

enumext

ENUMERATE EXERCISE SHEETS

V1.0 2024-06-16*

©2024 by Pablo González†

CTAN: <https://www.ctan.org/pkg/enumext>

 <https://github.com/pablgonz/enumext>

Abstract

This package provides “*enumerated list*” environments for creating “*simple exercise sheets*” along with “*multiple choice questions*”, storing the `\answers` to these in memory using `multicol` and `scontents` packages and the `l3seq` and `l3prop` modules.

Contents

5.6.1	The command <code>\miniright</code>	10			
5.6.2	The key <code>mini-right</code>	10			

Motivation and acknowledgments

Usually it is enough to use the classic `enumerate` environment to generate “*simple exercise sheets*” or “*multiple choice questions*”, the basic idea behind `enumext` is to cover three points:

1. To have a simple interface to be able to write “*lists of exercises*” with “*answers*”.
2. To have a simple interface for writing “*multiple choice questions*”.
3. To have a simple interface for placing “*columns*” and “*drawings*” or “*tables*”.

This package would not be possible without Phelype Oleinik who has collaborated and adapted a large part of the code and all \LaTeX team for their great work and to the different members of the `TeX-SX` community who have provided great answers and ideas. Here a note of the main ones:

1. Answer given by Alan Munn in `\topsep`, `\itemsep`, `\partopsep`, `\parsep` - what do they each mean (and what about the bottom)?
2. Answer given by Enrico Gregorio in `Understanding minipages` - aligning at top
3. Answer given by Ulrich Diez in `Different mechanics of hyperlink vs. hyperref`
4. Answer given by Enrico Gregorio in `Minipage and multicols`, vertical alignment

*This file describes a documentation for v1.0, last revised 2024-06-16.

License and Requirements

Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License (l^{pp}l), version 1.3 or later (<https://www.latex-project.org/l^{pp}l.txt>). The software has the status “maintained”.
The enumext package loads and requires multicol[3] and scontents[4] packages, need to have a modern T_EX distribution such as T_EX Live or MiK_TE_X. It has been tested with the standard classes provided by L^AT_EX: book, report, article and letter on 10pt, 11pt and 12pt.

1 Introduction

In the L^AT_EX world there are many useful packages and classes for creating “lists of exercises”, “worksheets” or “multiple choice questions”, classes like exam[1] and packages like xsim[2] do the job perfectly, but they don’t always fit the basic day to day needs.
In my work (and in the work of many teachers) it is common to use “simple exercise sheets” also known as “informal lists of exercises”, as an example:

1. Factor $x^2 - 2x + 1$

2. Factor $3x + 3y + 3z$

3. True False

(a) $\alpha > \delta$

(b) L^AT_EXze is cool?

4. Related to Linux
- (a) You use linux?

(b) Usually uses the package manager?

(c) Rate the following package and class

i. xsim-exam

ii. xsim

iii. exsheets

Sometimes we are also interested in showing the “answers” along with the questions:

1. Factor $x^2 - 2x + 1$

*

$(x - 1)^2$

2. Factor $3x + 3y + 3z$

*

$3(x + y + z)$

3. True False

(a) $\alpha > \delta$

*

False

(b) L^AT_EXze is cool?

*

Very True!

4. Related to Linux
- (a) You use linux?

*

Yes

(b) Usually uses the package manager?

*

Yes, dnf

(c) Rate the following package and class

i. xsim-exam

*

doesn’t exist for now :(

ii. xsim

*

very good

iii. exsheets

*

obsolete

Or we are interested in referring to a specific question and its “answer”, for example:
The answer to 3.(b) is “Very True!” and the answer to 4.(c).ii is “very good”.
Or we are interested in printing all the “answers”:

1. $(x - 1)^2$

* (b) Yes, dnf

2. $3(x + y + z)$

* (c) i. doesn’t exist for now :(

3. (a) False

* ii. very good

(b) Very True!

* iii. obsolete

4. (a) Yes

*

Another very common thing to use in my work is “multiple choice questions”, for example:

1. First type of questions

A) value

C) value

B) correct

D) value

2. Second type of questions

I. $2\alpha + 2\delta = 90^\circ$

II. $\alpha = \delta$

III. $\angle EDF = 45^\circ$

A) I only

D) I and III only

B) II only

E) I, II, and III

C) I and II only

★ 3. Third type of questions

(1) $2\alpha + 2\delta = 90^\circ$

(2) $\angle EDF = 45^\circ$

A) value

D) value

B) value

E) value

C) value
4. Question with image and label below:

A

A)

B

B)

A

C)

A

D)

E)

5. Question with image on left side:

A) value

B) value

C) value

D) correct

E) value

B

Where what we are interested in the <label> and a “short note” that we leave as an explanation, and then print them:

1. B), $x = 5$

2. D)

3. C), some note
- * 4. E), A duck

* 5. D), “other note”

*

These “*simple worksheets*” or “*multiple choice questions*” appear to be easy to obtain using a combination of the `enumerate`, `minipage` and `multicols` environments, but like many things, what “*looks simple*” is not so simple.

The `enumext` package was created and designed to meet these small requirements in the creation of “*simple worksheets*” and “*multiple choice questions*”.

1.1 Description and usage

The `enumext` package defines enumerated environments using the `list` environment provided by \LaTeX , but “*does not redefine*” any internal commands associated with it such as `\list`, `\endlist` or `\item` outside of the “*scope*” in which they are defined.

- This package is NOT intend to replace the `enumerate` environment nor replace the powerful `enumitem`[6], the approach is intended to work without hindering either of them.
- This package can be used with `xelatex`, `lualatex`, `pdflatex` and the classical `latex>dvips>ps2pdf` and is present in \TeX Live and \MiKTeX , use the package manager to install. For manual installation, download `enumext.zip` and unzip it, run `lualatex enumext.dtx` and move all files to appropriate locations, then run `mktexlsr`. To produce the documentation run `lualatex enumext.dtx` two times.

```
enumext.sty  >> TDS:tex/latex/enumext/
enumext.pdf  >> TDS:doc/latex/enumext/
README.md   >> TDS:doc/latex/enumext/
enumext.dtx  >> TDS:source/latex/enumext/
```

The package is loaded in the usual way:

```
\usepackage{enumext}
```

1.2 The concept of left margin

There is a direct relationship between the parameters `\leftmargin`, `\itemindent`, `\labelwidth` and `\labelsep` plus an “*extra space*” that makes it difficult to obtain the desired *horizontal spaces* in a `list` environment.

Usually we don’t want the `list` to go beyond the left margin of the page, but since these four values are related, that causes a problem. The `enumitem`[6] package adds the `\labelindent` parameter to solve some of these problems. A simplified representation of this in the figure 1.

Figure 1: Representation of horizontal lengths in `enumitem`.

The `enumext` package does NOT provide a user interface to set the values for `\leftmargin` and `\itemindent`, instead it provides the keys `list-offset` and `list-indent` which internally set the values for `\leftmargin` and `\itemindent`. The concepts of `\leftmargin` and `\itemindent` are different in `enumext`. The figure 2 shows the visual representation of idea.

Figure 2: Representation of horizontal lengths concept in `enumext`.

In this way we reduce a *little* the amount of parameters we have to pass. With the default values of keys `list-offset`, `list-indent`, `labelwidth` and `labelsep` the lists will have the (usually) expected output for “*simple worksheets*”. The figure 3 shows the visual representation.

Figure 3: Default horizontal lengths `list-offset=0pt`, `list-indent=\labelwidth+\labelsep` in `enumext`.

1.3 User interface

The user interface consists of two main list environments `enumext` (vertical) and `enumext*` (horizontal), the environment `anskey*` and the command `\anskey` to “store content” and the environments `keyans`, `keyans*` and `keyanspic` for multiple choice. It also provides the commands `\getkeyans` to print individual *stored content*, `\printkeyans` to print all *stored content*, `\miniright` for `minipage` and `\setenumext` to config all `[key = val]` options.

1.3.1 Internal counters

The package `enumext` uses internally the `enumXi`, `enumXii`, `enumXiii`, `enumXiv` counters for the four nesting levels of the `enumext` environment, the `enumXv` counter for the `keyans` environment, the `enumXvi` counter for the `keyanspic` environment, the counter `enumXvii` for `enumext*` environment and the counter `enumXviii` for `keyans*` environment.

- If any package defines these counters or they are user-defined in the document, the package will return a fatal error and abort the load.

1.3.2 Public dimension

The package `enumext` only provides a single public dimension `\itemwidth` and is intended for user convenience only and is not for internal use as such. The dimension `\itemwidth` is *rigid length* and contains the “width of the content” of each `\item` regardless of `labelwidth` and `labelsep`.

- If any package defines `\itemwidth` or they are user-defined `\itemwidth` in the document, the package will overwrite it without warning.

1.3.3 Support for multicol

The package provides direct support for using the `multicol[3]` package. This allows to obtain directly a two-column output as shown in the figure 4.

Figure 4: Representation of the two column output for a nested level in `enumext` environment.

The “non starred” version of the `multicols` environment is always used together with the `\raggedcolumns` command and is controlled by `columns` and `columns-sep` keys. It can be used in all nesting levels of the environment `enumext` and the environment `keyans` and can together with the `mini-env` key. If you need to force a start a new column `\columnbreak` must be used (see §5.5).

- The `\columnseprule` command is not available as a key and is set to “zero” for the inner levels and the `keyans` environment. If the value of this is set inside the document, it will affect “all environments” that use the `columns` key.

1.3.4 Support for minipage

The package provides direct support for `minipage` environment, this allows you to obtain an output like the one shown in figure 5.

Figure 5: Representation of the `mini-env` output for a nested level `enumext` environment.

The `minipage` environments on “left side” and “right side” is always used with “aligned on top” `[t]`. It can be used in all nesting levels of the environment `enumext` and the environment `keyans` and is controlled by `mini-env` and `mini-sep` keys. In order to switch from the “left” side `minipage` environment to the “right” side one must use the command `\miniright` (see §5.6).

1.3.5 The \label and \ref system

This package provides a user interface like the `enumitem[6]` package to customize the references which is activated by the `ref` key (§5.1), the standard \LaTeX `\label` and `\ref` commands work as usual. It also provides an “internal reference” system for the “stored content” by means of the key `save-ref` (§6.1.1) when the key `save-ans` (§6.1) is active.

- The implementation of `\label` and `\ref` together with the `save-ref` key are compatible with the `hyperref[8]` package.

1.3.6 Support for \footnote

This package provides an internal implementation for the `\footnote` command which is compatible with the `hyperref` package for the `enumext*` and `keyans*` environments, but will not produce the expected links, and if the `mini-env` key is used in `enumext` or `keyans` environments the output will look like the classic way they are displayed in the environment `minipage`.
The best way to solve this is to use Jean-François Burnol `footnotehyper`[9] package, it will support keeping the links if `hyperref` is loaded with the `hyperfootnotes=true` option (default) and will show the output numbered at the bottom of the page (as opposed to how it is displayed in the `minipage` environment). The way to load it is as follows:

```
\usepackage{footnotehyper}
\makesavenoteenv{enumext}
\makesavenoteenv{enumext*}
```

2 The environments provided

The package `enumext` provides two main list environments, the *vertical* environment `enumext` and the *horizontal* environment `enumext*`.

<code>enumext</code>	<code>\begin{enumext}[\langle keyval list \rangle]</code>	<code>\begin{enumext*}[\langle keyval list \rangle]</code>
<code>enumext*</code>	<code>\item \langle item content \rangle</code>	<code>\item \langle item content \rangle</code>
	<code>\item [\langle custom \rangle] \langle item content \rangle</code>	<code>\item [\langle custom \rangle] \langle item content \rangle</code>
	<code>\item* [\langle symbol \rangle] [\langle offset \rangle] \langle item content \rangle</code>	<code>\item* [\langle symbol \rangle] [\langle offset \rangle] \langle item content \rangle</code>
	<code>\end{enumext}</code>	<code>\end{enumext*}</code>

2.1 The environment enumext

The `enumext` is an environment that works in the same way as the standard `enumerate` environment provided by L^AT_EX, `\item` and `\item[\langle custom \rangle]` commands work in the usual way. The environment can be nested with at most “four levels” and the options can be configured globally using `\setenumext` command and locally using `[\langle key = val \rangle]` in the environment.

Example with columns=2

1. This text is in the first level.
- A. This text is in the fourth level.
- (a) This text is in the second level.
- X This text is in the first level.
- i. This text is in the third level.
- ★ 2. This text is in the first level.

2.2 The environment enumext*

The `enumext*` is a *horizontal list environment* similar to the `enumerate*` environment provided by the `enumitem` package or `task` environment provided by the `task` package, `\item` and `\item[\langle custom \rangle]` work as usual. The options can be configured globally using `\setenumext` command and locally using `[\langle key = val \rangle]` in the environment.

Some considerations to take into account for this environment:

- The environment cannot be nested within itself or in the environment `keyans*`, but it can be nested within `enumext` and vice versa.
- Each “item” in the environment is placed within a `minipage` environment whose *width* is stored in the dimension `\itemwidth` that NOT includes `labelwidth`, `labelsep`, only the *width of the content*.
- You cannot have floating environments like `figure` or `table` but `\footnote` with `hyperref` support is supported if the `footnotehyper` package is loaded.

Example with columns=2

1. This text is in the first level.
2. This text is in the first level.
- X This text is in the first level.
- ★ 3. This text is in the first level.

2.3 The command \item*

```
\item* \item*
\item* [\langle symbol \rangle]
\item* [\langle symbol \rangle] [\langle offset \rangle]
```

The `\item*`, `\item*[\langle symbol \rangle]` and `\item*[\langle symbol \rangle][\langle offset \rangle]` works like the numbered `\item`, but placing a `\langle symbol \rangle` to the “left” of the `\langle label \rangle` separated from it by the `\langle offset \rangle` set by the the second optional argument. The default values for `\langle symbol \rangle` and `\langle offset \rangle` are `\star ‘★’` and the value set by `labelsep` key.

