__enumext_the_counter_ \__enumext_level: _tl }
        \tl_put_right:ce { l__enumext_renew_the_count_ \__enumext_level: _tl }
          {
            \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V \l__
          }
      }
  }
```

Finally the function `\__enumext_standar_ref:` will execute the modification for the reference system in the second argument of the environment definition `enumext`.

```
\cs_new_protected:Nn \__enumext_standar_ref:
  {
    \tl_if_empty:cF { l__enumext_renew_the_count_ \__enumext_level: _tl }
      {
        \tl_use:c { l__enumext_renew_the_count_ \__enumext_level: _tl }
      }
  }
```

(*End of definition for* `\__enumext_standar_ref:n` *and* `\__enumext_standar_ref:`.)

13.14.2 Define and set `label` and `ref` keys for `enumext*` and `keyans*` environments

`label` `ref` `\l__enumext_label_vii_tl` `\l__enumext_label_viii_tl`

Here we set the default ⟨*labels*⟩ for `enumext*` and `keyans*` environments, along with the default value for `labelwidth` key and `ref` key.

```
\cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
  {
    \keys_define:nn { enumext / #1 }
      {
        label .code:n    = {
                             \__enumext_label_style:cvn { l__enumext_label_#2_tl }
                               { l__enumext_counter_#2_tl } {##1}
                             \dim_set_eq:cN  { l__enumext_labelwidth_#2_dim }
                               \l__enumext_current_widest_dim
                           },
        label .initial:n = #3,
        label .value_required:n = true,
        ref   .code:n    = \__enumext_starred_ref:n {##1},
        ref   .value_required:n = true,
      }
  }
\__enumext_tmp:nnn { enumext* } {  vii } { \arabic*.}
\__enumext_tmp:nnn { keyans*  } { viii } { \Alph*) }
```

(*End of definition for* `label` *and others.*)

__enumext_starred_ref:n
__enumext_starred_ref:

The implementation of __enumext_starred_ref:n is the same as that used for the environment enumext.

```
\cs_new_protected:Npn \__enumext_starred_ref:n #1
  {
    \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
    \int_compare:nNnT { \l__enumext_level_h_int } = { 1 }
      {
        \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
          {
            \msg_error:nnn { enumext } { key-ref-empty } { enumext* }
          }
          {
            \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_counter_vii_tl
            \__enumext_regex_counter_style:
            \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_vii_tl
            \tl_put_right:Ne \l__enumext_renew_the_count_vii_tl
              {
                \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V
              }
          }
      }
    \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
      {
        \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
          {
            \msg_error:nnn { enumext } { key-ref-empty } { keyans* }
          }
          {
            \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_counter_viii_tl
            \__enumext_regex_counter_style:
            \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_viii_tl
            \tl_put_right:Ne \l__enumext_renew_the_count_viii_tl
              {
                \exp_not:N \renewcommand  { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V
              }
          }
      }
  }
```

Finally the function __enumext_starred_ref: will execute the modification for the reference system in the second argument of the enumext* and keyans* environment definition.

```
\cs_new_protected:Nn \__enumext_starred_ref:
  {
    \int_compare:nNnT { \l__enumext_level_h_int } = { 1 }
      {

      }
  }
```

(*End of definition for* __enumext_starred_ref:n *and* __enumext_starred_ref:.)

13.14.3 Define and set label and ref keys for keyans and keyanspic environments

label
ref
\l__enumext_label_v_tl
\l__enumext_label_vi_tl

Here we set the default ⟨*label*⟩ for keyans and keyanspic environment, along with the default value for labelwidth and ref key. The keyanspic environment use the same ⟨*label*⟩ as the keyans environment.

```
\keys_define:nn { enumext / keyans }
  {
    label .code:n    = {
                          \__enumext_label_style:cvn { l__enumext_label_v_tl }
                            { l__enumext_counter_v_tl } {#1}
                          \dim_set_eq:cN  { l__enumext_labelwidth_v_dim }
                            \l__enumext_current_widest_dim
                          \__enumext_label_style:cvn { l__enumext_label_vi_tl }
```

```
                                { l__enumext_counter_vi_tl } {#1}
                              \dim_set_eq:cN  { l__enumext_labelwidth_v_dim }
                                \l__enumext_current_widest_dim
                            },
    label .initial:n = \Alph*),
    label .value_required:n = true,
    ref   .code:n    = \__enumext_keyans_ref:n {#1},
    ref   .value_required:n = true,
  }
```

(*End of definition for* `label` *and others.*)

`\__enumext_keyans_ref:n`
`\__enumext_keyans_ref:`

The implementation of `\__enumext_keyans_ref:n` is the same as that used for the environment `enumext`.

```
\cs_new_protected:Npn \__enumext_keyans_ref:n #1
  {
    \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
    \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
      {
        \msg_error:nnn { enumext } { key-ref-empty } { keyans }
      }
      {
        \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_counter_v_tl
        \__enumext_regex_counter_style:
        \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_v_tl
        \tl_put_right:Ne \l__enumext_renew_the_count_v_tl
          {
            \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V \l__
          }
      }
  }
```

Finally the function `\__enumext_keyans_ref:` will execute the modification for the reference system in the second argument of the `keyans*` environment definition.

```
\cs_new_protected:Nn \__enumext_keyans_ref:
  {
    \tl_if_empty:NF \l__enumext_renew_the_count_v_tl
      {
        \tl_use:N \l__enumext_renew_the_count_v_tl
      }
  }
```

(*End of definition for* `\__enumext_keyans_ref:n` *and* `\__enumext_keyans_ref:`.)

13.15 Setting `start`, `start*` and `widest` keys

`\__enumext_start_from:NNn`
`\__enumext_start_from:ccn`
`\__enumext_start_from:cce`

The function `\__enumext_start_from:NNn` used by `start` and `start*` keys take three arguments:

`#1:` `\l__enumext_label_X_tl`
`#2:` `\l__enumext_start_X_int`
`#3:` ⟨*integer or string*⟩

The first argument of this function are the *"counter style"* set by `label` key, the second argument is returned by the function, the third argument can be an ⟨*integer*⟩ or ⟨*string*⟩ of the form `\Alph`, `\alph`, `\Roman` or `\roman`. This effectively allows `start=A` or `start=1` to be used.

```
\cs_new_protected:Npn \__enumext_start_from:NNn #1 #2 #3
  {
    \__enumext_if_is_int:nTF { #3 }
      {
        \int_set:Nn #2 {#3}
      }
      {
        \regex_match:nVT { \c{Alph} | \c{alph} } {#1}
          { \int_set:Nn #2 { \int_from_alph:n {#3} } }
        \regex_match:nVT { \c{Roman} | \c{roman} } {#1}
          { \int_set:Nn #2  { \int_from_roman:n {#3} } }
      }
  }
\cs_generate_variant:Nn \__enumext_start_from:NNn { ccn, cce }
```

(*End of definition for* `\__enumext_start_from:NNn`.)

`\__enumext_widest_from:nNNn`
`\__enumext_widest_from:nccn`

The function `\__enumext_widest_from:nNNn` used by the `widest` key take four arguments:

`#1:` The counter associated with the environment level
`#2:` `\l__enumext_label_X_tl`

#3 : \l__enumext_labelwidth_X_dim
#4 : ⟨*integer or string*⟩
The second and third arguments of this function are the values set by label and labelwidth keys, the four argument can be an ⟨*integer*⟩ or ⟨*string*⟩ of the form \Alph, \alph, \Roman or \roman. The value of the four argument is set temporarily for the identified counter in this point (level), then the value is expanded into a *"box"* and the *"width"* of the *"box"* is returned.

```
\cs_new_protected:Npn \__enumext_widest_from:nNNn #1 #2 #3 #4
  {
    \__enumext_if_is_int:nTF {#4}
      {
        \setcounter{enumX#1} { #4 }
      }
      {
        \regex_match:nVT { \c{Alph} | \c{alph} } {#2}
          { \setcounter{enumX#1} { \int_from_alph:n {#4} } }
        \regex_match:nVT { \c{Roman} | \c{roman} } {#2}
          { \setcounter{enumX#1} { \int_from_roman:n {#4} } }
      }
     \__enumext_label_width_by_box:cv
       { l__enumext_labelwidth_#1_dim } { l__enumext_label_#1_tl }
  }
\cs_generate_variant:Nn \__enumext_widest_from:nNNn { nccn }
```

(*End of definition for* __enumext_widest_from:nNNn.)

start
start*
widest

Now define and set start*, start and widest keys for enumext, enumext*, keyans and keyans* environments.

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
  {
    \keys_define:nn { enumext / #1 }
      {
        start* .code:n    = {
                              \__enumext_start_from:ccn
                                { l__enumext_label_#2_tl }
                                { l__enumext_start_#2_int } {##1}
                            },
        start* .value_required:n = true,
        start  .code:n    = {
                              \__enumext_start_from:cce
                                { l__enumext_label_#2_tl }
                                { l__enumext_start_#2_int } { \int_eval:n {##1} }
                            },
        start  .initial:n = 1,
        start  .value_required:n = true,
        widest .code:n    = {
                              \__enumext_widest_from:nccn {#2}
                                { l__enumext_label_#2_tl }
                                { l__enumext_labelwidth_#2_dim } {##1}
                            },
        widest .value_required:n = true,
      }
  }
\clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(*End of definition for* start , start* , *and* widest.)

13.16 Setting keys for vertical spaces

topsep
partopsep
parsep
noitemsep
nosep

Define and set topsep, partopsep, parsep, itemsep, noitemsep and nosep keys for enumext, enumext*, keyans and keyans* environments.

```
\cs_set_protected:Npn \__enumext_tmp:nnnnnn #1 #2 #3 #4 #5 #6
  {
    \keys_define:nn { enumext / #1 }
      {
        topsep    .skip_set:c = { l__enumext_topsep_#2_skip },
        topsep    .initial:n  = {#3},
        topsep    .value_required:n = true,
        partopsep .skip_set:c = { l__enumext_partopsep_#2_skip },
        partopsep .initial:n  = {#4},
        partopsep .value_required:n = true,
```

```
      parsep    .skip_set:c = { l__enumext_parsep_#2_skip },
      parsep    .initial:n  = {#5},
      parsep    .value_required:n = true,
      itemsep   .skip_set:c = { l__enumext_itemsep_#2_skip },
      itemsep   .initial:n  = {#6},
      itemsep   .value_required:n = true,
      noitemsep .meta:n     = { itemsep = 0pt, parsep = 0pt },
      noitemsep .value_forbidden:n = true,
      nosep     .meta:n     = {
                                itemsep = 0pt, parsep= 0pt,
                                topsep = 0pt, partopsep = 0pt,
                              },
      nosep     .value_forbidden:n = true,
    }
}
```

Now we set the values based on standard `article` class in `10pt`.

```
\__enumext_tmp:nnnnnn { level-1 } { i } { 8.0pt plus 2.0pt minus 4.0pt }
  { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
  { 4.0pt plus 2.0pt minus 1.0pt }
\__enumext_tmp:nnnnnn { level-2 } { ii } { 4.0pt plus 2.0pt minus 1.0pt }
  { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
  { 2.0pt plus 1.0pt minus 1.0pt }
\__enumext_tmp:nnnnnn { level-3 } { iii } { 2.0pt plus 1.0pt minus 1.0pt }
  { 1.0pt minus 1.0pt }{ 0pt }{ 2.0pt plus 1.0pt minus 1.0pt }
\__enumext_tmp:nnnnnn { level-4 } { iv } { 2.0pt plus 1.0pt minus 1.0pt }
  { 1.0pt minus 1.0pt }{ 0pt }{ 2.0pt plus 1.0pt minus 1.0pt }
\__enumext_tmp:nnnnnn { keyans  } { v }{ 4.0pt plus 2.0pt minus 1.0pt }
  { 2.0pt plus 1.0pt minus 1.0pt }{ 2.0pt plus 1.0pt minus 1.0pt }
  { 2.0pt plus 1.0pt minus 1.0pt }
\__enumext_tmp:nnnnnn { enumext* } { vii } { 8.0pt plus 2.0pt minus 4.0pt }
  { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
  { 4.0pt plus 2.0pt minus 1.0pt }
\__enumext_tmp:nnnnnn { keyans* } { viii } { 4.0pt plus 2.0pt minus 1.0pt }
  { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
  { 2.0pt plus 1.0pt minus 1.0pt }
```

(*End of definition for* `topsep` *and others.*)

13.17 Setting `base-fix` key

When nesting starting right after `\item` (without material between them) there is a problem with the alignment of the *baseline* between the two environments. One way to get around this problem is to place `\mode_leave_vertical:` apply `\vspace{-\baselineskip}` and set `\topsep=0pt` for the *"first level"* of the nested `enumext` environment.

`base-fix`

We define the key `base-fix` only for the *"first level"* of `enumext` environment.

`\__enumext_nested_base_line_fix:`

```
\keys_define:nn { enumext /  level-1 }
  {
    base-fix .bool_set:N = \l__enumext_base_line_fix_bool,
    base-fix .initial:n  = false,
    base-fix .value_forbidden:n = true,
  }
```

The function `\__enumext_nested_base_line_fix:` passed to the `\__enumext_parse_keys:n` function in the definition of the `enumext` environment (§??) will be responsible for applying the *baseline correction* and adjusting the ⟨*keys*⟩ for the `enumext` environment and the `\printkeyans` with *starred argument* '`*`' (§??). We will first implement the function code from the user side of the `base-fix` key, that is, only the user knows when it is necessary to apply it within the document in which case the variable `\l__enumext_print_keyans_star_bool` set by the `\printkeyans` command is false and the variable `\l__enumext_base_line_fix_bool` is true.

```
\cs_new_protected:Nn \__enumext_nested_base_line_fix:
  {
    \bool_lazy_all:nT
      {
        { \bool_if_p:N \l__enumext_starred_first_bool }
        { \bool_if_p:N \l__enumext_base_line_fix_bool }
        { \bool_not_p:n { \l__enumext_print_keyans_star_bool } }
      }
      {
        \mode_leave_vertical:
        \vspace { -\dim_eval:n { \baselineskip + \parsep } }
      }
```

©2024 by Pablo González L

When we are running the \printkeyans command with the *starred argument* '*' the variable \l__enumext_print_keyans_star_bool is true and we can run a simplified version of \vspace using \skip_vertical:n.

```
    \bool_lazy_and:nnT
      { \bool_if_p:N \l__enumext_starred_first_bool }
      { \bool_if_p:N \l__enumext_print_keyans_star_bool }
      {
        \mode_leave_vertical:
        \skip_vertical:n { -\baselineskip }
        \skip_vertical:N \c_zero_skip
      }
```

Finally we set the values of the keys topsep, above and above* for the *"first level"* of enumext environment equal to 0pt and set the variable \l__enumext_base_line_fix_bool to false.

```
    \keys_set:nn { enumext / level-1 }
      {
        topsep = 0pt, above = 0pt, above* = 0pt,
      }
    \bool_set_false:N \l__enumext_base_line_fix_bool
  }
```

(*End of definition for* base-fix *and* __enumext_nested_base_line_fix:.)

13.18 Setting keys for horizontal spaces

itemindent
rightmargin
listparindent
list-offset
list-indent

Define and set itemindent, rightmargin, listparindent, list-offset and list-indent keys for enumext, enumext*, keyans and keyans* environments.

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
  {
    \keys_define:nn { enumext / #1 }
      {
        itemindent    .dim_set:c = { l__enumext_fake_item_indent_#2_dim },
        itemindent    .value_required:n = true,
        rightmargin   .dim_set:c = { l__enumext_rightmargin_#2_dim },
        rightmargin   .value_required:n = true,
        listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
        listparindent .value_required:n = true,
        list-offset   .dim_set:c = { l__enumext_listoffset_#2_dim },
        list-offset   .value_required:n = true,
        list-indent   .code:n    =
                        \bool_set_true:c { l__enumext_leftmargin_tmp_#2_bool }
                        \dim_set:cn { l__enumext_leftmargin_tmp_#2_dim } {##1},
        list-indent   .value_required:n = true,
      }
  }
\clist_map_inline:nn
  {
    {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {keyans}{v}
  }
  { \__enumext_tmp:nn #1 }
```

(*End of definition for* itemindent *and others.*)

For enumext* and keyans* environments the situation is a bit different, the list-indent key behaves like the list-offset key.

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
  {
    \keys_define:nn { enumext / #1 }
      {
        itemindent    .dim_set:c = { l__enumext_fake_item_indent_#2_dim },
        itemindent    .value_required:n = true,
        rightmargin   .dim_set:c = { l__enumext_rightmargin_#2_dim },
        rightmargin   .value_required:n = true,
        listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
        listparindent .value_required:n = true,
        list-offset   .dim_set:c = { l__enumext_listoffset_#2_dim },
        list-offset   .value_required:n = true,
        list-indent   .meta:n    = { list-offset = ##1 },
        list-indent   .value_required:n = true,
      }
  }
\clist_map_inline:nn
```

```
  {
    {enumext*}{vii}, {keyans*}{viii}
  }
  { \__enumext_tmp:nn #1 }
```

13.18.1 Functions for setting the fake itemindent

__enumext_fake_item_indent:
__enumext_keyans_fake_item_indent:
__enumext_fake_item_indent_vii:
__enumext_fake_item_indent_viii:

The itemindent key does not set the value of \itemindent, it only sets the value of the *horizontal space* applied using \skip_horizontal:N. We will store this value in the variable and only apply it when it is greater than 0pt. Here I will need to place \mode_leave_vertical: and the plain TEX macro \ignorespaces to avoid unwanted extra space when using the itemindent key.

```
\cs_set_protected:Nn \__enumext_fake_item_indent:
  {
    \dim_compare:nNnT
      { \dim_use:c { l__enumext_fake_item_indent_ \__enumext_level: _dim } }
      >
      { \c_zero_dim }
      {
        \tl_set:ce { l__enumext_fake_item_indent_ \__enumext_level: _tl }
          {
            \exp_not:N \mode_leave_vertical:
            \exp_not:n { \skip_horizontal:n }
              { \dim_use:c { l__enumext_fake_item_indent_ \__enumext_level: _dim } }
            \exp_not:N \ignorespaces
          }
      }
   }
\cs_set_protected:Nn \__enumext_keyans_fake_item_indent:
  {
    \dim_compare:nNnT
      { \l__enumext_fake_item_indent_v_dim } > { \c_zero_dim }
      {
        \tl_set:Ne \l__enumext_fake_item_indent_v_tl
          {
            \exp_not:N \mode_leave_vertical:
            \exp_not:N \skip_horizontal:N \l__enumext_fake_item_indent_v_dim
            \exp_not:N \ignorespaces
          }
      }
   }
\cs_set_protected:Nn \__enumext_fake_item_indent_vii:
  {
    \dim_compare:nNnT
      { \l__enumext_fake_item_indent_vii_dim } > { \c_zero_dim }
      {
        \tl_set:Ne \l__enumext_fake_item_indent_vii_tl
          {
            \exp_not:N \skip_horizontal:N \l__enumext_fake_item_indent_vii_dim
            \exp_not:N \ignorespaces
          }
      }
   }
\cs_set_protected:Nn \__enumext_fake_item_indent_viii:
  {
    \dim_compare:nNnT
      { \l__enumext_fake_item_indent_viii_dim } > { \c_zero_dim }
      {
        \tl_set:Ne \l__enumext_fake_item_indent_viii_tl
          {
            \exp_not:N \skip_horizontal:N \l__enumext_fake_item_indent_viii_dim
            \exp_not:N \ignorespaces
          }
      }
   }
```

(*End of definition for* __enumext_fake_item_indent: *and others.*)

13.19 Setting show-length key

show-length

Define and set show-length key for enumext, enumext*, keyans and keyans* environments. The function sets the boolean variable \l__enumext_show_length_X_bool used in the definition of all environments to

"true" and calls the function `\__enumext_show_length:nnn` which prints all the values of the *"vertical"* and *"horizontal"* parameters calculated and used.

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
  {
    \keys_define:nn { enumext / #1 }
      {
        show-length .bool_set:c = { l__enumext_show_length_#2_bool },
        show-length .initial:n  = false,
      }
  }
\clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(*End of definition for* `show-length`.)

13.20 Setting `before`, `after` and `first` keys

`before` `before*` `after` `first`

Define and set `before`, `before*`, `after` and `first` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
  {
    \keys_define:nn { enumext / #1 }
      {
        before  .tl_set:c   = { l__enumext_before_no_starred_key_#2_tl },
        before  .value_required:n = true,
        before* .tl_set:c   = { l__enumext_before_starred_key_#2_tl },
        before* .value_required:n = true,
        after   .tl_set:c   = { l__enumext_after_stop_list_#2_tl },
        after   .value_required:n = true,
        first   .tl_set:c   = { l__enumext_after_list_args_#2_tl },
        first   .value_required:n = true,
      }
  }
\clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(*End of definition for* `before` *and others.*)

13.20.1 Functions for `before`, `after` and `first` keys in `enumext`

`\__enumext_before_args_exec:` `\__enumext_before_keys_exec:` `\__enumext_after_stop_list:` `\__enumext_after_args_exec:`

The function `\__enumext_before_args_exec:` executes the {⟨*code*⟩} set by the `before*` key *"before"* the `enumext` environment is started. The {⟨*code*⟩} is executed *"without"* knowing any definition of the {⟨*arg two*⟩} of the list: {⟨*code*⟩}`\list`{⟨*arg one*⟩}{⟨*arg two*⟩}.

```
\cs_new_protected:Nn \__enumext_before_args_exec:
  {
    \tl_use:c { l__enumext_before_starred_key_ \__enumext_level: _tl }
  }
```

The function `\__enumext_before_keys_exec:` executes the {⟨*code*⟩} set by the `before` key *"before"* the `enumext` environment is started in *second argument* of the list. The {⟨*code*⟩} is executed *"knowing"* all definition and values provides by ⟨*keys*⟩: `\list`{⟨*arg one*⟩}{⟨*arg two*⟩{⟨*code*⟩}}

```
\cs_new_protected:Nn \__enumext_before_keys_exec:
  {
    \tl_use:c { l__enumext_before_no_starred_key_ \__enumext_level: _tl }
  }
```

The function `\__enumext_after_stop_list:` executes the {⟨*code*⟩} set by the `after` key *"after"* the `enumext` environment has finished: `\endlist`{⟨*code*⟩}.

```
\cs_new_protected:Nn \__enumext_after_stop_list:
  {
    \tl_use:c { l__enumext_after_stop_list_ \__enumext_level: _tl }
  }
```

The function `\__enumext_after_args_exec:` executes the {⟨*code*⟩} set by the `first` key after the end of the second argument of the list defining the `enumext` environment, just before the first occurrence of `\item`: `\list`{⟨*arg one*⟩}{⟨*arg two*⟩}{⟨*code*⟩}`\item`.

```
\cs_new_protected:Nn \__enumext_after_args_exec:
  {
    \tl_use:c { l__enumext_after_list_args_ \__enumext_level: _tl }
  }
```

(*End of definition for* `\__enumext_before_args_exec:` *and others.*)

13.20.2 Functions for before, after and first keys in keyans

__enumext_before_args_exec_v:
__enumext_before_keys_exec_v:
__enumext_after_stop_list_v:
__enumext_after_args_exec_v:

Same implementation as the one used in the enumext environment.

```
\cs_new_protected:Nn \__enumext_before_args_exec_v:
  {
    \tl_use:N \l__enumext_before_starred_key_v_tl
  }
\cs_new_protected:Nn \__enumext_before_keys_exec_v:
  {
    \tl_use:N \l__enumext_before_no_starred_key_v_tl
  }
\cs_new_protected:Nn \__enumext_after_stop_list_v:
  {
    \tl_use:N \l__enumext_after_stop_list_v_tl
  }
\cs_new_protected:Nn \__enumext_after_args_exec_v:
  {
    \tl_use:N \l__enumext_after_list_args_v_tl
  }
```

(*End of definition for* `\__enumext_before_args_exec_v:` *and others.*)

13.20.3 Functions for before, after and first keys in enumext* and keyans*

__enumext_before_args_exec_vii:
__enumext_before_keys_exec_vii
__enumext_after_stop_list_vii:
__enumext_after_args_exec_vii:

Same implementation as the one used in the enumext environment.

```
\cs_new_protected:Nn \__enumext_before_args_exec_vii:
  {
    \tl_use:N \l__enumext_before_starred_key_vii_tl
  }
\cs_new_protected:Nn \__enumext_before_args_exec_viii:
  {
    \tl_use:N \l__enumext_before_starred_key_viii_tl
  }
\cs_new_protected:Nn \__enumext_before_keys_exec_vii:
  {
    \tl_use:N \l__enumext_before_no_starred_key_vii_tl
  }
\cs_new_protected:Nn \__enumext_before_keys_exec_viii:
  {
    \tl_use:N \l__enumext_before_no_starred_key_viii_tl
  }
\cs_new_protected:Nn \__enumext_after_stop_list_vii:
  {
    \tl_use:N \l__enumext_after_stop_list_vii_tl
  }
\cs_new_protected:Nn \__enumext_after_stop_list_viii:
  {
    \tl_use:N \l__enumext_after_stop_list_viii_tl
  }
\cs_new_protected:Nn \__enumext_after_args_exec_vii:
  {
    \tl_use:N \l__enumext_after_list_args_vii_tl
  }
\cs_new_protected:Nn \__enumext_after_args_exec_viii:
  {
    \tl_use:N \l__enumext_after_list_args_viii_tl
  }
```

(*End of definition for* `\__enumext_before_args_exec_vii:` *and others.*)

13.21 Setting keys for multicols and minipage

mini-env
mini-sep
columns-sep
columns

The default value of the columns-sep key is handled by the state of the boolean variable `\l__enumext_columns_sep_X_bool` which is handled in the internal definition of the enumext and keyans environments. Define and set mini-env, mini-sep, columns-sep and columns keys for enumext, enumext*, keyans and keyans* environments.

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
  {
    \keys_define:nn { enumext / #1 }
      {
        mini-env    .dim_set:c  = { l__enumext_minipage_right_#2_dim },
        mini-env    .value_required:n = true,
        mini-sep    .dim_set:c  = { l__enumext_minipage_hsep_#2_dim },
```

```
      mini-sep    .initial:n  = 0.3333em,
      mini-sep    .value_required:n = true,
      columns-sep .dim_set:c  = { l__enumext_columns_sep_#2_dim },
      columns-sep .value_required:n = true,
      columns     .int_set:c  = { l__enumext_columns_#2_int },
      columns     .initial:n  = 1,
      columns     .value_required:n = true,
    }
}
\clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

For enumext* and keyans* environments the situation is a bit different, the command \miniright is not available, so we will add the keys mini-right and mini-right* to implement support for minipage environment.

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
  {
    \keys_define:nn { enumext / #1 }
      {
        mini-right  .tl_gset:c = { g__enumext_miniright_code_#2_tl },
        mini-right  .value_required:n = true,
        mini-right* .code:n    = {
                                   \bool_gset_true:c { g__enumext_minipage_center_#2_bool }
                                   \keys_set:nn { enumext / #1 } { mini-right = {##1} }
                                 },
        mini-right* .value_required:n = true,
      }
  }
\clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }
```

(*End of definition for* mini-env *and others.*)

13.22 Adjustment of vertical spaces for multicols

When nesting a *"list environment"* inside the multicols environment, the values of the *"vertical spaces"* are lost, basically the multicols environment takes control over them. Graphically it can be seen like in the figure ??.

Figure 7: Representation of the vertical space in multicols for a nested level.

To keep the desired spaces *above* and *below* in the *"list environment"* (\topsep + [\partopsep]) it is necessary to *"adjust"* the spaces added by the multicols environment. The most appropriate option in this case is to use a *"context sensitive"* vertical space with \addvspace.

I should make it clear that the implementation here is a *"bit questionable"*. At first glance doing \multicolsep=\topsep seemed right, but the results were not always as expected. An almost *imperceptible* detail is that in some cases the \itemsep values of are *"stretched"*, possibly due to the use of \raggedcolumns and this affects the lower space when closing the environment, which is *"smaller"* than expected. My attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

13.22.1 Adjustment of vertical spaces for multicols in enumext

__enumext_multi_set_vskip:

The function __enumext_multi_set_vskip: will take care of determining the *"adjusted spaces"* that we will apply *"above"* and *"below"* the multicols environment in enumext.

We will set the default values taking into account that TEX is in ⟨*horizontal mode*⟩, then we will make the settings for the ⟨*vertical mode*⟩ in which \partopsep comes into play.

Set the values of \l__enumext_multicols_above_X_skip and \l__enumext_multicols_below_X_skip equal to the value of \topsep in the *current level.*

```
\cs_new_protected:Nn \__enumext_multi_set_vskip:
  {
    \skip_set:cn { l__enumext_multicols_above_ \__enumext_level: _skip }
      {
        \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
      }
    \skip_set:cn { l__enumext_multicols_below_ \__enumext_level: _skip }
      {
        \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
      }
```

```
    \__enumext_add_pre_parsep:
  }
```

(*End of definition for* `\__enumext_multi_set_vskip:`.)

`\__enumext_add_pre_parsep:` The function `\__enumext_add_pre_parsep:` *"adjusted"* the value of `\l__enumext_multicols_above_X_skip` detecting the value of `\parsep` from the previous level. This is necessary since `\parsep` from the previous level affects the *vertical spaces*.

```
\cs_new_protected:Nn \__enumext_add_pre_parsep:
  {
    \int_case:nn { \l__enumext_level_int }
      {
        { 2 }{
                \skip_if_eq:nnF { \l__enumext_parsep_i_skip } { \c_zero_skip }
                  {
                    \skip_add:Nn \l__enumext_multicols_above_ii_skip
                      {
                        \l__enumext_parsep_i_skip
                      }
                  }
              }
        { 3 }{
                \skip_if_eq:nnF { \l__enumext_parsep_ii_skip } { \c_zero_skip }
                  {
                    \skip_add:Nn \l__enumext_multicols_above_iii_skip
                      {
                        \l__enumext_parsep_ii_skip
                      }
                  }
              }
        { 4 }{
                \skip_if_eq:nnF { \l__enumext_parsep_iii_skip } { \c_zero_skip }
                  {
                    \skip_add:Nn \l__enumext_multicols_above_iv_skip
                      {
                        \l__enumext_parsep_iii_skip
                      }
                  }
              }
      }
  }
```

(*End of definition for* `\__enumext_add_pre_parsep:`.)

`\__enumext_multi_addvspace:` The function `\__enumext_multi_addvspace:` will apply the spaces set using `\addvspace` *"above"* the `multicols` environment in `enumext`, taking into account whether TEX is in ⟨*horizontal mode*⟩ or ⟨*vertical mode*⟩.

```
\cs_new_protected:Nn \__enumext_multi_addvspace:
  {
    \__enumext_multi_set_vskip:
    \mode_if_vertical:T
      {
        \skip_add:cn { l__enumext_multicols_above_ \__enumext_level: _skip }
          {
            \skip_use:c { l__enumext_partopsep_ \__enumext_level: _skip }
          }
        \skip_add:cn { l__enumext_multicols_below_ \__enumext_level: _skip }
          {
            \skip_use:c { l__enumext_partopsep_ \__enumext_level: _skip }
          }
      }
    \par\nopagebreak
    \addvspace{ \skip_use:c { l__enumext_multicols_above_ \__enumext_level: _skip } }
  }
```

(*End of definition for* `\__enumext_multi_addvspace:`.)

13.22.2 Adjustment of vertical spaces for multicols in keyans

__enumext_keyans_multi_set_vskip:
__enumext_keyans_multi_addvspace:

The function __enumext_keyans_multi_set_vskip: will take care of determining the *"adjusted spaces"* that we will apply *"above"* and *"below"* the multicols environment in keyans. The implementation of this function is the same as the one used in enumext.

```
\cs_new_protected:Nn \__enumext_keyans_multi_set_vskip:
  {
    \skip_set:Nn \l__enumext_multicols_above_v_skip
      {
        \l__enumext_topsep_v_skip
      }
    \skip_set:Nn \l__enumext_multicols_below_v_skip
      {
        \l__enumext_topsep_v_skip
      }
  }
\cs_new_protected:Nn \__enumext_keyans_multi_addvspace:
  {
    \__enumext_keyans_multi_set_vskip:
    \mode_if_vertical:T
      {
        \skip_add:Nn \l__enumext_multicols_above_v_skip
          {
            \skip_use:N \l__enumext_partopsep_v_skip
          }
        \skip_add:Nn \l__enumext_multicols_below_v_skip
          {
            \skip_use:N \l__enumext_partopsep_v_skip
          }
      }
    \par\nopagebreak
    \addvspace{ \l__enumext_multicols_above_v_skip }
  }
```

(*End of definition for* __enumext_keyans_multi_set_vskip: *and* __enumext_keyans_multi_addvspace:.)

13.23 Adjustment of vertical spaces for minipage

When nesting a *"list environment"* within the minipage environment, the values of the *"vertical spaces"* are lost. Graphically it can be seen like in the figure ??.

Figure 8: Representation of the minipage spacing adjustment for a nested level.

Since we want to keep the *"left"* and *"right"* environments *"aligned on top"*, preserving the \baselineskip and keep the desired *"spaces"* (\topsep + [\partopsep]) it is necessary to *"adjust"* the *"vertical spaces"* for minipage environments.

Here there are several complications that we must circumvent, the minipage environment eliminates the "top" spaces, the multicols environment can be nested in the minipage environment, the "top" and "bottom" spaces are affected when topsep=0pt and to this is added the \partopsep parameter that comes into action according to whether TEX is in ⟨*horizontal mode*⟩ or ⟨*vertical mode*⟩. Depending on these cases, small adjustments must be made using \vspace and \addvspace to obtain the *"desired vertical spacing"*.

Again I must make clear that the implementation here is a *"bit questionable"*, but hunting the spaces (glue) produced by the minipage environment is quite complicated, even more if multicols it is nested. The setting of the values was more *"trial and error"* (aprox to \strutbox), using the help of the lua-visual-debug[?] package, again my attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

13.23.1 Adjustment of vertical spaces for minipage in enumext

__enumext_minipage_set_skip:
__enumext_minipage_add_space:

The function __enumext_minipage_set_skip: will take care of determining the *"adjust"* spaces that we will apply *"above"* and *"below"* the __enumext_mini_page environment in enumext.

First we will set the value of \l__enumext_minipage_right_skip equal to \topsep, then we will see if TEX is in ⟨*vertical mode*⟩ and we will add \partopsep, followed by that we set the value of \l__enumext_minipage_after_skip.

```
\cs_new_protected:Nn \__enumext_minipage_set_skip:
  {
    \skip_set:Nn \l__enumext_minipage_right_skip
```

```
      {
        \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
      }
    \mode_if_vertical:T
      {
        \skip_add:Nn \l__enumext_minipage_right_skip
          {
            \skip_use:c { l__enumext_partopsep_ \__enumext_level: _skip }
          }
      }
    \skip_set_eq:NN \l__enumext_minipage_after_skip \l__enumext_minipage_right_skip
```

We will adjust the values `\l__enumext_multicols_above_X_skip` and `\l__enumext_multicols_below_X_skip` and call the function `\__enumext_pre_itemsep_skip:`.

```
    \skip_set_eq:cN
      { l__enumext_multicols_above_ \__enumext_level: _skip } \l__enumext_minipage_right_skip
    \skip_set_eq:cN
      { l__enumext_multicols_below_ \__enumext_level: _skip } \l__enumext_minipage_right_skip
    \__enumext_pre_itemsep_skip:
```

If the environment `multicols` is active, we set `\topskip=0pt` and then we make `\multicolsep` have the same value as `\l__enumext_multicols_above_X_skip`.

```
    \int_compare:nNnT
      { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
      {
        \skip_zero:N \topskip
        \skip_set_eq:Nc \multicolsep { l__enumext_multicols_above_ \__enumext_level: _skip }
      }
  }
```

The function `\__enumext_minipage_add_space:` will apply the spaces on the *"left side"* using `\addvspace` *"above"* the `__enumext_mini_page` environment, taking into account whether TEX is in ⟨*horizontal mode*⟩ or ⟨*vertical mode*⟩. Here we use the plain TEX macro `\nointerlineskip` to prevent baseline *"glue"* being added between the next pair of boxes in a *vertical list*. For the latter we will make some adjustments since the `\partopsep` parameter comes into play and this affects the *vertical spacing*.

```
\cs_new_protected:Nn \__enumext_minipage_add_space:
  {
    \__enumext_minipage_set_skip:
    \__enumext_unskip_unkern:
    \mode_if_vertical:TF
      {
        \nopagebreak\nointerlineskip
      }
      {
        \par\nopagebreak\nointerlineskip
        \skip_zero:c { l__enumext_partopsep_ \__enumext_level: _skip }
      }
    \int_compare:nNnTF

            \l__enumext_topsep_viii_skip
          }
        \skip_set:Nn \l__enumext_minipage_after_skip
          {
            0.325\box_dp:N \strutbox + \l__enumext_topsep_viii_skip
          }
       }
  }
```

(*End of definition for* `\__enumext_mini_set_vskip_vii:` *and* `\__enumext_mini_set_vskip_viii:`.)

`\__enumext_mini_addvspace_vii:`
`\__enumext_mini_addvspace_viii:`

The functions `\__enumext_mini_addvspace_vii:` and `\__enumext_mini_addvspace_viii:` will apply the vertical space *"only above"* the `__enumext_mini_page` environment on the *left side* when the `mini-right` key is active in the `enumext*` and `keyans*` environments.
Here we will NOT take into account whether TEX is in ⟨*horizontal mode*⟩ or ⟨*vertical mode*⟩, since `\partopsep` is equal to `0pt` in both environments.

```
\cs_new_protected:Nn \__enumext_mini_addvspace_vii:
  {
    \__enumext_mini_set_vskip_vii:
    \par\nopagebreak
    \addvspace { \l__enumext_minipage_left_skip }
  }
\cs_new_protected:Nn \__enumext_mini_addvspace_viii:
  {
    \__enumext_mini_set_vskip_viii:
    \par\nopagebreak
```

```
    \addvspace { \l__enumext_minipage_left_skip }
  }
```

(*End of definition for* `\__enumext_mini_addvspace_vii:` *and* `\__enumext_mini_addvspace_viii:`.)

13.23.4 The command \miniright

The command `\miniright` will close the `__enumext_mini_page` environment on the *"left side"*, open the `__enumext_mini_page` environment on the *"right side"* adding the *adjusted vertical space*. By default we will add `\centering` when starting the *"right side"* environment. The *starred argument* '`*`' inhibits the use of `\centering` command i.e. the usual LaTeX justification is maintained in the `__enumext_mini_page` on the *"right side"*.

`\miniright` First we will perform some checks to prevent the command from being executed outside the `enumext` environment or somewhere inappropriate then we will call the internal functions to execute it in the `enumext` and `keyans` environments.

```
\NewDocumentCommand \miniright { s }
  {
    \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
      {
        \msg_error:nnn { enumext } { wrong-miniright-place }
      }
    % outside
    \bool_lazy_and:nnT
      { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
      { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
      {
        \msg_error:nnn { enumext } { wrong-miniright-place }
      }
    % starred env
    \bool_lazy_and:nnT
      { \bool_if_p:N \g__enumext_starred_bool }
      { \bool_not_p:n { \l__enumext_standar_bool } }
      {
        \msg_error:nnn { enumext } { wrong-miniright-starred }
      }
    % exec
    \int_compare:nNnTF { \l__enumext_keyans_level_int } = { 1 }
      {
        \__enumext_keyans_mini_right_cmd:n {#1}
      }
      { \__enumext_mini_right_cmd:n {#1} }
  }
```

(*End of definition for* `\miniright`. *This function is documented on page* ??.)

`\__enumext_mini_right_cmd:n` The function `\__enumext_mini_right_cmd:n` takes as argument the *starred* '`*`' of the `\miniright` command in the `enumext` environment. We check if the `mini-env` key is active via the variable `\l__enumext_minipage_right_X_dim`, if so we close the `multicols` environment with the `__enumext_mini_page` environment on the *"left side"*, then we open the `__enumext_mini_page` environment on the *"right side"*, apply our adjusted *"vertical spaces"*, followed by adding the `\centering` command when the *starred argument* '`*`' is not present and set zero `\g__enumext_minipage_stat_int`, otherwise we return an error.

```
\cs_new_protected:Npn \__enumext_mini_right_cmd:n #1
  {
    \dim_compare:nNnTF
      { \dim_use:c { l__enumext_minipage_right_ \__enumext_level: _dim } } > { \c_zero_dim }
      {
        \__enumext_multicols_stop:
        \int_compare:nNnT
          { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } = { 1 }
          {
            \par\addvspace{ \l__enumext_minipage_after_skip }
          }
        \end__enumext_mini_page
        \hfill
        \__enumext_mini_page{ \dim_use:c { l__enumext_minipage_right_ \__enumext_level: _dim } }
          \par\nointerlineskip
          \addvspace { \l__enumext_minipage_right_skip }
          \bool_if:nF {#1}
            {
              \centering
```

```
            }
          \int_gzero:N \g__enumext_minipage_stat_int
      }
      { \msg_error:nnn { enumext } { wrong-miniright-use } }
    % paranoia
    \RenewDocumentCommand \miniright { s }
      {
        \msg_error:nn { enumext } { many-miniright-used }
      }
  }
```

(*End of definition for* `\__enumext_mini_right_cmd:n`.)

`\__enumext_keyans_mini_right_cmd:n` The function `\__enumext_keyans_mini_right_cmd:n` takes as argument the *starred* '`*`' of the `\miniright` command in the `keyans` environment. The implementation of this function is the same as that of the `\__enumext_mini_right_cmd:n` function of the `enumext` environment.

```
\cs_new_protected:Npn \__enumext_keyans_mini_right_cmd:n #1
  {
    \dim_compare:nNnTF { \l__enumext_minipage_right_v_dim } > { \c_zero_dim }
      {
        \__enumext_keyans_multicols_stop:
        \int_compare:nNnT { \l__enumext_columns_v_int } = { 1 }
          {
            \par\addvspace{ \l__enumext_minipage_after_skip }
          }
        \end__enumext_mini_page
        \hfill
        \__enumext_mini_page{ \l__enumext_minipage_right_v_dim }
          \par\nointerlineskip
          \addvspace { \l__enumext_minipage_right_skip }
          \bool_if:nF {#1}
            {
              \centering
            }
          \int_gzero:N \g__enumext_minipage_stat_int
      }
      { \msg_error:nnn { enumext } { wrong-miniright-use } }
    % paranoia
    \RenewDocumentCommand \miniright { s }
      {
        \msg_error:nn { enumext } { many-miniright-used }
      }
  }
```

(*End of definition for* `\__enumext_keyans_mini_right_cmd:n`.)

13.24 Setting above and below keys

While having controlled the *vertical spaces* within the `enumext` and `keyans` environments when using the `columns` or `mini-env` keys, sometimes the *"vertical spaces above"* or *"vertical spaces below"* the environments are not as expected and it is necessary to be able to apply a *"fine correction"* to these. As I have not been able to correct these *glitches*, the best option is to leave a couple of ⟨*keys*⟩ dedicated to this purpose, in this case it is best to use `\vspace` or `\vspace*` when convenient.

above Define above, above*, below and below* keys for `enumext` and `keyans` environments.

above*

below

below*

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
  {
    \keys_define:nn { enumext / #1 }
      {
        above  .skip_set:c = { l__enumext_vspace_above_#2_skip },
        above  .value_required:n = true,
        above* .code:n     = \bool_set_true:c { l__enumext_vspace_a_star_#2_bool }
                             \keys_set:nn { enumext / #1 } { above = {##1} },
        above* .value_required:n = true,
        below  .skip_set:c = { l__enumext_vspace_below_#2_skip },
        below  .value_required:n = true,
        below* .code:n     = \bool_set_true:c { l__enumext_vspace_b_star_#2_bool }
                             \keys_set:nn { enumext / #1 } { below = {##1} },
        below* .value_required:n = true,
      }
  }

      }
  }
```

(*End of definition for* __enumext_vspace_below_vii: *and* __enumext_vspace_below_viii:.)

13.25 Setting series, resume and resume* keys

The series key is responsible for the whole process of the resume and resume* keys. The idea behind this is to be able to absorb the ⟨*keys*⟩ passed to the *optional argument* of the *"first level"* of the environments enumext and enumext*, but, discarding some specific ⟨*keys*⟩. This implementation is adapted directly from the code provided by Jonathan P. Spratte (@Skillmon) in chat-TeX-SX

series
resume
resume*

We define the keys series, resume and resume* only for the *"first level"* of enumext and enumext*.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
  {
    \keys_define:nn { enumext / #1 }
      {
        series  .str_set:N = \l__enumext_series_str,
        series  .value_required:n = true,
        resume  .code:n = \__enumext_resume_series:n {##1},
        resume* .code:n = \__enumext_resume_starred:,
```

```
1833          resume* .value_forbidden:n = true,
1834        }
1835    }
1836  \clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }
```

(*End of definition for* `series`, `resume`, *and* `resume*`.)

13.25.1 Internal functions for series key

`\__enumext_filter_series:n`
`\__enumext_filter_series_key:n`
`\__enumext_filter_series_pair:nn`

The function `\__enumext_filter_series:n` will be in charge of filtering the ⟨*keys*⟩ we want to store where `{#1}` represents the *optional argument* passed to the environment.

```
1837  \cs_new:Npn \__enumext_filter_series:n #1
1838    {
1839      \use:e
1840        {
1841          \keyval_parse:NNn
1842            \__enumext_filter_series_key:n
1843            \__enumext_filter_series_pair:nn {#1}
1844        }
1845    }
```

The function `\__enumext_filter_series_key:n` will be responsible for filtering the ⟨*keys*⟩ that are passed *"without value"* by excluding the `resume`, `resume*` and `base-fix` keys.

```
1846  \cs_new:Npn \__enumext_filter_series_key:n #1
1847    {
1848      \str_case:nnF {#1}
1849        {
1850          { resume } {} { resume* } {} { base-fix } {}
1851        }
1852        { , { \exp_not:n {#1} } }
1853    }
```

The function `\__enumext_filter_series_pair:nn` will be responsible for filtering the ⟨*keys*⟩ that are passed *"with value"* by excluding the `series`, `resume`, `start`, `start*`, `save-ans` and `save-key` keys.

```
1854  \cs_new:Npn \__enumext_filter_series_pair:nn #1#2
1855    {
1856      \str_case:nnF {#1}
1857        {
1858          { series } {} { resume } {} { start } {}
1859          { start* } {}  { save-ans } {} { save-key } {}
1860        }
1861        { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
1862    }
```

(*End of definition for* `\__enumext_filter_series:n`, `\__enumext_filter_series_key:n`, *and* `\__enumext_filter_series_pair:nn`.)

`\__enumext_parse_series:n`
`\__enumext_resume_last:n`

The function `\__enumext_parse_series:n` will be responsible for storing the filtered ⟨*keys*⟩ in the global variable `\g__enumext_series_`⟨*series name*⟩`_tl` along with the creation of the integer variable `\g__enumext_series_`⟨*series name*⟩`_int` when the key is passed as an argument; otherwise, it will check the state of the boolean variable `\l__enumext_resume_active_bool` set by the keys `resume` and `resume*` and will call the function `\__enumext_resume_last:n`.

The value of boolean variable `\l__enumext_resume_active_bool` is set to true by the function `\__enumext_resume_counter:n` which is used by the keys `resume` and `resume*`, in this case we must Make sure it is set to false so that it does not overwrite the default filtered ⟨*keys*⟩. This function is passed to the function `\__enumext_parse_keys:n` in the `enumext` environment definition (§??) and to the function `\__enumext_parse_keys_vii:n` in the `enumext*` environment definition (§??).

```
1863  \cs_new_protected:Npn \__enumext_parse_series:n #1
1864    {
1865      \str_if_empty:NTF \l__enumext_series_str
1866        {
1867          \bool_if:NF \l__enumext_resume_active_bool
1868            {
1869              \__enumext_resume_last:n {#1}
1870            }
1871        }
1872        {
1873          \tl_gclear_new:c { g__enumext_series_ \l__enumext_series_str _tl }
1874          \tl_gset:ce { g__enumext_series_ \l__enumext_series_str _tl }
1875            { \__enumext_filter_series:n {#1} }
1876          \int_if_exist:cF { g__enumext_series_ \l__enumext_series_str _int }
1877            {
```

```
      \int_new:c { g__enumext_series_ \l__enumext_series_str _int }
    }
  }
}
```

The function `\__enumext_resume_last:n` will be in charge of saving the filtering ⟨*keys*⟩ when the `series` key is *not used* and will save them in the variable `\g__enumext_standar_series_tl` for the `enumext` environment and in the variable `\g__enumext_starred_series_tl` for the `enumext*` environment.

```
\cs_new_protected:Npn \__enumext_resume_last:n #1
  {
    \bool_if:NT \l__enumext_standar_first_bool
      {
        \tl_gclear:N \g__enumext_standar_series_tl
        \tl_gset:Ne \g__enumext_standar_series_tl { \__enumext_filter_series:n {#1} }
      }
    \bool_if:NT \l__enumext_starred_first_bool
      {
        \tl_gclear:N \g__enumext_starred_series_tl
        \tl_gset:Ne \g__enumext_starred_series_tl { \__enumext_filter_series:n {#1} }
      }
  }
```

(*End of definition for* `\__enumext_parse_series:n` *and* `\__enumext_resume_last:n`.)

13.25.2 Internal function to save counter value

`\__enumext_resume_save_counter:`

The `\__enumext_resume_save_counter:` function will save the last counter value to `\g__enumext_series_`⟨*series name*⟩`_int` if the `series={`⟨*series name*⟩`}` key has been passed, to `\g__enumext_resume_int` if it has passed the key `resume` *without value* and the key `series` is not active, in `\g__enumext_series_`⟨*series name*⟩`_int` if the key `resume={`⟨*series name*⟩`}` has been passed and in `\g__enumext_series_`⟨*store name*⟩`_int` if the key has been passed `save-ans={`⟨*store name*⟩`}`.

The variables `\l__enumext_series_str` and `\l__enumext__resume_name_tl` contain the same {⟨*series name*⟩} but are executed at different moments, the integer variable with `\l__enumext_series_str` sets the value when execute `series={`⟨*series name*⟩`}` and the integer variable with `\l__enumext__resume_name_tl` sets the subsequent values when use `resume={`⟨*series name*⟩`}`. This function is passed to the `enumext` environment definition (§??) and the `enumext*` environment definition (§??).

```
\cs_new_protected:Nn \__enumext_resume_save_counter:

          { g__enumext_resume_ \l__enumext_store_name_tl _int } \value{enumXvii}
      }
  }
}
```

(*End of definition for* `\__enumext_resume_save_counter:`.)

13.25.3 Internal functions for `resume` key

`\__enumext_resume_series:n`

The function `\__enumext_resume_series:n` will handle the argument passed to the `resume` key in `enumext` and `enumext*` environments. If the key is passed *without value* the function `\__enumext_resume_counter:` is executed which will set the counter according to the numbering of the last `enumext` or `enumext*` environments in which `series`={⟨*series name*⟩} key is not present, if the `save-ans` key is active it will set the counter according to the value of the integer variable created by that key, otherwise it will verify that the `\g__enumext_series_`⟨*series name*⟩`_tl` variable set by the `series` key exists, if so it will pass these keys to the *first level* of the environment, otherwise it will return an error.

```
\cs_new_protected:Npn \__enumext_resume_series:n #1
  {
    \tl_if_empty:nTF {#1}
      {
        \__enumext_resume_counter:n { }
      }
      {
        \tl_if_exist:cTF { g__enumext_series_ \tl_to_str:n {#1} _tl }
          {
            \__enumext_resume_counter:n {#1}
            \bool_if:NT \g__enumext_standar_bool
              {
                \keys_set:nv { enumext / level-1 }
                  { g__enumext_series_ \tl_to_str:n {#1} _tl }
              }
            \bool_if:NT \g__enumext_starred_bool
              {
                \keys_set:nv { enumext / enumext* }
                  { g__enumext_series_ \tl_to_str:n {#1} _tl }
              }
          }
          {
            \bool_if:NT \g__enumext_standar_bool
              {
                \msg_error:nnn { enumext } { unknown-series } {#1}
              }
            \bool_if:NT \g__enumext_starred_bool
              {
                \msg_error:nnn { enumext } { unknown-series } {#1}
              }
          }
      }
  }
```

(*End of definition for* `\__enumext_resume_series:n`.)

`\__enumext_resume_counter:n` `\__enumext_resume_counter:` `\__enumext_resume_counter_series:` `\__enumext_resume_counter_save_ans:`

The function `\__enumext_resume_counter:n` will set the variable `\l__enumext_resume_active_bool` to true and pass the value of the key `resume` to the variable `\l__enumext_series_name_tl` which will

contain the {⟨*series name*⟩}. If the variable `\l__enumext_series_name_tl` is empty, that is, we are passing the key `resume` *without value*, we will execute the function `\__enumext_resume_counter:` otherwise, when we pass `resume={`⟨*series name*⟩`}` we will execute the function `\__enumext_resume_counter_series:`, finally we will execute the function `\__enumext_resume_counter_save_ans:` which is associated with the key `save-ans`.

```
\cs_new_protected:Npn \__enumext_resume_counter:n #1
  {
    \bool_set_true:N \l__enumext_resume_active_bool
    \tl_set:Nn \l__enumext_resume_name_tl {#1}
    \tl_if_empty:NTF \l__enumext_resume_name_tl
      {
        \__enumext_resume_counter:
      }
      {
        \__enumext_resume_counter_series:
      }
    \__enumext_resume_counter_save_ans:
  }
```

The `\__enumext_resume_counter:` function is executed when the `resume` key is used *without value*, only the counters for the *"first level"* of the environments will be set.

```
\cs_new_protected:Nn \__enumext_resume_counter:
  {
    \bool_if:NT \g__enumext_standar_bool
      {
        \int_gincr:N \g__enumext_resume_int
        \int_set_eq:NN \l__enumext_start_i_int \g__enumext_resume_int
      }
    \bool_if:NT \g__enumext_starred_bool
      {
        \int_gincr:N \g__enumext_resume_vii_int
        \int_set_eq:NN \l__enumext_start_vii_int \g__enumext_resume_vii_int
      }
  }
```

The function `\__enumext_resume_counter_series:` will be executed when the `resume={`⟨*series name*⟩`}` key is active, setting the counters for the *"first level"* of the environments according to the value of the integer variables created by the `series` key.

```
\cs_new_protected:Nn \__enumext_resume_counter_series:
  {
    \bool_if:NT \g__enumext_standar_bool
      {
        \int_set:Nn \l__enumext_start_i_int
          {
            \int_use:c { g__enumext_series_ \l__enumext_resume_name_tl _int } + 1
          }
      }
    \bool_if:NT \g__enumext_starred_bool
      {
        \int_set:Nn \l__enumext_start_vii_int
          {
            \int_use:c { g__enumext_series_ \l__enumext_resume_name_tl _int } + 1
          }
      }
  }
```

The function `\__enumext_resume_counter_save_ans:` will be executed when the `save-ans` key is active along with the `resume` key, setting the counters for the *"first level"* of the environments according to the value of the integer variables created by the `save-ans` key.

```
\cs_new_protected:Nn \__enumext_resume_counter_save_ans:
  {
    \bool_lazy_and:nnT
      { \bool_if_p:N \l__enumext_standar_first_bool }
      { \bool_if_p:N \l__enumext_store_active_bool }
      {
        \int_set:Nn \l__enumext_start_i_int
          {
            \int_use:c { g__enumext_resume_ \l__enumext_store_name_tl _int } + 1
          }
      }
    \bool_lazy_and:nnT
```

```
      { \bool_if_p:N \l__enumext_starred_first_bool }
      { \bool_if_p:N \l__enumext_store_active_bool }
      {
        \int_set:Nn \l__enumext_start_vii_int
          {
            \int_use:c { g__enumext_resume_ \l__enumext_store_name_tl _int } + 1
          }
      }
  }
```

(*End of definition for* `\__enumext_resume_counter:n` *and others.*)

13.25.4 Internal function for resume* key

`\__enumext_resume_starred:`

The function `\__enumext_resume_starred:` will handle the `resume*` key in the `enumext` and `enumext*` environments. This function will execute the filtered ⟨*keys*⟩ in the last one and will continue with the numbering according to the last execution of the environment `enumext` or `enumext*` in which the keys `resume={`⟨*series name*⟩`}` or `series={`⟨*series name*⟩`}` were not active.

```
\cs_new_protected:Nn \__enumext_resume_starred:
  {
    \bool_if:NT \g__enumext_standar_bool
      {
        \tl_if_empty:NF \g__enumext_standar_series_tl
          {
            \__enumext_resume_counter:n { }
            \keys_set:nV { enumext / level-1 } \g__enumext_standar_series_tl
          }
      }
    \bool_if:NT \g__enumext_starred_bool
      {
        \tl_if_empty:NF \g__enumext_starred_series_tl
          {
            \__enumext_resume_counter:n { }
            \keys_set:nV { enumext / enumext* } \g__enumext_starred_series_tl
          }
      }
  }
```

(*End of definition for* `\__enumext_resume_starred:`.)

13.26 Setting save-ans, check-ans and no-store keys

The key `save-ans` is directly associated with the keys `check-ans`, `no-store`, `resume` and `resume*`, this will activate the entire *"storage system"* in the enumext package.

13.26.1 Setting save-ans key

`save-ans`

We define the keys `save-ans` only for the *"first level"* of `enumext` and `enumext*`.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
  {
    \keys_define:nn { enumext / #1 }
      {
        save-ans .code:n = \__enumext_storing_set:n {##1},
        save-ans .value_required:n = true,
      }
  }
\clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }
```

(*End of definition for* `save-ans`.)

13.26.2 Internal functions for save-ans key

`\__enumext_start_save_ans_msg:`
`\__enumext_stop_save_ans_msg:`

The functions `\__enumext_start_save_ans_msg:` and `\__enumext_stop_save_ans_msg:` will display in the terminal and `.log` file the environment in which the `save-ans` key was executed along with the line at the beginning and end of it. The function `\__enumext_start_save_ans_msg:` will be passed to `\__enumext_storing_set:n` and the function `\__enumext_stop_save_ans_msg:` will be passed to the function `\__enumext_execute_after_env:`.

```
\cs_new_protected:Nn \__enumext_start_save_ans_msg:
  {
    \msg_term:nnVV { enumext } { save-ans-log }
      \g__enumext_envir_name_tl \l__enumext_store_name_tl
  }
\cs_new_protected:Nn \__enumext_stop_save_ans_msg:
  {
```

```
    \msg_term:nnVV { enumext } { save-ans-log-hook }
      \g__enumext_envir_name_tl \g__enumext_store_name_tl
  }
```

(*End of definition for* `\__enumext_start_save_ans_msg:` *and* `\__enumext_stop_save_ans_msg:`.)

`\__enumext_storing_set:n`
`\__enumext_storing_exec:`

The function `\__enumext_storing_set:n` first pass the value of the `save-ans` key to the variable `\l__enumext_store_name_tl` which will contain the {⟨*store name*⟩} of the *sequence* and *prop list* we will use. If `\l__enumext_store_name_tl` is *empty* we return an error message, otherwise will return the appropriate message `\__enumext_start_save_ans_msg:` and proceed to execute the function `\__enumext_storing_exec:` for `enumext` and `enumext*` environments.