The *starred argument* “*” cannot be separated by spaces ‘ ’ from the command, i.e. `\item*` and the first optional argument does “not support” verbatim content. Can be configure with the keys `item-sym*` and `item-pos*` locally in the environment or globally using `\setenumext` command (§3).

• The behavior of `\item*` in the `enumext` and `enumext*` environments is NOT the same as in the `keyans` and `keyans*` environments.

2.3.1 Keys for `\item*`

`item-sym*` = { $\langle symbol \rangle$ } default: $\$ \backslash stars$
Sets the *symbol* to be displayed in the “left” of the box containing the current $\langle label \rangle$ set by `labelwidth` key for `\item*` in `enumext` and `enumext*`. The *symbol* can be in text or math mode, for example `item-sym*={ $\$ \backslash ast$ $\$$ }`.

`item-pos*` = { $\langle rigid length \rangle$ } default: *by levels*
Sets the *offset* between the box containing the current $\langle label \rangle$ defined by `labelwidth` key and the $\langle symbol \rangle$ set by `item-sym*` key. The default values are set by `labelsep` key at each level. If positive values are passed it will *offset to the left* and if negative values are passed it will *offset to the right*.

2.4 The command `\item` in `enumext*`

The `\item` command for the `enumext*` environment provides an optional “first argument” `\item($\langle columns \rangle$)` which “joins items” between columns. Let’s consider the following examples adapted directly from the `task` package:

```
\begin{enumext*}[widest=10,columns=4]
  \item The first
  \item* The second
  \item The third
  \item The fourth
  \item(3)* The fifth item is way too long for this and needs three columns
  \item The sixth
  \item The seventh
  \item(2)[X] The eighth item is way too long for this and needs two columns
    (\the\itemwidth)
  \item The ninth
  \item[Z] The tenth (\the\itemwidth)
\end{enumext*}
```

1. The first
- ★ 2. The second
3. The third
4. The fourth
- ★ 5. The fifth item is way too long for this and needs three columns
6. The sixth
7. The seventh
- X 8. The eighth item is way too long for this and needs two columns (187.14374pt)
8. The ninth
- Z 9. The tenth (84.76483pt)

3 The command `\setenumext`

<code>\setenumext</code>	<code>\setenumext{$\langle key = val \rangle$}</code>	<code>\setenumext[$\langle keyans* \rangle$]{$\langle key = val \rangle$}</code>
	<code>\setenumext[$\langle enumext, level \rangle$]{$\langle key = val \rangle$}</code>	<code>\setenumext[$\langle print, level \rangle$]{$\langle key = val \rangle$}</code>
	<code>\setenumext[$\langle enumext* \rangle$]{$\langle key = val \rangle$}</code>	<code>\setenumext[$\langle print, * \rangle$]{$\langle key = val \rangle$}</code>
	<code>\setenumext[$\langle keyans \rangle$]{$\langle key = val \rangle$}</code>	<code>\setenumext[$\langle print* \rangle$]{$\langle key = val \rangle$}</code>

The command `\setenumext` sets the $\langle keys \rangle$ on a global basis for environments `enumext`, `enumext*`, `keyans`, `keyans*` and the `\printkeyans` command. It can be used both in the preamble and in the body of the document as many times as desired.

The $\langle keys \rangle$ set in the optional arguments of environments and commands have the *highest precedence*, overriding both options passed by `\setenumext`. If the optional argument is not passed, the first level of the environment `enumext` will be taken by default.

• The key `save-ans` that activate the “storage system” must NOT be passed through this command and must be passed directly in the optional argument of the “first level” of the environment in which they are executed.

4 The command `\setenumextmeta`

<code>\setenumextmeta</code>	<code>\setenumextmeta {$\langle key name \rangle$}{$\langle key-one = val, key-two = val, ... \rangle$}</code>
	<code>\setenumextmeta*{$\langle key name \rangle$}{$\langle key-one = val, key-two = val, ... \rangle$}</code>
	<code>\setenumextmeta [$\langle enumext* \rangle$]{$\langle key name \rangle$}{$\langle key-one = val, key-two = val, ... \rangle$}</code>
	<code>\setenumextmeta [$\langle enumext, level \rangle$]{$\langle key name \rangle$}{$\langle key-one = val, key-two = val, ... \rangle$}</code>

The command `\setenumextmeta` adds a new “meta-key” for the environments `enumext` and `enumext*`, the $\{ \langle key name \rangle \}$ must be different from those defined by the package. If the optional argument is not passed, the new “meta-key” will be created for the first level of the environment `enumext`.

The starred version `*` will create the new “meta-key” for the environment `enumext*` and for all levels of the environment `enumext`.

5 The keyval system

The $\langle key = val \rangle$ system used by the `enumext` package is implemented using `l3keys` so it must be taken into consideration that those keys marked as “*value forbidden*”, that is $\langle key \rangle$ is different from $\langle key = \rangle$.

All $\langle keys \rangle$ described in this section are available for the `enumext`, `enumext*`, `keyans` and `keyans*` environments with the exception of the keys `series`, `resume`, `resume*` which are only available for the “*first level*” of the environments `enumext` and `enumext*`; and the keys `mini-right`, `mini-right*` which are only available for the `enumext*` and `keyans*` environments.

All $\langle keys \rangle$ related to vertical or horizontal spacing accept a “*skip*” or “*dim*” expression if passed between braces, i.e. you do not need to use `\dimeval` or `\dimexpr` to perform calculations.

It should be kept in mind that using any $\langle key \rangle$ that sets a *rubber lengths* or *rigid lengths* for vertical or horizontal space on a level will influence the vertical and horizontal space for *inners levels* and `keyans`, `keyans*` and `keyanspic` environments.

5.1 Keys for label and ref

`label = { $\langle \backslash\alpha^* | \backslash\Alpha^* | \backslash\arabic^* | \backslash\roman^* | \backslash\Roman^* \rangle$ }` default: *by levels*

Sets the $\langle label \rangle$ that will be printed at the *current level*. The default value for the first level of the environments `enumext` and `enumext*` are `\arabic*`, for second level are `(\alph*)`, for third level are `\roman*`, and for fourth level are `\Alpha*`. For `keyans` and `keyans*` environments the default value is `\Alpha*`.

- This key is intended to give the basic structure with which the $\langle label \rangle$ will be displayed, and the form in which it is used by standard “*label and ref*” and the “*internal reference*” system with the `save-ref` key. You cannot use commands with $\langle label \rangle$ as an argument, for example `\emph{\langle\alph*\rangle}` will return an error. For full customization of how $\langle label \rangle$ is displayed use the `font` or `wrap-label` keys.

`ref = { $\langle code \langle \backslash\alpha^* | \backslash\Alpha^* | \backslash\arabic^* | \backslash\roman^* | \backslash\Roman^* \rangle$ more code \rangle }` default: *empty*

Modifies the way *cross references* are displayed. The `label` key sets the default form of the *cross references*, by using this key you can define a different format, for example: `ref=\emph{\langle\alph*\rangle}` is valid.

Internally it renews the command associated with each counter when it is executed, i.e., in the environment `enumext` the command `\theenumxi` is modified when the key is executed at the first level, `\theenumxii` when it is executed at the second level and `\theenumxiii` together with `\theenumxiv` when it is executed at the third and fourth levels.

- This must be kept in mind, since the values set by the `label` and `ref` keys are not cumulative by levels, so if you have used the `ref` key in the first level and then want to associate the counter with `label` or `ref` in the second level you must use the direct commands, i.e. `\arabic{eunumxi}` to indicate the count of the first level instead of using `\theenumxi`.

`labelsep = { $\langle rigid length \rangle$ }` default: `0.3333em`

Sets the *horizontal space* between the box containing the current $\langle label \rangle$ defined by `label` key and the text of an item on the first line. Internally sets the value of `\labelsep` for the current level.

`labelwidth = { $\langle rigid length \rangle$ }` default: *by label*

Sets the *width* of the box containing the current $\langle label \rangle$ set by `label` key. Internally sets the value of `\labelwidth` for the current level. The default values are calculated by means of the *width* of a box by setting a *value* to the current counter using ‘0’ for `\arabic*`, ‘M’ for `\Alpha*`, ‘m’ for `\alph*`, ‘VIII’ for `\Roman*` and ‘viii’ for `\roman*`.

`widest = { $\langle integer | string \rangle$ }` default: *empty*

Sets the `labelwidth` key pass the $\langle integer \rangle$ or converting the $\langle string \rangle$ of the form `\Alpha`, `\alph`, `\Roman` or `\roman` to a *value* for the current counter defined by `label` key, then calculating the *width* by means of a box. For example `widest={XXIII}` or `widest={23}` are equivalent. This key is useful when the default values of the `labelwidth` key are smaller than those actually used.

`font = { $\langle font commands \rangle$ }` default: *empty*

Sets the *font style* for the current $\langle label \rangle$ defined by `label` key. For example `font={\bfseries\small}`.

`align = { $\langle left | right | center \rangle$ }` default: *left*

Sets the *aligned* of $\langle label \rangle$ defined by `label` key on the current level in the label box.

`wrap-label = { $\langle code \{ \#1 \}$ more code \rangle }` default: *empty*

Wraps the *current* $\langle label \rangle$ defined by `label` key referenced by $\{ \#1 \}$. The $\{ \langle code \rangle \}$ must be passed between braces. This key does not modify the value set by the `labelwidth` key and is applied only on `\item` and `\item*`. When using it in the `\setenumext` command it is necessary to use the *double hash* ‘ $\{ \# \#1 \}$ ’. For example `wrap-label={\fbox{\#1}}` or you can create a command:

```
\NewDocumentCommand \labelbx { s +m }
{%
  \IfBooleanTF{\#1}
  {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{\#2}}}}%
  {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{\#2}}}}%
}
```

and then pass it through the key `wrap-label={\labelbx{#1}}` or `wrap-label={\labelbx*{#1}}`.

`wrap-label* = {\code{#1} more code}`

default: *empty*

The same as the `wrap-label` key but also applies on `\item[⟨custom⟩]`.

5.2 Keys for spaces

`show-length = {\true | false}`

default: *false*

Displays on the terminal the values for *all list parameters* at the current level. For *vertical spaces* show the values of `\topsep`, `\itemsep`, `\parsep` and `\partopsep`. For *horizontal spaces* show the values of `\labelwidth`, `\labelsep`, `\itemindent`, `\listparindent` and `\leftmargin`.

5.2.1 Vertical spaces

`topsep = {\rubber length | rigid length}`

default: *by levels*

Set the *vertical space* added to both the top and bottom of the list. Internally sets the value of `\topsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are 8.0pt plus 2.0pt minus 4.0pt, for second level are 4.0pt plus 2.0pt minus 1.0pt, for third and fourth level are 2.0pt plus 1.0pt minus 1.0pt. For `keyans` and `keyans*` environments the default value is 4.0pt plus 2.0pt minus 1.0pt.

`parsep = {\rubber length | rigid length}`

default: *by levels*

Set the *vertical space* between paragraphs within an item. Internally sets the value of `\parsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are 4.0pt plus 2.0pt minus 1.0pt, for second level are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 0pt. For `keyans` and `keyans*` environments the default value is 2.0pt plus 1.0pt minus 1.0pt.

`partopsep = {\rubber length | rigid length}`

default: *by levels*

Set the *vertical space* added, beyond `topsep`, to the “top” and “bottom” of the entire environment if the environment instance is preceded by a “blank line” or `\par` command. Internally sets the value of `\partopsep` for the current level. The default values for first and second level in environment `enumext` are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 1.0pt minus 1.0pt. For the `keyans` environment the default value is 2.0pt plus 1.0pt minus 1.0pt, and for the `keyans*` and `enumext*` environments it is available but *without* effect.

- The value of this parameter also affects the *inner levels* and the environments `keyans`, `keyanspic` and `keyans*`. Caution should be taken with “blank lines” or `\par` command “before” each environment or nested level when formatting the source code of document. TeX will enter *⟨vertical mode⟩* and apply this value to the “top” and “bottom” the environment or nested level.

`itemsep = {\rubber length | rigid length}`

default: *by levels*

Set the *vertical space* between items, beyond the `parsep`. Internally sets the value of `\itemsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are 4.0pt plus 2.0pt minus 1.0pt, for the rest of the levels are 2.0pt plus 1.0pt minus 1.0pt. For `keyans` and `keyans*` environments the default value is 4.0pt plus 2.0pt minus 1.0pt.

`noitemsep` *⟨value forbidden⟩*

default: *not used*

This is a “meta-key” that does not receive an argument. Set `itemsep` and `parsep` equal to 0pt the entire level of environment.

`nosep` *⟨value forbidden⟩*

default: *not used*

This is a “meta-key” that does not receive an argument. Sets all keys for vertical spacing equal to 0pt the entire level of environment.

`base-fix` *⟨value forbidden⟩*

default: *not used*

This is a “meta-key” that does not receive an argument available only for the *first level* of environment `enumext` and environment `enumext*`. Fix the *baseline* when an environment `enumext` is nested in `enumext*` or vice versa and there is no material between the `\item` and the start of the environment for example `\item \begin{enumext*}` within the environment `enumext`. Internally sets the keys `topsep`, `above` and `above*` at 0pt.

- The following *⟨keys⟩* should be used with “caution”, they are intended to be used at the “top” and “bottom” of the environment when the `columns` or `mini-env` keys do not provide adequate *vertical spaces*. The values passed can be *rubber* or *rigid* lengths, the way they are applied is the way you differ, using the star ‘*’ *⟨keys⟩* applies `\vspace*` so that TeX does *not discard* this space at page break.

`above = {\rubber length | rigid length}`

default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the top of the entire level of environment. This key is intended to give a “fine adjustment” of the vertical space on the “above” the environment without hindering the value of the `topsep` key. The space is added with `\vspace` so is “discardable”.

`above* = {\rubber length | rigid length}`

default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the top of the entire level of environment. This key is intended to give a “fine adjustment” of the vertical space on the “above” the environment without hindering the value of the `topsep` key. The space is added with `\vspace*` so is “not discardable”.

`below = {⟨rubber length | rigid length⟩}` default: *not used*

Set the *extra vertical space* space added, beyond `topsep`, to the bottom of the entire level of environment. This key is intended to give a “*fine adjustment*” of the vertical space on the “*below*” the environment without hindering the value of the `topsep` key. The space is added with `\vspace` so is “*discardable*”.

`below* = {⟨rubber length | rigid length⟩}` default: *not used*

Set the *extra vertical space* space added, beyond `topsep`, to the bottom of the entire level of environment. This key is intended to give a “*fine adjustment*” of the vertical space on the “*below*” the environment without hindering the value of the `topsep` key. The space is added with `\vspace*` so is “*not discardable*”.

5.2.2 Horizontal spaces

`itemindent = {⟨rigid length⟩}` default: *0pt*

Extra *horizontal indentation*, beyond `labelsep`, of the “*first line*” off each item. This value is applied internally using `\hspace` and does not modify the value of `\itemindent`.

`rightmargin = {⟨rigid length⟩}` default: *0pt*

Set the *horizontal space* between the right margin of the environment and the right margin of the enclosing environment, the value it takes must be greater than or equal to *0pt*. Internally sets the value of `\rightmargin` for the current level.

`listparindent = {⟨rigid length⟩}` default: *0pt*

Sets the *horizontal space* indentation, beyond `list-indent`, for second and subsequent paragraphs within a list item. Internally sets the value of `\listparindent` for the current level.

`list-offset = {⟨rigid length⟩}` default: *0pt*

Sets the *horizontal translation* of the entire environment level from the left edge of the box defined by the `labelwidth` key. Internally sets the values of `\leftmargin` and `\itemindent` for the current level.

`list-indent = {⟨rigid length⟩}` default: *labelwidth + labelsep*

Sets the *indentation* of the whole environment under the box defined by `labelwidth` and `labelsep` keys. Internally sets the value of `\leftmargin` and `\itemindent` for the current level.

If `list-indent=0pt` is set in the environment `enumext` the `⟨label⟩` will be part of the text, separated by the value of the `labelsep` key and the *first word*, in simple terms it will look like a “*common paragraph*”. This setting is equivalent (more or less) to the `wide` key provided by the `enumitem` package.

🔗 For the `enumext*` and `keyans*` environments the keys `list-indent` and `list-offset` have the same effect.

5.3 Keys for add code

🔗 The following `⟨keys⟩` should be used with “*caution*”, they are intended to inject `{⟨code⟩}` into different parts of the defined environments. We must keep in mind that the defined environments are based on the `list` base environment provided by `TeX` which is defined (simplified) as plain form `\list{⟨arg one⟩}{⟨arg two⟩}`. Using the `before*` key does not allow access to the `list` parameters defined by `[⟨key = val⟩]`.

`before = {⟨code⟩}` default: *not used*

Execute `{⟨code⟩}` “*before*” the environment starts. The `{⟨code⟩}` must be passed between braces, is executed “*after*” performing all calculations related to the *list parameters* in the environment and the parameters sets by `[⟨key = val⟩]` that is, in the second argument of the list after setting all the parameters `\begin{list}{⟨arg one⟩}{⟨arg two⟩}{⟨code⟩}`.

`before* = {⟨code⟩}` default: *not used*

Execute `{⟨code⟩}` “*before*” the environment starts. The `{⟨code⟩}` must be passed between braces, is executed “*before*” performing all calculations related to the *list parameters* and `[⟨key = val⟩]` sets in the environment that is, before the arguments defining the environment are executed: `{⟨code⟩}\begin{list}{⟨arg one⟩}{⟨arg two⟩}`.

`first = {⟨code⟩}` default: *not used*

Executes `{⟨code⟩}` when “*starting*” the environment. The `{⟨code⟩}` must be passed between braces, is executed right “*after*” all *list parameters* are done, after the second argument of list, just before the first occurrence of `\item`: `\begin{list}{⟨arg one⟩}{⟨arg two⟩}{⟨code⟩}\item`.

🔗 Keep in mind that the code set in this key will affect the entire “*body*” of the environment and therefore the inner levels of the list and the `keyans` environment. It is recommended to set this key per level.

`after = {⟨code⟩}` default: *not used*

Execute `{⟨code⟩}` “*after*” finishing the environment. The `{⟨code⟩}` must be passed between braces.

5.4 Keys for start, series and resume

`start = {⟨integer | string⟩}` default: 1
 Sets the *start value* of the numbering on the current level. Internally ⟨string⟩ is converted and passed as value to the counter defined by `label` key on the current level, i.e. it is equivalent to enter `start=5`, `start=E` or `start=v`.

`start* = {⟨integer expression⟩}` default: not used
 Sets the *start value* of the numbering on the current level. The {⟨integer expression⟩} must be passed between braces, internally is evaluated and pass to the counter defined by `label` key on the current level, i.e. it is equivalent to enter `start={\dimeval{100*\value{chapter}}` or `start={100*\value{chapter}}`.

• The following ⟨keys⟩ are “only” available for the `enumext*` environment and the “first level” of the `enumext` environment and are ignored if set when nested within each other.

`series = {⟨series name⟩}` default: not used
 Stores the *keys* of the optional argument of the “first level” of the environment in which it is executed in {⟨series name⟩} which is used as an argument in the key `resume`. The ⟨keys⟩ stored in {⟨series name⟩} are not cumulative and are overwritten if the same {⟨series name⟩} is used again.

`resume = {⟨series name⟩}` default: not used
 Sets the *start value* and *options* for the “first level” continuing the numbering of the environment in which the `series={⟨series name⟩}` key was executed. If passed *without value* this will only set *start value* continue the numbering from the last environment in which `series={⟨series name⟩}` or `resume={⟨series name⟩}` is not present and if the `save-ans` key is active it will continue the numbering from the last environment in which it was executed. The *start value* can be overwritten using `start` or `start*` keys.

`resume* ⟨value forbidden⟩` default: not used
 Sets the *start value* and *options* for the “first level” continuing the numbering of the environment in which the `series={⟨series name⟩}` or `resume={⟨series name⟩}` keys are NOT present, if the `save-ans` key is active it will continue the numbering from the last environment in which it was executed. The *start value* can be overwritten using `start` or `start*` keys.

• For security reasons the `series` key will never save in {⟨series name⟩} the keys `series`, `resume`, `resume*`, `save-ans`, `save-key`, `start*` and `start`. When using the key `resume={⟨series name⟩}` it will have hierarchy in the ⟨keys⟩ that are saved in {⟨series name⟩}, in order to establish the value of a ⟨key⟩ already saved in {⟨series name⟩} it must be placed to the “right” of `resume={⟨series name⟩}`, the same thing happens with the `resume*` key, the exception is the `save-ans` key that must be placed on the “left” if you want to start the numbering with its value. The `resume` key passed “without value” must be exactly “without value”, i.e. `resume=` cannot be used and if executed before `resume*` it will affect the *start value*.

5.5 Keys for multicol

`columns = {⟨integer⟩}` default: 1
 Set the *number of columns* to be used by the `multicol` environment within the environment. The value must be a positive integer less than or equal to 10.

`columns-sep = {⟨rigid length⟩}` default: by level
 Set the *space between columns* used by the `multicol` environment within the environment. Internally sets the value of `\columnsep`, by default its value is equal to the sum of the values set in the keys `labelwidth` and `labelsep` of the current level.

• The `\footnote{⟨text⟩}` command in the nested levels of `multicol` will not work as expected, prefer the use of `\footnotemark[⟨number⟩]` inside the environment and `\footnotetext[⟨number⟩]{⟨text⟩}` outside the environment or via the `after` key.

5.6 Keys for minipage

`mini-env = {⟨rigid length⟩}` default: not used
 Sets the *width* of the `minipage` environment on the “right side”. This value added to the value set by the `mini-sep` key to determines the *width* of the `minipage` environment on the “left side”, taking `\linewidth` as the maximum reference value.

`mini-sep = {⟨rigid length⟩}` default: 0.3333em
 Sets the *space between* the `minipage` environment on the “left side” and the `minipage` environment on the “right side”. This separation is applied together with `\hfill`.

5.6.1 The command \miniright

```
\miniright \begin{enumext}[mini-env=⟨rigid length⟩] ⟨item's before⟩ \item \miniright ⟨content⟩ \end{enumext}
\begin{enumext}[mini-env=⟨rigid length⟩] ⟨item's before⟩ \item \miniright*⟨content⟩ \end{enumext}
```

The `\miniright` command close the `minipage` environment on the “left side” and opens the `minipage` environment on the “right side” by starting it with the `\centering` command. It must be placed “after” the last `\item` of the current environment and “before” starting the material to be placed on the “right side”. The starred argument “*” inhibits the use of `\centering` command i.e. the usual L^AT_EX justification is maintained in the `minipage` on the “right side”.

- The `\footnote{⟨text⟩}` command in `minipage` environment will work as usual. If you prefer the footnotes to be numbered (not lowercase) and outside the environment, use `\footnotemark[⟨number⟩]` inside the environment and `\footnotetext[⟨number⟩]{⟨text⟩}` outside the environment or via the `after` key (see §1.3.6 for full support).

5.6.2 The key mini-right

In the horizontal list environments `enumext*` and `keyans*` it is not possible to use the `\mini-right` command and the `mini-right` key must be used instead.

`mini-right = {⟨content⟩}` default: not used

Set the *content* for the drawing or tabular to be placed in the `minipage` environment on the “right side” by starting it with `\centering`. The `{⟨content⟩}` must be passed between braces.

`mini-right* = {⟨content⟩}` default: not used

Same as above, but *without* starting with `\centering`.

- The keys `mini-right` and `mini-right*` has a *slightly different* implementation, the argument `{⟨content⟩}` is saved in a box and then printed outside the environment using *hooks*.

6 The storage system

The entire mechanism for “storing content” it is activated according to `save-ans` key on the “first level” of `enumext` or `enumext*` environments and it is ignored if they are established when they are nested inside each other. Only when this `⟨key⟩` is “active” the `\anskey` command and the environments `anskey*`, `keyans`, `keyans*` and `keyanspic` are available.

<pre>\begin{enumext}[save-ans={⟨store name⟩}] \item Text \anskey{answer} \item Text \begin{keyans} ... \end{keyans} \end{enumext}</pre>	<pre>\begin{enumext}[save-ans={⟨store name⟩}] \item Text \anskey{answer} \item Text \begin{keyanspic} ... \end{keyanspic} \end{enumext}</pre>
---	---

By executing the key `save-ans={⟨store name⟩}` the entire structure of the environment (excluding the first level) including the optional arguments passed to the inner levels or the environment nested in it, along with the content passed to `\anskey`, the current `⟨labels⟩` for `\item*` and `\anspic*` in the environments `keyans`, `keyans*` and `keyanspic` will be stored in a `⟨sequence⟩` and at the same time will be stored (without the environment structure or optional arguments) in a `⟨prop list⟩`.

The optional arguments of the inner levels or the nested environment are filtered by excluding all `⟨keys⟩` related to the “stored system” along with the keys `series`, `resume` and `resume*` when storing in `⟨sequence⟩`.

6.1 Keys for storage system

- The only `⟨keys⟩` available for all levels of the `enumext` environment and the `enumext*` environment are `no-store` and `save-key`, the rest of the `⟨keys⟩` described in this section must be passed directly in the optional argument of the “first level” of the environment in which the key `save-ans` is executed. The key `save-ans` should NOT be passed with the command `\setenumext`.

`save-ans = {⟨store name⟩}` default: not set

Sets the *name* of the `⟨sequence⟩` and `⟨prop list⟩` in which the contents will be “stored” by `\anskey` and `anskey*` in `enumext` and `enumext*` environments, `\item*` in `keyans` and `keyans*` environments and `\anspic*` in `keyanspic` environment. If the `⟨sequence⟩` or `⟨prop list⟩` does not exist, it will be created globally and will not be overwritten if the key is used again.

`save-key = {⟨key list⟩}` default: not set

This key *overrides* the default “stored keys” of the optional arguments of the inner levels or nested environment that will be passed to the `⟨sequence⟩`. The `⟨key list⟩` passed to this key ignores any `⟨keys⟩` in the “stored system” and must be passed between braces. For example, if we execute at a second level:

```
\begin{enumext}[save-ans={⟨store name⟩}]
  \item Text \anskey{answer}
  \item Text
    \begin{enumext}[nosep, columns=2, save-key={columns=3}]
      ...
    \end{enumext}
\end{enumext}
```

The `⟨keys⟩` that will be stored by default in the `⟨sequence⟩` would be `nosep`, `columns=2`, but using the key `save-key={columns=3}` will overwrite this and store it in the `⟨sequence⟩` only the key `columns=3` ignoring all the others.

`save-sep = {⟨text symbol⟩}` default: {, }

Sets the *text symbol* that will separate the current `⟨label⟩` to the *optional argument* passed to the `\item*` and `\anspic*` in the `keyans`, `keyans*` and `keyanspic` environments and storing them in the `⟨store name⟩` defined by the `save-ans` key. The `{⟨text symbol⟩}` must always be passed between braces, whitespace ‘ ’

is preserved within the braces and only affects the “*stored content*” and not what is displayed when using the `show-ans` or `show-pos` keys.

6.1.1 Keys for `label` and `ref`

`save-ref` = { `<true | false>` } default: *false*
 Activates the “*internal label and ref*” mechanism for referencing “*stored content*” in `<store name>` set by `save-ans` key. To reference the location of the “*stored content*” within the environment you must use `\ref{<store name>: position}`, where `<position>` corresponds to the position occupied by the “*stored content*” in the `<store name>` returned by the `show-pos` key. For example `\ref{test:4}` will return 3. (b) which corresponds to the location of the “*stored content*” at position 4 within the environment in which the key `save-ans=test` was set.

`mark-ref` = { `<symbol>` } default: *\textasteriskcentered*
 Sets the *symbol* that will be displayed by the `\printkeyans` command only if the `hyperref` package is detected and the `save-ref` key are active. This “*symbol*” is used as a “*link*” between the environment in which the `save-ans` key was used and the place where the command is executed.