```
\cs_new_protected:Npn \__enumext_storing_set:n #1
  {
    \tl_set:Ne \l__enumext_store_name_tl {#1}
    \tl_if_empty:NTF \l__enumext_store_name_tl
      {
        \bool_lazy_or:nnT
          { \l__enumext_standar_first_bool } { \l__enumext_starred_first_bool }
          {
            \msg_error:nnV { enumext } { save-ans-empty } \g__enumext_envir_name_tl
          }
      }
      {
        \bool_lazy_or:nnT
          { \l__enumext_standar_first_bool } { \l__enumext_starred_first_bool }
          {
            \__enumext_start_save_ans_msg:
            \__enumext_storing_exec:
          }
      }
  }
```

The function `\__enumext_storing_exec:` will set to true the variable `\l__enumext_store_active_bool` which activates the use of the `\anskey` command and the `anskey*`, `keyans`, `keyans*` and `keyanspic` environments and will set to "true" the variable `\l__enumext_check_answers_bool` used for intenal checking answers mechanism set by the `check-ans` and `no-store` keys, copy {⟨*store name*⟩} into the variable `\g__enumext_store_name_tl` and execute the function `\__enumext_anskey_env_make:V` creating the environment `anskey*` (§??).

```
\cs_new_protected:Nn \__enumext_storing_exec:
  {
    \bool_set_true:N \l__enumext_store_active_bool
    \bool_set_true:N \l__enumext_check_answers_bool
    \tl_gset:NV \g__enumext_store_name_tl \l__enumext_store_name_tl
    \__enumext_anskey_env_make:V \l__enumext_store_name_tl
```

The *prop list* `\g__enumext_series_`⟨*store name*⟩`_prop` and the *sequence* `\g__enumext_series_`⟨*store name*⟩`_seq` will be created globally to *"store content"* in case they do not exist together with the integer variable `\g__enumext_series_`⟨*store name*⟩`_int` used by the keys `resume` and `resume*`.

```
    \prop_if_exist:cF { g__enumext_ \l__enumext_store_name_tl _prop }
      {
        \msg_log:nnV { enumext } { store-prop } \l__enumext_store_name_tl
        \prop_new:c { g__enumext_ \l__enumext_store_name_tl _prop }
      }
    \seq_if_exist:cF { g__enumext_ \l__enumext_store_name_tl _seq }
      {
        \msg_log:nnV { enumext } { store-seq } \l__enumext_store_name_tl
        \seq_new:c { g__enumext_ \l__enumext_store_name_tl _seq }
      }
    \int_if_exist:cF { g__enumext_resume_ \l__enumext_store_name_tl _int }
      {
        \msg_log:nnV { enumext } { store-int } \l__enumext_store_name_tl
        \int_new:c { g__enumext_resume_ \l__enumext_store_name_tl _int }
      }
  }
```

(*End of definition for* `\__enumext_storing_set:n` *and* `\__enumext_storing_exec:`.)

13.26.3 The check answer mechanism

The internal mechanism for *"checking answers"* follows this logic:

> If the line begins with \item or \item* and does NOT *open a nested environment*, each \item or \item* must contain a *single* execution of the \anskey command, i.e. the counter of the executions of the \anskey command must be equal to the counter associated with the sum of executions of \item and \item*.
>
> If the line begins with \item or \item* and *opens a nested environment* each \item or \item* in the nested environment must have a *single* execution of the \anskey command and the counter associated to the sum of \item and \item* executions must decrementing by *"one"* to maintain equality.

In order for the mechanism for the check-answer to work (not counting keyans, keyans* and keyanspic) we need:

1. We must keep track of the total number of \item and \item* (enumerated) that appear within the environment including the nested levels.
2. We must keep track of the total number of \item and \item* (enumerated) that appear per level of nesting.
3. Keeping track of the number of times the environment nests.

The integer variable associated to the sum of each \item and \item* in the environment \g__enumext_item_number_int must match the integer variable \g__enumext_item_anskey_int associated to the execution of the command \anskey. We analyze the cases:

a) If the list only has one level the number of \item + \item* = \anskey
b) If the list has *nested levels*, for each level of nesting we need to decrementing by one (for the \item or \item* that opens the nest) so that the account remains the same.

With keyans, keyans* and keyanspic it is enough to increase in one the integer of \anskey. The integers created must be global if they are not lost in the interior levels of nesting and to execute the test we will use a *"hook"* function after closing the *first level* of the environment.

13.26.4 Setting check-ans and no-store keys

check-ans
no-store

Now we define the keys check-ans and no-store for all levels of enumext and enumext* environments.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
  {
    \keys_define:nn { enumext / #1 }
      {
        check-ans .bool_set:N = \l__enumext_check_ans_key_bool,
        check-ans .initial:n  = false,
        check-ans .value_required:n = true,
        no-store  .code:n = {
                              \bool_set_false:N \l__enumext_check_answers_bool
                              \bool_set_false:N \l__enumext_check_ans_key_bool
                            },
        no-store  .value_forbidden:n = true,
      }
  }
\clist_map_inline:nn
  {
    level-1, level-2, level-3, level-4, enumext*
  }
  { \__enumext_tmp:n {#1} }
```

(*End of definition for* check-ans *and* no-store.)

13.26.5 Set-up check answer mechanism

__enumext_check_ans_active:
__enumext_check_ans_level:

The function __enumext_check_ans_active: will first check the state of the variable \l__enumext_store_name_tl, that is, the save-ans key is active, if so it will check the state of the variable \l__enumext_check_answers_bool handled by the key no-store and will execute the function __enumext_check_ans_level: only if *"true"*, i.e. the key no-store is not active.

```
\cs_new_protected:Nn \__enumext_check_ans_active:
  {
    \tl_if_empty:NF \l__enumext_store_name_tl
      {
        \bool_if:NT \l__enumext_check_answers_bool
          {
            \__enumext_check_ans_level:
          }
      }
  }
```

The function __enumext_check_ans_level: will decrement by *"one"* the value of the variable \g__enumext_item_number_int which keeps track of the executions of \item and \item* for each level of nesting of the environment enumext, taking into account whether it is nested within enumext* or the opposite and set \l__enumext_item_number_bool to *"false"* .

```
\cs_new_protected:Nn \__enumext_check_ans_level:
  {
    \int_case:nn { \l__enumext_level_int }
      {
        { 1 }{
               \bool_lazy_all:nT
                 {
                   { \bool_if_p:N \g__enumext_starred_bool }
                   { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
                 }
                 {
                   \int_gdecr:N \g__enumext_item_number_int
                   \bool_set_false:N \l__enumext_item_number_bool
                 }
             }
        { 2 }{
               \int_gdecr:N \g__enumext_item_number_int
               \bool_set_false:N \l__enumext_item_number_bool
             }
        { 3 }{
               \int_gdecr:N \g__enumext_item_number_int
               \bool_set_false:N \l__enumext_item_number_bool
             }
        { 4 }{
               \int_gdecr:N \g__enumext_item_number_int
               \bool_set_false:N \l__enumext_item_number_bool
             }
      }
```

We should only execute this if enumext* is nested in the *"first level"* of enumext, for the rest of the cases the value of \g__enumext_item_number_int is already decreased.

```
    \int_case:nn { \l__enumext_level_h_int }
      {
        { 1 }{
               \bool_lazy_all:nT
                 {
                   { \bool_if_p:N \g__enumext_standar_bool }
                   { \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
                 }
                 {
                   \int_gdecr:N \g__enumext_item_number_int
                   \bool_set_false:N \l__enumext_item_number_bool
                 }
             }
      }
  }
```

(*End of definition for* __enumext_check_ans_active: *and* __enumext_check_ans_level:.)

__enumext_check_ans_key_hook:

The function __enumext_check_ans_key_hook: will *export* the status of the local variable \l__enumext_check_ans_key_bool to the global variable \g__enumext_check_ans_key_bool only if the key check-ans is active.

```
\cs_new_protected:Nn \__enumext_check_ans_key_hook:
  {
    \bool_lazy_and:nnT
      { \bool_if_p:N \l__enumext_check_ans_key_bool }
      { \bool_if_p:N \g__enumext_standar_bool }
      {
        \bool_gset_true:N \g__enumext_check_ans_key_bool
      }
    \bool_lazy_and:nnT
      { \bool_if_p:N \l__enumext_check_ans_key_bool }
      { \bool_if_p:N \g__enumext_starred_bool }
      {
        \bool_gset_true:N \g__enumext_check_ans_key_bool
      }
  }
```

(*End of definition for* `\__enumext_check_ans_key_hook:`.)

`\__enumext_item_answer_diff:`

The function `\__enumext_item_answer_diff:` will set the value of the variable `\g__enumext_item_answer_diff_int` which is used by the functions `\__enumext_check_ans_show:` for the key `save-ans` and by the function `\__enumext_check_ans_log:` by the internal *"check answer"* mechanism. This function will be passed to the function `\__enumext_execute_after_env:`.

```
\cs_new_protected:Nn \__enumext_item_answer_diff:
  {
    \int_gset:Nn \g__enumext_item_answer_diff_int
      {
        \int_sign:n { \g__enumext_item_number_int - \g__enumext_item_anskey_int }
      }
  }
```

(*End of definition for* `\__enumext_item_answer_diff:`.)

`\__enumext_check_ans_show:`
`\__enumext_check_ans_msg_less:`
`\__enumext_check_ans_msg_same_ok:`
`\__enumext_check_ans_msg_greater:`

The function `\__enumext_check_ans_show:` will be executed within the function `\__enumext_execute_after_env:` when the key `check-ans` is active, that is, when `\g__enumext_check_ans_key_bool` is *"true"* and will return the appropriate message according to the value of `\g__enumext_item_answer_diff_int` set by the function `\__enumext_item_answer_diff:`.

```
\cs_new_protected:Nn \__enumext_check_ans_show:
  {
    \int_case:nn { \g__enumext_item_answer_diff_int }
      {
        { -1 }{ \__enumext_check_ans_msg_less:    }
        {  0 }{ \__enumext_check_ans_msg_same_ok: }
        {  1 }{ \__enumext_check_ans_msg_greater: }
      }
  }
\cs_new_protected:Nn \__enumext_check_ans_msg_less:

13.26.6 Check for `\item*` and `\anspic*` commands

`\__enumext_check_starred_cmd:n`

The function `\__enumext_check_starred_cmd:n` performs an *extra check* for the `keyans`, `keyans*` and `keyanspic` environments. Unlike the *check* executed by `check-ans` key this one is not controlled by any key, it is intended to prevent the forgetting of `\item*` or `\anspic*` in these environments.

```
\cs_new_protected:Npn \__enumext_check_starred_cmd:n #1
  {
    \int_compare:nNnT
      { \g__enumext_check_starred_cmd_int } = { 0 }
      {
        \msg_warning:nnnV
          { enumext } { missing-starred }{ #1 } \l__enumext_check_start_line_env_tl
      }
    \int_compare:nNnT
      { \g__enumext_check_starred_cmd_int } > { 1 }
      {
        \msg_warning:nnnV
          { enumext } { many-starred }{ #1 } \l__enumext_check_start_line_env_tl
      }
    \int_gzero:N \g__enumext_check_starred_cmd_int
    \tl_clear:N \l__enumext_check_start_line_env_tl
  }
```

(*End of definition for* `\__enumext_check_starred_cmd:n`.)

13.27 Keys and functions associated with storage

`wrap-ans` `wrap-opt` `save-sep` `mark-ans` `mark-pos` `show-ans` `mark-ref` `save-ref`

We add the keys `wrap-ans`, `wrap-opt`, `save-sep`, `mark-ans`, `mark-pos`, `show-ans`, `show-pos`, `mark-ref` and `save-ref` related to the *"storage system"* and internal mechanism of *"label and ref"* only at the *first level* of `enumext` and `enumext*`.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
  {
    \keys_define:nn { enumext / #1 }
      {
        wrap-ans   .cs_set_protected:Np = \__enumext_anskey_wrapper:n ##1,
        wrap-ans   .initial:n =
                     {
                       \fbox{\parbox[t]{\dimeval{\itemwidth -2\fboxsep -2\fboxrule}}{##1}}
                     },
        wrap-ans   .value_required:n = true,
        wrap-opt   .cs_set_protected:Np = \__enumext_keyans_wrapper_opt:n ##1,
        wrap-opt   .initial:n = [{##1}],
        wrap-opt   .value_required:n = true,
        save-sep   .tl_set:N  = \l__enumext_store_keyans_item_opt_sep_tl,
        save-sep   .initial:n = {, ~ },
        save-sep   .value_required:n = true,
        mark-ans   .tl_set:N  = \l__enumext_mark_answer_sym_tl,
        mark-ans   .initial:n = \textasteriskcentered,
        mark-ans   .value_required:n = true,
        mark-pos   .choice:,
        mark-pos / left    .code:n = \str_set:Nn \l__enumext_mark_position_str { l },
        mark-pos / right   .code:n = \str_set:Nn \l__enumext_mark_position_str { r },
        mark-pos / unknown .code:n =
                             \msg_error:nneee { enumext } { unknown-choice }
                               { mark-pos } { left, ~ right } { \exp_not:n {##1} },
        mark-pos   .initial:n = right,
        mark-pos   .value_required:n = true,
        show-ans   .bool_set:N = \l__enumext_show_answer_bool,

        show-ans   .value_required:n = true,
        show-pos   .bool_set:N = \l__enumext_show_position_bool,
        show-pos   .initial:n  = false,
        show-pos   .value_required:n = true,
        mark-ref   .tl_set:N   = \l__enumext_mark_ref_sym_tl,
```

```
      mark-ref   .initial:n  = \textreferencemark,
      mark-ref   .value_required:n = true,
      save-ref   .bool_set:N = \l__enumext_store_ref_key_bool,
      save-ref   .initial:n  = false,
      save-ref   .value_required:n = true,
    }
  }
\clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }
```

(*End of definition for* `wrap-ans` *and others.*)

`mark-pos` `show-ans` `show-pos`

For the `keyans` and `keyans*` environments we will only add the keys `mark-pos`, `show-ans` and `show-pos`.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
  {
    \keys_define:nn { enumext / #1 }
      {
        mark-pos .choice:,
        mark-pos / left  .code:n = \str_set:Nn \l__enumext_mark_position_str { l },
        mark-pos / right .code:n = \str_set:Nn \l__enumext_mark_position_str { r },
        mark-pos .initial:n = right,
        mark-pos .value_required:n  = true,
        show-ans .bool_set:N = \l__enumext_show_answer_bool,
        show-ans .initial:n  = false,
        show-ans .value_required:n = true,
        show-pos .bool_set:N = \l__enumext_show_position_bool,
        show-pos .initial:n  = false,
        show-pos .value_required:n = true,
      }
  }
\clist_map_inline:nn { keyans, keyans* } { \__enumext_tmp:n {#1} }
```

(*End of definition for* `mark-pos` *,* `show-ans` *, and* `show-pos`*.*)

13.27.1 Storing structure of the environments

The idea behind *"storing structure"* in the *sequence* is to have a copy of the *structure of the environment* in which the key `save-ans` is being executed so we must capture the *optional argument* passed to the levels of the environment in which it is executed and *"storing"* this in the *sequence*.

`\__enumext_store_active_keys:n` `\__enumext_store_active_keys_vii:n`

The functions `\__enumext_store_active_keys:n` and `\__enumext_store_active_keys_vii:n` will be responsible for the *"storing keys"* filtered from the *optional argument* of the environment in which the key `save-ans` is executed and the levels within this for the `enumext` and `enumext*` environments. We will execute this function only if the variable `\l__enumext_store_save_key_X_bool` is false, that is, the key `store-key` is not active, establishing the variable `\l__enumext_store_save_key_X_tl` with the filtered ⟨*keys*⟩.

```
\cs_new_protected:Npn \__enumext_store_active_keys:n #1
  {
    \bool_if:cF { l__enumext_store_save_key_ \__enumext_level: _bool }
      {
        \tl_clear:c { l__enumext_save_key_ \__enumext_level: _tl }
        \tl_set:ce
          { l__enumext_store_save_key_ \__enumext_level: _tl }
          { \__enumext_filter_save_key:n {#1} }
      }
  }
\cs_new_protected:Npn \__enumext_store_active_keys_vii:n #1
  {
    \bool_if:NF \l__enumext_store_save_key_vii_bool
      {
        \tl_clear:N \l__enumext_store_save_key_vii_tl
        \tl_set:Ne \l__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
      }
  }
```

(*End of definition for* `\__enumext_store_active_keys:n` *and* `\__enumext_store_active_keys_vii:n`*.*)

13.27.2 Setting save-key key

Since this *"storing structure"* in the *sequence* established by the save-ans key when executing \anskey or anskey*, we will not be able to modify it. The best thing here is to have a key that allows you to modify the *optional argument* of the *"storing structure"* in the *sequence*.

save-key

The values set by this key passed in the *optional argument* of the enumext and enumext* environments will override the values of the \l__enumext_store_save_key_X_tl variable set by the functions __enumext_store_active_keys:n and __enumext_store_active_keys_vii:n. Now define the key save-key for all levels of enumext and enumext* environments.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
  {
    \keys_define:nn { enumext / enumext* }
      {
        save-key .code:n = \__enumext_parse_save_key_vii:n {##1},
        save-key .value_required:n = true,
      }
    \keys_define:nn { enumext / #1 }
      {
        save-key .code:n = \__enumext_parse_save_key:n {##1},
        save-key .value_required:n = true,
      }
  }
\clist_map_inline:nn { level-1, level-2, level-3, level-4 } { \__enumext_tmp:n {#1} }
```

(*End of definition for* save-key.)

__enumext_parse_save_key:n
__enumext_parse_save_key_vii:n

The functions __enumext_parse_save_key:n and __enumext_parse_save_key_vii:n will be responsible for *"storing keys"* in the variable \l__enumext_store_save_key_X_tl for enumext and enumext*.

```
\cs_new_protected:Npn \__enumext_parse_save_key:n #1
  {
    \bool_set_true:c { l__enumext_store_save_key_ \__enumext_level: _bool }
    \tl_clear:c { l__enumext_save_key_ \__enumext_level: _tl }
    \tl_set:ce
      { l__enumext_store_save_key_ \__enumext_level: _tl }
      { \__enumext_filter_save_key:n {#1} }
  }
\cs_new_protected:Npn \__enumext_parse_save_key_vii:n #1
  {
    \bool_set_true:N \l__enumext_store_save_key_vii_bool
    \tl_clear:N \l__enumext_store_save_key_vii_tl
    \tl_set:Ne \l__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
  }
```

(*End of definition for* __enumext_parse_save_key:n *and* __enumext_parse_save_key_vii:n.)

13.27.3 Internal functions to store optional arguments

__enumext_filter_save_key:n
__enumext_filter_save_key_key:n
__enumext_filter_save_key_pair:nn

The function __enumext_filter_save_key:n will be in charge of *"filtering keys"* we want to *stored* in *sequence* where {#1} represents the *optional argument* passed to the environment.

```
\cs_new:Npn \__enumext_filter_save_key:n #1
  {
    \use:e
      {
        \keyval_parse:NNn
          \__enumext_filter_save_key_key:n
          \__enumext_filter_save_key_pair:nn {#1}
      }
  }
```

The function __enumext_filter_save_key_key:n will be responsible for *"filtering keys"* that are passed *"without value"* by excluding the resume, resume*, no-store and base-fix keys.

```
\cs_new:Npn \__enumext_filter_save_key_key:n #1
  {
    \str_case:nnF {#1}
      {
        { resume } {} { resume* } {} { no-store } {} { base-fix } {}
      }
      { , { \exp_not:n {#1} } }
  }
```

The function __enumext_filter_save_key_pair:nn will be responsible for *"filtering keys"* that are passed *"with value"* by excluding the series, resume, save-ans, save-ref, check-ans, show-ans, save-pos, wrap-ans, mark-ans, wrap-opt, save-sep, mark-ref, mini-env, mini-sep, mini-right and mini-right* keys.

```
\cs_new:Npn \__enumext_filter_save_key_pair:nn #1#2
  {
    \str_case:nnF {#1}
      {
        { series   } {} { resume    } {} { save-ans } {} { save-ref   } {}
        { save-key } {} { check-ans } {} { show-ans } {} { show-pos   } {}
        { wrap-ans } {} { mark-ans  } {} { wrap-opt } {} { save-sep   } {}
        { mark-ref } {} { mini-env  } {} { mini-sep } {} { mini-right } {}
        { mini-right* } {}
      }
      { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
  }
```

(*End of definition for* __enumext_filter_save_key:n, __enumext_filter_save_key_key:n, *and* __enumext_filter_save_key_pair:nn.)

13.27.4 Function for storing content in prop list

__enumext_store_addto_prop:n
__enumext_store_addto_prop:V

The function __enumext_store_addto_prop:n stores the {⟨*content*⟩} in *prop list* defined by save-ans key. The *"stored content"* is retrieved by means of the \getkeyans command.

The form in which the {⟨*content*⟩} is *"stored"* in the *prop list* is {⟨*position*⟩}{⟨*content*⟩}. This function is used by \anskey in enumext and enumext* environments, \item* in keyans and keyans* environments and \anspic* in keyanspic environment.

```
\cs_new_protected:Npn \__enumext_store_addto_prop:n #1
  {
    \prop_gput_if_not_in:cen { g__enumext_ \l__enumext_store_name_tl _prop }
      {
        \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } + 1 }
      }
      { #1 }
  }
\cs_generate_variant:Nn \__enumext_store_addto_prop:n { V }
```

(*End of definition for* __enumext_store_addto_prop:n.)

13.27.5 Function for storing content in sequence

__enumext_store_addto_seq:n
__enumext_store_addto_seq:v
__enumext_store_addto_seq:V

The function __enumext_store_addto_seq:n stores the {⟨*content*⟩} in *sequence* defined by save-ans key. This function is used by \anskey in enumext, \item* in keyans and \anspic in keyanspic.

The form in which the {⟨*content*⟩} is stored in *sequence* is in a internal enumext or enumext* environments with the *"same structure"* in which the command was executed.
The *"stored content"* is retrieved by means of the \printkeyans command.

```
\cs_new_protected:Npn \__enumext_store_addto_seq:n #1
  {
    \seq_gput_right:cn { g__enumext_ \l__enumext_store_name_tl _seq } { #1 }
  }
\cs_generate_variant:Nn \__enumext_store_addto_seq:n { v, V }
```

(*End of definition for* __enumext_store_addto_seq:n.)

13.27.6 Functions for storing structure in the sequence

__enumext_store_level_open:
__enumext_store_level_close:

The *"storing structure"* is handled by the functions __enumext_store_level_open: and __enumext_store_level_close: which are executed per level within the enumext environment.

```
\cs_new_protected:Nn \__enumext_store_level_open:
  {
    \bool_if:NT \l__enumext_check_answers_bool
      {
        \tl_if_empty:cTF { l__enumext_store_save_key_ \__enumext_level: _tl }
          {
            \__enumext_store_addto_seq:n
              {
                \item \begin{enumext}
              }
          }
          {
            \tl_put_left:cn { l__enumext_store_save_key_ \__enumext_level: _tl }
              {
```

```
                \item \begin{enumext} [
              }
            \tl_put_right:cn { l__enumext_store_save_key_ \__enumext_level: _tl }
              {
                ]
              }
            \__enumext_store_addto_seq:v { l__enumext_store_save_key_ \__enumext_level: _tl }
          }
      }
  }
\cs_new_protected:Nn \__enumext_store_level_close:
  {
    \bool_if:NT \l__enumext_check_answers_bool
      {
        \__enumext_store_addto_seq:n { \end{enumext} }
      }
  }
```

(*End of definition for* `\__enumext_store_level_open:` *and* `\__enumext_store_level_close:`.)

`\__enumext_store_level_open_vii:` `\__enumext_store_level_close_vii:`

The *"storing structure"* is handled by the functions `\__enumext_store_level_open_vii:` and `\__enumext_store_level_close_vii:` which are executed in the `enumext*` environment.

```
\cs_new_protected:Nn \__enumext_store_level_open_vii:
  {
    \bool_if:NT \l__enumext_check_answers_bool
      {
        \tl_if_empty:NTF \l__enumext_store_save_key_vii_tl
          {
            \__enumext_store_addto_seq:n
              {
                \item \begin{enumext*}
              }
          }
          {
            \tl_put_left:Nn \l__enumext_store_save_key_vii_tl
              {
                \item \begin{enumext*}[
              }
            \tl_put_right:Nn \l__enumext_store_save_key_vii_tl
              {
                ]
              }
            \__enumext_store_addto_seq:V \l__enumext_store_save_key_vii_tl
          }
      }
  }
\cs_new_protected:Nn \__enumext_store_level_close_vii:
  {
    \bool_if:NT \l__enumext_check_answers_bool
      {
        \__enumext_store_addto_seq:n { \end{enumext*} }
      }
  }
```

(*End of definition for* `\__enumext_store_level_open_vii:` *and* `\__enumext_store_level_close_vii:`.)

13.27.7 Function for show marks and position

`\__enumext_print_keyans_box:NN` `\__enumext_print_keyans_box:cc`

The function `\__enumext_print_keyans_box:NN` print a box in the left margin with `\l__enumext_mark_answer_sym_tl` used by the `wrap-ans`, `show-ans` and `show-pos` keys. The function takes two arguments:

#1: `\l__enumext_labelwidth_X_dim`
#2: `\l__enumext_labelsep_X_dim`

```
\cs_new_protected:Nn \__enumext_print_keyans_box:NN
  {
    \mode_leave_vertical:
    \skip_horizontal:n { -\dim_use:N #2 }
    \makebox[0pt][ r ]
      {
        \makebox[ \dim_use:N #1 ][ \l__enumext_mark_position_str ]
          {
            \tl_use:N \l__enumext_mark_answer_sym_tl
```

```
      }
    }
    \skip_horizontal:n { \dim_use:N #2 }
  }
\cs_generate_variant:Nn \__enumext_print_keyans_box:NN { cc }
```

(*End of definition for* `\__enumext_print_keyans_box:NN`.)

13.28 The internal label and ref

The function `\__enumext_store_internal_ref:` handles the *"internal label and ref"* system used by the `save-ref` and `mark-ref` keys for `\anskey` will allow to execute `\ref{`⟨*store name* : *position*⟩`}` and will return `1.(a).i.A`.

`\__enumext_store_internal_ref:`

First we will remove the dots "." from the current ⟨*labels*⟩, we do not want to get double dots in our references, then we will place this in the variable `\l__enumext_newlabel_arg_two_tl`.

```
\cs_new_protected:Nn \__enumext_store_internal_ref:
  {
    \cs_set_protected:Npn \__enumext_tmp:n ##1
      {
        \tl_set_eq:cc { l__enumext_label_copy_##1_tl } { l__enumext_label_##1_tl }
        \tl_reverse:c { l__enumext_label_copy_##1_tl }
        \tl_remove_once:cn { l__enumext_label_copy_##1_tl } { . }
        \tl_reverse:c { l__enumext_label_copy_##1_tl }
      }
    \clist_map_inline:nn { i, ii, iii, iv, vii } { \__enumext_tmp:n {##1} }
    \cs_set:Npn \__enumext_tmp:n ##1
      { . \tl_use:c { l__enumext_label_copy_ \int_to_roman:n {##1} _tl } }
```

Here we need to analyse the cases where the environment is started with `enumext*` and if `\anskey` or `anskey*` is running alone in it or if it is running in a nested `enumext` environment within the starting environment.

```
    \bool_lazy_all:nT
      {
        { \bool_if_p:N \g__enumext_starred_bool }
        { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
      }
      {
        \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
          { \tl_use:N \l__enumext_label_copy_vii_tl }
      }
    \bool_lazy_all:nT
      {
        { \bool_not_p:n { \g__enumext_standar_bool } }
        { \bool_if_p:N \l__enumext_standar_bool }
        { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
      }
      {
        \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
          {
            \tl_use:N \l__enumext_label_copy_vii_tl
            \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
          }
      }
```

If started with `enumext` and if `\anskey` or `anskey*` is running alone in it or if it is running in a nested `enumext*` environment within the starting environment.

```
    \bool_lazy_all:nT
      {
        { \bool_if_p:N \g__enumext_standar_bool }
        { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
        { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
      }
      {
        \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
          {
            \tl_use:N \l__enumext_label_copy_i_tl
            \int_step_function:nnN { 2 } { \l__enumext_level_int } \__enumext_tmp:n
          }
      }
    \cs_set:Npn \__enumext_tmp:n ##1
      { \tl_use:c { l__enumext_label_copy_ \int_to_roman:n {##1} _tl } . }
    \bool_lazy_all:nT
```

```
      {
        { \bool_if_p:N \g__enumext_standar_bool }
        { \bool_if_p:N \l__enumext_starred_bool }
        { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
      }
      {
        \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
          {
            \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
            \tl_use:N \l__enumext_label_copy_vii_tl
          }
      }
```

Now we set the variable `\l__enumext_newlabel_arg_one_tl` which will contain {⟨*store name* : *position*⟩}.

```
    \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
      {
        \l__enumext_store_name_tl \c_colon_str
        \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
      }
```

Now execute the function `\__enumext_newlabel:nn` and save the result in the variable `\l__enumext_write_aux_file_tl` and finally we write in the `.aux` file.

```
    \tl_put_right:Ne \l__enumext_write_aux_file_tl
      {
        \__enumext_newlabel:nn
          { \exp_not:V \l__enumext_newlabel_arg_one_tl }
          { \l__enumext_newlabel_arg_two_tl }
      }
    \l__enumext_write_aux_file_tl
  }
```

(*End of definition for* `\__enumext_store_internal_ref:`.)