6.1.2 Keys for `wrap` and `display`

`wrap-ans` = { `<code> {#1} more code` } default: *\fbox+\parbox{#1}*
 Wraps the *argument* passed to the `\anskey` and the *body* in `anskey*` environment referenced by `{#1}` when using the `show-ans` or `show-pos` keys. The `{<code>}` must be passed between braces and only affects the *argument* or *body* and NOT the “*stored content*” in the *sequence* and *prop list* `{<store name>}` set by `save-ans` key. If this key is passed using `\setenumext` it is necessary to use double `{##1}`.

`wrap-opt` = { `<code> {#1} more code` } default: *[{#1}]*
 Wraps the *optional argument* passed to the `\item*` and `\anspic*` referenced by `{#1}` in the `keyans`, `keyans*` and `keyanspic` environments when using the `show-ans` or `show-pos` keys. The `{<code>}` must be passed between braces and only affects the current *optional argument* and NOT the “*stored content*” in the *sequence* and *prop list* `{<store name>}` set by `save-ans` key. If this key is passed using `\setenumext` it is necessary to use double `{##1}`.

`show-ans` = { `<true | false>` } default: *false*
 Displays the *argument* passed to the `\anskey`, the *body* for `anskey*` environment, the `<label>` for `\item*` and `\anspic*` at the place where it is executed. If the optional argument is present in `\item*` or `\anspic*` it will be shown using `wrap-opt` key.

`mark-ans` = { `<symbol>` } default: *\textasteriskcentered*
 Sets the *symbol* to be displayed in the left margin for `\anskey`, `anskey*`, `\item*` and `\anspic*` in the place where they are executed when using the key `show-ans`.

`mark-pos` = { `<left | right>` } default: *left*
 Sets the *aligned* of the symbol defined by `mark-ans` key. The “*symbol*” is aligned in a box with the same dimensions of the label box defined by `labelwidth` key on the current level and separated by the value of the `labelsep` key.

6.1.3 Keys for `debug` and `checking`

`show-pos` = { `<true | false>` } default: *false*
 Displays the *position* occupied by the “*stored content*” by `\anskey`, `anskey*`, `\item*` and `\anspic*` in the *prop list* `{<store name>}` set by `save-ans` key. This position is used by the `\getkeyans` command and by the `\ref` command if the `save-ref` key is active.

`check-ans` = { `<true | false>` } default: *false*
 Enables the *checking answer* mechanism displaying an appropriate message on the terminal. This key works under the logic that each `\item` or `\item*` that does not open an inner level or nested environment contains “*only one answer*” or “*only one execution*” of the `\anskey` or `anskey*`. It is intended to be used in conjunction with the `no-store` key.

`no-store` `<value forbidden>` default: *not used*
 This is a *meta-key* that does not receive an argument and disables the structure stored in the *sequence* `{<store name>}` set by `save-ans` key at the entire level or a nested environment in which it runs. This key is intended for use in internal levels or nested `enumext` or `enumext*` environments in which you want to use `enumext` or `enumext*` but “*without*” using the `\anskey`, “*without*” use `anskey*`, “*without*” interfering with the `check-ans` key and “*without*” storing an unwanted structure in the *sequence* `{<store name>}`.

6.2 The command `\anskey`

`\anskey` `\anskey[⟨keys⟩]{⟨content⟩}`

The command `\anskey` takes a mandatory non empty argument `{⟨content⟩}` and “stores” it in the *sequence* and *prop list* `{⟨store name⟩}` set by `save-ans` key. By design the command cannot be nested or passed *verbatim material* in the argument and it is assumed that each `numbered \item` or `\item*` within the environment in which it is active it has a “single execution” of `\anskey` unless `\item` or `\item*` open a nested level or use the `no-store` key.

If `save-ref` key are active and the `hyperref`[8] package is detected, `\hyperlink` and `\hypertarget` will be used, otherwise the usual “label and ref” system provided by \TeX will be used.

The `\anskey` command is available for all levels of the `enumext` environment and the `enumext*` environment, but is disabled for the `keyans`, `keyans*` and `keyanspic` environments.

6.2.1 Keys for `\anskey`

By default the `{⟨content⟩}` passed to `\anskey` when “storing” in the *sequence* `{⟨store name⟩}` has the form `\item ⟨content⟩`, the following `⟨keys⟩` allow modifying the way in which it is “stored” in the *sequence*.

<code>break-col</code>	<code>⟨value forbidden⟩</code>	default: <i>not used</i>
	Stores <code>{⟨content⟩}</code> in the <i>sequence</i> <code>{⟨store name⟩}</code> of the form <code>\columnbreak \item ⟨content⟩</code> .	
<code>item-join</code>	<code>= {⟨columns⟩}</code>	default: <i>not set</i>
	Set the <i>number of columns</i> to be used for <code>\item(⟨columns⟩)</code> and stores <code>{⟨content⟩}</code> in the <i>sequence</i> <code>{⟨store name⟩}</code> of the form <code>\item(⟨columns⟩) ⟨content⟩</code> .	
<code>item-star</code>	<code>⟨value forbidden⟩</code>	default: <i>not used</i>
	Stores <code>{⟨content⟩}</code> in the <i>sequence</i> <code>{⟨store name⟩}</code> of the form <code>\item* ⟨content⟩</code> .	
<code>item-sym*</code>	<code>= {⟨symbol⟩}</code>	default: <code>\$\star\$</code>
	Sets the <i>symbol</i> for <code>\item*</code> when using the key <code>item-star</code> and stores <code>{⟨content⟩}</code> in the <i>sequence</i> <code>{⟨store name⟩}</code> of the form <code>\item*[⟨symbol⟩] ⟨content⟩</code> . The <i>symbol</i> can be in text or math mode, for example <code>item-sym*={\$\ast\$}</code> stores <code>\item*[\$\ast\$] ⟨content⟩</code> .	
<code>item-pos*</code>	<code>= {⟨rigid length⟩}</code>	default: <i>not set</i>
	Sets the <i>offset</i> for <code>\item*</code> when using the keys <code>item-star</code> and <code>item-sym*</code> and stores <code>{⟨content⟩}</code> in the <i>sequence</i> <code>{⟨store name⟩}</code> of the form <code>\item*[⟨symbol⟩][⟨offset⟩] ⟨content⟩</code> .	

Example

```
\begin{enumext}[save-ans=test,show-ans=true]
  \item* Text containing our instructions or questions. \anskey{⟨first answer⟩}
  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.\anskey{⟨second answer⟩}

4. Text containing our instructions or questions.

* fourth answer

6.3 The environment `anskey*`

`anskey*` `\begin{anskey*}[⟨key = val⟩] ⟨body content⟩ \end{anskey*}`

The environment `anskey*` takes a mandatory `{⟨body content⟩}` and “stores” it in the *sequence* and *prop list* `{⟨store name⟩}` set by `save-ans` key. If `save-ref` key are active and the `hyperref`[8] package is detected, `\hyperlink` and `\hypertarget` will be used, otherwise the usual “label and ref” system provided by \TeX will be used.

By design the environment cannot be nested but full supports “verbatim material” in the body and it is assumed that each `numbered \item` or `\item*` within the environment in which it is active it has a “single execution” unless `\item` or `\item*` open a nested level or use the `no-store` key.

The `anskey*` environment is implemented using the `scontents` package, for the correct operation `\begin{anskey*}` and `\end{anskey*}` must be in different lines, all `⟨keys⟩` must be passed separated by commas and “without separation” of the start of the environment. Comments “%” or “any character” after `\begin{anskey*}` or `[⟨key = val⟩]` on the same line are NOT supported, the package `scontents` will return an “error” message if this happens. In a similar way comments “%” or “any character” after `\end{anskey*}` on the same line the package `scontents` will return a “warning” message.

6.3.1 Keys for anskey*

The `anskey*` environment uses the same $\langle keys \rangle$ as the `\anskey` command next to the keys inherited from package `scontents`. The environment is available for all levels of the `enumext` environment and the `enumext*` environment, but it is disabled for the `keyans`, `keyans*` and `keyanspic` environments.

- `write-env = { \langle file.ext \rangle }` default: *not used*
 Sets the name of the $\langle external\ file \rangle$ in which the $\langle contents \rangle$ of the environment will be written. The $\langle file.ext \rangle$ will be created in the working directory, relative or absolute paths are not supported. If $\langle file.ext \rangle$ does not exist, it will be created or overwritten if the `overwrite` key is used.
- `overwrite = { \langle true | false \rangle }` default: *false*
 Sets whether the $\langle file.ext \rangle$ generated by `write-env` from the `anskey*` environment will be rewritten.
- `force-eol = { \langle true | false \rangle }` default: *false*
 Sets if the *end of line* for the $\langle stored\ content \rangle$ is hidden or not. This key is necessary only if the last line is the closing of some environment defined by the `fancyvrb` package as `\end{Verbatim}` or another environment that does not support a comments “%” after closing `\end{Verbatim}%`.
- For security reasons the keys `store-env`, `print-env` and `write-out` they have been left disabled. It is recommended that you review the `scontents`[4] documentation to understand how the keys described here work.

Example

```
\begin{enumext}[save-ans=test,show-pos=true,start=5]
  \item* Text containing our instructions or questions.
    \begin{anskey*}[item-star]
      \langle first answer \rangle
    \end{anskey*}
  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.
        \begin{anskey*}
          \langle second answer \rangle
        \end{anskey*}
    \end{enumext}
  \item Text containing our instructions or questions.
    \begin{anskey*}
      \langle third answer \rangle
    \end{anskey*}
  \item Text containing our instructions or questions.
    \begin{anskey*}
      \langle fourth answer \rangle
    \end{anskey*}
\end{enumext}
```

- | | |
|---|--|
| <p>★ 5. Text containing our instructions or questions.</p> <p>[5] First answer with verbatim</p> <p>6. Text containing our instructions or questions.</p> <p>(a) Question.</p> <p>[6] second answer</p> | <p>7. Text containing our instructions or questions.</p> <p>[7] third answer</p> <p>8. Text containing our instructions or questions.</p> <p>[8] fourth answer</p> |
|---|--|

6.4 The environments keyans and keyans*

<code>keyans</code>	<code>\begin{keyans}[\langle key = val \rangle] \item \item[\langle custom \rangle] \item* \item*[\langle content \rangle] \end{keyans}</code>
<code>keyans*</code>	<code>\begin{keyans*}[\langle key = val \rangle] \item \item[\langle custom \rangle] \item* \item*[\langle content \rangle] \end{keyans*}</code>

The `keyans` and `keyans*` environments are “*enumerated list*” environments designed for “*multiple choice*” questions activated by the `save-ans` key. This environments can NOT be nested and must always be at the “*first level*” of the `enumext` environment, the commands `\item` and `\item[\langle custom \rangle]` work in the usual and the command `\item(\langle columns \rangle)` is available for the `keyans*` environment.

<pre>\begin{enumext}[save-ans=test] \item \langle item content \rangle \begin{keyans}[\langle key = val \rangle] \item \langle item content \rangle \item [\langle custom \rangle] \langle item content \rangle \item* \langle item content \rangle \item*[\langle content \rangle] \langle item content \rangle \end{keyans} \end{enumext}</pre>	<pre>\begin{enumext}[save-ans=test] \item \langle item content \rangle \begin{keyans*}[\langle key = val \rangle] \item \langle item content \rangle \item [\langle custom \rangle] \langle item content \rangle \item* \langle item content \rangle \item*[\langle content \rangle] \langle item content \rangle \end{keyans*} \end{enumext}</pre>
---	---

The $\langle keys \rangle$ set in the optional argument of the environment are the same (almost) as those of the `enumext` and `enumext*` environments and have higher precedence than those set by `\setenumext[\langle keyans \rangle]{\langle key = val \rangle}` or `\setenumext[\langle keyans* \rangle]{\langle key = val \rangle}`. If the optional argument is not passed or the $\langle keys \rangle$

are not set by `\setenumext`, the default values will be the same as the second level of the `enumext` environment with the difference in the `\label` which will be set to `\label=\Alph*`.

6.4.1 The `\item*` in `keyans` and `keyans*`

```
\item* \item*
\item* [\content]
```

The `\item*` and `\item*[\content]` command “store” the current `\label` set by `label` key next to the `\content` (if it is present) in *sequence* and *prop list* `{\store name}` set by `save-ans` key in the “first level” of the `enumext` or `enumext*` environments.

The *starred argument* ‘*’ cannot be separated by spaces ‘ ’ from the command, i.e. `\item*` and the optional argument does “not support” verbatim content. By design it is assumed that the `\item*` will only appear “once” within the environment.

The behavior of `\item*` in `keyans` and `keyans*` environments is NOT the same as in the `enumext` or `enumext*` environments.

Example

```
\begin{enumext}[save-ans=test,columns=2,show-ans=true]
  \item Text containing a question.
  \begin{keyans*}[nosep,columns=2]
    \item Choice
    \item* Correct choice
    \item Choice
    \item Choice
    \item Choice
  \end{keyans*}
  \item Text containing a question and image.
  \begin{keyans}[nosep,mini-env={0.4\linewidth}]
    \item Choice
    \item Choice
    \item Choice
    \item Choice
    \item*[\note] Correct choice
    \miniright
    \includegraphics[scale=0.25]{example-image-a}
    Some text
  \end{keyans}
\end{enumext}
```

1. Text containing a question.
A) Choice * B) Correct choice
C) Choice D) Choice
E) Choice

2. Text containing a question and image.
A) Choice
B) Choice
C) Choice
D) Choice
* E) [note] Correct choice

Some text

6.5 The environment `keyanspic`

```
keyanspic \begin{keyanspic}[\langle n^\circ above, n^\circ below \rangle]\anspic{\langle drawing \rangle}\anspic*[\langle content \rangle]{\langle drawing \rangle}
```

The `keyanspic` is a “fake enumerated list” environment that which uses the `\anspic` command instead of `\item`. It is activated by the `save-ans` key and has the same settings as the `keyans` environment. It is intended for placing “drawings” or “tabular” with an in-line or *above* and *below* layout. A representation of the output can be seen in the figure 6.

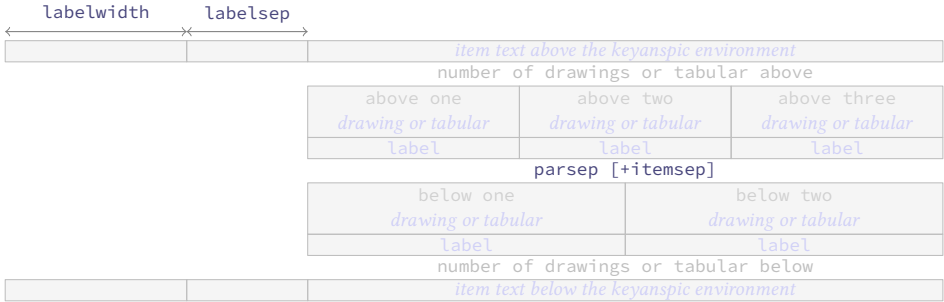

Figure 6: Representation of the `keyanspic` environment with optional argument `[3,2]` in `enumext`.

The optional argument determines the number drawings or tabular “above” and “below” within the environment. The vertical separation between “above” and “below” is controlled by the values set by `parsep` and `itemsep` keys passed to `keyans` environment. If the optional argument or the second part of it is omitted the drawings or tabular will be put on a single line.

6.5.1 The command `\anspic`

```
\anspic{<drawing or tabular>}
\anspic* [<content>] {<drawing or tabular>}
```

The `\anspic` command take three arguments, the *starred argument* ‘*’ store the current *<label>* next to the *<content>* (if it is present) in *sequence* and *prop list* {*<store name>*} set by *save-ans* key.

The *starred argument* ‘*’ cannot be separated by spaces ‘ ’ from the command, i.e. `\anspic*` and the optional argument does “not support” verbatim content. By design it is assumed that the *starred argument* ‘*’ will only appear “once” within the environment.

Example

```
\begin{enumext}[save-ans=test,show-ans,nosep]
  \item Question with images.
  \begin{keyanspic}[3,2]
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-b}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
  \end{keyanspic}
\end{enumext}
```

1. Question with images.

A)

B)

C)

D)

* E)[note]

6.6 Printing stored content

6.6.1 The command `\getkeyans`

```
\getkeyans \getkeyans{<store name : position>}
```

The command `\getkeyans` prints the “stored content” in *prop list* {*<store name>*} defined by *save-ans* key in the *<position>* returned by the *show-pos* key. The “stored content” can only be accessed *after* it is stored, if {*<store name>*} does not exist the command will return an error.

The form taken by the argument {*<store name : position>*} is the same as that used to generate the “internal label and ref” system when *save-ref* key are active, so to refer to a “stored content”. For example `\getkeyans{test:4}` will return the “stored content” at position 4 of the environment in which the key *save-ans=test* was set.

6.6.2 The command `\printkeyans`

```
\printkeyans \printkeyans [<keys>] {<store name>}
\printkeyans* [<keys>] {<store name>}
```

The command `\printkeyans` prints “all stored content” in *sequence* {*<store name>*} defined by *save-ans* key placing this inside the `enumext` environment or the `enumext*` environment if the *starred argument* ‘*’ is used. The “stored content” can only be accessed *after* it is stored in the *sequence*, if {*<store name>*} does not exist the command will return an error.

The optional argument allows managing the *<keys>* in the “first level” of the environment in which the “stored content” of the *sequence* {*<store name>*} will be printed, if the *starred argument* ‘*’ is used it will be `enumext*` otherwise `enumext`.

The default values for the “first level” are the same as the default values for the `enumext` and `enumext*` environments along with the keys *nosep*, *first=\small*, *font=\small* and *columns=2*. For the inner levels of the environment `enumext` saved in the *sequence* {*<store name>*} the default values are the same as those established for the second, third and fourth levels plus the keys *nosep*, *first=\small*, *font=\small*. If the environment `enumext*` is saved within the *sequence* {*<store name>*} it will have the same default values plus the keys *nosep*, *first=\small*, *font=\small*.

Since the command encapsulates by default the `enumext` environment or the `enumext*` environment, we must take some considerations:

- If we execute `\printkeyans*{<store name>}` and the *sequence* `{<store name>}` already contains any `enumext*` environment an error will be returned as we cannot nest.
- If we execute `\printkeyans*{<store name>}` and the *sequence* `{<store name>}` contains any `enumext` environments, they will start with the `<keys>` set for the first level unless they are set in the optional argument or `save-key` is used to modify it.
- If we execute `\printkeyans{<store name>}` and the *sequence* `{<store name>}` contains any environment `enumext*`, they will start with the `<keys>` set by default unless they are set in the optional argument or `save-key` is used to modify it.

The default values for the “first level” of `\printkeyans` commands and `\printkeyans*` are established using `\setenumext[<print , 1>]{<keys>}` and `\setenumext[<print*>]{<keys>}`. If we need to set the `<keys>` for the environment `enumext` “saved” in the *sequence* `{<store name>}` we will use `\setenumext[<print , level>]{<keys>}` and if we need to set the `<keys>` for the environment `enumext*` “saved” in the *sequence* `{<store name>}` we will use `\setenumext[<print , *>]{<keys>}`.

Example

```
\begin{enumext}[save-ans=sample,columns=2,show-pos=true,nosep,save-ref=true]
  \item Factor  $3x+3y+3z$ . \anskey{{3}(x+y+z)}
  \item True False

  \begin{enumext}[nosep]
    \item \LaTeXe\ is cool? \anskey{Very True!}
  \end{enumext}

  \item Related to Linux

  \begin{enumext}[nosep]
    \item You use linux? \anskey{Yes}
    \item Rate the following package and class
      \begin{enumext}[nosep]
        \item \texttt{xsim} \anskey{very good}
        \item \texttt{exsheets} \anskey{obsolete}
      \end{enumext}
    \end{enumext}
  \end{enumext}

  The answer to \ref{sample:4} is \getkeyans{sample:4} and the answers to
  all the worksheets are as follows:

  \printkeyans{sample}
```

1. Factor $3x + 3y + 3z$.

[1]

2. True False

(a) ~~LT_EX~~e is cool?

[2]

3. Related to Linux

(a) You use linux?

[3]

(b) Rate the following package and class

i. xsim

[4]

ii. exsheets

[5]

The answer to 3.(b).i is very good and the answers to all the worksheets are as follows:

1. $3(x + y + z)$

2. (a) Very True!

3. (a) Yes

(b) i. very good

ii. obsolete

7 Full examples

Here I will leave as an example some adaptations questions taken from [TeX-SX](#). The examples are attached to this documentation and can be extracted from your PDF viewer or from the command line by running:

```
$ pdftdetach -saveall enumext.pdf
```

and then you can use the excellent [arara](#)¹ tool to compile them.

Example 1

Adapted from the response given by Enrico Gregorio in [Squares for answer choice options and perfect alignment to mathematical answers](#) .

¹The cool \TeX automation tool: <https://www.ctan.org/pkg/arara>

1. La velocità di $1,00 \times 10^2$ m/s espressa in km/h è: 3. La velocità di $1,00 \times 10^2$ m/s espressa in km/h è:

- ☐ A 36 km/h.
☐ B 360 km/h.
☐ C 27,8 km/h.
☐ D $3,60 \times 10^8$ km/h.

- ☐ A 36 km/h.
☐ B 360 km/h.
☐ C 27,8 km/h.
☐ D $3,60 \times 10^8$ km/h.

2. In fisica nucleare si usa l'angstrom (simbolo: $1 \text{ \AA} = 1 \times 10^{-10} \text{ m}$) e il fermi o femtometro ($1 \text{ fm} = 1 \times 10^{-15} \text{ m}$). Qual è la relazione tra queste due unità di misura?

- ☐ A $1 \text{ \AA} = 1 \times 10^5 \text{ fm}$.
☐ B $1 \text{ \AA} = 1 \times 10^{-5} \text{ fm}$.
☐ C $1 \text{ \AA} = 1 \times 10^{-15} \text{ fm}$.
☐ D $1 \text{ \AA} = 1 \times 10^3 \text{ fm}$.

4. In fisica nucleare si usa l'angstrom (simbolo: $1 \text{ \AA} = 1 \times 10^{-10} \text{ m}$) e il fermi o femtometro ($1 \text{ fm} = 1 \times 10^{-15} \text{ m}$). Qual è la relazione tra queste due unità di misura?

- ☐ A $1 \text{ \AA} = 1 \times 10^5 \text{ fm}$.
☐ B $1 \text{ \AA} = 1 \times 10^{-5} \text{ fm}$.
☐ C $1 \text{ \AA} = 1 \times 10^{-15} \text{ fm}$.
☐ D $1 \text{ \AA} = 1 \times 10^3 \text{ fm}$.

1. B

2. A

3. B

4. A

Example 2

Adapted from the response given by Florent Rougon in [Multiple choice questions with proposed answers in random order — addition of automatic correction \(cross mark\)](#) .

1. La velocità di $1,00 \times 10^2$ m/s espressa in km/h è:

- ☐ A 36 km/h.
☒ B 360 km/h.
☐ C 27,8 km/h.
☐ D $3,60 \times 10^8$ km/h.

2. In fisica nucleare si usa l'angstrom (simbolo: $1 \text{ \AA} = 1 \times 10^{-10} \text{ m}$) e il fermi o femtometro ($1 \text{ fm} = 1 \times 10^{-15} \text{ m}$). Qual è la relazione tra queste due unità di misura?

- ☒ A $1 \text{ \AA} = 1 \times 10^5 \text{ fm}$.
☐ B $1 \text{ \AA} = 1 \times 10^{-5} \text{ fm}$.
☐ C $1 \text{ \AA} = 1 \times 10^{-15} \text{ fm}$.
☐ D $1 \text{ \AA} = 1 \times 10^3 \text{ fm}$.

3. La velocità di $1,00 \times 10^2$ m/s espressa in km/h è:

- ☐ A 36 km/h.
☒ B 360 km/h.
☐ C 27,8 km/h.
☐ D $3,60 \times 10^8$ km/h.

4. In fisica nucleare si usa l'angstrom (simbolo: $1 \text{ \AA} = 1 \times 10^{-10} \text{ m}$) e il fermi o femtometro ($1 \text{ fm} = 1 \times 10^{-15} \text{ m}$). Qual è la relazione tra queste due unità di misura?

- ☒ A $1 \text{ \AA} = 1 \times 10^5 \text{ fm}$.

Example 3

A “simple multiple choice” test .

1. First type of questions

- ☐ A value
☐ B correct
☐ C value
☐ D value

2. Second type of questions

- I. $2\alpha + 2\delta = 90^\circ$
 II. $\alpha = \delta$
 III. $\angle EDF = 45^\circ$

- A

I only

B

II only

C

I and II only
- D

I and III only
- E

I, II, and III

3. Third type of questions

(1) $2\alpha + 2\delta = 90^\circ$

(2) $\angle EDF = 45^\circ$

A

value

B

value

C

value

D

value

E

value

4. Question with image and label below:

5. Question with image on left side:
- A

value
- B

value
- C

value
- D

correct
- E

value

Test keys

1. B, $x = 5$

2. D

3. C, some note

4. E, A duck

5. D, other note

Example 4

A “simple worksheet” using ducks :) 🦆.

 Factor $x^2 - 2x + 1$

 Factor $3x + 3y + 3z$

The following questions need to be cuaqtified :)

 True False

- (a) $\alpha > \delta$
- (b) \LaTeX is cool?

 Related to Linux

- (a) You use linux?
- (b) Usually uses the package manager?
- (c) Rate the following package and class

i.

`xsim-exam`

ii.

`xsim`

iii.

`exsheets`

The answer to 1 is $(x - 1)^2$ and the answer to 3.(a) is False.

1. $(x - 1)^2$

2. $3(x + y + z)$

3. (a) False

(b) Very True!

4. (a) Yes

(b) Yes, dnf

(c) i. doesn’t exist for now :(

ii. very good

iii. obsolete

Example 5

Adapted from the response given by Stephen in SAT like question format 📄.

- 1

Which choice best describes what happens in the passage?

A) One character argues with another character who intrudes on her home.

B) One character receives a surprising request from another character.

C) One character reminisces about choices she

- has made over the years.
- D) One character criticizes another character for pursuing an unexpected course of action.

- 2

Which choice best describes what happens in the passage?

A) One character argues with another character

ter who intrudes on her home.

B) One character receives a surprising request from another character.

C) One character reminisces about choices she has made over the years.

D) One character criticizes another character for pursuing an unexpected course of action.

3

Which choice best describes what happens in the passage?

A) One character argues with another character who intrudes on her home.

B) One character receives a surprising request from another character.

C) One character reminisces about choices she has made over the years.

D) One character criticizes another character for pursuing an unexpected course of action.

4

Which choice best describes what happens in the passage?

A) One character argues with another character who intrudes on her home.

B) One character receives a surprising request from another character.

C) One character reminisces about choices she has made over the years.

D) One character criticizes another character for pursuing an unexpected course of action.

1. A) 2. C) 3. B) 4. D)

8 The way of non-enumerated lists

It is possible to use (or abuse) the `enumext` environment to mimic *non-enumerated* list environments such as `itemize` and `description`, clearly the `<keys>` to “store answers”, the `keyans` and `keyanspic` environments lose their sense and it is not the focus of the main of this package, but, why not to do it?. Here I leave as an example other uses of the `enumext` environment that can be helpful for specific purposes. The “trick” to generate these *fake environments* is set `label={}` or `label={\some}` and play with the `list-indent`, `list-offset`, `font` and `wrap-label` keys.

Fake itemize environment

Here we set the `label` key using the default settings in \TeX for the four levels `\textbullet`, `\textendash`, `\textasteriskcentered` and `\textperiodcentered` together with the `nosep` key to reduce the vertical spaces in the left side example and set the `label` key in *mathematical mode* for the right side as `\ast`, `\diamond`, `\circ` and `\star` for the four levels together with the `nosep` key

- First level item
 - Second level item
 - * Third level item
 - Fourth level item
 - First level item
- * First level item
 - ◇ Second level item
 - Third level item
 - ★ Fourth level item
 - * First level item

Fake description environment

Here we set `label={}` and `list-indent=2.5em`, `font=\bfseries`.

SomeThing A short one-line description.
This is an entry *without* a label.

Something A short *one-line* description text.

Something long A much *longer* description text may take more than one line or more than one paragraph.
Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

If we add `list-indent=0pt` you get *widest style*:

SomeThing A short one-line description.
This is an entry *without* a label.

Something A short *one-line* description text.

Something long A much *longer* description text may take more than one line or more than one paragraph.
Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

🟢 The small space at the beginning of the “unlabeled entry” corresponds to `\labelsep` and can be removed using `\hspace{-\labelsep}` at the beginning of the line.

Description indented by label

Here we set `label={}` and we will give a convenient value to `labelsep` and `labelwidth`, for example we can take as reference our *longest label* and pass it as value using:

```
\newlength{\descitemwd}
\settowidth{\descitemwd}{\textbf{Something long}}
```

and then use `labelsep=4pt`, `labelwidth=\descitemwd`, `font=\bfseries`.

Something	A short one-line description. This is an entry <i>without</i> a label.
Something	A short one-line description.
Something long	A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

The environment can be translated so that the `(labels)` are on the left margin calculating the value passed to the `list-offset` key, in this case it will be equal to the sum of the values set by the `labelwidth` and `labelsep` keys finally resulting as `list-offset={-\descitemwd - 4pt}`.

Something	A short one-line description. This is an entry <i>without</i> a label.
Something	A short one-line description.
Something long	A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

If we add `align=right` it will look like this:

Something	A short one-line description. This is an entry <i>without</i> a label.
Something	A short one-line description.
Something long	A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

At this point we have used `list-offset={-\descitemwd - 4pt}` instead of `list-offset={-\labelwidth - \labelsep}`, this is because the parameters `\labelwidth` and `\labelsep` take the default values, as if we had not set `label`.

Description with multi-line labels

The `label` key does not accept *multiline material*, this is where the `wrap-label*` key comes into play. Unlike the `enumitem` package, the `align` key only supports three options, so what we will do is create a command in the style `\parleft` of `enumitem` that allows us to place *multiline labels* using `\parbox`.