13.29 Common functions for \anskey and anskey* environment

`\__enumext_store_anskey_code:n`

The internal function `\__enumext_store_anskey_code:n` first we pass the {⟨*argument*⟩} to the *prop list*, then checks the state of the variable `\l__enumext_store_ref_key_bool` handled by the `save-ref` key and will call the function `\__enumext_store_internal_ref:` for the *"internal label and ref"* system. Followed by this if the `show-ans` or `show-pos` keys are active we will show the *"wrapped"* {⟨*argument*⟩}.

```
\cs_new_protected:Npn \__enumext_store_anskey_code:n #1
  {
    \int_gincr:N \g__enumext_item_anskey_int
    \__enumext_store_addto_prop:n {#1}
    \bool_if:NT \l__enumext_store_ref_key_bool
      {
        \__enumext_store_internal_ref:
      }
    \__enumext_anskey_show_wrap_left:n { #1 }
```

Now we start processing the [⟨*key* = *val*⟩] passed to the command to build our `\item` in the variable `\l__enumext_store_anskey_arg_tl` which we will *"store"* in the *sequence*. First we clear the variable `\l__enumext_store_anskey_arg_tl` and process the ⟨*keys*⟩, if the `break-col` key is present and the command is running under `enumext` (not in `enumext*`) we will add `\columnbreak` and then `\item`.

```
    \tl_clear:N \l__enumext_store_anskey_arg_tl
    \bool_lazy_and:nnT
      { \bool_if_p:N \l__enumext_store_columns_break_bool }
      { \bool_not_p:n { \l__enumext_starred_bool } }
      {
        \tl_put_left:Nn \l__enumext_store_anskey_arg_tl { \columnbreak }
      }
    \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { \item }
```

If the `item-join` key is present and the command is running under `enumext*` we will add (⟨*number*⟩) to `\l__enumext_store_anskey_arg_tl`.

```
    \bool_lazy_and:nnT
      { \bool_not_p:n { \l__enumext_starred_bool } }
      { \int_compare_p:nNn { \l__enumext_store_item_join_int } > { 1 } }
      {
        \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
          {
            ( \exp_not:V \l__enumext_store_item_join_int )
          }
      }
```

And now we will review the keys item-star, item-sym* and item-pos* and pass them to \l__enumext_store_anskey_arg_tl along with the {⟨argument⟩} for \anskey or ⟨body⟩ for anskey*.

```
\bool_if:NTF \l__enumext_store_item_star_bool
  {
    \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { * }
    \tl_if_empty:NF \l__enumext_store_item_symbol_tl
      {
        \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
          {
            [ \exp_not:V \l__enumext_store_item_symbol_tl ]
          }
      }
    \dim_compare:nT
      {
        \l__enumext_store_item_symbol_sep_dim != \c_zero_dim
      }
      {
        \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
          {
            [ \exp_not:V \l__enumext_store_item_symbol_sep_dim ]
          }
      }
    \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
  }
  {
    \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
  }
```

Finally we check if the save-ref key are active along with the hyperref package load, if both conditions are met, it will create the \hyperlink with *"symbol"* set by mark-ref key and then store in *sequence*.

```
\bool_lazy_and:nnT
  { \bool_if_p:N \l__enumext_store_ref_key_bool }
  { \bool_if_p:N \l__enumext_hyperref_bool }
  {
    \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
      {
        \hfill \exp_not:N \hyperlink { \exp_not:V \l__enumext_newlabel_arg_one_tl }
             { \exp_not:V \l__enumext_mark_ref_sym_tl }
      }
  }
\__enumext_store_addto_seq:V \l__enumext_store_anskey_arg_tl
}
```

(*End of definition for* __enumext_store_anskey_code:n.)

__enumext_anskey_show_wrap_arg:n

The function __enumext_anskey_show_wrap_arg:n *"wraps"* the {⟨argument⟩} passed to \anskey and the ⟨body⟩ for anskey* when using the wrap-ans key.

```
\cs_new_protected:Npn \__enumext_anskey_show_wrap_arg:n #1
  {
    \par
    \bool_if:NTF \l__enumext_starred_bool
      {
        \__enumext_print_keyans_box:NN
          \l__enumext_labelwidth_vii_dim  \l__enumext_labelsep_vii_dim
      }
      {
        \__enumext_print_keyans_box:cc
          { l__enumext_labelwidth_ \__enumext_level: _dim }
          { l__enumext_labelsep_ \__enumext_level: _dim }
      }
    \__enumext_anskey_wrapper:n { #1 }
  }
```

(*End of definition for* __enumext_anskey_show_wrap_arg:n.)

__enumext_anskey_show_wrap_left:n

The function __enumext_anskey_show_wrap_left:n will show the *"mark"* defined by the mark-ans key or the *"position"* of the {⟨content⟩} stored in the *prop list* when using the show-pos key on the left margin next to the *"wraps"* {⟨argument⟩} passed to \anskey and the ⟨body⟩ in anskey* on the right side when using the show-ans key.

```
\cs_new_protected:Npn \__enumext_anskey_show_wrap_left:n #1
  {
```

```
    \bool_if:NT \l__enumext_show_answer_bool
      {
        \__enumext_anskey_show_wrap_arg:n { #1 }
      }
    \bool_if:NT \l__enumext_show_position_bool
      {
        \tl_set:Ne \l__enumext_mark_answer_sym_tl
          {
            \group_begin:
            \exp_not:N \normalfont
            \exp_not:N \footnotesize [ \int_eval:n
              {
                \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop }
              }
              ]
            \group_end:
          }
        \__enumext_anskey_show_wrap_arg:n { #1 }
      }
  }
```

(*End of definition for* `\__enumext_anskey_show_wrap_left:n`.)

13.30 The command \anskey

Since we will be *"storing content"* in a `list` environment within *sequences* and can (more or less) manage the options passed to each level, it is necessary that we have a little more control over `\item` when storing.

The `\anskey` command will cover this point and give it similar behaviour to that of `\item` in the `enumext` and `enumext*` environments executed as follows `\anskey[`⟨*key = val*⟩`]{`⟨*content*⟩`}`.

`\__enumext_anskey_unknown:n`
`\__enumext_anskey_unknown:nn`

First we'll add the keys `break-col`, `item-join`, `item-star`, `item-sym*` and `item-pos*`.

```
\keys_define:nn { enumext / anskey }
  {
    break-col .bool_set:N = \l__enumext_store_columns_break_bool,
    break-col .default:n  = true,
    break-col .value_forbidden:n = true,
    item-join .int_set:N  = \l__enumext_store_item_join_int,
    item-join .value_required:n = true,
    item-star .bool_set:N = \l__enumext_store_item_star_bool,
    item-star .default:n  = true,
    item-star .value_forbidden:n = true,
    item-sym* .tl_set:N   = \l__enumext_store_item_symbol_tl,
    item-sym* .value_required:n = true,
    item-pos* .dim_set:N  = \l__enumext_store_item_symbol_sep_dim,
    item-pos* .value_required:n = true,
    unknown   .code:n     = { \__enumext_anskey_unknown:n {#1} },
  }
```

The ⟨*keys*⟩ are stored in `\l_keys_key_str` and the value (if any) is passed as an argument to the function `\__enumext_anskey_unknown:n`.

```
\cs_new_protected:Npn \__enumext_anskey_unknown:n #1
  {
    \exp_args:NV \__enumext_anskey_unknown:nn \l_keys_key_str {#1}
  }
\cs_new_protected:Npn \__enumext_anskey_unknown:nn #1 #2
  {
    \tl_if_blank:nTF {#2}
      {
        \msg_error:nnn { enumext } { anskey-cmd-key-unknown } {#1}
      }
      {
        \msg_error:nnnn { enumext } { anskey-cmd-key-value-unknown } {#1} {#2}
      }
  }
```

(*End of definition for* `\__enumext_anskey_unknown:n` *and* `\__enumext_anskey_unknown:nn`.)

The `\anskey` command will only be present when using the `save-ans` key in `enumext` and `enumext*` environments, otherwise it will return an error.

`\anskey`

We will first call the function `\__enumext_anskey_safe_outer:` to be sure where we execute the command, then we will check the state of the variable `\l__enumext_check_answers_bool` set by the key `no-store`, if is true we will increment `\g__enumext_item_anskey_int` for the internal *"check answer"* system and

execute the function __enumext_anskey_safe_inner:n to ensure that the command is not nested and that the argument is not empty, finally search the [⟨*key* = *val*⟩] and call the function __enumext_store_anskey_code:n.

```
\NewDocumentCommand \anskey { o +m }
  {
    \__enumext_anskey_safe_outer:
    \group_begin:
      \bool_if:NT \l__enumext_check_answers_bool
        {
          \tl_if_novalue:nF {#1}
            {
              \keys_set:nn { enumext / anskey } {#1}
            }
          \tl_if_blank:nTF {#2}
            {
              \msg_error:nn { enumext } { anskey-empty-arg }
            }
            {
              \__enumext_anskey_safe_inner:
              \__enumext_store_anskey_code:n {#2}
            }
        }
    \group_end:
  }
```

(*End of definition for* \anskey. *This function is documented on page* ??.)

13.30.1 Internal functions for the command

__enumext_anskey_safe_outer:
__enumext_anskey_safe_inner:

The __enumext_store_anskey_safe_outer: function will return the appropriate messages when the command is executed outside the environment in which the save-ans key was activated.

```
\cs_new_protected:Nn \__enumext_anskey_safe_outer:
  {
    \bool_if:NF \l__enumext_store_active_bool
      {
        \msg_error:nnnn { enumext } { anskey-wrong-place }{ anskey }{ enumext }
      }
    \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
      {
        \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyans }
      }
    \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
      {
        \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyans* }
      }
    \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
      {
        \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyanspic }
      }
  }
```

The __enumext_anskey_safe_inner: function will first check if the command is nested, if preceded by a not numbered \item or if it is in *math mode* returning the appropriate messages.

```
\cs_new_protected:Nn \__enumext_anskey_safe_inner:
  {
    \int_incr:N \l__enumext_anskey_level_int
    \int_compare:nNnT { \l__enumext_anskey_level_int } > { 1 }
      {
        \msg_error:nn { enumext } { anskey-nested }
      }
    \bool_if:NF \l__enumext_item_number_bool
      {
        \msg_error:nn { enumext } { anskey-unnumber-item }
      }
    \mode_if_math:T
      {
        \msg_error:nne { enumext } { anskey-math-mode } { \c_backslash_str anskey }
      }
  }
```

(*End of definition for* __enumext_anskey_safe_outer: *and* __enumext_anskey_safe_inner:.)

13.31 The environment anskey*

Managing *verbatim content* in an environment is quite complicated, I learned that when creating the scontents package, so to be able to have support at this point it is best to play a little with the internal code of scontents and *hooks*. Some considerations I should have here before implementing this:

- If some package, class or user has defined the environment with the same name somewhere in the document it would be a problem, you would not know what argument has been passed to store-env, if you are using the key print-env or the write-out key, sure, I can detect and modify it within the enumext and enumext* environments, but it would look strange not to have some keys available when running within these environments.
- A better (perhaps a bit paranoid) option is to define it within the environment in which the save-ans key is executed. and have it available only when that key is executed, here I would have absolute control of the ⟨*keys*⟩ and I make sure that write-out is not used, then using *hooks after* I undefine it and using *hook before* I check if it has been created by any package, class or user and I return a error, then the user will have to see how to solve the problem.

__enumext_undefine_anskey_env:

The function __enumext_undefine_anskey_env: will undefine the environment anskey* and will be passed to the function __enumext_execute_after_env: (§??) which is executed after the environment in which the key save-ans is active.

```
\cs_new_protected:Nn \__enumext_undefine_anskey_env:
  {
    \cs_undefine:c { anskey* }
    \cs_undefine:c { endanskey* }
    \cs_undefine:c { __scontents_anskey*_env_begin: }
    \cs_undefine:c { __scontents_anskey*_env_end: }
  }
```

Detection of the anskey* environment outside the enumext and enumext* environments.

```
\__enumext_before_env:nn { enumext }
  {
    \bool_lazy_and:nnT
      { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
      { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
      {
        \cs_if_free:cF { __scontents_anskey*_env_begin: }
          {
            \msg_error:nnn { enumext } { anskey-env-error } { anskey* }
          }
      }
  }
\__enumext_before_env:nn { enumext* }
  {
    \bool_lazy_and:nnT
      { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
      { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
      {
        \cs_if_free:cF { __scontents_anskey*_env_begin: }
          {
            \msg_error:nnn { enumext } { anskey-env-error } { anskey* }
          }
      }
  }
```

Detection of the anskey* environment inside the keyans, keyans* and keyanspic environments, if preceded by a not numbered \item or if it is in *math mode* returning the appropriate messages.

```
\__enumext_before_env:nn { anskey* }
  {
    \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
      {
        \msg_error:nnn { enumext } { anskey-env-wrong }{ keyans }
      }
    \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
      {
        \msg_error:nnn { enumext } { anskey-env-wrong } { keyans* }
      }
    \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
      {
        \msg_error:nnn { enumext } { anskey-env-wrong } { keyanspic }
      }
    \bool_if:NF \l__enumext_item_number_bool
      {
```

```
      \msg_error:nn { enumext } { anskey-unnumber-item }
    }
  \mode_if_math:T
    {
      \msg_error:nnn { enumext } { anskey-math-mode } { anskey* }
    }
}
```

(*End of definition for* `\__enumext_undefine_anskey_env:`.)

anskey*
__enumext_anskey_env_make:n
__enumext_anskey_env_make:V
__enumext_anskey_env_define_keys:
__enumext_anskey_env_unknown:n
__enumext_anskey_env_unknown:nn
__enumext_anskey_env_reset_keys:
__enumext_rescan_anskey_env:n

The function `\__enumext_anskey_env_make:n` creates the environment `anskey*` (*custom version* of `scontents` environment) by setting the initial keys `store-env={`⟨*store name*⟩`}` and `print-env=false`. To maintain the *scope* of the environment and that it is only active when the key `save-ans` is active we will pass this function to the function `\__enumext_storing_exec:` (§??) and we will execute it only if the variable `\l__enumext_anskey_env_bool` is true, with this we prevent it from being executed again when the environment is nested and the key `save-ans` is active, which returns an error for part of the package `scontents`.

```
\cs_new_protected:Npn \__enumext_anskey_env_make:n #1
  {
    \bool_if:NT \l__enumext_anskey_env_bool
      {
        \newenvsc{anskey*}[store-env=#1,print-env=false]
        \__enumext_anskey_env_exec:
      }
  }
\cs_generate_variant:Nn \__enumext_anskey_env_make:n { V }
```

The function `\__enumext_anskey_env_define_keys:` will add the keys `break-col`, `item-join`, `item-join`, `item-star`, `item-sym*` and `item-pos*` and will leave the keys `print-env`, `store-env` and `write-out` undefined. We will apply this function using the *hook* function `\__enumext_before_env:nn`.

```
\cs_new_protected:Nn \__enumext_anskey_env_define_keys:
  {
    \keys_define:nn { scontents / scontents }
      {
        break-col .bool_gset:N = \g__enumext_store_columns_break_bool,
        break-col .default:n   = true,
        break-col .value_forbidden:n = true,
        item-join .int_gset:N  = \g__enumext_store_item_join_int,
        item-join .value_required:n = true,
        item-star .bool_gset:N = \g__enumext_store_item_star_bool,
        item-star .default:n   = true,
        item-star .value_forbidden:n = true,
        item-sym* .tl_gset:N   = \g__enumext_store_item_symbol_tl,
        item-sym* .value_required:n = true,
        item-pos* .dim_gset:N  = \g__enumext_store_item_symbol_sep_dim,
        item-pos* .value_required:n = true,
        print-env .undefine:,
        store-env .undefine:,
        write-out .undefine:,
        unknown   .code:n      = { \__enumext_anskey_env_unknown:n {##1} },
      }
  }
```

The ⟨*keys*⟩ are stored in `\l_keys_key_str` and the value (if any) is passed as an argument to the function `\__enumext_anskey_env_unknown:n`.

```
\cs_new_protected:Npn \__enumext_anskey_env_unknown:n #1
  {
    \exp_args:NV \__enumext_anskey_env_unknown:nn \l_keys_key_str {#1}
  }
\cs_new_protected:Npn \__enumext_anskey_env_unknown:nn #1#2
  {
    \tl_if_blank:nTF {#2}
      {
        \msg_error:nnn { enumext } { anskey-env-key-unknown } {#1}
      }
      {
        \msg_error:nnnn { enumext } { anskey-env-key-value-unknown } {#1} {#2}
      }
  }
```

The function __enumext_anskey_env_reset_keys: will leave the keys break-col, item-join, item-join, item-star, item-sym* and item-pos* undefined. We will apply this function using the *hook* function __enumext_after_env:nn.

```
\cs_new_protected:Nn \__enumext_anskey_env_reset_keys:
  {
    \keys_define:nn { scontents / scontents }
      {
        break-col .undefine:,
        item-join .undefine:,
        item-star .undefine:,
        item-sym* .undefine:,
        item-pos* .undefine:,
        write-out .code:n    = {
                                 \bool_set_false:N \l__scontents_storing_bool
                                 \bool_set_true:N  \l__scontents_writing_bool
                                 \tl_set:Nn \l__scontents_fname_out_tl {##1}
                               },
        write-out .value_required:n = true,
        print-env .meta:nn   = { scontents } { print-env = ##1 },
        print-env .default:n = true,
        store-env .meta:nn   = { scontents } { store-env = ##1 },
        unknown   .code:n    = { \__scontents_parse_environment_keys:n {##1} },
      }
  }
```

The function __enumext_rescan_anskey_env:n will be responsible for bringing the ⟨*body*⟩ of the environment saved in the sequence \g__scontents_name_⟨*store name*⟩_seq to pass it to our *sequence* and *prop list*.

```
\cs_new_protected:Npn \__enumext_rescan_anskey_env:n #1
  {
    \group_begin:
      \int_set:Nn \tex_newlinechar:D { `\^^J }
      \__scontents_rescan_tokens:x
        {
          \endgroup % This assumes \catcode`\\=0... Things might go off otherwise.
         #1
        }
  }
```

(*End of definition for* anskey* *and others. This function is documented on page* ??.)

__enumext_anskey_env_exec:

The function __enumext_anskey_env_exec: will be responsible for processing all the code necessary for the execution of the environment. The first thing will be to add our ⟨*keys*⟩.

```
\cs_new_protected:Nn \__enumext_anskey_env_exec:
  {
    \__enumext_before_env:nn { anskey* }
      {
        \__enumext_anskey_env_define_keys:
      }
```

Now we will execute our actions after the anskey* environment is closed. We'll fetch the contents of the *environment body* that is now saved in \g__scontents_name_⟨*store name*⟩_seq and store it in the variable \l__enumext_store_anskey_env_tl then we execute the rest of the functions.

```
    \hook_if_empty:nF {env/anskey*/after}
      {
        \hook_gremove_code:nn {env/anskey*/after} { * }
      }
    \__enumext_after_env:nn { anskey* }
      {
        \__enumext_anskey_env_save_keys:
        \tl_clear:N \l__enumext_store_anskey_env_tl
        \tl_clear:N \l__enumext_store_anskey_opt_tl
        \bool_if:NT \l__enumext_check_answers_bool
          {
            \tl_gset:Ne \l__enumext_store_anskey_env_tl
              {
                \seq_item:ce { g__scontents_name_ \l__enumext_store_name_tl _seq } { -1 }
              }
            \regex_match:nVTF
              { ^\s* \z | ^\s* \u{c__scontents_hidden_space_str} \z }
              \l__enumext_store_anskey_env_tl
```

```
                {
                  \msg_error:nn { enumext } { anskey-empty-arg }
                }
                {
                  \__enumext_anskey_env_store:
                }
            }
          \__enumext_anskey_env_clean_vars:
          \__enumext_anskey_env_reset_keys:
        }
    }
```

The use of \hook_gremove_code:nn is necessary here, otherwise the {⟨*code*⟩} passed to __enumext_after_env:nn{anskey*} will be accumulated for each execution. The last function __enumext_anskey_env_reset_keys: is necessary so as not to hinder any scontents environment running within enumext or enumext*.

(*End of definition for* __enumext_anskey_env_exec:.)

__enumext_anskey_env_save_keys:
__enumext_anskey_env_store:
__enumext_anskey_env_clean_vars:

The function __enumext_anskey_env_save_keys: processing the [⟨*key* = *val*⟩] passed to the environment and save this in the variable \l__enumext_store_anskey_opt_tl. If the break-col key is present and the environment is running under enumext (not in enumext*) we will add the key break-col.

```
\cs_new_protected:Nn \__enumext_anskey_env_save_keys:
  {
    \bool_lazy_and:nnT
      { \bool_if_p:N \g__enumext_store_columns_break_bool }
      { \bool_not_p:n { \l__enumext_starred_bool } }
      {
        \tl_put_left:Ne \l__enumext_store_anskey_opt_tl { ,break-col, }
      }
```

If the item-join key is present and the command is running under enumext* we will add to \l__enumext_store_anskey_opt_tl.

```
    \bool_lazy_and:nnT
      { \bool_not_p:n { \l__enumext_starred_bool } }
      { \int_compare_p:nNn { \g__enumext_store_item_join_int } > { 1 } }
      {
        \tl_put_left::Ne \l__enumext_store_anskey_opt_tl
          {
            ,item-join = \exp_not:V \g__enumext_store_item_join_int,
          }
      }
```

And now we will review the keys item-star, item-sym* and item-pos* and pass them to \l__enumext_store_anskey_opt_tl.

```
    \bool_if:NT \g__enumext_store_item_star_bool
      {
        \tl_put_left:Ne \l__enumext_store_anskey_opt_tl
          {
            ,item-star,
          }
        \tl_if_empty:NF \g__enumext_store_item_symbol_tl
          {
            \tl_put_left:Ne \l__enumext_store_anskey_opt_tl
              {
                ,item-sym* = \exp_not:V \g__enumext_store_item_symbol_tl,
              }
          }
        \dim_compare:nT
          {
            \g__enumext_store_item_symbol_sep_dim != \c_zero_dim
          }
          {
            \tl_put_left:Ne \l__enumext_store_anskey_opt_tl
              {
                ,item-pos* = \exp_not:V \g__enumext_store_item_symbol_sep_dim,
              }
          }
      }
  }
```

The function __enumext_anskey_env_store: will be responsible for storing the content of the environment using the functions __enumext_store_anskey_code:n and __enumext_rescan_anskey_env:n.

```
\cs_new_protected:Nn \__enumext_anskey_env_store:
```

```
{
  \group_begin:
    \tl_if_empty:NTF \l__enumext_store_anskey_opt_tl
      {
        \exp_args:Ne
          \__enumext_store_anskey_code:n
            {
              \__enumext_rescan_anskey_env:n { \l__enumext_store_anskey_env_tl }
            }
      }
      {
        \keys_set_known:nV { enumext / anskey } \l__enumext_store_anskey_opt_tl
        \exp_args:Ne
          \__enumext_store_anskey_code:n
            {
              \__enumext_rescan_anskey_env:n { \l__enumext_store_anskey_env_tl }
            }
      }
  \group_end:
}
```

The function `\__enumext_anskey_env_clean_vars:` will return the global variables used by the ⟨*keys*⟩ to their initial state.

```
\cs_new_protected:Nn \__enumext_anskey_env_clean_vars:
  {
    \bool_gset_false:N \g__enumext_store_columns_break_bool
    \int_gzero:N       \g__enumext_store_item_join_int
    \bool_gset_false:N \g__enumext_store_item_star_bool
    \tl_gclear:N       \g__enumext_store_item_symbol_tl
    \dim_gzero:N       \g__enumext_store_item_symbol_sep_dim
  }
```

(*End of definition for* `\__enumext_anskey_env_save_keys:`, `\__enumext_anskey_env_store:`, *and* `\__enumext_anskey_env_clean_vars:`.)

13.32 Executing anskey*, check-ans and write .log

`\__enumext_execute_after_env:`

The `\__enumext_execute_after_env:` function will first return the appropriate message for the end of the environment in which the `save-ans` key is being executed, then call the `\__enumext_item_answer_diff:` function and then will write the values of the global variables used to the `.log` file. If the key `check-ans` is active it will execute the function `\__enumext_check_ans_show:` and show the result in the terminal, otherwise it will execute the function `\__enumext_check_ans_log:` and write the results in the `.log` file, undefine the environment `anskey*` (§??) through the function `\__enumext_undefine_anskey_env:` and finally we execute the function `\__enumext_reset_global_vars:` returning the used variables to their original state.

```
\cs_new_protected:Nn \__enumext_execute_after_env:
  {
    \int_compare:nNnT { \l__enumext_level_int } = { 0 }
      {
        \tl_if_empty:NF \g__enumext_store_name_tl
          {
            \__enumext_stop_save_ans_msg:

```

(*End of definition for* `\__enumext_execute_after_env:`.)

This function is passed to the function `\__enumext_after_env:nn` for the environments `enumext` (§??) and `enumext*` (§??) and it is executed only when the environments are not nested or at some level of these..

13.33 Common functions for keyans, keyans* and keyanspic

13.33.1 Storing content in prop list

__enumext_keyans_addto_prop:n

The function __enumext_keyans_addto_prop:n will pass the the current ⟨*label*⟩ for \item* in keyans environment and the current ⟨*label*⟩ for \anspic* in keyanspic environment followed by the ⟨*contents*⟩ of the *optional argument* of both commands to the \l__enumext_store_current_label_tl variable, which will be stored to the *prop list* defined by the save-ans key using the function __enumext_store_addto_prop:V.

```
\cs_new_protected:Npn \__enumext_keyans_addto_prop:n #1
  {
    \tl_clear:N \l__enumext_store_current_label_tl
    \int_compare:nNnTF { \l__enumext_keyans_pic_level_int } = { 1 }
      {
        \tl_put_right:Ne \l__enumext_store_current_label_tl { \l__enumext_label_vi_tl }
      }
      {
        \tl_put_right:Ne \l__enumext_store_current_label_tl { \l__enumext_label_v_tl }
      }
```

If the *optional argument* is present and the save-sep key is not empty, we save it.

```
    \tl_if_novalue:nF { #1 }
      {
        \tl_if_empty:NF \l__enumext_store_keyans_item_opt_sep_tl
          {
            \tl_put_right:Ne \l__enumext_store_current_label_tl
              {
                \l__enumext_store_keyans_item_opt_sep_tl
              }
          }
        \tl_put_right:Ne \l__enumext_store_current_label_tl { #1 }
      }
    \__enumext_store_addto_prop:V \l__enumext_store_current_label_tl
  }
```

(*End of definition for* __enumext_keyans_addto_prop:n.)

13.33.2 The save-ref key for keyans, keyans* and keyanspic

The *"internal label and ref"* system for the keyans, keyans* and keyanspic environments has *slight differences* with the one implemented for \anskey basically because in this environments the interest is in the current ⟨*label*⟩ for \item* and \anspic* with the ⟨*contents*⟩ of the *optional argument.* The mechanism defined here will allow to execute \ref{⟨*store name : position*⟩} and will return `1.(A)`.

__enumext_keyans_store_ref:
__enumext_keyans_store_ref_aux_i:
__enumext_keyans_store_ref_aux_ii:

The function __enumext_keyans_store_ref: handles the *"internal label and ref"* system used by the save-ref key for \item* and \anspic* commands. First we will create copies of the current ⟨*labels*⟩ and remove the dots "." from them, we do not want to get double dots in references.

```
\cs_new_protected:Nn \__enumext_keyans_store_ref:
  {
    \bool_if:NT \l__enumext_store_ref_key_bool
      {
        \cs_set_protected:Npn \__enumext_tmp:n ##1
          {
            \tl_set_eq:cc { l__enumext_label_copy_##1_tl } { l__enumext_label_##1_tl }
            \tl_reverse:c { l__enumext_label_copy_##1_tl }
            \tl_remove_once:cn { l__enumext_label_copy_##1_tl } { . }
            \tl_reverse:c { l__enumext_label_copy_##1_tl }
          }
        \clist_map_inline:nn { i, v, vi, vii, viii } { \__enumext_tmp:n {##1} }
        \__enumext_keyans_store_ref_aux_i:
      }
   }
```

The auxiliary function __enumext_keyans_store_ref_aux_i: set the variable \l__enumext_newlabel_arg_one_tl which will contain {⟨*store name : position*⟩} analyzing whether the environment in which they are executed is enumext* or enumext.

```
\cs_new_protected:Nn \__enumext_keyans_store_ref_aux_i:
  {
    \bool_if:NT \g__enumext_starred_bool
      {
        \tl_set_eq:NN \l__enumext_label_copy_i_tl \l__enumext_label_copy_vii_tl
      }
    \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
```

```
      {
        \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
          { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_vi_tl }
      }
    \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
      {
        \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
          { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_v_tl }
      }
    \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
      {
        \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
          { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_viii_tl }
      }
    \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
      {
        \l__enumext_store_name_tl \c_colon_str
        \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
      }
    \__enumext_keyans_store_ref_aux_ii:
  }
```

Now auxiliary function `\__enumext_keyans_store_ref_aux_ii:` save the result in the variable `\l__enumext_write_aux_file_tl` and finally we write in the `.aux` file.

```
\cs_new_protected:Nn \__enumext_keyans_store_ref_aux_ii:
  {
    \tl_put_right:Ne \l__enumext_write_aux_file_tl
      {
        \__enumext_newlabel:nn
          { \exp_not:V \l__enumext_newlabel_arg_one_tl }
          { \l__enumext_newlabel_arg_two_tl }
      }
    \l__enumext_write_aux_file_tl
  }
```

(*End of definition for* `\__enumext_keyans_store_ref:`, `\__enumext_keyans_store_ref_aux_i:`, *and* `\__enumext_keyans_store_ref_aux_ii:`.)

13.33.3 Storing content in sequence

`\__enumext_keyans_addto_seq:n`
`\__enumext_keyans_addto_seq_link:`

The function `\__enumext_keyans_addto_seq:n` will pass the contents of the current ⟨*label*⟩ `\l__enumext_label_v_tl` for the `keyans` environment and the `\l__enumext_label_vi_tl` for the `keyanspic` environment when using `\item*` and `\anspic*`, followed by the ⟨*contents*⟩ of the *optional argument* of both commands to the `\l__enumext_store_current_label_tl` variable to the sequence defined by the `save-ans` key.

```
\cs_new_protected:Npn \__enumext_keyans_addto_seq:n #1
  {
    \tl_clear:N \l__enumext_store_current_label_tl
    \int_compare:nNnTF { \l__enumext_keyans_pic_level_int } = { 1 }
      {
        \tl_put_right:Ne \l__enumext_store_current_label_tl { \item \l__enumext_label_vi_tl }
      }
      {
        \tl_put_right:Ne \l__enumext_store_current_label_tl { \item \l__enumext_label_v_tl }
      }
    \tl_if_novalue:nF { #1 }
      {
        \tl_if_empty:NF \l__enumext_store_keyans_item_opt_sep_tl
          {
            \tl_put_right:Ne \l__enumext_store_current_label_tl
              {
                \l__enumext_store_keyans_item_opt_sep_tl
              }
          }
        \tl_put_right:Ne \l__enumext_store_current_label_tl { #1 }
      }
    \__enumext_keyans_addto_seq_link:
  }
```

Checks if the `save-ref` key is active along with the `hyperref` package load, if both conditions are met, it will create the `\hyperlink` and then store using the `\__enumext_store_addto_seq:V` function. Finally, copy the contents of the variable `\l__enumext_store_current_label_tl` into the global variable `\g__enumext_check_ans_item_tl` to be used by the function `\__enumext_check_starred_cmd:n` and

increment the value of the integer variable \g__enumext_item_anskey_int handled by the check-ans key.

```
\cs_new_protected:Nn \__enumext_keyans_addto_seq_link:
  {
    \bool_lazy_and:nnT
      { \bool_if_p:N \l__enumext_store_ref_key_bool }
      { \bool_if_p:N \l__enumext_hyperref_bool }
      {
        \tl_put_right:Ne \l__enumext_store_current_label_tl
          {
            \hfill \exp_not:N \hyperlink
              {
                \exp_not:V \l__enumext_newlabel_arg_one_tl
              }
              { \exp_not:V \l__enumext_mark_ref_sym_tl }
          }
      }
    \__enumext_store_addto_seq:V \l__enumext_store_current_label_tl
    \bool_if:NT \l__enumext_check_answers_bool
      {
        \int_gincr:N \g__enumext_item_anskey_int
      }
  }
```

(*End of definition for* __enumext_keyans_addto_seq:n *and* __enumext_keyans_addto_seq_link:.)

13.33.4 The show-ans and show-pos keys for keyans and keyanspic

The code is very similar to the \anskey code, but, if I change the order of the operations the counter off ⟨*label*⟩ are incorrect.

__enumext_keyans_show_left:n
__enumext_keyans_show_ans:
__enumext_keyans_show_pos:
__enumext_keyans_show_item_opt:

Common function to show *starred commands* \item* and ⟨*position*⟩ of stored content in *prop list* for keyans and keyanspic. Need add 1 to \g__enumext_⟨*store name*⟩_prop for show-pos key.

```

  }
```

(*End of definition for* `\__enumext_keyans_show_left:n` *and others.*)

13.34 Redefining `\item` and `\makelabel` in enumext

Redefining the `\item` command is not as simple as I thought. This command works in conjunction with the `\makelabel` command so I have to redefine both of them, in addition to this, we will have to use a couple of *global* variables to pass the values from one command to the other.

When *labeling* PDF is active `\makelabel` is redefined as `\hss #1` and the only way to get the `align` key to work correctly is to redefine `\makelabel` using `\makebox`. The best way to implement this is to use the conditional command `\IfDocumentMetadataTF` to force this redefinition and the dedicated `mode-box` key to manually activate it by the user.

The `\item` and `\item[`⟨*custom*⟩`]` commands work in the usual way on `enumext` and we will add `\item*`, `\item*[`⟨*symbol*⟩`]` and `\item*[`⟨*symbol*⟩`][`⟨*offset*⟩`]`.

`\__enumext_default_item:n`

First we will see if the *optional argument* is present, if it is NOT present we will check the state of the variable `\l__enumext_check_answers_bool` set by the key `no-store`, set the boolean variable `\l__enumext_wrap_label_X_bool` to "true" for the key `wrap-label` and execute `\__enumext_item_std:w` and the key `itemindent`, otherwise we will check the state of the boolean variable `\l__enumext_wrap_label_opt_X_bool` set by the key `wrap-label*` and execute `\__enumext_item_std:w` with the *optional argument* and the key `itemindent`.

```
\cs_new_protected:Npn \__enumext_default_item:n #1
  {
    \tl_if_novalue:nTF {#1}
      {
        \bool_if:NT \l__enumext_check_answers_bool
          {
            \int_gincr:N \g__enumext_item_number_int
            \bool_set_true:N \l__enumext_item_number_bool
```

```
3238            }
3239          \bool_set_true:c { l__enumext_wrap_label_ \__enumext_level: _bool }
3240          \__enumext_item_std:w \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl }
3241        }
3242        {
3243          \bool_set_eq:cc
3244            { l__enumext_wrap_label_ \__enumext_level: _bool }
3245            { l__enumext_wrap_label_opt_ \__enumext_level: _bool }
3246          \__enumext_item_std:w [#1] \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl
3247        }
3248    }
```

(*End of definition for* `\__enumext_default_item:n`.)

`\__enumext_starred_item:nn`
`\__enumext_item_star_exec:`

The `\item*`, `\item*[`⟨*symbol*⟩`]` and `\item*[`⟨*symbol*⟩`][`⟨*offset*⟩`]` works like the *numbered* `\item`, but placing a ⟨*symbol*⟩ to the *"left"* of the ⟨*label*⟩ separated from it by the value the second *optional argument* ⟨*offset*⟩.

`#1:` `\l__enumext_item_symbol_X_tl`
`#2:` `\l__enumext_item_symbol_sep_X_dim`

First we will make a copy of `\l__enumext_item_symbol_X_tl` which is set by the key `item-sym*` or passed as *"first" optional argument* in the global variable `\g__enumext_item_symbol_aux_tl`, followed by setting the variable `\l__enumext_item_symbol_sep_X_dim` set by the key `item-pos*` or by the *"second" optional argument*, then we will see the state of the variable `\l__enumext_check_answers_bool` set by the key `no-store`, set the boolean variable `\l__enumext_wrap_label_X_bool` to "true" for the key `wrap-label` and execute `\__enumext_item_std:w` and the key `itemindent`.

```
3249 \cs_new_protected:Npn \__enumext_starred_item:nn #1 #2
3250   {
3251     \tl_if_novalue:nTF {#1}
3252       {
3253         \tl_gset_eq:Nc
3254           \g__enumext_item_symbol_aux_tl { l__enumext_item_symbol_ \__enumext_level: _tl }
3255       }
3256       {
3257         \tl_gset:Nn \g__enumext_item_symbol_aux_tl {#1}
3258       }
3259     \tl_if_novalue:nTF {#2}
3260       {
3261         \dim_set_eq:cc
3262           { l__enumext_item_symbol_sep_ \__enumext_level: _dim }
3263           { l__enumext_labelsep_ \__enumext_level: _dim }
3264       }
3265       {
3266         \dim_set:cn { l__enumext_item_symbol_sep_ \__enumext_level: _dim } {#2}
3267       }
3268     \bool_if:NT \l__enumext_check_answers_bool
3269       {
3270         \int_gincr:N \g__enumext_item_number_int
3271         \bool_set_true:N \l__enumext_item_number_bool
3272       }
3273     \bool_set_true:c { l__enumext_wrap_label_ \__enumext_level: _bool }
3274     \__enumext_item_std:w \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl }
3275   }
```

The function `\__enumext_item_star_exec:` will be responsible for executing `\item*` for the `enumext` environment.

```
3276 \cs_new_protected:Nn \__enumext_item_star_exec:
3277   {
3278     \tl_if_empty:cF { l__enumext_item_symbol_ \__enumext_level: _tl }
3279       {
3280         \mode_leave_vertical:
3281         \skip_horizontal:n { -\dim_use:c { l__enumext_item_symbol_sep_ \__enumext_level: _dim } }
3282         \hbox_overlap_left:n { \g__enumext_item_symbol_aux_tl }
3283         \skip_horizontal:n { \dim_use:c { l__enumext_item_symbol_sep_ \__enumext_level: _dim } }
3284       }
3285   }
```

(*End of definition for* `\__enumext_starred_item:nn` *and* `\__enumext_item_star_exec:`.)

`\__enumext_redefine_item:`

The function `\__enumext_redefine_item:` will redefine the `\item` command in the `enumext` environment adding `\item*`. This function are passed to `\__enumext_list_arg_two_X:` used in the definition of the `enumext` environment (§??).

```
\cs_new_protected:Nn \__enumext_redefine_item:
  {
    \RenewDocumentCommand \item { s o o }
      {
        \bool_if:nTF {##1}
          {
            \__enumext_starred_item:nn {##2} {##3}
          }
          { \__enumext_default_item:n {##2} }
      }
  }
```

(*End of definition for* `\__enumext_redefine_item:`.)

`\__enumext_make_label:` `\__enumext_make_label_std:` `\__enumext_make_label_box:`

The function `\__enumext_make_label:` redefine `\makelabel` for the keys `mode-box`, `align`, `font`, `wrap-label`, `wrap-label*` and `\item*` for `enumext` environment. This function are passed to `\__enumext_-list_arg_two_X:` used in the definition of the `enumext` environment (§??).

```
\cs_new_protected:Nn \__enumext_make_label:
  {
    \IfDocumentMetadataTF
      {
        \__enumext_make_label_box:
      }

13.35 Setting item-sym* and item-pos* keys

In order to have a cleaner implementation of `\item*` for the `enumext` and `enumext*` environments it is best to define a couple of keys that allow us to control and set by default the ⟨*symbol*⟩ and its ⟨*offset*⟩.

item-sym*
item-pos*

Define and set `item-sym*` and `item-pos*` keys for `enumext` and `enumext*`.

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
  {
    \keys_define:nn { enumext / #1 }
      {
        item-sym* .tl_set:c  = { l__enumext_item_symbol_#2_tl },
        item-sym* .value_required:n = true,
        item-sym* .initial:n  = {\textasteriskcentered},
        item-pos* .dim_set:c  = { l__enumext_item_symbol_sep_#2_dim },
        item-pos* .value_required:n = true,
      }
  }
\clist_map_inline:nn
  {
    {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {enumext*}{vii}
  }
  { \__enumext_tmp:nn #1 }
```

(*End of definition for* `item-sym*` *and* `item-pos*`.)

13.36 Handling unknown keys

At this point in the code I already know that I will not add more ⟨*keys*⟩ and since I have already been quite *paranoid and restrictive* with the definitions of environments and commands, the only thing left to do is do it with the ⟨*keys*⟩ (you have to be consistent in life).

13.36.1 Handling unknown keys for keyans, keyans* and keyanspic

unknown
__enumext_keyans_unknown_keys:n
__enumext_keyans_unknown_keys:nn

Define and set `unknown` key for `keyans`, `keyans*` and `keyanspic` environments.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
  {
    \keys_define:nn { enumext / #1 }
      {
        unknown .code:n = { \__enumext_keyans_unknown_keys:n {##1} }
      }
  }
\clist_map_inline:nn { keyans, keyans*, keyanspic } { \__enumext_tmp:n {#1} }
```

Internal functions for handling `unknown` key.

```
\cs_new_protected:Npn \__enumext_keyans_unknown_keys:n #1
  {
    \exp_args:NV \__enumext_keyans_unknown_keys:nn \l_keys_key_str {#1}
  }
\cs_new_protected:Npn \__enumext_keyans_unknown_keys:nn #1#2
  {
    \tl_if_blank:nTF {#2}
      {
        \msg_error:nnn { enumext } { keyans-unknown-key } {#1}
      }
      {
        \msg_error:nnnn { enumext } { keyans-unknown-key-value } {#1} {#2}
      }
  }
```

(*End of definition for* `unknown`, `\__enumext_keyans_unknown_keys:n`, *and* `\__enumext_keyans_unknown_keys:nn`.)

13.36.2 Handling unknown keys for enumext*

unknown
__enumext_starred_unknown_keys:n
__enumext_starred_unknown_keys:nn

Define and set `unknown` key for `enumext*` environment.

```
\keys_define:nn { enumext / enumext* }
  {
    unknown .code:n = { \__enumext_starred_unknown_keys:n {#1} }
  }
```

Internal functions for handling unknown key.

```
\cs_new_protected:Npn \__enumext_starred_unknown_keys:n #1
  {
    \exp_args:NV \__enumext_starred_unknown_keys:nn \l_keys_key_str {#1}
  }
\cs_new_protected:Npn \__enumext_starred_unknown_keys:nn #1#2
  {
    \tl_if_blank:nTF {#2}
      {
        \msg_error:nnn { enumext } { starred-unknown-key } {#1}
      }
      {
        \msg_error:nnnn { enumext } { starred-unknown-key-value } {#1} {#2}
      }
  }
```

(*End of definition for* unknown , __enumext_starred_unknown_keys:n , *and* __enumext_starred_unknown_keys:nn.)

13.36.3 Handling unknown keys for enumext

unknown

Defines and set the key unknown for enumext environment.

__enumext_standar_unknown_keys:n
__enumext_standar_unknown_keys:nn

```
\cs_set_protected:Npn \__enumext_tmp:n #1
  {
    \keys_define:nn { enumext / #1 }
      {
        unknown .code:n = { \__enumext_standar_unknown_keys:n {##1} }
      }
  }
\clist_map_inline:nn { level-1,level-2,level-3,level-4 } { \__enumext_tmp:n {#1} }
```

Internal functions for handling unknown key.

```
\cs_new_protected:Npn \__enumext_standar_unknown_keys:n #1
  {
    \exp_args:NV \__enumext_standar_unknown_keys:nn \l_keys_key_str {#1}
  }
\cs_new_protected:Npn \__enumext_standar_unknown_keys:nn #1#2
  {
    \tl_if_blank:nTF {#2}
      {
        \msg_error:nnn { enumext } { standar-unknown-key } {#1}
      }
      {
        \msg_error:nnnn { enumext } { standar-unknown-key-value } {#1} {#2}
      }
  }
```

(*End of definition for* unknown , __enumext_standar_unknown_keys:n , *and* __enumext_standar_unknown_keys:nn.)

13.37 Redefining \item and \makelabel in keyans

The \item and \item[⟨*custom*⟩] commands work in the usual way in keyans, but the \item* and \item*[⟨*content*⟩] commands *store* the current ⟨*label*⟩ next to the ⟨*content*⟩ if it is present in the *sequence* and *prop list* defined by save-ans key.

__enumext_keyans_default_item:n

The function __enumext_keyans_default_item:n executes the original behavior of the \item along with the keys wrap-label, wrap-label* and itemindent.

```
\cs_new_protected:Npn \__enumext_keyans_default_item:n #1
  {
    \tl_if_novalue:nTF { #1 }
      {
        \bool_set_true:N \l__enumext_wrap_label_v_bool
        \__enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl
      }
      {
        \bool_set_eq:NN \l__enumext_wrap_label_v_bool \l__enumext_wrap_label_opt_v_bool
        \__enumext_item_std:w [#1] \tl_use:N \l__enumext_fake_item_indent_v_tl
      }
  }
```

(*End of definition for* __enumext_keyans_default_item:n.)

__enumext_keyans_starred_item:n

The function __enumext_keyans_starred_item:n which will make a temporary copy of the current ⟨*label*⟩, execute the show-ans or show-pos keys using the function __enumext_keyans_show_left:n and will display the ⟨*contents*⟩ of that item using the internal copy __enumext_item_std:w, this is necessary to prevent incrementing the current *"counter"* of the original ⟨*label*⟩, followed by this it will execute function __enumext_keyans_show_item_opt: handled by wrap-opt key.

```
\cs_new_protected:Npn \__enumext_keyans_starred_item:n #1
  {
    \tl_set_eq:NN \l__enumext_store_current_label_tmp_tl \l__enumext_label_v_tl
    \__enumext_keyans_show_left:n { #1 }
    \bool_set_true:N \l__enumext_wrap_label_v_bool
    \__enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl
    \__enumext_keyans_show_item_opt:
```

Recover the original value of the current ⟨*label*⟩ and *store* it first in the *prop list* (including the *optional argument*), run the internal *"label and ref"* system if the save-ref key is active, *store* it in the *sequence* and finally increments \g__enumext_check_starred_cmd_int for internal check system.

```
    \tl_set_eq:NN \l__enumext_label_v_tl \l__enumext_store_current_label_tmp_tl
    \__enumext_keyans_addto_prop:n { #1 }
    \__enumext_keyans_store_ref:
    \__enumext_keyans_addto_seq:n { #1 }
    \int_gincr:N \g__enumext_check_starred_cmd_int
  }
```

(*End of definition for* __enumext_keyans_starred_item:n.)

\item*
__enumext_keyans_redefine_item:

The function __enumext_keyans_redefine_item: is responsible for adding the *starred argument* and *optional argument* by the __enumext_list_arg_two_v: function in the definition of the keyans environment. Here we need to use \peek_remove_spaces:n to prevent an unwanted space when using \item* in conjunction with the itemindent key. This function are passed to __enumext_list_arg_two_v: used in the definition of the keyans environment (§??).

```
\cs_new_protected:Nn \__enumext_keyans_redefine_item:
  {
    \RenewDocumentCommand \item { s o }
      {
        \bool_if:nTF {##1}
          {
            \peek_remove_spaces:n
              {
                \__enumext_keyans_starred_item:n {##2}
              }
          }
          {
            \__enumext_keyans_default_item:n {##2}
          }
      }
  }
```

(*End of definition for* \item* *and* __enumext_keyans_redefine_item:. *This function is documented on page* ??.)

__enumext_keyans_make_label:
__enumext_keyans_make_label_std:
__enumext_keyans_make_label_box:

The function __enumext_keyans_make_label: redefine \makelabel for the keys mode-box, align, font, wrap-label, wrap-label* and \item* for keyans environment. This function are passed to __enumext_list_arg_two_v: used in the definition of the keyans environment (§??).

```
\cs_new_protected:Nn \__enumext_keyans_make_label:
  {
    \IfDocumentMetadataTF
      {
        \__enumext_keyans_make_label_box:
      }
      {
        \bool_if:NTF \l__enumext_mode_box_bool
          {
            \__enumext_keyans_make_label_box:
          }
          {
            \__enumext_keyans_make_label_std:
          }
      }
  }
```

Standard definition when \DocumentMetadata is not active.

```
\cs_new_protected:Nn \__enumext_keyans_make_label_std:
  {
    \RenewDocumentCommand \makelabel { m }
      {
        \tl_use:N \l__enumext_label_fill_left_v_tl
        \tl_use:N \l__enumext_label_font_style_v_tl
        \bool_if:NTF \l__enumext_wrap_label_v_bool
          {
            \__enumext_wrapper_label_v:n { ##1 }
          }
          { ##1 }
        \tl_use:N \l__enumext_label_fill_right_v_tl
      }
  }
```

Definition using \makebox when \DocumentMetadata is active or mode-box is active.

```
\cs_new_protected:Nn \__enumext_keyans_make_label_box:
  {
    \RenewDocumentCommand \makelabel { m }
      {
        \makebox[ \l__enumext_labelwidth_v_dim ][ \l__enumext_align_label_pos_v_str ]
          {
            \tl_use:N \l__enumext_label_font_style_v_tl
            \bool_if:NTF \l__enumext_wrap_label_v_bool
              {
                \__enumext_wrapper_label_v:n { ##1 }
              }
              { ##1 }
          }
      }
  }
```

(*End of definition for* __enumext_keyans_make_label:, __enumext_keyans_make_label_std:, *and* __enumext_keyans_make_label_box:.)

13.38 Second argument of the lists

At this point of the code we have already programmed most the necessary tools to create a custom list environment, remember that the function __enumext_start_list:nn takes two arguments, the first one we have ready, the second one we will define for all the levels of the environment enumext and the environment keyans.

13.38.1 Calculation of \leftmargin and \itemindent

Consider the figure ?? where the default margins (on the left) of a list are represented.

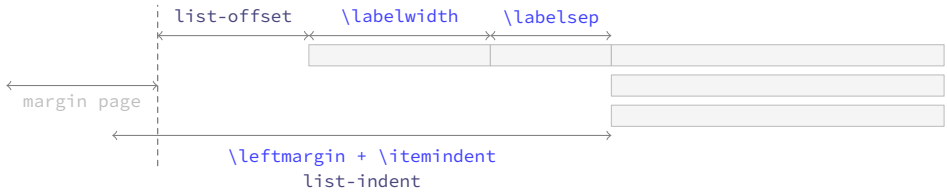

Figure 9: Representation of standard horizontal lengths in list environment.

The idea is to have control over these margins so that our list does not overlap the left margin of the page. The *key* relationship is that the right edge of the \labelsep equals the right edge of the \itemindent, so that the left edge of the *label box* is at \leftmargin+\itemindent minus \labelwidth+\labelsep. Thus, the handling of the margins by the package will be as shown in the figure ??.

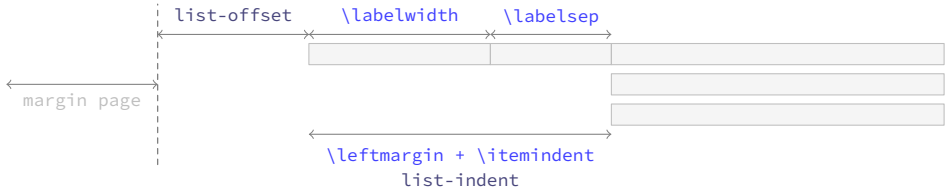

Figure 10: Representation of horizontal lengths concept in list in enumext.

Where the default values will look like in the figure ??.

__enumext_calc_hspace:NNNNNNN
__enumext_calc_hspace:ccccccc

The function __enumext_calc_hspace:NNNNNNN takes seven arguments to be able to determine horizontal spaces for all list environment:

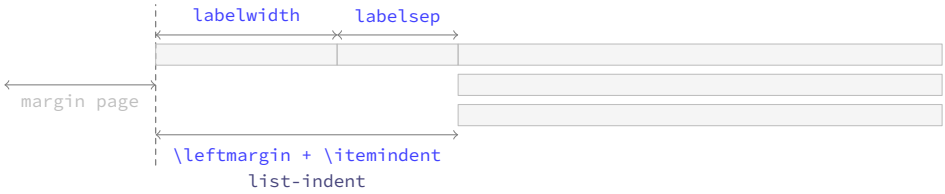

Figure 11: Default horizontal lengths in enumext.

```
#1: \l__enumext_labelwidth_X_dim       #2: \l__enumext_labelsep_X_dim
#3: \l__enumext_listoffset_X_dim       #4: \l__enumext_leftmargin_tmp_X_dim
#5: \l__enumext_leftmargin_X_dim       #6: \l__enumext_itemindent_X_dim
#7: \l__enumext_leftmargin_tmp_X_bool
```

And returns the *"adjusted"* values of \leftmargin and \itemindent.

This function is passed to __enumext_list_arg_two_X: which is used in the definition of the enumext and keyans environments (§??).

```
\cs_new_protected:Npn \__enumext_calc_hspace:NNNNNNN #1 #2 #3 #4 #5 #6 #7
  {
    \dim_compare:nNnT { #1 } < { \c_zero_dim }
      {
        \msg_warning:nnnV { enumext } { width-non-positive }{ labelwidth }{ #1 }
        \dim_set:Nn #1 { \dim_abs:n { #1 } }
      }
    \dim_compare:nNnT { #2 } < { \c_zero_dim }
      {
        \msg_warning:nnnV { enumext } { width-negative }{ labelsep }{ #2 }
        \dim_set:Nn #2 { \dim_abs:n { #2 } }
      }
```

If no value has been passed to the labelwidth and labelsep keys we set the default values for \l__enumext_leftmargin_tmp_X_dim.

```
    \bool_if:nF #7 { \dim_set:Nn #4 { #1 + #2} }
```

We now analyze the cases and set the values for \leftmargin and \itemindent.

```
    \dim_compare:nNnTF { #4 } < { \c_zero_dim }
      {
        \dim_set:Nn #6 { #1 + #2 - #4}
        \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
      }
      {
        \dim_compare:nNnT { #4 } = { #1 + #2 }
          { \dim_set:Nn #6 { \c_zero_dim } }
        \dim_compare:nNnT { #4 } < { #1 + #2 }
          { \dim_set:Nn #6 { #1 + #2 - #4} }
        \dim_compare:nNnT { #4 } > { #1 + #2 }
          {
            \dim_set:Nn #6 { -#1 - #2 + #4}
            \dim_set:Nn #6 { #6*-1}
          }
        \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
      }
  }
\cs_generate_variant:Nn \__enumext_calc_hspace:NNNNNNN { ccccccc }
```

(*End of definition for* __enumext_calc_hspace:NNNNNNN.)

13.38.2 Setting second argument of the lists

(*End of definition for* `\__enumext_list_arg_two_i:` *and others.*)

`\__enumext_list_arg_two_vii:`
`\__enumext_list_arg_two_viii:`

For the horizontal environments `enumext*` and `keyans*` the implementation is similar, but, the value of `\partopsep` is always `0pt`. At this point we will modify the `parsep` key to make it take the value of the `itemsep` key and later, in the environment definition, we will modify `parindent` to make it set the value of `lisparindent` and `parsep` to set the value of `\parskip` locally.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
  {
    \cs_new_protected:cpn { __enumext_list_arg_two_#1: }
      {
        \bool_set_true:c { l__enumext_leftmargin_tmp_#1_bool }

13.39 The environment enumext

`\__enumext_safe_exec:`

The `\__enumext_safe_exec:` function first call the function `\__enumext_is_not_nested:` which sets `\g__enumext_standar_bool` to *"true"* if we are NOT nested within enumext*, then call the function `\__enumext_internal_mini_page:` to create the environment __enumext_mini_page, we will increment `\l__enumext_level_int` to restrict nesting of the environment, set `\l__enumext_standar_bool` to *"true"* and finally call the function `\__enumext_is_on_first_level:` which sets `\l__enumext_standar_first_bool` to *"true"* only if the environment is NOT nested and we are at the *"first level"*.

```
\cs_new_protected:Nn \__enumext_safe_exec:
  {
    \__enumext_is_not_nested:
    \__enumext_internal_mini_page:
    \int_incr:N \l__enumext_level_int
    \int_compare:nNnT { \l__enumext_level_int } > { 4 }
      { \msg_fatal:nn { enumext } { list-too-deep } }
    \bool_set_true:N \l__enumext_standar_bool
    \bool_set_false:N \l__enumext_starred_bool
    \__enumext_is_on_first_level:
  }
```

(*End of definition for* `\__enumext_safe_exec:`.)

`\__enumext_parse_keys:n`

The `\__enumext_parse_store_keys:n` function first we will clear the variable `\l__enumext_series_str` used by the key series and then we check if we are at the *"first level"*, if so we process the ⟨*keys*⟩ and then execute the function `\__enumext_parse_series:n` used by the key series and call the function `\__enumext_nested_base_line_fix:` used by the key base-fix, otherwise we will pass the ⟨*keys*⟩ to the inner levels of the environment then we execute the function `\__enumext_store_active_keys:n` and reprocess the ⟨*keys*⟩ to pass them to the *sequence* if the key save-key is not active.

```
\cs_new_protected:Npn \__enumext_parse_keys:n #1
  {
    \tl_if_novalue:nF {#1}
      {
        \str_clear:N \l__enumext_series_str
        \int_compare:nNnTF { \l__enumext_level_int } = { 1 }
          {
            \keys_set:nn { enumext / level-1 } {#1}
            \__enumext_parse_series:n {#1}
            \__enumext_nested_base_line_fix:
          }
          {
            \exp_args:Ne \keys_set:nn
              { enumext / level-\int_use:N \l__enumext_level_int } {#1}
          }
        \__enumext_store_active_keys:n {#1}
      }
  }
```

(*End of definition for* `\__enumext_parse_keys:n`.)

`\__enumext_start_store_level:`

The `\__enumext_start_store_level:` function activate the *"storing structure"* mechanism in the *sequence* for the command \anskey and the environment anskey*.

```
\cs_new_protected:Nn \__enumext_start_store_level:
  {
    \bool_lazy_all:nT
      {
        { \bool_if_p:N \l__enumext_store_active_bool }
        { \bool_not_p:n { \l__enumext_keyans_env_bool } }
        { \bool_if_p:N \g__enumext_standar_bool }
      }
      {
        \int_compare:nNnT { \l__enumext_level_int } > { 1 }
          {
            \bool_set_true:c { l__enumext_store_upper_level_ \__enumext_level: _bool }
            \__enumext_store_level_open:
          }
      }
```

If enumext are nested in enumext* add __enumext_store_level_open: to preserve the *"storing structure"*.

```
    \bool_lazy_all:nT
      {
        { \bool_if_p:N \l__enumext_store_active_bool }
        { \bool_not_p:n { \l__enumext_keyans_env_bool } }
        { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
      }
      {
        \int_compare:nNnT { \l__enumext_level_int } > { 0 }
          {
            \bool_set_true:c { l__enumext_store_upper_level_ \__enumext_level: _bool }
            \__enumext_store_level_open:
          }
      }
  }
```

(*End of definition for* __enumext_start_store_level:.)

__enumext_stop_store_level: The __enumext_stop_store_level: function stop the *"storing structure"* mechanism in the *sequence* for the command \anskey and the environment anskey*.

```
\cs_new_protected:Nn \__enumext_stop_store_level:
  {
    \bool_if:cT { l__enumext_store_upper_level_ \__enumext_level: _bool }
      {
        \__enumext_store_level_close:
      }
  }
```

(*End of definition for* __enumext_stop_store_level:.)

__enumext_multicols_start: The function __enumext_multicols_start: will start the multicols environment according to the value passed by the columns key, then set the default value for \columnsep when columns-sep=0pt and set the value of \multicolsep equal to zero and leave \columnseprule equal to zero for inner levels.

```
\cs_new_protected:Nn \__enumext_multicols_start:
  {
    \int_compare:nNnT
      { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
      {
        \dim_compare:nNnT
          { \dim_use:c { l__enumext_columns_sep_ \__enumext_level: _dim } } = { \c_zero_dim }
          {
            \dim_set:cn { l__enumext_columns_sep_ \__enumext_level: _dim }
              {
                ( \dim_use:c { l__enumext_labelwidth_ \__enumext_level: _dim }
                  + \dim_use:c { l__enumext_labelsep_ \__enumext_level: _dim }
                ) / \int_use:c { l__enumext_columns_ \__enumext_level: _int }
                - \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim }
              }
          }
        \dim_set_eq:Nc \columnsep { l__enumext_columns_sep_ \__enumext_level: _dim  }
        \int_compare:nNnT { \l__enumext_level_int } > { 1 }
          {
            \dim_zero:N \columnseprule
          }
```

We will calculate the *vertical spacing* settings for the multicols environment using the function __enumext_multi_addvspace:, apply our *"vertical adjust spacing"*, then start the multicols environment.