```
\NewDocumentCommand \labelbx { s +m }
{%
  \IfBooleanTF{#1}
  {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
  {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
}
```

Now we just need to set `wrap-label*={\labelbx{#1}}`.

Something	A short one-line description. This is an entry <i>without</i> a label.
Something	A short one-line description.
Something long	A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.
SoMeThInG	A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Final notes

The original implementation (if you can call it that) of the ideas that led to the creation of `enumext` were some macros using the `enumerate[5]` package for personal use created in early 2003, the code was quite questionable, but functional for these simple requirements.

With the great answers given by Christian Hupfer in [Create a fake label ref using list](#) and the answer given by David Carlisle in [Change the use of label ref by data save in an array \(list\)](#) I managed to create a more solid code than the original version, now using the `l3prop[11]` and `l3seq[11]` modules together with the `hyperref[8]` and `enumitem[6]` packages, which did the job, but with some limitations.

As time went by I took these limitations as a personal challenge which I called “*reinventing the wheel*”, since there were packages and classes that did more or less what I was looking for, but did not fit my simple requirements. This “*reinventing the wheel*” finally ended up becoming `enumext`.

Why list environments?

The answer is simple, first I love the beauty of its syntax and many of what I had already written used the `enumerate` environment or lists created using the `enumitem` package. In my mind I thought: how complicated could it be to write a package that looked like `enumitem`? It seemed simple enough, of course I didn’t have in mind the mess I was getting into working with `list` environments, `minipage` and adding support for the `multicol` and `hyperref` packages.

Of course, seeing the final result of the experiment “*reinventing the wheel*” I am quite satisfied.

Why not random questions and other utilities

The “*random*” type questions I love and hate them at the same time, although they simplify a lot the work when creating a multiple choice test, but you lose the beauty of typesetting a document with \LaTeX , that is to say the output does not always look as nice as it should, even if they are only alternatives these must follow a certain order when presented either numerical or presentation, that said handling that using *nested lists* is quite complicated so I do not classify to be implemented.

12 Implementation

The most recent publicly released version of `enumext` is available at CTAN: <https://www.ctan.org/pkg/enumext>. While general feedback via email is welcomed, specific bugs or feature requests should be reported through the issue tracker: <https://github.com/pablgonz/enumext/issues>.

- The documentation presented here is far from professional, it contains a lot of obvious information that to the eye of a \TeX pert are superfluous, but, after so many years developing this project is the only way to remember what does what.

12.1 General conventions

Variables containing `i`, `ii`, `iii` and `iv` are associated by level with the `enumext` environment, variables containing `v` are associated with the `keyans` environment, variables containing `vi` are associated with the `keyanspic` environment, variables containing `vii` are associated with the `enumext*` environment and variables containing `viii` are associated with the `keyans*` environment.

To simplify writing and documentation some variables and functions that are common to the different levels of the environments are described using a capital “X”.

The temporary function `__enumext_tmp:n` is used in different parts of the package code for variable creation or execution of other functions that are grouped into this one.

All variables and functions defined in this package are private and are NOT intended to work or be used by another package or module.

12.2 Initial set up

Start the DocStrip guards.

```
1 <{*package>
```

Identify the internal prefix (\LaTeX 3 DocStrip convention) for `l3doc` class.

```
2 <@@=enumext>
```

12.3 Declaration of the package

First we will make sure we have a minimum (super updated) version of \LaTeX to work correctly.

```
3 \NeedsTeXFormat{LaTeX2e}[2024-06-01]
```

Now declare the `enumext` package.

```
4 \ProvidesExplPackage
5   {enumext}
6   {2024-06-16}
7   {1.0}
8   {Enumerate exercise sheets}
```

Finally check if the `multicol` and `scontents` packages are loaded, if not we load it.

```
9 \hook_gput_code:nnn {begindocument} {enumext}
10 {
11   \IfPackageLoadedTF { multicol }
12   {
13     \msg_info:nnn { enumext } { package-load } { multicol }
14   }
15   {
16     \msg_info:nnn { enumext } { package-not-load } { multicol }
17     \RequirePackage{multicol}[2024-05-23]
18   }
19   \IfPackageLoadedTF { scontents }
20   {
21     \msg_info:nnn { enumext } { package-load } { scontents }
22   }
23   {
24     \msg_info:nnn { enumext } { package-not-load } { scontents }
25     \RequirePackage{scontents}
26   }
27 }
```

12.4 Definition of variables

Variables that do not appear in this section are created by means of `\keys_define:nn` or some function described below.

```
\l__enumext_level_int
\l__enumext_level_h_int
\l__enumext_anskey_level_int
\l__enumext_keyans_level_int
\l__enumext_keyans_level_h_int
\l__enumext_keyans_pic_level_int
```

Integer variables will control the nesting levels of the environments and `\anskey` command.

```
28 \int_new:N \l__enumext_level_int
29 \int_new:N \l__enumext_level_h_int
30 \int_new:N \l__enumext_anskey_level_int
31 \int_new:N \l__enumext_keyans_level_int
32 \int_new:N \l__enumext_keyans_level_h_int
33 \int_new:N \l__enumext_keyans_pic_level_int
```

(End of definition for `\l__enumext_level_int` and others.)

```
\l__enumext_starred_bool
\g__enumext_starred_bool
\l__enumext_starred_first_bool
\l__enumext_standar_bool
\g__enumext_standar_bool
\l__enumext_standar_first_bool
\l__enumext_anskey_env_bool
\l__enumext_keyans_env_bool
\g__enumext_start_line_tl
\g__enumext_envir_name_tl
\l__enumext_envir_name_tl
```

Internal variables used by functions `__enumext_is_not_nested:`, `__enumext_is_on_first_level:` and `__enumext_keyans_name_and_start:` (§12.5.1).

```
34 \bool_new:N \l__enumext_starred_bool
35 \bool_new:N \g__enumext_starred_bool
36 \bool_new:N \l__enumext_starred_first_bool
37 \bool_new:N \l__enumext_standar_bool
38 \bool_new:N \g__enumext_standar_bool
39 \bool_new:N \l__enumext_standar_first_bool
40 \bool_new:N \l__enumext_anskey_env_bool
41 \bool_new:N \l__enumext_keyans_env_bool
42 \tl_new:N \g__enumext_start_line_tl
43 \tl_new:N \g__enumext_envir_name_tl
44 \tl_new:N \l__enumext_envir_name_tl
```

(End of definition for `\l__enumext_starred_bool` and others.)

```
\l__enumext_counter_i_tl
\l__enumext_counter_ii_tl
\l__enumext_counter_iii_tl
\l__enumext_counter_iv_tl
\l__enumext_counter_v_tl
\l__enumext_counter_vi_tl
\l__enumext_counter_vii_tl
\l__enumext_counter_viii_tl
```

Variables to store the “*name of the counters*” `enumXi`, `enumXii`, `enumXiii` and `enumXiv` for `enumext` environment, `enumXv` for `keyans` environment and `enumXvi` for the `keyanspic` environment. The counters `enumXvii` and `enumXviii` are used by `enumext*` and `keyans*` environments.

The initial values of these variables are set by the function `__enumext_define_counters:Nn` (§12.10) and then modified by the function `__enumext_label_style:Nnn` used by `label` key (§12.13).

```
45 \cs_set_protected:Npn \__enumext_tmp:n #1
46 {
47   \tl_new:c { l__enumext_counter_#1_tl }
48 }
49 \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }
```

(End of definition for `\l__enumext_counter_i_tl` and others.)

```
\c__enumext_counter_style_tl
\l__enumext_ref_key_arg_tl
\l__enumext_ref_the_count_tl
\l__enumext_the_counter_X_tl
\l__enumext_renew_the_count_X_tl
```

Internal variables used by `ref` key (§12.13).

```
50 \tl_const:Nn \c__enumext_counter_style_tl
51 { { arabic } { roman } { Roman } { alph } { Alph } }
52 \tl_new:N \l__enumext_ref_key_arg_tl
53 \tl_new:N \l__enumext_ref_the_count_tl
54 \cs_set_protected:Npn \__enumext_tmp:n #1
55 {
56   \tl_new:c { l__enumext_renew_the_count_#1_tl }
57   \tl_new:c { l__enumext_the_counter_#1_tl }
58   \tl_set:ce { l__enumext_the_counter_#1_tl } { \exp_not:c { theenumX#1 } }
59 }
60 \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }
```

(End of definition for `\c__enumext_counter_style_tl` and others.)

```
\g__enumext_resume_int
\g__enumext_resume_vii_int
\l__enumext_resume_name_tl
\l__enumext_resume_active_bool
\g__enumext_starred_series_tl
\g__enumext_standar_series_tl
```

Internal variables used by `resume`, `resume*` and `series` keys (§12.24).

```
61 \int_new:N \g__enumext_resume_int
62 \int_new:N \g__enumext_resume_vii_int
63 \tl_new:N \l__enumext_resume_name_tl
64 \bool_new:N \l__enumext_resume_active_bool
65 \tl_new:N \g__enumext_standar_series_tl
66 \tl_new:N \g__enumext_starred_series_tl
```

(End of definition for `\g__enumext_resume_int` and others.)

```

\l__enumext_current_widest_dim
\g__enumext_counter_styles_tl
\g__enumext_widest_label_tl
\l__enumext_label_width_by_box

```

The variable `\l__enumext_current_widest_dim` stores the current label width, the variable `\g__enumext_counter_styles_tl` stores the default *label style* and the variable `\g__enumext_widest_label_tl` the label width. These variables are used by `widest` (§12.14) and `label` (§12.12) keys.

```

67 \dim_new:N \l__enumext_current_widest_dim
68 \tl_new:N \g__enumext_counter_styles_tl
69 \tl_new:N \g__enumext_widest_label_tl
70 \box_new:N \l__enumext_label_width_by_box

```

(End of definition for `\l__enumext_current_widest_dim` and others.)

```

\l__enumext_leftmargin_tmp_X_bool
\l__enumext_leftmargin_tmp_X_dim
\l__enumext_leftmargin_X_dim
\l__enumext_itemindent_X_dim

```

The boolean variable `\l__enumext_leftmargin_tmp_X_bool` and the dimensional variable `\l__enumext_leftmargin_tmp_X_dim` are used by the `list-indent` key (§12.17). The variables `\l__enumext_leftmargin_X_dim` and `\l__enumext_itemindent_X_dim` are used and set by the function `__enumext_calc_hspace:NNNNNNNNNN` (§12.37.1).

```

71 \cs_set_protected:Npn \__enumext_tmp:n #1
72 {
73   \bool_new:c { \l__enumext_leftmargin_tmp_#1_bool }
74   \dim_new:c { \l__enumext_leftmargin_tmp_#1_dim }
75   \dim_new:c { \l__enumext_leftmargin_#1_dim }
76   \dim_new:c { \l__enumext_itemindent_#1_dim }
77 }
78 \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }

```

(End of definition for `\l__enumext_leftmargin_tmp_X_bool` and others.)

```

\l__enumext_multicols_above_X_skip
\l__enumext_multicols_below_X_skip

```

Internal variables used by `columns` key (§12.21).

```

79 \cs_set_protected:Npn \__enumext_tmp:n #1
80 {
81   \skip_new:c { \l__enumext_multicols_above_#1_skip }
82   \skip_new:c { \l__enumext_multicols_below_#1_skip }
83 }
84 \clist_map_inline:nn { i, ii, iii, iv, v } { \__enumext_tmp:n {#1} }

```

(End of definition for `\l__enumext_multicols_above_X_skip` and `\l__enumext_multicols_below_X_skip`.)

```

\g__enumext_minipage_stat_int
\l__enumext_minipage_left_skip
\l__enumext_minipage_right_skip
\l__enumext_minipage_after_skip
\g__enumext_minipage_right_skip
\g__enumext_minipage_after_skip
\l__enumext_minipage_left_X_dim
\l__enumext_minipage_active_X_bool

```

Internal variables used by `\miniright` command (§12.22.4) and the keys `mini-right`, `mini-right*`, `mini-env` and `mini-sep` (§12.20, §12.22).