```
        \bool_if:cF { l__enumext_minipage_active_ \__enumext_level: _bool }
          {
            \skip_zero:N \multicolsep
            \__enumext_multi_addvspace:
          }
        \raggedcolumns
        \begin{multicols}{ \int_use:c { l__enumext_columns_ \__enumext_level: _int } }
      }
  }
```

(*End of definition for* __enumext_multicols_start:.)

__enumext_multicols_stop:

The function __enumext_multicols_stop: will stop the multicols environment and apply our *"vertical adjust"* spacing. For compatibility with *tagged* PDF, the closing of the list environment is executed here along with __enumext_stop_store_level:.

```
\cs_new_protected:Nn \__enumext_multicols_stop:
  {
    \int_compare:nNnTF
      { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
      {
        \__enumext_stop_list:
        \__enumext_stop_store_level:
        \end{multicols}
        \__enumext_unskip_unkern:
        \__enumext_unskip_unkern:
        \par\addvspace{ \skip_use:c { l__enumext_multicols_below_ \__enumext_level: _skip } }
      }
      {
        \__enumext_stop_list:
        \__enumext_stop_store_level:
      }
  }
```

(*End of definition for* __enumext_multicols_stop:.)

__enumext_before_list:

The function __enumext_before_list: first calls the function __enumext_vspace_above: used by the keys above and above*, then calls the function __enumext_before_args_exec: used by the key before* and finally execute the function __enumext_check_ans_active: for the check answer mechanism.

```
\cs_new_protected:Nn \__enumext_before_list:
  {
    \__enumext_vspace_above:
    \__enumext_before_args_exec:
    \__enumext_check_ans_active:
```

When the mini-env key is active it will set the value of the \l__enumext_minipage_right_X_dim to be the *width* of the __enumext_mini_page environment on the *"right side"*, using this value together with the value of the \l__enumext_minipage_hsep_X_dim set by the mini-sep key, the value of \l__enumext_minipage_left_X_dim will be set, which will be the *width* of __enumext_mini_page environment on the *"left side"*, always having a current \linewidth as *maximum width* between them.

```
    \dim_compare:nNnT
      { \dim_use:c { l__enumext_minipage_right_ \__enumext_level: _dim } } > { \c_zero_dim }
      {
        \dim_set:cn { l__enumext_minipage_left_ \__enumext_level: _dim }
          {
            \linewidth
            - \dim_use:c { l__enumext_minipage_right_ \__enumext_level: _dim }
            - \dim_use:c { l__enumext_minipage_hsep_ \__enumext_level: _dim }
          }
```

The boolean variable \l__enumext_minipage_active_X_bool will be activated and the integer variable \g__enumext_minipage_stat_int used by the \miniright command will be incremented, then the function __enumext_minipage_add_space: is called and the __enumext_mini_page environment on the *"left side"* will be initialized followed by the *"vertical spacing"* applied to preserve the *"baseline"* between the *left* and *right* side environments. After these actions, the function __enumext_multicols_start: is called to handle the multicols environment.

```
        \bool_set_true:c { l__enumext_minipage_active_ \__enumext_level: _bool }
        \int_gincr:N \g__enumext_minipage_stat_int
        \__enumext_minipage_add_space:
        \noindent
        \__enumext_mini_page{ \dim_use:c { l__enumext_minipage_left_ \__enumext_level: _dim } }
      }
    \__enumext_multicols_start:
  }
```

(*End of definition for* __enumext_before_list:.)

__enumext_second_part:

The function __enumext_second_part: first check the state of the boolean variable \l__enumext_minipage_active_X_bool, if it is "true" a small test will be executed to check if we have omitted the use of \miniright (the __enumext_mini_page environment has not been closed), then close __enumext_mini_page and add the *adjusted vertical space* \l__enumext_minipage_after_skip, otherwise we will close the multicols environment.

```
\cs_new_protected:Nn \__enumext_second_part:
```

```
  {
    \bool_if:cTF { l__enumext_minipage_active_ \__enumext_level: _bool }
      {
        \int_compare:nNnT { \g__enumext_minipage_stat_int } = { 1 }
          {
            \msg_warning:nn { enumext } { missing-miniright }
            \miniright
          }
        \int_gzero:N \g__enumext_minipage_stat_int
        \__enumext_unskip_unkern: % remove topsep + [partopsep]
        \end__enumext_mini_page
      }
      {
        \__enumext_multicols_stop:
      }
```

Now we will execute the functions `\__enumext_after_stop_list:` used by the key `after`, `\__enumext_check_ans_key_hook:` used by the key `check-ans`, `\__enumext_vspace_below:` used by the keys `below` and `below*`. Finally set `\l__enumext_standar_bool` to false and call the function `\__enumext_resume_save_counter:` used by the `series`, `resume` and `resume*` keys.

```
    \__enumext_after_stop_list:
    \__enumext_check_ans_key_hook:
    \__enumext_vspace_below:
    \bool_set_false:N \l__enumext_standar_bool
    \__enumext_resume_save_counter:
  }
```

(*End of definition for* `\__enumext_second_part:`.)

`\__enumext_set_item_width:`

The function `\__enumext_set_item_width:` will set the value of `\itemwidth` taking into account the value established by the `list-offset` key for each level of the environment.

```
\cs_new_protected:Nn \__enumext_set_item_width:
  {
    \dim_set:Nn \itemwidth { \linewidth }
    \dim_compare:nT
      {
        \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim } != \c_zero_dim
      }
      {
        \dim_sub:Nn \itemwidth
          {
            \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim }
          }
      }
  }
```

(*End of definition for* `\__enumext_set_item_width:`.)

`enumext`

Now create the `enumext` environment based on `list` environment by levels.

```
\NewDocumentEnvironment{enumext}{ O{} }
  {
    \__enumext_safe_exec:
    \__enumext_parse_keys:n {#1}
    \__enumext_before_list:
    \__enumext_start_store_level:
    \__enumext_start_list:nn
      { \tl_use:c { l__enumext_label_ \__enumext_level: _tl } }
      {
        \use:c { __enumext_list_arg_two_ \__enumext_level: : }
        \__enumext_before_keys_exec:
      }
    \__enumext_set_item_width:
    \__enumext_after_args_exec:
  }
  {
    \__enumext_second_part:
  }
```

(*End of definition for* `enumext`. *This function is documented on page* ??.)

As we don't want our check to be executed `check-ans` by levels but on the complete list, we will take it out of the `enumext` environment using the *"hook"* function `\__enumext_after_env:nn`.

```
\__enumext_after_env:nn {enumext}
  {
    \__enumext_execute_after_env:
  }
```

13.40 The environment keyans

The environment keyans also based on lists. The main differences with the enumext environment are the *nesting* and the way the *answers* (choice) will be stored and checked, this environment is intended exclusively for *"multiple choice questions"*.

__enumext_keyans_safe_exec:

The keyans environment will only be available if the save-ans key is active and can only be used at the *"first level"* within the enumext environment. We do not want the environment to be nested, so we will set a maximum at this point. If the conditions are not met, an error message will be returned.

```
\cs_new_protected:Nn \__enumext_keyans_safe_exec:
  {
    \bool_if:NF \l__enumext_store_active_bool
      {
        \msg_error:nnnn { enumext } { wrong-place }{ keyans }{ save-ans }
      }
    \int_incr:N \l__enumext_keyans_level_int
    \bool_set_true:N \l__enumext_keyans_env_bool
    \__enumext_keyans_name_and_start:
    % Set false for interfering with enumext nested in keyans (yes, its possible and crayze)
    \bool_set_false:N \l__enumext_store_active_bool
    \int_compare:nNnT { \l__enumext_keyans_level_int } > { 1 }
      {
        \msg_error:nn { enumext } { keyans-nested }
      }
    \int_compare:nNnT { \l__enumext_level_int } > { 1 }
      {
        \msg_error:nn { enumext } { keyans-wrong-level }
      }
  }
```

(*End of definition for* __enumext_keyans_safe_exec:.)

__enumext_keyans_parse_keys:n

Parse [⟨*key* = *val*⟩] for keyans environment.

```
\cs_new_protected:Npn \__enumext_keyans_parse_keys:n #1
  {
    \keys_set:nn { enumext / keyans } {#1}
  }
```

(*End of definition for* __enumext_keyans_parse_keys:n.)

__enumext_before_list_v:
__enumext_keyans_multicols_start:
__enumext_keyans_multicols_stop:
__enumext_second_part_v:

Same implementation as the one used in the enumext environment.

```
\cs_new_protected:Nn \__enumext_before_list_v:
  {
    \__enumext_vspace_above_v:
    \__enumext_before_args_exec_v:

13.41 Tagging PDF support for non-standart list environments

The LaTeX release 2022-06-01 brings automatic support for *tagged* PDF in several aspects, including the standard *list environments* and the list environment. Unfortunately non-standard *list environments* like keyanspic or the horizontal list environments enumext* and keyans* are not structured in a nice way, i.e. the expected result in the PDF file is the expected one, but the underlying structure is not correct. In simple terms, for *tagged* PDF a list environment is a list environment, no matter what it looks like in the PDF file.

To maintain a correct list structure when \DocumentMetadata is active, it is necessary to do some things manually using tagpdf[?] and ltsockets[?]. This implementation is an adaptation of my answer thanks to Ulrike Fischer's comments in How can I modify my \item redefinition to be compatible with tagging-pdf.

13.41.1 Socket for tagging support in enumext* and keyans*

start-list-tags
stop-start-tags
stop-list-tags
__enumext_start_list_tag:n
__enumext_stop_start_list_tag:
__enumext_stop_list_tag:n

We will first define the necessary sockets and their behavior for enumext* and keyans*.

```
\socket_new:nn {tagsupport/enumext/starred}{ 1 }
\socket_new_plug:nnn {tagsupport/enumext/starred} {start-list-tags}
  {
    \tag_resume:n {#1}
    \tag_mc_end_push:
    \tag_struct_begin:n {tag=LI}
    \tag_struct_begin:n {tag=Lbl}
    \tag_mc_begin:n {tag=Lbl}
  }
\socket_new_plug:nnn {tagsupport/enumext/starred} {stop-start-tags}
  {
    \tag_mc_end:
    \tag_struct_end:n {tag=Lbl}
    \tag_struct_begin:n {tag=LBody}
    \tag_struct_begin:n {tag=text-unit}
    \tag_struct_begin:n {tag=text}
  }
\socket_new_plug:nnn {tagsupport/enumext/starred} {stop-list-tags}
  {
    \tag_struct_end:n {tag=text}
    \tag_struct_end:n {tag=text-unit}
    \tag_struct_end:n {tag=LBody}
    \tag_struct_end:n {tag=LI}
    \tag_mc_begin_pop:n {}
    \tag_suspend:n {#1}
  }
```

And now we'll wrap them so that they're only active when \DocumentMetadata is present.

```
\cs_new_protected_nopar:Npn \__enumext_start_list_tag:n #1
  {
    \IfDocumentMetadataTF
      {
        \socket_assign_plug:nn {tagsupport/enumext/starred} {start-list-tags}
        \socket_use:n {tagsupport/enumext/starred} {#1}
      } {}
   }
```

```
\cs_new_protected_nopar:Nn \__enumext_stop_start_list_tag:
  {
    \IfDocumentMetadataTF
      {
        \socket_assign_plug:nn {tagsupport/enumext/starred} {stop-start-tags}
        \socket_use:nn {tagsupport/enumext/starred} { }
      } {}
   }
\cs_new_protected_nopar:Npn \__enumext_stop_list_tag:n #1
  {
    \IfDocumentMetadataTF
      {
        \socket_assign_plug:nn {tagsupport/enumext/starred} {stop-list-tags}
        \socket_use:nn {tagsupport/enumext/starred} {#1}
      } {}
   }
```

(*End of definition for* `start-list-tags` *and others.*)

13.41.2 Socket for tagging support in keyanspic

start-list-tags
stop-start-tags
stop-list-tags
__enumext_anspic_start_list_tag:
__enumext_anspic_stop_start_list_tag:
__enumext_anspic_stop_list_tag:

We will first define the necessary sockets and their behavior for keyanspic environment.

```
\socket_new:nn {tagsupport/enumext/keyanspic}{ 0 }
\socket_new_plug:nnn {tagsupport/enumext/keyanspic} {start-list-tags}
  {
    \tag_resume:n {keyanspic}
    \tag_mc_end_push:
    \tag_struct_begin:n {tag=LI}
    \tag_struct_begin:n {tag=Lbl}
    \tag_mc_begin:n {tag=Lbl}
  }
\socket_new_plug:nnn {tagsupport/enumext/keyanspic} {stop-start-tags}
  {
    \tag_mc_end:
    \tag_struct_end:n {tag=Lbl}
    \tag_struct_begin:n {tag=LBody}
    \tag_struct_begin:n {tag=text-unit}
    \tag_struct_begin:n {tag=text}
    \tag_mc_begin:n {tag=text}
  }
\socket_new_plug:nnn {tagsupport/enumext/keyanspic} {stop-list-tags}
  {
    \tag_mc_end:
    \tag_struct_end:n {tag=text-unit}
    \tag_struct_end:n {tag=text}
    \tag_struct_end:n {tag=LBody}
    \tag_struct_end:n {tag=LI}
    \tag_mc_begin_pop:n {}
    \tag_suspend:n {keyanspic}
  }
```

And now we'll wrap them so that they're only active when \DocumentMetadata is present.

```
\cs_new_protected_nopar:Nn \__enumext_anspic_start_list_tag:
  {
    \IfDocumentMetadataTF
      {
        \socket_assign_plug:nn {tagsupport/enumext/keyanspic} {start-list-tags}
        \socket_use:n {tagsupport/enumext/keyanspic}
      } {}
   }
\cs_new_protected_nopar:Nn \__enumext_anspic_stop_start_list_tag:
  {
    \IfDocumentMetadataTF
      {
        \socket_assign_plug:nn {tagsupport/enumext/keyanspic} {stop-start-tags}
        \socket_use:nn {tagsupport/enumext/keyanspic}
      } {}
   }
\cs_new_protected_nopar:Nn \__enumext_anspic_stop_list_tag:
  {
    \IfDocumentMetadataTF
      {
        \socket_assign_plug:nn {tagsupport/enumext/keyanspic} {stop-list-tags}
```

```
      \socket_use:nn {tagsupport/enumext/keyanspic}
    } {}
  }
```

(*End of definition for* `start-list-tags` *and others.*)

13.42 The environment keyanspic and \anspic

The keyanspic environment is a list based environment that uses the same configuration for *"spacing"* and ⟨*label*⟩ as the keyans environment, but it does not use \item. The ⟨*contents*⟩ are passed to the environment by means of the \anspic command as replacement for \item command and placed inside minipage environments, with the ⟨*label*⟩ centered *"above"* or *"below"*, adjusting *widths* and *position* according to the options passed to the environment.

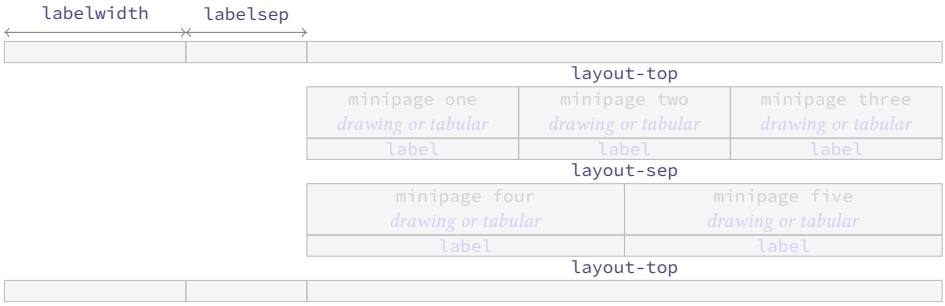

Figure 12: Representation of the keyanspic spacing in enumext.

In order for the keyanspic environment and the \anspic command to work correctly, we need to set and export some variables in the first part of the environment definition and pass them to \anspic which is executed in the second part of the environment. This implementation is adapted from the answer given by Enrico Gregorio (@egreg) in How to process the body of an environment and divide it by a \macro?.

13.42.1 The environment keyanspic

label-pos
label-sep
layout-sty
layout-sep
layout-top

First we define the key that allows us to process the position of the ⟨*label*⟩ centered "above" or "below" which will be label-pos, the vertical separation of these from *drawing or tabular* will be handled with the key label-sep. The *"layout style"* will be handled with the key layout-sty will take two values separated by comma {⟨*n° upper, n° lower*⟩} and will determine the number of minipage environments in which all arguments of \anspic will be printed at the "upper" and "lower" within the environments separated by the value of the key layout-sep. The vertical space "top" and "bottom" of the environment will be handled with the key layout-top.

```
\keys_define:nn { enumext / keyanspic }
  {
    label-pos .choice:,
    label-pos / above   .code:n =
                              \bool_set_true:N \l__enumext_anspic_label_above_bool
                              \str_set:Nn \l__enumext_anspic_mini_pos_str { t },
    label-pos / below   .code:n =
                              \bool_set_false:N \l__enumext_anspic_label_above_bool
                              \str_set:Nn \l__enumext_anspic_mini_pos_str { b },
    label-pos / unknown .code:n =
                              \msg_error:nneee { enumext } { unknown-choice }
                                { label-pos } { above,~ below } { \exp_not:n {#1} },
    label-pos  .initial:n        = below,
    label-pos  .value_required:n = true,
    label-sep  .skip_set:N       = \l__enumext_anspic_label_sep_skip,
    label-sep  .value_required:n = true,
    layout-sty .tl_set:N         = \l__enumext_anspic_layout_style_tl,
    layout-sty .value_required:n = true,
    layout-sep .code:n           = \keys_set:nn { enumext / keyans }
                                     { parsep = #1 },
    layout-sep .value_required:n = true,
    layout-top .code:n           = \keys_set:nn { enumext / keyans }
                                     { topsep = #1 },
    layout-top .value_required:n = true,
    unknown    .code:n           = { \__enumext_keyans_unknown_keys:n {#1} }
  }
```

(*End of definition for* `label-pos` *and others.*)

__enumext_keyans_pic_safe_exec:
__enumext_keyans_pic_parse_keys:n
__enumext_keyans_pic_skip_abs:N
__enumext_keyans_pic_arg_two:

The function __enumext_keyans_pic_safe_exec: check the nested level position inside the enumext environment.

```
\cs_new_protected:Nn \__enumext_keyans_pic_safe_exec:
```

```
{
  \int_incr:N \l__enumext_keyans_pic_level_int
  \int_compare:nNnT { \l__enumext_keyans_pic_level_int } > { 1 }
    {
      \msg_error:nn { enumext } { keyanspic-nested }
    }
  \__enumext_keyans_name_and_start:
}
```

Parse [⟨*key* = *val*⟩] for keyanspic environment.

```
\cs_new_protected:Npn \__enumext_keyans_pic_parse_keys:n #1
  {
    \tl_if_novalue:nF {#1}
      {
        \keys_set:nn { enumext / keyanspic } {#1}
      }
  }
```

The function __enumext_keyans_pic_skip_abs:N will return a positive value \parsep from keyans environment.

```
\cs_new_protected:Npn \__enumext_keyans_pic_skip_abs:N #1
  {
    \dim_compare:nNnT { #1 } < { \c_zero_dim }
      {
        \skip_set:Nn #1 { -#1 }
      }
  }
```

The __enumext_keyans_pic_arg_two: function will be used in the *second argument* of the list environment that defines the keyanspic environment, with this we will take the configuration of the *"spaces"* and the keys label, wrap-label, parsep and topsep from the keyans environment. The first thing we need to do is set the boolean variable \l__enumext_leftmargin_tmp_v_bool handled by the list-indent key to "false", then copy the definition of the second list argument from the keyans environment definition and make sure that \parsep does not have a negative value.

```
\cs_new_protected:Npn \__enumext_keyans_pic_arg_two:
  {
    \bool_set_false:N \l__enumext_leftmargin_tmp_v_bool
    \__enumext_list_arg_two_v:
    \__enumext_keyans_pic_skip_abs:N \parsep
```

Now we increment the counter enumXv of the keyans environment and save the *total height* of the ⟨*label*⟩ in \l__enumext_anspic_label_htdp_dim used by \anspic and we will adjust the values of \parsep only if the key label-pos is set to *below*.

```
    \bool_if:NF \l__enumext_anspic_label_above_bool
      {
        \stepcounter { enumXv }
        \hbox_set:Nn \l__enumext_anspic_label_box { \l__enumext_label_v_tl }
        \dim_set:Nn \l__enumext_anspic_label_htdp_dim
          {
            \box_ht_plus_dp:N \l__enumext_anspic_label_box
          }
        \skip_add:Nn \parsep
          {
            \l__enumext_anspic_label_htdp_dim
            + \box_dp:N \strutbox
            + \l__enumext_anspic_label_sep_skip
          }
      }
```

Finally we *adjust* the value of \leftmargin and \topsep then set \listparindent, \partopsep and \itemsep to zero so that the *horizontal* and *vertical* space is not affected.

```
    \dim_add:Nn  \leftmargin { -\labelwidth - \labelsep }
    \skip_add:Nn \topsep { 0.5\box_dp:N \strutbox }
    \dim_zero:N  \listparindent
    \skip_zero:N \partopsep
    \skip_zero:N \itemsep
  }
```

(*End of definition for* __enumext_keyans_pic_safe_exec: *and others.*)

keyanspic

Now we define the environment keyanspic. For compatibility with *tagged* PDF we must use the \begin{list} form and a lot of conditional code using \IfDocumentMetadataTF.

```
\NewDocumentEnvironment{keyanspic}{ o }
  {
    \__enumext_keyans_pic_safe_exec:
    \__enumext_keyans_pic_parse_keys:n {#1}
    \begin{list} { } { \__enumext_keyans_pic_arg_two: }
    \IfDocumentMetadataTF
      {
        \tag_suspend:n {list}
      }{}
    \item[] \scan_stop:
    % paranoia
    \RenewDocumentCommand \item {}
      {
        \msg_error:nn { enumext } { keyanspic-item-cmd }
      }
    \IfDocumentMetadataTF
      {
        \tag_resume:n {keyanspic}
        \tag_tool:n {para/tagging=false}
        \tag_suspend:n {keyanspic}
      } { }
  }
  {
    \IfDocumentMetadataTF
      {
        \tag_resume:n {keyanspic}
        \tag_mc_end_push:
        \tag_struct_begin:n {tag=L,attribute=enumerate}
      } { }
```

Now we process the command `\anspic`, if the key `layout-sty` is not present, the number of times the `\anspic` command appears will be counted from `\l__enumext_anspic_args_seq` and placed a *single line*.

```
    \__enumext_anspic_exec:
    \IfDocumentMetadataTF
      {
        \tag_suspend:n {keyanspic}
      } { }
    \end{list}
    \IfDocumentMetadataTF
      {
        \tag_struct_end:n {tag=L}
        \tag_mc_begin_pop:n {}
        \tag_struct_end:n {tag=L}
        \tag_mc_begin_pop:n {}
      } { }
```

Finally we check if `\anspic*` has been used, set the counter `enumXvi` to zero and apply our "adjusted" vertical space bottom.

```
    \__enumext_check_starred_cmd:n { anspic }
    \setcounter { enumXvi } { 0 }
    \bool_if:NTF \l__enumext_anspic_label_above_bool
      {
        \par\addvspace{ 0.5\box_dp:N \strutbox }
      }
      {
        \par
        \addvspace
          {
            \dim_eval:n
              {
                \l__enumext_anspic_label_htdp_dim + \box_ht_plus_dp:N \strutbox
                + \l__enumext_anspic_label_sep_skip + \l__enumext_topsep_v_skip
              }
          }
      }
  }
```

(*End of definition for* `keyanspic`. *This function is documented on page* ??.)

13.42.2 The command `\anspic`

The `\anspic` command take three arguments, the *starred versions* `\anspic*`[⟨*content*⟩] *store* the current ⟨*label*⟩ next to the *optional argument* [⟨*content*⟩] in the *sequence* and *prop list* defined by `save-ans` key. The

third *mandatory argument* {⟨*drawing or tabular*⟩} is NOT *stored* in the *sequence* or *prop list*.

One of the complications here to make the keyanspic environment compatible with *tagged* PDF is the position of ⟨*label*⟩, the \anspic command processes the arguments in order, where #1 and #2 correspond to ⟨*label*⟩ and #3 to the mandatory argument and puts all this inside a minipage environment. If #1 and #2, that is ⟨*label*⟩, is above #3 there are no problems with *tagged* PDF, but if #3 comes first the list created with *tagged* PDF will not be correct.

\anspic
__enumext_anspic_body_dim:n
__enumext_anspic_label:nn
__enumext_anspic_label_pos:nnn
__enumext_anspic_args:nnn
__enumext_anspic_print:n
__enumext_anspic_print:e
__enumext_anspic_print:V
__enumext_anspic_row:n
__enumext_anspic_exec:

We check that the command is active in the keyanspic environment only if the save-ans key is present, otherwise we return an error. The three arguments are handled by the function __enumext_anspic_args:nnn and stored in the sequence \l__enumext_anspic_args_seq which is processed by the keyanspic environment.

```
\NewDocumentCommand \anspic { s o +m }
  {
    \bool_if:NF \l__enumext_store_active_bool
      {
        \msg_error:nnnn { enumext } { wrong-place }{ keyanspic }{ save-ans }
      }
    \int_compare:nNnT { \l__enumext_level_int } > { 1 }
      {
        \msg_error:nn { enumext } { keyanspic-wrong-level }
      }
    \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
      {
        \msg_error:nnnn { enumext } { command-wrong-place }{ anspic }{ keyans }
      }
    \seq_put_right:Nn \l__enumext_anspic_args_seq
      {
        \__enumext_anspic_args:nnn { #1 } { #2 } { #3 }
      }
  }
```

The __enumext_anspic_body_dim:n function will set the value of \l__enumext_anspic_body_htdp_dim equal to the "height plus depth" of the *mandatory argument* if the key label-pos is set "below".

```
\cs_new_protected:Npn \__enumext_anspic_body_dim:n #1
  {
    \bool_if:NF \l__enumext_anspic_label_above_bool
      {
        \IfDocumentMetadataTF
          {
            \tag_suspend:n {keyanspic}
          } { }
        \vbox_set:Nn \l__enumext_anspic_body_box { #1 }
        \dim_set:Nn \l__enumext_anspic_body_htdp_dim
          {
            \box_ht_plus_dp:N \l__enumext_anspic_body_box
          }
        \IfDocumentMetadataTF
          {
            \tag_resume:n {keyanspic}
          } { }
      }
  }
```

The __enumext_anspic_label:nn function will process inside \makebox the *starred argument* '*' and *optional argument* passed to the command. Here we will store the ⟨*label*⟩ and *optional argument* in *prop list* and *sequence* and execute the show-ans, show-pos, font, wrap-label and wrap-opt keys.

```
\cs_new_protected:Npn \__enumext_anspic_label:nn #1 #2
  {
    \makebox[ \l__enumext_anspic_mini_width_dim ][ c ]
      {
        \bool_if:nT { #1 }
          {
            \__enumext_keyans_addto_prop:n { #2 }
            \__enumext_keyans_store_ref:
            \__enumext_keyans_addto_seq:n { #2 }
            \int_gincr:N \g__enumext_check_starred_cmd_int
            \bool_lazy_or:nnT
              { \bool_if_p:N \l__enumext_show_answer_bool }
              { \bool_if_p:N \l__enumext_show_position_bool }
              {
                \tl_set_eq:NN \l__enumext_label_v_tl \l__enumext_label_vi_tl
                \__enumext_keyans_show_left:n { #2 }
```

```
                \tl_set_eq:NN \l__enumext_label_vi_tl \l__enumext_label_v_tl
              }
          }
        \tl_use:N \l__enumext_label_font_style_v_tl
        \__enumext_wrapper_label_v:n { \l__enumext_label_vi_tl }
        \__enumext_keyans_show_item_opt:
      }
  }
```

The function `\__enumext_anspic_label_pos:nnn` will be in charge of handling the *"counter"* and the position of the ⟨*label*⟩, set by `label-pos` key which will have the same configuration as the `keyans` environment.

```
\cs_new_protected:Npn \__enumext_anspic_label_pos:nnn #1 #2 #3
  {
    \stepcounter { enumXvi }
    \__enumext_anspic_body_dim:n { #3 }
    \bool_if:NTF \l__enumext_anspic_label_above_bool
      {
        \__enumext_anspic_label:nn { #1 } { #2 }
      }
      {
        \raisebox
          {
            -\dim_eval:n
              {
                \l__enumext_anspic_label_htdp_dim
                + \l__enumext_anspic_body_htdp_dim
                + \box_dp:N \strutbox
                + \l__enumext_anspic_label_sep_skip
              }
          }
          [ 0pt ] [ 0pt ]
          {
            \__enumext_anspic_label:nn { #1 } { #2 }
          }
      }
  }
%
```

The `\__enumext_anspic_args:nnn` function will be responsible for placing the code compatible with *tagged* PDF and the arguments within the `\l__enumext_anspic_args_seq` sequence which will be processed by the `\__enumext_anspic_print:n` function in the second part of the definition of the `keyanspic` environment.

```
\cs_new_protected:Nn \__enumext_anspic_args:nnn
  {
    \__enumext_anspic_start_list_tag:
    \__enumext_anspic_label_pos:nnn { #1 } { #2 } { #3 }
    \__enumext_anspic_stop_start_list_tag:
    \bool_if:NTF \l__enumext_anspic_label_above_bool
      {
        \\[\l__enumext_anspic_label_sep_skip] #3
      }
      {
        \\ #3
      }
    \__enumext_anspic_stop_list_tag:
  }
```

The value {⟨*n° upper, n° lower*⟩} passed to the `layout-sty` key is split by comma and is handled directly by the function `\__enumext_anspic_print:n` and passed to the function `\__enumext_anspic_row:n`.

```
\cs_new_protected:Nn \__enumext_anspic_print:n
  {
    \clist_map_function:nN { #1 } \__enumext_anspic_row:n
  }
\cs_generate_variant:Nn \__enumext_anspic_print:n { e, V }
```

The function `\__enumext_anspic_row:n` will set the *widths* for the `minipage` environments and place *all arguments* passed to `\anspic` *saved* in the `\l__enumext_anspic_args_seq` sequence inside them.

```
\cs_new_protected:Nn \__enumext_anspic_row:n
  {
    \dim_set:Nn \l__enumext_anspic_mini_width_dim { \linewidth / #1 }
    \int_set:Nn \l__enumext_anspic_above_int { \l__enumext_anspic_below_int }
    \int_set:Nn \l__enumext_anspic_below_int { \l__enumext_anspic_above_int + #1 }
    \int_step_inline:nnn
```

```
4292        { \l__enumext_anspic_above_int + 1 }
4293        { \l__enumext_anspic_below_int }
4294        {
4295          \IfDocumentMetadataTF
4296            {
4297              \tag_suspend:n {minipage}
4298            } { }
4299          \begin{minipage}[ \l__enumext_anspic_mini_pos_str ]{ \l__enumext_anspic_mini_width_dim }
4300            \centering
4301            \seq_item:Nn \l__enumext_anspic_args_seq { ##1 }
4302          \end{minipage}
4303          \IfDocumentMetadataTF
4304            {
4305              \tag_resume:n {minipage}
4306            } { }
4307        }
4308      \par
4309    }
```

The `\__enumext_anspic_exec:` function will execute all the code in the `\anspic` command in the second argument of the `keyanspic` environment definition. If the key `layout-sty` is not set, everything will be printed on a *single line*.

```
4310 \cs_new_protected:Nn \__enumext_anspic_exec:
4311   {
4312     \tl_if_empty:NTF \l__enumext_anspic_layout_style_tl
4313       {
4314         \__enumext_anspic_print:e { \seq_count:N \l__enumext_anspic_args_seq }
4315       }
4316       {
4317         \__enumext_anspic_print:V \l__enumext_anspic_layout_style_tl
4318       }
4319   }
```

(*End of definition for* `\anspic` *and others. This function is documented on page* ??.)