```

85 \int_new:N \g__enumext_minipage_stat_int
86 \skip_new:N \l__enumext_minipage_left_skip
87 \skip_new:N \l__enumext_minipage_right_skip
88 \skip_new:N \l__enumext_minipage_after_skip
89 \skip_new:N \g__enumext_minipage_right_skip
90 \skip_new:N \g__enumext_minipage_after_skip
91 \cs_set_protected:Npn \__enumext_tmp:n #1
92 {
93   \dim_new:c { \l__enumext_minipage_left_#1_dim }
94   \bool_new:c { \l__enumext_minipage_active_#1_bool }
95 }
96 \clist_map_inline:nn { i, ii, iii, iv, v, vii, viii } { \__enumext_tmp:n {#1} }

```

(End of definition for `\g__enumext_minipage_stat_int` and others.)

```

\l__enumext_wrap_label_X_bool
\l__enumext_wrap_label_opt_X_bool
\l__enumext_start_X_int
\l__enumext_fake_item_indent_X_tl

```

(End of definition for `\l__enumext_wrap_label_X_bool` and others.)

```
\l__enumext_store_active_bool
\l__enumext_store_name_tl
\g__enumext_store_name_tl
\l__enumext_store_anskey_arg_tl
\l__enumext_store_anskey_env_tl
\l__enumext_store_anskey_opt_tl
\l__enumext_store_current_label_tl
\l__enumext_store_current_opt_arg_tl
\l__enumext_store_current_label_tmp_tl
```

The variable `\l__enumext_store_active_bool` setting by `save-ans` key (§12.25.1) activates all the mechanism related to `\anskey`, `anskey*`, `keyans`, `keyans*` and `keyanspic` environments.

The variable `\l__enumext_store_name_tl` saves the $\langle\textit{store name}\rangle$ set by the `save-ans` key of the *sequence* and *prop list* in which we will store, the variable `\g__enumext_store_name_tl` it's just a global copy of $\langle\textit{store name}\rangle$ used by different functions.

The variable `\l__enumext_store_anskey_arg_tl` save the *argument* of `\anskey` (§12.29) and the variables `\l__enumext_store_anskey_env_tl` and `\l__enumext_store_anskey_opt_tl` save the $\langle\textit{body}\rangle$ and the $\langle\textit{keys}\rangle$ of the environment `anskey*` (§12.30).

The variables `\l__enumext_store_current_label_tl` and `\l__enumext_store_current_opt_arg_tl` save the *current label* and *optional argument* of `\item*` (§12.36) and `\anspic*` (§12.40.1) for the `keyans`, `keyans*` and `keyanspic` environments.

The variable `\l__enumext_store_current_label_tmp_tl` is a temporary variable used by `keyans`, `keyans*` and `keyanspic` at various points.

185 }

```

(End of definition for `\c__enumext_all_envs_clist`.)

12.5 Some utility functions

`\keys_precompile:neN` Non-standard kernel variant used by the `\printkeyans` command (§12.46).

```
186 \cs_generate_variant:Nn \keys_precompile:nnN { neN }
```

(End of definition for `\keys_precompile:neN`.)

`__enumext_at_begin_document:n` A internal “hook” function used for copying plain `list` and `minipage` environments definition and `hyperref` detection.

```
187 \cs_new_protected:Npn \__enumext_at_begin_document:n #1
188 {
189   \hook_gput_code:nnn {begindocument} {enumext} { #1 }
190 }
```

(End of definition for `__enumext_at_begin_document:n`.)

`__enumext_after_env:nn` and `__enumext_before_env:nn` A internal “hook” functions for execute code `mini-right` and `mini-right*` keys outside the `enumext*` and `keyans*` environments and print `check-ans` outside the `enumext` and `enumext*` environments.

```
191 \cs_new_protected:Npn \__enumext_after_env:nn #1 #2
192 {
193   \hook_gput_code:nnn {env/#1/after} {enumext} {#2}
194 }
195 \cs_new_protected:Npn \__enumext_before_env:nn #1 #2
196 {
197   \hook_gput_code:nnn {env/#1/before} {enumext} {#2}
198 }
```

(End of definition for `__enumext_after_env:nn` and `__enumext_before_env:nn`.)

`__enumext_level:` Function for check current level in `enumext`.

```
199 \cs_new:Nn \__enumext_level:
200 {
201   \int_to_roman:n { \__enumext_level_int }
202 }
```

(End of definition for `__enumext_level:`.)

`__enumext_if_is_int:nT`, `__enumext_if_is_int:nF` and `__enumext_if_is_int:nTF` A conditional function to know if the variable we are passing is an integer used by `start` and `widest` keys. This function is taken directly from the answer given by Henri Menke in [How to test if an expl3 function argument is an integer expression?](#).

```
203 \prg_new_protected_conditional:Npnn \__enumext_if_is_int:n #1 { T, F, TF }
204 {
205   \regex_match:nnTF { ^[\+|-]?[\d]+$ } {#1} % $
206   { \prg_return_true: }
207   { \prg_return_false: }
208 }
```

(End of definition for `__enumext_if_is_int:nT`, `__enumext_if_is_int:nF`, and `__enumext_if_is_int:nTF`.)

`__enumext_regex_counter_style:` The internal function `__enumext_regex_counter_style:` replace the ‘*’ with the actual counter of the running level and is used by the `ref` key. It loops through the defined counter styles in `\c__enumext_counter_style_tl` and replace ‘*’ by real command, for example, looking for `\arabic*` and replacing that by `\arabic{<counter>}` defined on the current level.

```
209 \cs_new_protected:Nn \__enumext_regex_counter_style:
210 {
211   \tl_map_inline:Nn \c__enumext_counter_style_tl
212   {
213     \regex_replace_once:nnN { \c{##1}\* }
214     { \c{##1}\cB{\u{\l__enumext_ref_the_count_tl}\cE} } \l__enumext_ref_key_arg_tl
215   }
216 }
```

(End of definition for `__enumext_regex_counter_style:`.)

`__enumext_show_length:nnn` Internal function used by `show-length` key to show “all lengths” calculated and use in `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```
217 \cs_new:Npn \__enumext_show_length:nnn #1 #2 #3
218 {
219   * ~ #2
220   \prg_replicate:nn { 14 - \str_count:n {#2} } { ~ }
221   = ~ \use:c { #1_use:c } { \__enumext_#2_#3_#1 } \\
222 }
```

(End of definition for `__enumext_show_length:nnn`.)

12.5.1 Utilities for environments and levels

`__enumext_is_not_nested:`
`__enumext_is_on_first_level:`

The function `__enumext_is_not_nested:` set the variables `g__enumext_standar_bool` and `g__enumext_starred_bool` to “true” only if the environments `enumext` and `enumext*` are nested in each other and save the environment name in `l__enumext_envir_name_tl`.

```

223 \cs_new_protected:Nn __enumext_is_not_nested:
224 {
225   \str_case:en { \@currentenv }
226   {
227     {enumext}
228     {
229       \tl_set:Nn \l__enumext_envir_name_tl { enumext }
230       \bool_lazy_and:nnT
231       { \bool_not_p:n { \g__enumext_standar_bool } }
232       { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
233       {
234         \bool_gset_true:N \g__enumext_standar_bool
235       }
236     }
237     {enumext*}
238     {
239       \tl_set:Nn \l__enumext_envir_name_tl { enumext* }
240       \bool_lazy_and:nnT
241       { \bool_not_p:n { \g__enumext_starred_bool } }
242       { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
243       {
244         \bool_gset_true:N \g__enumext_starred_bool
245       }
246     }
247   }
248 }

```

The function `__enumext_is_on_first_level:` will set the variables `l__enumext_standar_first_bool` (§12.25.1), `l__enumext_starred_first_bool` (§12.25.1) and `l__enumext_anskey_env_bool` (§12.30) to “true” only if the environment is not nested and we are in the “first level” of it. We will also save the *start line number* of each environment in the variable `g__enumext_start_line_tl` and the *name* of each environment in the variable `g__enumext_envir_name_tl` to use in messages related to the `check-ans` key and `.log` file.

```

249 \cs_new_protected:Nn __enumext_is_on_first_level:
250 {
251   \bool_lazy_all:nT
252   {
253     { \bool_if_p:N \g__enumext_standar_bool }
254     { \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
255     { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
256   }
257   {
258     \bool_set_true:N \l__enumext_standar_first_bool
259     \bool_set_true:N \l__enumext_anskey_env_bool
260     \tl_gset:Nn \g__enumext_envir_name_tl { enumext }
261     \tl_gset:Nn \g__enumext_start_line_tl
262     {
263       on ~ line ~ \exp_not:V \inputlineno
264     }
265   }
266   \bool_lazy_all:nT
267   {

309     }
310   }
311 }

```

(End of definition for `__enumext_keyans_name_and_start:`)

12.5.2 Utilities for log and terminal

`__enumext_reset_global_vars:`

`__enumext_reset_global_int:`

`__enumext_reset_global_bool:`

`__enumext_reset_global_tl:`

The function `__enumext_reset_global_vars:` will be passed to the function `__enumext_execute_after_env:` and will return the global variables to their default values after being used.

```

312 \cs_new_protected:Nn \__enumext_reset_global_vars:
313 {
314   \__enumext_reset_global_int:
315   \__enumext_reset_global_bool:
316   \__enumext_reset_global_tl:
317 }
318 \cs_new_protected:Nn \__enumext_reset_global_int:
319 {
320   \int_gzero:N \g__enumext_item_number_int
321   \int_gzero:N \g__enumext_item_anskey_int
322   \int_gzero:N \g__enumext_item_answer_diff_int
323 }
324 \cs_new_protected:Nn \__enumext_reset_global_bool:
325 {
326   \bool_gset_false:N \g__enumext_check_ans_key_bool
327   \bool_gset_false:N \g__enumext_standar_bool
328   \bool_gset_false:N \g__enumext_starred_bool
329 }
330 \cs_new_protected:Nn \__enumext_reset_global_tl:
331 {
332   \tl_gclear:N \g__enumext_store_name_tl
333   \tl_gclear:N \g__enumext_start_line_tl
334   \tl_gclear:N \g__enumext_envir_name_tl
335 }

```

(End of definition for `__enumext_reset_global_vars:` and others.)

`__enumext_log_global_vars:` The function `__enumext_log_global_vars:` will be passed to the function `__enumext_execute_after_env:` and write to the `.log` file the number of elements saved in the *(prop list)* and *(sequence)* created by the `save-ans` key along with the value of the integer variable created for the `resume` key.

```

336 \cs_new_protected:Nn \__enumext_log_global_vars:
337 {
338   \msg_log:nneeee { enumext } { prop-seq-int-hook }
339   { \g__enumext_store_name_tl }
340   { \prop_count:c { g__enumext_ \g__enumext_store_name_tl _prop } }
341   { \seq_count:c { g__enumext_ \g__enumext_store_name_tl _seq } }
342   { \int_use:c { g__enumext_resume_ \g__enumext_store_name_tl _int } }
343 }

```

The function `__enumext_log_answer_vars:` will be passed to the function `__enumext_execute_after_env:` and write to the `.log` file the number of items and answers along with the difference between them.

```

344 \cs_new_protected:Nn \__enumext_log_answer_vars:
345 {
346   \msg_log:nneeee { enumext } { item-answer-hook }
347   { \int_use:N \g__enumext_item_number_int }
348   { \int_use:N \g__enumext_item_anskey_int }
349   { \int_eval:n { \g__enumext_item_number_int - \g__enumext_item_anskey_int } }
350 }

```

(End of definition for `__enumext_log_global_vars:` and `__enumext_log_answer_vars:`.)

12.6 Copying list and minipage environments

The `list` environment provided by \LaTeX has the following plain form:

```

\list{⟨arg one⟩}{⟨arg two⟩}
  \item[⟨opt⟩]
\endlist

```

As a precaution we copy them using `__enumext_at_begin_document:n` in case any package redefines the `list` environment or a related command.

`__enumext_start_list:nn` The functions `__enumext_start_list:nn`, `__enumext_stop_list:` and `__enumext_item_std:w` correspond to copies of `\list`, `\endlist` and `\item` from plain definition of `list` environment.

```

351 \__enumext_at_begin_document:n
352 {
353   \cs_new_eq:NN \__enumext_start_list:nn \list
354   \cs_new_eq:NN \__enumext_stop_list: \endlist
355   \cs_new_eq:NN \__enumext_item_std:w \item
356 }

```

(End of definition for `__enumext_start_list:nn`, `__enumext_stop_list:`, and `__enumext_item_std:w`.)

The `minipage` environment provided by \LaTeX has the following (simplified) plain form:

```

\minipage[⟨pos⟩][⟨height⟩][⟨inner-pos⟩]{⟨width⟩}
  ⟨internal implement⟩
\endminipage

```

As a precaution we copy them using `__enumext_at_begin_document:n` in case any package redefines the `minipage` environment or a related command.

`__enumext_minipage:w` The functions `__enumext_minipage:w`, `__enumext_endminipage:` and correspond to copies of `\minipage`, `\endminipage` from plain definition of `minipage` environment.

```

357 \__enumext_at_begin_document:n
358 {
359   \cs_new_eq:NN \__enumext_minipage:w \minipage
360   \cs_new_eq:NN \__enumext_endminipage: \endminipage
361 }

```

(End of definition for `__enumext_minipage:w` and `__enumext_endminipage:`.)

12.7 The internal minipage environment

```
\__enumext_internal_mini_page:
__enumext_mini_env*
```

The function `__enumext_internal_mini_page:` creates a internal `__enumext_mini_env*` environment (*custom version of minipage*) setting the `\if@minipage` switch to “false” to allow spaces at the “above” of the environment, plus we will add `\skip_vertical:N \c_zero_skip` to maintain alignment on “top” in the first part and `\skip_vertical:N \c_zero_skip` in the second part to allow spaces “below”. This environment will be used internally by the `mini-env` key, it is not documented in the user interface and is for internal use only. This function is passed to the function `__enumext_safe_exec:` in the `enumext` environment definition (§12.38) and `__enumext_safe_exec_vii:` in the `enumext*` environment definition (§12.43)

```
362 \cs_new_protected:Nn \__enumext_internal_mini_page:
363 {
364   \int_compare:nNtT { \l__enumext_level_int } = { 0 }
365   {
366     \DeclareDocumentEnvironment{__enumext_mini_env*}{ m }
367     {
368       __enumext_minipage:w [ t ] { ##1 }
369       \legacy_if_gset_false:n { @minipage }
370       \skip_vertical:N \c_zero_skip
371     }
372     {
373       \skip_vertical:N \c_zero_skip
374       __enumext_endminipage:
375     }
376   }
377 }
```

(End of definition for `__enumext_internal_mini_page:` and `__enumext_mini_env*`.)

12.8 Compatibility with hyperref and footnotehyper

First we define the necessary rules using “hooks” to determine if the `hyperref` package is loaded.