13.43 The horizontal environments

Generating *horizontal list environments* is NOT as simple as standard LaTeX list environments. The fundamental part of the code is adapted from the `shortlst` package to a more modern version using `expl3`. It is not possible to redefine `\item` and `\makelabel` using `\RenewDocumentCommand` as in the vertical *non starred* versions.

To achieve the *horizontal list environments* we will capture the `\item` command and the ⟨*content*⟩ of this in *horizontal box* using `\makebox` for the `label` and a `minipage` environment for the ⟨*content*⟩ passed to `\item`, we will also add the *optional argument* (⟨*number*⟩) to `\item` to be able to *join columns* horizontally, in simple terms, we want `\item` to behave in the same way as in the `enumext` environment but adding an *first optional argument* (⟨*number*⟩).

A side effect is the limitation of using `\item` in this way *without* using `\RenewDocumentCommand`, which loses the original definition and affects the *standard list environments* provided by LaTeX and any environment defined using base `list` environment, including: `itemize`, `enumerate`, `description`, `quote`, `quotation`, `verse`, `center`, `flushleft`, `flushright`, `verbatim`, `tabbing`, `trivlist`, `list` and all environments created with `\newtheorem`.

One way to get around this is to use something like:

```
\AddToHook{env/enumerate/before}{recover original \item definition}
```

inside `minipage`, but in my partial tests this does not have the desired effect and the vertical and horizontal spacing is distorted. For now this will remain as a limitation and I will see if it is feasible to implement it in the future.

For compatibility with the *tagged* PDF we close the environments according to the presence or not of the `mini-env` key.

13.43.1 Functions for item box width

`\__enumext_starred_columns_set_vii:`
`\__enumext_starred_columns_set_viii:`

We set the default value for the *width of the box* containing the ⟨*content*⟩ of the items for `enumext*` environment.

```
4320 \cs_new_protected:Nn \__enumext_starred_columns_set_vii:
4321   {
4322     \dim_compare:nNnT { \l__enumext_columns_sep_vii_dim } = { \c_zero_dim }
4323       {
4324         \dim_set:Nn \l__enumext_columns_sep_vii_dim
4325           {
4326             ( \l__enumext_labelwidth_vii_dim + \l__enumext_labelsep_vii_dim )
4327             / \l__enumext_columns_vii_int
4328           }
4329       }
```

```
    \int_set:Nn \l__enumext_tmpa_vii_int { \l__enumext_columns_vii_int - 1 }
    \dim_set:Nn \l__enumext_item_width_vii_dim
      {
        ( \linewidth - \l__enumext_columns_sep_vii_dim * \l__enumext_tmpa_vii_int )
        / \l__enumext_columns_vii_int
        - \l__enumext_labelwidth_vii_dim
        - \l__enumext_labelsep_vii_dim
      }
```

When the key `rightmargin` is active we must adjust the values.

```
    \dim_compare:nNnT { \l__enumext_rightmargin_vii_dim } > { \c_zero_dim }
      {
        \dim_sub:Nn \l__enumext_item_width_vii_dim
          {
            ( \l__enumext_rightmargin_vii_dim * \l__enumext_tmpa_vii_int )
            / \l__enumext_columns_vii_int
          }
        \dim_add:Nn \l__enumext_columns_sep_vii_dim
          {
            \l__enumext_rightmargin_vii_dim
          }
      }
  }
```

Same implementation for the `keyans*` environment.

```
\cs_new_protected:Nn \__enumext_starred_columns_set_viii:
  {
    \dim_compare:nNnT { \l__enumext_columns_sep_viii_dim } = { \c_zero_dim }
      {
        \dim_set:Nn \l__enumext_columns_sep_viii_dim
          {
            ( \l__enumext_labelwidth_viii_dim + \l__enumext_labelsep_viii_dim )
            / \l__enumext_columns_viii_int
          }
      }
    \int_set:Nn \l__enumext_tmpa_viii_int { \l__enumext_columns_viii_int - 1 }
    \dim_set:Nn \l__enumext_item_width_viii_dim

13.43.3 Functions for `mini-env`, `mini-right` and `mini-right*` keys

`\__enumext_start_mini_vii:`
`\__enumext_stop_mini_vii:`

The implementation of the `mini-env` key support is almost identical to the one used in the `enumext` and `keyans` environments, the difference is that the `__enumext_mini_page` environment on the *"right side"* is executed *"after"* closing the environment, so it is necessary to make a global copy of the variable `\l__enumext_minipage_right_vii_dim` in the variable `\g__enumext_minipage_right_vii_dim`.

```
\cs_new_protected:Nn \__enumext_start_mini_vii:
  {
    \dim_compare:nNnT { \l__enumext_minipage_right_vii_dim } > { \c_zero_dim }
      {
        \dim_set:Nn \l__enumext_minipage_left_vii_dim
          {
            \linewidth
            - \l__enumext_minipage_right_vii_dim
            - \l__enumext_minipage_hsep_vii_dim
          }
        \bool_set_true:N \l__enumext_minipage_active_vii_bool
        \dim_gset_eq:NN
          \g__enumext_minipage_right_vii_dim
          \l__enumext_minipage_right_vii_dim
        \__enumext_mini_addvspace_vii:
        \nointerlineskip\noindent
        \__enumext_mini_page{ \l__enumext_minipage_left_vii_dim }
      }
  }
```

The function `\__enumext_stop_mini_vii:` closes the `__enumext_mini_page` environment on the *"left side"*, applies `\hfill` and set the variable `\g__enumext_minipage_active_vii_bool` to *"true"* which will be used in the function `\__enumext_after_env:nn` to execute the `minipage` on the *"right side"*. At this point we will execute the `\__enumext_stop_list:` and `\__enumext_stop_store_level_vii:` functions stopping the `list` environment and the level saving mechanism for storage in *sequence* of the `\anskey` command and `anskey*` environment. This function is passed to the `\__enumext_after_list_vii:` function in the second part of the `enumext*` environment definition (§??).

```
\cs_new_protected:Nn \__enumext_stop_mini_vii:
  {
    \bool_if:NTF \l__enumext_minipage_active_vii_bool
      {
        \__enumext_stop_list:
        \__enumext_stop_store_level_vii:
        \IfDocumentMetadataTF { \tag_resume:n {enumext*} } { }
        \end__enumext_mini_page
        \hfill
        \bool_gset_true:N \g__enumext_minipage_active_vii_bool
      }
      {
        \__enumext_stop_list:
        \__enumext_stop_store_level_vii:
      }
  }
```

(*End of definition for* `\__enumext_start_mini_vii:` *and* `\__enumext_stop_mini_vii:`.)

Finally we execute the {⟨*code*⟩} passed to the `mini-right` or `mini-right*` keys stored in the variable `\g__enumext_miniright_code_vii_tl` in the `minipage` environment on the *"right side"*. For compatibility with the `caption` package and possibly other {⟨*code*⟩} passed to this key, we will pass it to a box and then print it.

```
\__enumext_after_env:nn {enumext*}
  {
    \bool_if:NT \g__enumext_minipage_active_vii_bool
      {
        \__enumext_minipage:w [ t ] { \g__enumext_minipage_right_vii_dim }
          \legacy_if_gset_false:n { @minipage }
          \skip_vertical:N \c_zero_skip
          \par\addvspace { \g__enumext_minipage_right_skip }
          \bool_if:NF \g__enumext_minipage_center_vii_bool
            {
              \tl_put_left:Nn \g__enumext_miniright_code_vii_tl
                {
                  \centering
                }
            }
          \vbox_set_top:Nn \l__enumext_miniright_code_vii_box
            {
              \tl_use:N \g__enumext_miniright_code_vii_tl
            }
          \box_use_drop:N \l__enumext_miniright_code_vii_box
          \skip_vertical:N \c_zero_skip
        \__enumext_endminipage:
        \par\addvspace{ \g__enumext_minipage_after_skip }
      }
    \bool_gset_false:N \g__enumext_minipage_active_vii_bool
    \bool_gset_true:N \g__enumext_minipage_center_vii_bool
    \tl_gclear:N \g__enumext_miniright_code_vii_tl

```

(*End of definition for* `\__enumext_start_mini_viii:` *and* `\__enumext_stop_mini_viii:`.)

13.44 The environment `enumext*`

`enumext*` First we will generate the environment and we will give a temporary definition to `\__enumext_stop_item_tmp_vii:` equal to `\__enumext_first_item_tmp_vii:` and next to `\item` equal to `\__enumext_start_item_tmp_vii:` which we will redefine later. Unlike the implementation used by the shortlst package, we will not set the values of `\rightskip` and `\@rightskip` equal to `\@flushglue` whose value is `0.0pt plus 1.0 fil`, in the tests I have performed this fails in some circumstances and different results are obtained when using pdfTEX and LuaTEX.

```
\NewDocumentEnvironment{enumext*}{ o }
  {
    \__enumext_safe_exec_vii:
    \__enumext_parse_keys_vii:n {#1}
    \__enumext_before_list_vii:
    \__enumext_start_store_level_vii:
    \__enumext_start_list:nn { }
      {
        \__enumext_list_arg_two_vii:
        \__enumext_before_keys_exec_vii:
      }
    \IfDocumentMetadataTF { \tag_suspend:n {enumext*} } { }
    \__enumext_starred_columns_set_vii:
    \item[] \scan_stop:
    \cs_set_eq:NN \__enumext_stop_item_tmp_vii: \__enumext_first_item_tmp_vii:
    \cs_set_eq:NN \item \__enumext_start_item_tmp_vii:
    \ignorespaces
  }
  {
    \IfDocumentMetadataTF { \tag_struct_end:n {tag=text-unit} } { }
    \__enumext_stop_item_tmp_vii:
    \__enumext_remove_extra_parsep_vii:
    \__enumext_after_list_vii:
  }
```

(*End of definition for* `enumext*`. *This function is documented on page* ??.)

`\__enumext_safe_exec_vii:` We will first call the function `\__enumext_is_not_nested:` which sets `\g__enumext_starred_bool` to true if we are NOT nested within enumext, then call the function `\__enumext_internal_mini_page:` to create the environment `__enumext_mini_page`, we will increment `\l__enumext_level_h_int` to restrict nesting of the environment, set `\l__enumext_starred_bool` to true and finally call the function `\__enumext_is_on_first_level:` which sets `\l__enumext_starred_first_bool` to true if we are not nested, allowing the *"storage system"* to be used.

```
\cs_new_protected:Nn \__enumext_safe_exec_vii:
  {
    \__enumext_is_not_nested:
    \__enumext_internal_mini_page:
    \int_incr:N \l__enumext_level_h_int
    \int_compare:nNnT { \l__enumext_level_h_int } > { 1 }
      {
        \msg_error:nn { enumext } { nested }
      }
    \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
      {
        \msg_error:nnn { enumext } { nested-horizontal } { keyans*}
      }
    \bool_set_true:N \l__enumext_starred_bool
    \bool_set_false:N \l__enumext_standar_bool
    \__enumext_is_on_first_level:
  }
```

(*End of definition for* `\__enumext_safe_exec_vii:`.)

`\__enumext_parse_keys_vii:n` First we will clear the variable `\l__enumext_series_str` used by the key `series`, process the environment `[`⟨*key* = *val*⟩`]` and execute the function `\__enumext_parse_series:n` and used by the key `series`, then we execute the function `\__enumext_store_active_keys_vii:n` and reprocess the ⟨*keys*⟩ to pass them to the storage *sequence* if the key `save-key` is not active.

```
\cs_new_protected:Npn \__enumext_parse_keys_vii:n #1
  {
    \tl_if_novalue:nF {#1}
      {
        \str_clear:N \l__enumext_series_str
        \keys_set:nn { enumext / enumext* } {#1}
        \__enumext_parse_series:n {#1}
        \__enumext_store_active_keys_vii:n {#1}
      }
  }
```

(*End of definition for* `\__enumext_parse_keys_vii:n`.)

`\__enumext_before_list_vii:` The function `\__enumext_before_list_vii:` first calls the function `\__enumext_vspace_above_vii:` used by the keys `above` and `above*`, then calls the function `\__enumext_check_ans_active:` for the check answer mechanism and finally calls the functions `\__enumext_before_args_exec:` and `\__enumext_start_mini_vii:` used by the keys `before*`, `mini-env`, `mini-right` and `mini-right*`.

```
\cs_new_protected:Nn \__enumext_before_list_vii:
  {
    \__enumext_vspace_above_vii:
    \__enumext_check_ans_active:
    \__enumext_before_args_exec_vii:
    \__enumext_start_mini_vii:
  }
```

(*End of definition for* `\__enumext_before_list_vii:`.)

`\__enumext_after_list_vii:` The function `\__enumext_after_list_vii:` first calls the function `\__enumext_stop_mini_vii:` which internally calls `\__enumext_stop_list:` and `\__enumext_stop_store_level_vii:` (§??) used by the keys `mini-env`, `mini-right` and `mini-right*`, then to the functions `\__enumext_after_stop_list_vii:` used by the key `after`, `\__enumext_check_ans_key_hook:` used by the key `check-ans`, `\__enumext_vspace_below_vii:` used by the keys `below` and `below*`. Finally set `\l__enumext_starred_bool` to false and call the `\__enumext_resume_save_counter:` function used by the `series`, `resume` and `resume*` keys.

```
\cs_new_protected:Nn \__enumext_after_list_vii:
  {
    \__enumext_stop_mini_vii:
    \__enumext_after_stop_list_vii:
    \__enumext_check_ans_key_hook:
    \__enumext_vspace_below_vii:
    \bool_set_false:N \l__enumext_starred_bool
    \__enumext_resume_save_counter:
  }
```

(*End of definition for* `\__enumext_after_list_vii:`.)

__enumext_start_store_level_vii:
__enumext_stop_store_level_vii:

The __enumext_start_store_level_vii: and __enumext_stop_store_level_vii: functions activate the *"storing structure"* mechanism in *sequence* for \anskey command and anskey* environment if enumext* are nested in enumext.

```
\cs_new_protected:Nn \__enumext_start_store_level_vii:
  {
    \bool_if:NT \l__enumext_store_active_bool
      {
        \int_compare:nNnT { \l__enumext_level_int } > { 0 }
          {
            \__enumext_store_level_open_vii:
          }
      }
  }
\cs_new_protected:Nn \__enumext_stop_store_level_vii:
  {
    \bool_if:NT \l__enumext_store_active_bool
      {
        \int_compare:nNnT { \l__enumext_level_int } > { 0 }
          {
            \__enumext_store_level_close_vii:
          }
      }
  }
```

(*End of definition for* __enumext_start_store_level_vii: *and* __enumext_stop_store_level_vii:.)

13.44.1 The command \item in enumext*

__enumext_first_item_tmp_vii:

The __enumext_first_item_tmp_vii: function will remove horizontal space equal to \labelwidth plus \labelsep to the left of the *"first"* \item in the environment at the point of execution of this function, where it is equal to the __enumext_stop_item_tmp_vii: function inside the environment body definition.

```
\cs_new_protected_nopar:Nn \__enumext_first_item_tmp_vii:
  {
    \skip_horizontal:n
      {
        -\l__enumext_labelwidth_vii_dim - \l__enumext_labelsep_vii_dim
      }
    \ignorespaces
  }
```

(*End of definition for* __enumext_first_item_tmp_vii:.)

__enumext_start_item_tmp_vii:
__enumext_item_peek_args_vii:
__enumext_joined_item_vii:w
__enumext_standar_item_vii:w
__enumext_starred_item_vii:w
__enumext_starred_item_vii_aux_i:w
__enumext_starred_item_vii_aux_ii:w
__enumext_starred_item_vii_aux_iii:w

First we will call the function __enumext_stop_item_tmp_vii: that we will redefine later, we will increment the value of \l__enumext_item_column_pos_vii_int that will count the item's by rows and the value of \g__enumext_item_count_all_vii_int that will count the total of item's in the environment. After that we will call the function __enumext_item_peek_args_vii: that will handle the arguments passed to \item.

```
\cs_new_protected_nopar:Nn \__enumext_start_item_tmp_vii:
  {
    \__enumext_stop_item_tmp_vii:
    \int_incr:N \l__enumext_item_column_pos_vii_int
    \int_gincr:N \g__enumext_item_count_all_vii_int
    \__enumext_item_peek_args_vii:
  }
```

The function __enumext_item_peek_args_vii: will handle the \item(⟨*number*⟩). Look for the argument "(", if it is present we will call the function __enumext_joined_item_vii:w (⟨*number*⟩), which is in charge of joining the item's in the same row, in case they are not present we will set the default value (1).

```
\cs_new_protected:Nn \__enumext_item_peek_args_vii:
  {
    \peek_meaning:NTF (
      { \__enumext_joined_item_vii:w }
      { \__enumext_joined_item_vii:w (1) }
  }
```

The function __enumext_joined_item_vii:w will first call the function __enumext_starred_joined_item_vii:n in charge of setting the *width* of the box that will store the content passed to \item. Then we will look for the argument "*", if it is present we will call the function __enumext_starred_item_vii:w otherwise we will call the function __enumext_standar_item_vii:w.

```
\cs_new_protected:Npn \__enumext_joined_item_vii:w (#1)
  {
```

```
    \__enumext_starred_joined_item_vii:n {#1}
    \peek_meaning_remove:NTF *
      { \__enumext_starred_item_vii:w  }
      { \__enumext_standar_item_vii:w }
  }
```

The function `\__enumext_standar_item_vii:w` will first look for the argument "`[`", if present it will set the state of the variable `\l__enumext_wrap_label_opt_vii_bool` equal to the state of the variable `\l__enumext_wrap_label_opt_vii_bool` handled by the key `wrap-label*` and finally execute the *non-enumerated* version `\item[`⟨*custom*⟩`]` by means of the function `\__enumext_start_item_vii:w`, otherwise we will set the value of the variable `\l__enumext_wrap_label_vii_bool` handled by the `wrap-label` key to true and set the switch `\if@noitemarg` to true to execute the enumerated version of `\item` by means of the function `\__enumext_start_item_vii:w [ \l__enumext_label_vii_tl ]`.

```
\cs_new_protected:Npn \__enumext_standar_item_vii:w
  {
    \bool_set_false:N \l__enumext_item_starred_vii_bool
    \peek_meaning:NTF [
      {
        \bool_set_eq:NN \l__enumext_wrap_label_vii_bool \l__enumext_wrap_label_opt_vii_bool
        \__enumext_start_item_vii:w
      }
      {
        \bool_set_true:N \l__enumext_wrap_label_vii_bool
        \legacy_if_set_true:n { @noitemarg }
        \__enumext_start_item_vii:w [ \l__enumext_label_vii_tl ] \ignorespaces
      }
  }
```

The function `\__enumext_starred_item_vii:w` together with the specified auxiliary functions `aux_i:w`, `aux_ii:w`, and `aux_iii:w` execute `\item*`, `\item*[`⟨*symbol*⟩`]` and `\item*[`⟨*symbol*⟩`][`⟨*offset*⟩`]`.

```
\cs_new_protected:Npn \__enumext_starred_item_vii:w
  {
    \bool_set_true:N \l__enumext_item_starred_vii_bool
    \bool_set_true:N \l__enumext_wrap_label_vii_bool
    \peek_meaning:NTF [
      { \__enumext_starred_item_vii_aux_i:w }
      { \__enumext_starred_item_vii_aux_ii:w }
  }
\cs_new_protected:Npn \__enumext_starred_item_vii_aux_i:w [#1]
  {
    \tl_gset:Nn \g__enumext_item_symbol_aux_vii_tl {#1}
    \__enumext_starred_item_vii_aux_ii:w
  }
\cs_new_protected:Npn \__enumext_starred_item_vii_aux_ii:w
  {

  }
```

(*End of definition for* `\__enumext_start_item_tmp_vii:` *and others.*)

`\__enumext_fake_make_label_vii:n`

The `\__enumext_fake_make_label_vii:n` function will be in charge of handling our definition of `\item`. First we increment the counter `enumXvii` for the enumerated items and activate support for the *check answers* mechanism, followed by support for `\item*[`⟨*symbol*⟩`][`⟨*offset*⟩`]` if present, then the `wrap-label` and `wrap-label*` keys which we execute using `\makebox` whose width will be given by the `labelwidth` key and position by the `align` key, inside the argument of this we will execute the `font` key together with the function defined by the `wrap-label` or `wrap-label*` keys. Finally we execute the `labelsep` key applying a `\skip_horizontal:N` and `\ignorespaces`.

For compatibility with *tagged* PDF and `hyperref` when an environment `enumext` is nested in `enumext*` and the key `save-ans` is not active need setting the `\if@hyper@item` switch to *"true"*. The explanation for this is given by the master

Heiko Oberdiek on \refstepcounter{enumi} twice (or more) creates destination with the same identifier. This patch is only needed if you are running pdflatex and not if you are running lualatex

```
\cs_new_protected_nopar:Npn \__enumext_fake_make_label_vii:n #1
  {

(*End of definition for* `\__enumext_fake_make_label_vii:n`.)

13.44.2 Real definition of `\item` in `enumext*`

The functions `\__enumext_start_item_vii:w` and `\__enumext_stop_item_vii:` executing the true definition of `\item` inside the `enumext*` environment, unlike the implementation in `shortlst` we will NOT use an extra group and the plain form of the `lrbox` environment.

`\__enumext_start_item_vii:w`
`\__enumext_stop_item_vii:`

The first thing we will do is set the value of `\__enumext_stop_item_tmp_vii:` equal to `\__enumext_stop_item_vii:` which we will define later, after that we will start capturing `\item` and *"item content"* in a *horizontal box* where the width will be `\itemwidth` plus `\labelwidth` plus `\labelsep`.

```
\cs_new_protected_nopar:Npn \__enumext_start_item_vii:w [#1]
  {
    \cs_set_eq:NN \__enumext_stop_item_tmp_vii: \__enumext_stop_item_vii:
    \hbox_set_to_wd:Nnw \l__enumext_item_text_vii_box
      {
        \l__enumext_joined_width_vii_dim
        + \l__enumext_labelwidth_vii_dim
        + \l__enumext_labelsep_vii_dim
      }
```

Redefine the `\footnote` command.

```
      \__enumext_renew_footnote_starred:
```

Now we insert our *sockets* for *tagging* PDF support and run \item.

```
      \__enumext_start_list_tag:n {enumext*}
      \__enumext_fake_make_label_vii:n {#1}
      \__enumext_stop_start_list_tag:
```

Finally we open the minipage environment, capture the *"item content"*, make \parindent take the value of the key listparindent and \parskip take the value of the key parsep, then execute the keys itemindent and first.

Here the use of \unskip and \skip_horizontal:n with the value of listparindent is necessary, otherwise an unwanted space is created when using \item[⟨*opt*⟩] and the value passed to the key itemindent is incremented.

```
      \__enumext_minipage:w [ t ]{ \l__enumext_joined_width_vii_dim }
        \dim_set_eq:NN \parindent \l__enumext_listparindent_vii_dim
        \skip_set_eq:NN \parskip \l__enumext_parsep_vii_skip
        \__enumext_unskip_unkern:
        \__enumext_unskip_unkern:
        \skip_horizontal:n { -\l__enumext_listparindent_vii_dim } \ignorespaces
        \tl_use:N \l__enumext_fake_item_indent_vii_tl
        \tl_use:N \l__enumext_after_list_args_vii_tl
    }
```

The __enumext_stop_item_vii: function will finish the fetching \item and *"item content"* by closing the minipage environment, the *sockets* for *tagging* PDF and the *horizontal box*.

```
\cs_new_protected_nopar:Nn \__enumext_stop_item_vii:
  {
      \__enumext_endminipage:
    \__enumext_stop_list_tag:n {enumext*}
    \hbox_set_end:
```

Here we will reduce the *warnings* a bit by setting the value of \hbadness to 10000, print \item and *"item content"* from the *horizontal box*,.

```
    \int_set:Nn \hbadness { 10000 }
    \box_use_drop:N \l__enumext_item_text_vii_box
```

Finally apply the *vertical space* between rows set by itemsep key passed to \parsep using \par\noindent and *horizontal space* between columns set by columns-sep key using \skip_horizontal:N.

```
    \int_compare:nNnTF
      { \l__enumext_item_column_pos_vii_int } = { \l__enumext_columns_vii_int }
      {
        \par\noindent
        \int_zero:N \l__enumext_item_column_pos_vii_int
      }
      {
        \skip_horizontal:N \l__enumext_columns_sep_vii_dim
      }
  }
```

(*End of definition for* __enumext_start_item_vii:w *and* __enumext_stop_item_vii:.)

__enumext_remove_extra_parsep_vii:

Remove the extra *vertical space* equal to \parsep=\itemsep when the total number of \item is divisible by the number of \item in the last row of the environment. Here the use of \unskip or \removelastskip fails and does not obtain the expected result, using \vspace is the option and in this case, we can use a simplified version since we are always in ⟨*vertical mode*⟩.

```
\cs_new_protected:Nn \__enumext_remove_extra_parsep_vii:
  {
    \int_compare:nNnT
      {
        \int_mod:nn
          {  \g__enumext_item_count_all_vii_int } { \l__enumext_columns_vii_int }
      }
      =
      { 0 }
      {
        \para_end:
        \skip_vertical:n { -\l__enumext_itemsep_vii_skip }
        \skip_vertical:N \c_zero_skip
        \int_gzero:N \g__enumext_item_count_all_vii_int
      }
  }
```

(*End of definition for* `\__enumext_remove_extra_parsep_vii:`.)

As we don't want our check to be executed `check-ans` by levels but on the complete list, we will take it out of the `enumext*` environment using the *"hook"* function `\__enumext_after_env:nn`.

```
\__enumext_after_env:nn {enumext*}
  {
    \__enumext_execute_after_env:
  }
```

13.45 The environment keyans*

keyans*

The implementation of `keyans*` environment is the similar as that used by the `enumext*` environment except for the `\__enumext_check_starred_cmd:n` function added in the second part.

```
\NewDocumentEnvironment{keyans*}{ o }
  {
    \__enumext_safe_exec_viii:
    \__enumext_parse_keys_viii:n {#1}
    \__enumext_before_list_viii:
    \__enumext_start_list:nn { }
      {
        \__enumext_list_arg_two_viii:
        \__enumext_before_keys_exec_viii:
      }
    \IfDocumentMetadataTF { \tag_suspend:n {keyans*} } { }
    \__enumext_starred_columns_set_viii:
    \item[] \scan_stop:
    \cs_set_eq:NN \__enumext_stop_item_tmp_viii: \__enumext_first_item_tmp_viii:
    \cs_set_eq:NN \item \__enumext_start_item_tmp_viii:
    \ignorespaces
  }
  {
    \IfDocumentMetadataTF { \tag_struct_end:n {tag=text-unit} } { }
    \__enumext_stop_item_tmp_viii:
    \__enumext_remove_extra_parsep_viii:
    \__enumext_check_starred_cmd:n { item }
    \__enumext_after_list_viii:
  }
```

(*End of definition for* `keyans*`. *This function is documented on page* ??.)

`\__enumext_safe_exec_viii:`

The `\__enumext_safe_exec_viii:` function will first check if the `save-ans` key is active and only when this is true the environment will be available, it will increment the value of `\l__enumext_keyans_level_h_int` and return an error message when we are nesting the environment, then it will call the `\__enumext_keyans_name_and_start:` function in charge of saving the name of the environment and the line it is running on, then it will check if we are trying to nest `keyans*` in `enumext*` returning an error and we will set `\l__enumext_starred_bool` to true, finally we will check if we are within the appropriate level within the `enumext` environment.

```
\cs_new_protected:Nn \__enumext_safe_exec_viii:
  {
    \bool_if:NF \l__enumext_store_active_bool
      {
        \msg_error:nnnn { enumext } { wrong-place }{ keyans* }{ save-ans }
      }
    \int_incr:N \l__enumext_keyans_level_h_int
    \int_compare:nNnT { \l__enumext_keyans_level_h_int } > { 1 }
      {
        \msg_error:nn { enumext } { nested }
      }
    \__enumext_keyans_name_and_start:
    \bool_if:NT \l__enumext_starred_bool
      {
        \msg_error:nnn { enumext } { nested-horizontal } { enumext* }
      }
    \bool_set_true:N \l__enumext_starred_bool
    % Set false for interfering with enumext nested in keyans* (yes, its possible and crayze)
    \bool_set_false:N \l__enumext_store_active_bool
    \int_compare:nNnT { \l__enumext_level_int } > { 1 }
      {
        \msg_error:nn { enumext } { keyans-wrong-level }
      }
  }
```

(*End of definition for* `\__enumext_safe_exec_viii:`.)

`\__enumext_parse_keys_viii:n` Parse [⟨*key* = *val*⟩] for `keyans*`.

```
\cs_new_protected:Npn \__enumext_parse_keys_viii:n #1
  {
    \tl_if_novalue:nF {#1}
      {
        \keys_set:nn { enumext / keyans* } {#1}
      }
  }
```

(*End of definition for* `\__enumext_parse_keys_viii:n`.)

`\__enumext_before_list_viii:` The function `\__enumext_before_list_viii:` will add the vertical spacing on the environment if the `above` key is active next to the {⟨*code*⟩} defined by the `before*` key if it is active, the call the function `\__enumext_start_mini_viii:` handle by `mini-env`.

```
\cs_new_protected:Nn \__enumext_before_list_viii:
  {
    \__enumext_vspace_above_viii:
    \__enumext_before_args_exec_viii:
    \__enumext_start_mini_viii:
  }
```

(*End of definition for* `\__enumext_before_list_viii:`.)

`\__enumext_after_list_viii:` The function `\__enumext_after_list_viii:` first call the function `\__enumext_stop_mini_viii:`, then apply the {⟨*code*⟩} handled by the `after` key together with the *vertical space* handled by the `below` key if they are present.

```
\cs_new_protected:Nn \__enumext_after_list_viii:
  {
    \__enumext_stop_mini_viii:
    \__enumext_after_stop_list_viii:
    \__enumext_vspace_below_viii:
  }
```

(*End of definition for* `\__enumext_after_list_viii:`.)

13.45.1 The command `\item` in keyans*

The idea here is to make the `\item` command behave in the same way as in the `keyans` environment with the difference of the *optional argument* (⟨*number*⟩) which works in the same way as in the `enumext*` environment. In simple terms we want to store the ⟨*label*⟩ next to the [⟨*content*⟩] if it is present in the *sequence* and *prop list* defined by `save-ans` key for `\item*`, `\item*`[⟨*content*⟩], `\item`(⟨*number*⟩)`*` and `\item`(⟨*number*⟩)`*`[⟨*content*⟩] commands.

`\__enumext_first_item_tmp_viii:` The `\__enumext_first_item_tmp_viii:` function will remove horizontal space equal to `\labelwidth` plus `\labelsep` to the left of the *"first"* `\item` in the environment at the point of execution of this function, where it is equal to the `\__enumext_stop_item_tmp_viii:` function inside the environment body definition.

```
\cs_new_protected_nopar:Nn \__enumext_first_item_tmp_viii:
  {
    \skip_horizontal:n
      {
        -\l__enumext_labelwidth_viii_dim - \l__enumext_labelsep_viii_dim
      }
    \ignorespaces
  }
```

(*End of definition for* `\__enumext_first_item_tmp_viii:`.)

`\__enumext_start_item_tmp_viii:`
`\__enumext_item_peek_args_viii:`
`\__enumext_joined_item_viii:w`
`\__enumext_standar_item_viii:w`

First we will call the function `\__enumext_stop_item_tmp_viii:` that we will redefine later, we will increment the value of `\l__enumext_item_column_pos_viii_int` that will count the item's by rows and the value of `\g__enumext_item_count_all_viii_int` that will count the total of item's in the environment. After that we will call the function `\__enumext_item_peek_args_viii:` that will handle the arguments passed to `\item`.

```
\cs_new_protected_nopar:Nn \__enumext_start_item_tmp_viii:
  {
    \__enumext_stop_item_tmp_viii:
    \int_incr:N \l__enumext_item_column_pos_viii_int
    \int_gincr:N \g__enumext_item_count_all_viii_int
    \__enumext_item_peek_args_viii:
  }
```

©2024 by Pablo González L

The function __enumext_item_peek_args_viii: will handle the \item(⟨*number*⟩). Look for the argument "(", if it is present we will call the function __enumext_joined_item_viii:w (⟨*number*⟩), which is in charge of joining the item's in the same row, in case they are not present we will set the default value (1).

```
\cs_new_protected:Nn \__enumext_item_peek_args_viii:
  {
    \peek_meaning:NTF (
      { \__enumext_joined_item_viii:w }
      { \__enumext_joined_item_viii:w (1) }
  }
```

The function __enumext_joined_item_viii:w will first call the function __enumext_starred_joined_item_viii:n in charge of setting the *width* of the box that will store the content passed to \item. Then we will look for the argument "*", if it is present we will call the function __enumext_starred_item_viii:w otherwise we will call the function __enumext_standar_item_viii:w.

```
\cs_new_protected:Npn \__enumext_joined_item_viii:w (#1)
  {
    \__enumext_starred_joined_item_viii:n {#1}
    \peek_meaning_remove:NTF *
      { \__enumext_starred_item_viii:w  }
      { \__enumext_standar_item_viii:w }
  }
```

The function __enumext_standar_item_viii:w will first look for the argument "[", if present it will set the state of the variable \l__enumext_wrap_label_opt_viii_bool equal to the state of the variable \l__enumext_wrap_label_opt_viii_bool handled by the key wrap-label* and finally execute the *non-enumerated* version \item[⟨*custom*⟩] by means of the function __enumext_start_item_viii:w, otherwise we will set the value of the variable \l__enumext_wrap_label_viii_bool handled by the wrap-label key to true and set the switch \if@noitemarg to true to execute the enumerated version of \item by means of the function __enumext_start_item_viii:w [\l__enumext_label_viii_tl].

```
\cs_new_protected:Npn \__enumext_standar_item_viii:w
  {
    \bool_set_false:N \l__enumext_item_starred_viii_bool
    \peek_meaning:NTF [
      {
        \bool_set_eq:NN \l__enumext_wrap_label_viii_bool \l__enumext_wrap_label_opt_viii_bool
        \__enumext_start_item_viii:w
      }
      {
        \bool_set_true:N \l__enumext_wrap_label_viii_bool
        \legacy_if_set_true:n { @noitemarg }
        \__enumext_start_item_viii:w [ \l__enumext_label_viii_tl ] \ignorespaces
      }
  }
```

(*End of definition for* __enumext_start_item_tmp_viii: *and others.*)

__enumext_starred_item_viii:w
__enumext_starred_item_viii_aux_i:w
__enumext_starred_item_viii_aux_ii:w
__enumext_starred_item_exec:

The function __enumext_starred_item_viii:w together with the specified auxiliary functions aux_i:w and aux_ii:w execute \item* and \item*[⟨*content*⟩].

```
\cs_new_protected:Npn \__enumext_starred_item_viii:w
  {
    \bool_set_true:N \l__enumext_item_starred_viii_bool
    \bool_set_true:N \l__enumext_wrap_label_viii_bool
    \peek_meaning:NTF [
      { \__enumext_starred_item_viii_aux_i:w }
      { \__enumext_starred_item_viii_aux_ii:w }
  }
```

The function __enumext_starred_item_viii_aux_i:w will save the *optional argument* to \item* in \l__enumext_store_current_opt_arg_tl and will save this argument along with the spacing set by the key save-sep in variable \l__enumext_store_current_label_tl if present, then call the function __enumext_starred_item_viii_aux_ii:w.

```
\cs_new_protected:Npn \__enumext_starred_item_viii_aux_i:w [#1]
  {
    \tl_clear:N \l__enumext_store_current_label_tl
    \tl_if_novalue:nF { #1 }
      {
        \tl_if_empty:NF \l__enumext_store_keyans_item_opt_sep_tl
          {
            \tl_put_right:Ne \l__enumext_store_current_label_tl
              {
                \l__enumext_store_keyans_item_opt_sep_tl
```

```
4994              }
4995            \tl_put_right:Ne \l__enumext_store_current_label_tl { #1 }
4996          }
4997        \tl_set:Ne \l__enumext_store_current_opt_arg_tl { #1 }
4998      }
4999    \__enumext_starred_item_viii_aux_ii:w
5000  }
5001 \cs_new_protected:Npn \__enumext_starred_item_viii_aux_ii:w
5002  {
5003    \legacy_if_set_true:n { @noitemarg }
5004    \__enumext_start_item_viii:w [ \l__enumext_label_viii_tl ] \ignorespaces
5005  }
```

The function `\__enumext_starred_item_exec:` will be in charge of storing the current ⟨*label*⟩ for `\item*` followed by the `[`⟨*content*⟩`]` for `\item*[`⟨*content*⟩`]` if present in the *sequence* and *prop list* set by the `save-ans` key. In this same function the keys `show-ans`, `show-pos` and `save-ref` are implemented.

```
5006 \cs_new_protected:Nn \__enumext_starred_item_exec:
5007  {
5008    \tl_put_left:Ne \l__enumext_store_current_label_tl { \l__enumext_label_viii_tl }

        \skip_vertical:N \c_zero_skip
        \int_gzero:N \g__enumext_item_count_all_viii_int
      }
  }
```

(*End of definition for* `\__enumext_remove_extra_parsep_viii:`.)

13.46 The command \getkeyans

`\getkeyans`
`\__enumext_getkeyans_aux:n`
`\__enumext_getkeyans:nn`

The `\getkeyans` command takes a *mandatory argument* of the form {⟨*store name* : *position*⟩}. Retrieve a *"single content"* stored by `\anskey`, `\anspic*` and `\item*` and `anskey*` from *prop list* defined by `save-ans` key.

```
\NewDocumentCommand \getkeyans { m }
  {
    \exp_args:Ne \__enumext_getkeyans_aux:n
      { \tl_to_str:e { \text_expand:n {#1} } }
  }
```

The internal function `\__enumext_getkeyans_aux:n` is in charge of *splitting* the *mandatory argument* using ":". If ":" is omitted it will return an error.

```
\cs_new_protected:Npn \__enumext_getkeyans_aux:n #1
  {
    \str_if_in:nnTF {#1} { : }
      {
        \use:e
          {
            \cs_set:Npn \exp_not:N \__enumext_tmp:w ##1 \c_colon_str ##2 \scan_stop:
              { {##1} {##2} }
          }
        \exp_after:wN \__enumext_getkeyans:nn \__enumext_tmp:w #1 \scan_stop:
      }
      { \msg_error:nnn { enumext } { missing-colon } {#1} }
  }
```

The internal function `\__enumext_getkeyans:nn` will check for the existence of the *prop list*, if it does not exist it will return an error message, then it will fetch the content specified by the *second argument* from *prop list*.

```
\cs_new_protected:Npn \__enumext_getkeyans:nn #1 #2
  {
    \prop_if_exist:cTF { g__enumext_#1_prop }
      {
        \prop_item:cn { g__enumext_#1_prop }{#2}
      }
      {
        \msg_error:nnn { enumext } { undefined-storage-anskey } {#1}
      }
  }
```

(*End of definition for* `\getkeyans`, `\__enumext_getkeyans_aux:n`, *and* `\__enumext_getkeyans:nn`. *This function is documented on page* ??.)

13.47 The command \printkeyans

The `\printkeyans` command prints *"all stored content"* in the *sequence* defined by the `save-ans` key.
The first thing we will do is define a set of ⟨*filtered keys*⟩ with which we will control the options of the different nesting levels for the environment `enumext` and `enumext*` by storing their values in the list of tokens `\l__enumext_print_keyans_X_tl`.

The variable `\l__enumext_print_keyans_starred_tl` will have the default ⟨*keys*⟩ for `\printkeyans*` and will be set by `\setenumext[`⟨*print**⟩`]` and the variable `\l__enumext_print_keyans_vii_tl` will have the default keys for the environment `enumext*` nested within the *sequence* and will be set by `\setenumext[`⟨*print* ,*⟩`]`, the rest of the variables will be for the environment `enumext` and will be set by `\setenumext[`⟨*print* , *level*⟩`]`.

```
\keys_define:nn  { enumext / print }
  {
    print*  .code:n     = \keys_precompile:neN { enumext / enumext* }
                            { \__enumext_filter_save_key:n {#1} }
                            \l__enumext_print_keyans_starred_tl, % starred cmd
    print*  .initial:n  = { nosep, label=\arabic*., columns=2, first=\small, font=\small },
    print-1 .code:n     = \keys_precompile:neN { enumext / level-1 }
                            { \__enumext_filter_save_key:n {#1} }
                            \l__enumext_print_keyans_i_tl,
    print-1 .initial:n  = { nosep, label=\arabic*., columns=2, first=\small, font=\small },
    print-2 .code:n     = \keys_precompile:neN { enumext / level-2 }
                            { \__enumext_filter_save_key:n {#1} }
                            \l__enumext_print_keyans_ii_tl,
    print-2 .initial:n  = { nosep, label=(\alph*), first=\small, font=\small },
    print-3 .code:n     = \keys_precompile:neN { enumext / level-3 }
```

```
                                { \__enumext_filter_save_key:n {#1} }
                                \l__enumext_print_keyans_iii_tl,
    print-3 .initial:n  = { nosep, label=\roman*., first=\small, font=\small },
    print-4 .code:n     = \keys_precompile:neN { enumext / level-4 }
                                { \__enumext_filter_save_key:n {#1} }
                                \l__enumext_print_keyans_iv_tl,
    print-4 .initial:n  = { nosep, label=\Alph*., first=\small, font=\small },
    print-* .code:n     = \keys_precompile:neN { enumext / enumext* }
                                { \__enumext_filter_save_key:n {#1} }
                                \l__enumext_print_keyans_vii_tl, % starred nested
    print-* .initial:n  = { nosep, label=\arabic*., first=\small, font=\small },
  }
```

The reason for storing ⟨*keys*⟩ in token lists using `\keys_precompile:neN` is because the keys are set via `\setenumext` but are later executed by running the command `\printkeyans` and they are not handled directly by its *optional argument*, except those related to the *first* opening level.

`\printkeyans`
`\__enumext_printkeyans:nnn`

Create a user command to print *"all stored content"* in *sequence* for `\anskey`, `anskey*`, `\item*` and `\anspic*`. Within a group we will run our *"precompiled keys"* and then call the internal function `\__enumext_printkeyans:nnn`.

```
\NewDocumentCommand \printkeyans { s O{} m }
  {
    \group_begin:
      \tl_use:N \l__enumext_print_keyans_i_tl
      \tl_use:N \l__enumext_print_keyans_ii_tl
      \tl_use:N \l__enumext_print_keyans_iii_tl
      \tl_use:N \l__enumext_print_keyans_iv_tl
      \tl_use:N \l__enumext_print_keyans_vii_tl
      \__enumext_printkeyans:nnn { #1 } { #2 } { #3 }
    \group_end:
  }
```

The internal function `\__enumext_printkeyans:nnn` will check for the existence of the *sequence*, if it does not exist it will return an error message, then it will check if not empty.

```
\cs_new_protected:Npn \__enumext_printkeyans:nnn #1 #2 #3
  {
    \seq_if_exist:cTF { g__enumext_#3_seq }
      {
        \seq_if_empty:cF { g__enumext_#3_seq }
          {
```

If the *starred argument* '`*`' is present we will check that the environment `enumext*` is not saved in the *sequence*, then execute the variable `\l__enumext_print_keyans_starred_tl` that contains the default ⟨*keys*⟩ for the environment `enumext*`, we set `\l__enumext_base_line_fix_bool` and `\l__enumext_print_keyans_star_bool` to true for *baseline correction*, open the `enumext*` environment passing the *optional argument* and map the *sequence*, then set `\l__enumext_base_line_fix_bool` and `\l__enumext_print_keyans_star_bool` to false.

```
            \bool_if:nTF {#1}
              {
                \seq_if_in:cnTF { g__enumext_#3_seq } { \end{enumext*} }
                  {
                    \msg_error:nnnn { enumext } { print-starred } {#3} { enumext* }
                  }
                  {
                    \tl_use:N \l__enumext_print_keyans_starred_tl
                    \bool_set_true:N \l__enumext_base_line_fix_bool
                    \bool_set_true:N \l__enumext_print_keyans_star_bool
                    \begin{enumext*}[#2]
                      \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
                    \end{enumext*}
                    \bool_set_false:N \l__enumext_base_line_fix_bool
                    \bool_set_false:N \l__enumext_print_keyans_star_bool
                  }
              }
```

Otherwise it will open the environment `enumext` passing the *optional argument* to the *"first level"* then map the *sequence*.

```
            {
              \begin{enumext}[#2]
                \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
              \end{enumext}
            }
```

```
        }
    }
    {
      \msg_error:nnn { enumext } { undefined-storage-anskey } {#3}
    }
}
```

(*End of definition for* `\printkeyans` *and* `\__enumext_printkeyans:nnn`. *This function is documented on page* ??.)

13.48 The command `\setenumext`

The command `\setenumext` will be in charge of managing the ⟨*keys*⟩ passed to all environments and to the `\printkeyans` command. We must take precautions with the `enumext*` environment and *"first level"* of the `enumext` environment so as not to capture ⟨*keys*⟩ that complicate us.

`\__enumext_filter_first_level:n`
`\__enumext_filter_first_level_key:n`
`\__enumext_filter_first_level_pair:nn`

The function `\__enumext_filter_first_level:n` will be in charge of filtering the ⟨*keys*⟩ passed to the environment `enumext*` and *"first level"* of the environment `enumext`.

```
\cs_new:Npn \__enumext_filter_first_level:n #1
  {
    \use:e
      {
        \keyval_parse:NNn
          \__enumext_filter_first_level_key:n
          \__enumext_filter_first_level_pair:nn {#1}
      }
  }
```

The function `\__enumext_filter_first_level_key:n` will be responsible for filtering the ⟨*keys*⟩ that are passed *"without value"* by excluding the keys `resume` and `resume*`.

```
\cs_new:Npn \__enumext_filter_first_level_key:n #1
  {
    \str_case:nnF {#1}
      {
        { resume   } {}
        { resume*  } {}
      }
      { , { \exp_not:n {#1} } }
  }
```

The function `\__enumext_filter_first_level_pair:nn` will be responsible for filtering the ⟨*keys*⟩ that are passed *"with value"* by excluding the `series`, `resume` and `save-ans` keys.

```
\cs_new:Npn \__enumext_filter_first_level_pair:nn #1#2
  {
    \str_case:nnF {#1}
      {
        { series } {}
        { resume } {}
        { save-ans } {}
      }
      { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
  }
```

(*End of definition for* `\__enumext_filter_first_level:n`, `\__enumext_filter_first_level_key:n`, *and* `\__enumext_filter_first_level_pair:nn`.)

Now define a *"meta families"* of ⟨*keys*⟩ to access from `\setenumext`.

```
\keys_define:nn { enumext / meta-families }
  {
    enumext-1 .code:n =
                {
                  \keys_set:ne { enumext / level-1 }
                    {
                      \__enumext_filter_first_level:n {#1}
                    }
                } ,
    enumext-2 .code:n = { \keys_set:nn { enumext / level-2 } {#1} } ,
    enumext-3 .code:n = { \keys_set:nn { enumext / level-3 } {#1} } ,
    enumext-4 .code:n = { \keys_set:nn { enumext / level-4 } {#1} } ,
    keyans    .code:n = { \keys_set:nn { enumext / keyans  } {#1} } ,
    enumext*  .code:n =
                {
                  \keys_set:ne { enumext / enumext* }
                    {
```

```
                    \__enumext_filter_first_level:n {#1}
                  }
              } ,
    keyans*   .code:n = { \keys_set:nn { enumext / keyans* } {#1} } ,
    print*    .code:n = { \keys_set:nn { enumext / print   } { print*  = {#1} } } ,
    print-1   .code:n = { \keys_set:nn { enumext / print   } { print-1 = {#1} } } ,
    print-2   .code:n = { \keys_set:nn { enumext / print   } { print-2 = {#1} } } ,
    print-3   .code:n = { \keys_set:nn { enumext / print   } { print-3 = {#1} } } ,
    print-4   .code:n = { \keys_set:nn { enumext / print   } { print-4 = {#1} } } ,
    print-*   .code:n = { \keys_set:nn { enumext / print   } { print-* = {#1} } } ,
    unknown   .code:n = { \msg_error:nn { enumext } { unknown-key-family } } ,
  }
```

We store them in the constant sequence `\c__enumext_all_families_seq` separated by commas.

```
\seq_const_from_clist:Nn \c__enumext_all_families_seq
  {
    enumext-1, enumext-2, enumext-3, enumext-4, keyans, enumext*,
    keyans*, print-1, print-2, print-3, print-4, print-*, print*,
  }
```

`\setenumext` `\__enumext_set_parse:n` `\__enumext_set_error:nn`

Now we define the user command `\setenumext`.

```
\NewDocumentCommand \setenumext { O{enumext,1} +m }
  {
    \seq_clear:N \l__enumext_setkey_tmpa_seq
    \seq_set_from_clist:Nn \l__enumext_setkey_tmpb_seq {#1}
    \int_set:Nn \l__enumext_setkey_tmpa_int
      {
        \seq_count:N \l__enumext_setkey_tmpb_seq
      }
    \int_compare:nNnTF { \l__enumext_setkey_tmpa_int } > { 1 }
      {
        \seq_pop_left:NN \l__enumext_setkey_tmpb_seq \l__enumext_setkey_tmpa_tl
        \seq_map_function:NN \l__enumext_setkey_tmpb_seq \__enumext_set_parse:n
        \seq_set_map_e:NNn \l__enumext_setkey_tmpa_seq \l__enumext_setkey_tmpa_seq
          {
            \tl_use:N \l__enumext_setkey_tmpa_tl - ##1
          }
      }
      {
        \seq_put_right:Ne \l__enumext_setkey_tmpa_seq { \tl_trim_spaces:n {#1} }
      }
    \seq_if_empty:NTF \l__enumext_setkey_tmpa_seq
      { \seq_map_inline:Nn \c__enumext_all_families_seq }
      { \seq_map_inline:Nn \l__enumext_setkey_tmpa_seq }
      {
        \keys_set:nn { enumext / meta-families } { ##1 = {#2} }
      }
  }
```

Internal functions used by the `\setenumext` command.

```
\cs_new_protected:Npn \__enumext_set_parse:n #1
  {
    \tl_set:Ne \l__enumext_setkey_tmpb_tl { \tl_trim_spaces:n {#1} }
    \clist_map_inline:nn { 0, 1, 2, 3, 4, * } % <- max level
      { \tl_remove_all:Nn \l__enumext_setkey_tmpb_tl {##1} }
    \tl_if_empty:NTF \l__enumext_setkey_tmpb_tl
      {
        \seq_put_right:Ne \l__enumext_setkey_tmpa_seq
          { \tl_trim_spaces:n {#1} }
      }
      { \__enumext_set_error:nn {#1} { } }
  }
\cs_new_protected:Npn \__enumext_set_error:nn #1 #2
  { \msg_error:nnn { enumext } { invalid-key } {#1} {#2} }
```

(*End of definition for* `\setenumext`, `\__enumext_set_parse:n`, *and* `\__enumext_set_error:nn`. *This function is documented on page* ??.)

13.49 The command `\setenumextmeta`

The command `\setenumextmeta` will be responsible for adding new *"meta-keys"* for the `enumext` and `enumext*` environments. The implementation code was given by Jonathan P. Spratte (`@Skillmon`) answer in Add `.meta` key to existing keys (l3keys).

\setenumextmeta
\c__enumext_meta_paths_prop
__enumext_add_meta_key:nnn
__enumext_def_meta_key:nnn
__enumext_def_meta_key:Vnn

First we will create a prop list \c__enumext_meta_paths_prop to handle the *optional argument*.

```
\prop_const_from_keyval:Nn \c__enumext_meta_paths_prop
  {
    {enumext,1} = level-1,
    {enumext,2} = level-2,
    {enumext,3} = level-3,
    {enumext,4} = level-4,
    {enumext*}  = enumext*
  }
```

Now we create the user command taking care that unknown cannot be passed as an argument.

```
\NewDocumentCommand \setenumextmeta { s O{enumext,1} m +m }
  {
    \str_if_eq:eeTF { \tl_trim_spaces:n {#3} } { unknown }
      { \msg_error:nn { enumext } { prohibited-unknown } }
      {
        \bool_if:nTF {#1}
          {
            \int_step_inline:nn { 4 }
              { \__enumext_add_meta_key:nnn { enumext, ##1 } {#3} {#4} }
            \__enumext_add_meta_key:nnn { enumext* } {#3} {#4}
          }
          { \__enumext_add_meta_key:nnn {#2} {#3} {#4} }
      }
  }
```

The internal functions __enumext_add_meta_key:nnn and __enumext_def_meta_key:nnn will check the *optional argument* and create the *"meta-key"*.

```
\cs_new_protected:Npn \__enumext_add_meta_key:nnn #1
  {
    \tl_set:Nn \l__enumext_meta_path_tl {#1}
    \tl_replace_all:Nnn \l__enumext_meta_path_tl { ~ } {}
    \prop_get:NVNTF
      \c__enumext_meta_paths_prop \l__enumext_meta_path_tl \l__enumext_meta_path_tl
      { \__enumext_def_meta_key:Vnn \l__enumext_meta_path_tl }
      {
        \msg_error:nnn { enumext } { unknown-set } {#1}
        \use_none:nn
      }
  }
\cs_new_protected:Npn \__enumext_def_meta_key:nnn #1#2#3
  {
    \bool_lazy_or:nnTF
      { \keys_if_exist_p:nn { enumext / #1 } {#2} }
      { \keys_if_exist_p:nn { enumext / enumext* } {#2} }
      { \msg_error:nnn { enumext } { already-defined } {#2} }
      {
        \keys_define:nn { enumext / #1 }
          {
            #2 .meta:n = {#3},
            #2 .value_forbidden:n = true
          }
      }
  }
\cs_generate_variant:Nn \__enumext_def_meta_key:nnn { V }
```

(*End of definition for* \setenumextmeta *and others. This function is documented on page* ??.)

13.50 The command \foreachkeyans

The command \foreachkeyans will execute a *loop* over the *prop list* and return its contents. The implementation code is adapted from the answer provided by Enrico Gregorio (@egreg) in Expand a .cs defined by key inside the function.

\foreachkeyans
__enumext_parse_foreach_keys:nn
__enumext_parse_foreach_keys:n
__enumext_foreach_keyans:nn
__enumext_foreach_add_body:n

We define a set of ⟨*keys*⟩ for command and we will save the default values of these in \g__enumext_foreach_default_keys_tl to avoid the use of group.

```
\keys_define:nn { enumext / foreach }
  {
    before  .tl_set:N  = \l__enumext_foreach_before_tl,
    before  .value_required:n = true,
    after   .tl_set:N  = \l__enumext_foreach_after_tl,
    after   .value_required:n = true,
```

```
    start   .int_set:N = \l__enumext_foreach_start_int,
    start   .value_required:n = true,
    stop    .int_set:N = \l__enumext_foreach_stop_int,
    stop    .value_required:n = true,
    step    .int_set:N = \l__enumext_foreach_step_int,
    step    .value_required:n = true,
    wrapper .cs_set_protected:Np = \__enumext_foreach_wrapper:n #1,
    wrapper .value_required:n = true,
    sep     .tl_set:N  = \l__enumext_foreach_sep_tl,
    sep     .value_required:n = true,
    unknown .code:n    = { \__enumext_parse_foreach_keys:n {#1} }
  }
\keys_precompile:nnN { enumext / foreach }
  {
    before={},after={},start=1,step=1,stop=0,wrapper=#1,sep={; }
  }
  \g__enumext_foreach_default_keys_tl
```

Functions for handling unknown ⟨*keys*⟩.

```
\cs_new_protected:Npn \__enumext_parse_foreach_keys:nn #1#2
  {
    \tl_if_blank:nTF {#2}
      {
        \msg_error:nnn { enumext } { for-key-unknown } {#1}
      }
      {
        \msg_error:nnnn { enumext } { for-key-value-unknown } {#1} {#2}
      }
  }
\cs_new_protected:Npn \__enumext_parse_foreach_keys:n #1
  {
    \exp_args:NV \__enumext_parse_foreach_keys:nn \l_keys_key_str {#1}
  }
```

We create the command.

```
\NewDocumentCommand \foreachkeyans { +O{} m }
  {
    \__enumext_foreach_keyans:nn {#1} {#2}
  }
```

Finally the internal functions `\__enumext_foreach_keyans:nn` and `\__enumext_foreach_add_body:n` will loop through the prop list and print the contents.

```
\cs_new_protected:Npn \__enumext_foreach_keyans:nn #1 #2
  {
    \tl_use:N \g__enumext_foreach_default_keys_tl
    \keys_set:nn { enumext / foreach } {#1}
    \tl_set:Nn \l__enumext_foreach_name_prop_tl {#2}
    \prop_if_exist:cF { g__enumext_#2_prop }
      {
        \msg_error:nnn { enumext } { undefined-storage-anskey } {#2}
      }
    \int_compare:nNnT { \l__enumext_foreach_stop_int } = { 0 }
      {
        \int_set:Nn \l__enumext_foreach_stop_int
          { \prop_count:c { g__enumext_#2_prop } }
      }
    \seq_clear:N \l__enumext_foreach_print_seq
    \int_step_function:nnnN
      { \l__enumext_foreach_start_int }
      { \l__enumext_foreach_step_int }
      { \l__enumext_foreach_stop_int }
      \__enumext_foreach_add_body:n
      \seq_use:NV \l__enumext_foreach_print_seq \l__enumext_foreach_sep_tl
  }
\cs_new_protected:Npn \__enumext_foreach_add_body:n #1
  {
    \seq_put_right:Ne \l__enumext_foreach_print_seq
      {
        \exp_not:V \l__enumext_foreach_before_tl
        \__enumext_foreach_wrapper:n
          {
            \prop_item:cn { g__enumext_ \l__enumext_foreach_name_prop_tl _prop }{#1}
```

```
5442            }
5443          \exp_not:V \l__enumext_foreach_after_tl
5444        }
5445    }
```

(*End of definition for* `\foreachkeyans` *and others. This function is documented on page* ??.)