```
378 \hook_gput_code:nnn { begindocument } { enumext } { \__enumext_after_hyperref: }
379 \hook_gset_rule:nnnn { begindocument } { enumext } { after } { hyperref }
```

```
\__enumext_after_hyperref:
__enumext_hypertarget:nn
__enumext_phantomsection:
```

The function `__enumext_after_hyperref:` sets the state of the boolean variable `\l__enumext_hyprerref_bool` to “true” if the package is loaded. At this point we will use the public macro `\IfHyperBoolean` to determine if the `hyperfootnotes=true` key is present, if so, we set the state of the boolean variable `__enumext_footnotes_key_bool` to “true”.

```
380 \cs_new_protected:Nn \__enumext_after_hyperref:
381 {
382   \IfPackageLoadedTF { hyperref }
383   {
384     \msg_info:nnn { enumext } { package-load } { hyperref }
385     \bool_set_true:N \l__enumext_hyprerref_bool
386     \IfHyperBoolean{hyperfootnotes}
387     {
388       \typeout{hyperfootnotes=true}
389       \bool_set_true:N \l__enumext_footnotes_key_bool
390     }
391     { \typeout{hyperfootnotes=false} }
392   }
393   { }
```

If the state of the variable `\l__enumext_footnotes_key_bool` is true we will check if the package `footnotehyper` is loaded, in case it is not present, we will set the value of `\l__enumext_footnotes_key_bool` to false and we will redefine `\footnote`.

```
394 \bool_if:NT \l__enumext_footnotes_key_bool
395 {
396   \IfPackageLoadedTF { footnotehyper }
397   {
398     \msg_info:nnn { enumext } { package-load } { footnotehyper }
399   }
400   {
401     \typeout{No ~ footnotehyper ~ load}
402     \typeout{Load ~ and ~ use ~ \string\makesavenoteenv{enumext*}}
403     \bool_set_false:N \l__enumext_footnotes_key_bool
404   }
405 }
```

The functions `__enumext_hypertarget:nn` and `__enumext_phantomsection:` correspond to the internal copies of `\hypertarget` and `\phantomsection`. If the boolean variable `\l__enumext_hyperref_bool` is false the functions `__enumext_hypertarget:nn` and `__enumext_phantomsection:` will be disabled.

```

406 \bool_if:NTF \l__enumext_hyperref_bool
407 {
408   \cs_new_eq:NN \__enumext_hypertarget:nn \hypertarget
409   \cs_new_eq:NN \__enumext_phantomsection: \phantomsection
410 }
411 {
412   \cs_new_eq:NN \__enumext_hypertarget:nn \use_none:nn
413   \cs_new_eq:NN \__enumext_phantomsection: \prg_do_nothing:
414 }
415 }

```

(End of definition for `__enumext_after_hyperref:`, `__enumext_hypertarget:nn`, and `__enumext_phantomsection:`.)

`__enumext_newlabel:nn` The function `__enumext_newlabel:nn` write the information to the `.aux` file when using the `save-ref` key. The arguments taken by the function are:
 #1: `\l__enumext_newlabel_arg_one_tl`
 #2: `\l__enumext_newlabel_arg_two_tl`

🔗 The trick here is to manage the number of arguments passed to `\newlabel{#1}{#2}` according to the presence of the `hyperref` package.

```

416 \cs_new_protected:Npn \__enumext_newlabel:nn #1 #2
417 {
418   \protected@write \@auxout { }
419   {
420     \token_to_str:N \newlabel {#1}
421     {
422       {#2}
423       \bool_if:NT \l__enumext_hyperref_bool
424       { { \thepage } {#2} {#1} }
425       { }
426     }
427   }
428   \__enumext_hypertarget:nn {#1} { }
429   \__enumext_phantomsection:
430 }

```

(End of definition for `__enumext_newlabel:nn`.)

12.9 Definition of public dimension

The package `enumext` only provides a single public dimension `\itemwidth` and is intended for user convenience only and is not for internal use as such. This dimension is set in all environments and is only used by the `wrap-ans` key at its default value.

```

431 \dim_zero_new:N \itemwidth

```

12.10 Definition of counters

`__enumext_define_counters:Nn` To create the necessary “counters” we must first make sure that they are not already defined by the user or a package such as `enumitem`, otherwise a error will be returned and the package loading will be aborted. The arguments taken by the function are:

#1: A token list `\l__enumext_counter_X_tl` for “store” the counter’s name.
 #2: The counter’s name.

```

432 \cs_new_protected:Npn \__enumext_define_counters:Nn #1 #2
433 {
434   \cs_if_exist:cTF { c@ #2 }
435   { \msg_fatal:nnn { enumext } { counters } { #2 } }
436   {
437     \tl_set:Nn #1 { #2 }
438     \newcounter { #2 }
439   }
440 }

```

(End of definition for `__enumext_define_counters:Nn`.)

enumXi The counters created here are enumXi, enumXii, enumXiii and enumXiv for enumext environment,
enumXii enumXv for keyans environment, enumXvi for keyanspic environment, enumXvii for enumext* and
enumXiii enumXviii for the keyans* environments.

```

enumXiiv 441 \__enumext_define_counters:Nn \__enumext_counter_i_tl { enumXi }
enumXv 442 \__enumext_define_counters:Nn \__enumext_counter_ii_tl { enumXii }
enumXvi 443 \__enumext_define_counters:Nn \__enumext_counter_iii_tl { enumXiii }
enumXvii 444 \__enumext_define_counters:Nn \__enumext_counter_iv_tl { enumXiv }
enumXviii 445 \__enumext_define_counters:Nn \__enumext_counter_v_tl { enumXv }
446 \__enumext_define_counters:Nn \__enumext_counter_vi_tl { enumXvi }
447 \__enumext_define_counters:Nn \__enumext_counter_vii_tl { enumXvii }
448 \__enumext_define_counters:Nn \__enumext_counter_viii_tl { enumXviii }

```

(End of definition for enumXi and others.)

12.11 Definition of labels

This part of the code is inspired by the `enumitem` package. The idea is to be able to access the counters using `\arabic*`, `\Alph*`, `\alph*`, `\Roman*` and `\roman*` to use them in the `label` key.

__enumext_register_counter_style:Nn

These *⟨counters⟩* will be used as default *⟨labels⟩* if the `label` key is not used for the different levels of the `enumext` environment and the `keyans` environment, so it is necessary to get a default value for `labelwidth` from these *⟨labels⟩* at the same time.

```

449 \cs_new_protected:Npn \__enumext_register_counter_style:Nn #1 #2
450 {
451   \tl_const:cn { c__enumext_widest_ \cs_to_str:N #1 _tl } {#2}
452   \tl_gput_right:Nn \g__enumext_counter_styles_tl {#1}
453 }
454 \__enumext_register_counter_style:Nn \arabic { 0 }
455 \__enumext_register_counter_style:Nn \Alph { M }
456 \__enumext_register_counter_style:Nn \alph { m }
457 \__enumext_register_counter_style:Nn \Roman { VIII }
458 \__enumext_register_counter_style:Nn \roman { viii }

```

(End of definition for __enumext_register_counter_style:Nn.)

__enumext_label_width_by_box:Nn

__enumext_label_width_by_box:cv

The function `__enumext_label_width_by_box:Nn` set the default `\labelwidth` using a box width if no `labelwidth` key is passed.

```

459 \cs_new_protected:Npn \__enumext_label_width_by_box:Nn #1 #2
460 {
461   \hbox_set:Nn \l__enumext_label_width_by_box {#2}
462   \dim_set:Nn #1 { \box_wd:N \l__enumext_label_width_by_box }
463 }
464 \cs_generate_variant:Nn \__enumext_label_width_by_box:Nn { cv }

```

(End of definition for __enumext_label_width_by_box:Nn.)

__enumext_label_style:Nnn

__enumext_label_style:cvn

The function `__enumext_label_style:Nnn` is used by the `label` key to creates the variables containing the *⟨label style⟩* and will allow to use `\arabic*`, `\Alph*`, `\alph*`, `\Roman*` and `\roman*` as arguments. It loops through the defined counter styles in `\g__enumext_counter_styles_tl` (`\arabic`, `\alph`, `\Alph`, `\roman`, and `\Roman`) for example, looking for `\roman*` and replacing that by `\roman{⟨counter⟩}`, and doing the same for the `\g__enumext_widest_label_tl` to keep both in sync.

```

465 \cs_new_protected:Npn \__enumext_label_style:Nnn #1 #2 #3
466 {
467   \tl_clear_new:N #1
468   \tl_put_right:Ne #1 { \tl_trim_spaces:n {#3} }
469   \tl_gset_eq:NN \g__enumext_widest_label_tl #1
470   \tl_map_inline:Nn \g__enumext_counter_styles_tl
471   {
472     \tl_replace_all:Nne #1 { ##1* } { \exp_not:N ##1 {#2} }
473     \tl_greplace_all:Nne \g__enumext_widest_label_tl { ##1* }
474     { \tl_use:c { c__enumext_widest_ \cs_to_str:N ##1 _tl } }
475   }
476   \__enumext_label_width_by_box:Nn \l__enumext_current_widest_dim
477   { \tl_use:N \g__enumext_widest_label_tl }
478   \tl_set_eq:cN { the #2 } #1
479 }
480 \cs_generate_variant:Nn \__enumext_label_style:Nnn { cvn }

```

(End of definition for __enumext_label_style:Nnn.)

12.12 Setting keys associated with label

font Definition of keys `font`, `labelsep`, `labelwidth`, `wrap-label` and `wrap-label*` keys for `enumext` and `keyans` environments.

```

481 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
482 {
483   \keys_define:nn { enumext / #1 }
484   {
485     font .tl_set:c = { l__enumext_label_font_style_#2_tl },
486     font .value_required:n = true,
487     labelsep .dim_set:c = { l__enumext_labelsep_#2_dim },
488     labelsep .initial:n = {0.3333em},
489     labelsep .value_required:n = true,
490     labelwidth .dim_set:c = { l__enumext_labelwidth_#2_dim },
491     labelwidth .value_required:n = true,
492     wrap-label .cs_set_protected:cp = { __enumext_wrapper_label_#2:n } ##1,
493     wrap-label .initial:n = {##1},
494     wrap-label .value_required:n = true,
495     wrap-label* .code:n = {
496       \bool_set_true:c { l__enumext_wrap_label_opt_#2_bool }
497       \keys_set:nn { enumext / #1 } { wrap-label = {##1} }
498     },
499     wrap-label* .value_required:n = true,
500   }
501 }
502 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(End of definition for `font` and others.)

- In this point, the following are set `__enumext_wrapper_label_X:n` which will be used by `__enumext_make_label:` for the different levels of the `enumext` environment and is set to `__enumext_wrapper_label_v:n` which will be used by `__enumext_keyans_make_label:` for `keyans` and `keyanspic` environments.

`align` The `align` key is implemented differently for “starred” and “non starred” environments.

```

503 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
504 {
505   \keys_define:nn { enumext / #1 }
506   {
507     align .choice:,
508     align / left .code:n =
509       {
510         \tl_clear:c { l__enumext_label_fill_left_#2_tl }
511         \tl_set:cn { l__enumext_label_fill_right_#2_tl } { \hfill }
512       },
513     align / right .code:n =
514       {
515         \tl_set:cn { l__enumext_label_fill_left_#2_tl } { \hfill }

521         \tl_set:cn { l__enumext_label_fill_right_#2_tl } { \hfill }
522       },
523     align / unknown .code:n =
524       \msg_error:nneee { enumext } { unknown-choice }
525       { align } { left, ~ right, ~ center } { \exp_not:n {##1} },
526     align .initial:n = left,
527     align .value_required:n = true,
528   }
529 }
530 \clist_map_inline:nn
531 {
532   {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {keyans}{v}
533 }
534 { \__enumext_tmp:nn #1 }

535 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
536 {
537   \keys_define:nn { enumext / #1 }
538   {
539     align .choice:,
```

```

540 align / left .code:n = \str_set:cn { l__enumext_align_label_#2_str } { l },
541 align / right .code:n = \str_set:cn { l__enumext_align_label_#2_str } { r },
542 align / center .code:n = \str_set:cn { l__enumext_align_label_#2_str } { c },
543 align / unknown .code:n =
544     \msg_error:nneee { enumext } { unknown-choice }
545     { align } { left, ~ right, ~ center } { \exp_not:n {##1} },
546 align .initial:n = left,
547 align .value_required:n = true,
548 }
549 }
550 \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }

```

(End of definition for align.)

12.13 Setting label and ref keys

The implementation of the keys `label` and `ref` are part of the core of the package `enumext`, here the default values for `\label`, the value of the variables `\l__enumext_label_X_tl`, the default values for `\labelwidth` and the “label and ref” system.

12.13.1 Define and set label and ref keys for enumext environment

Here we set the default *labels* of the *four levels* of `enumext` environment, along with the default value for `labelwidth` key and `ref` key.

```

label \l__enumext_label_i_tl 551 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
ref   \l__enumext_label_ii_tl 552 {
\l__enumext_label_iii_tl 553     \keys_define:nn { enumext / #1 }
\l__enumext_label_iv_tl 554     {
555         label .code:n = {
556             \__enumext_label_style:cnv { l__enumext_label_#2_tl }
557             { l__enumext_counter_#2_tl } {##1}
558             \dim_set_eq:cN { l__enumext_labelwidth_#2_dim }
559             \l__enumext_current_widest_dim
560         },
561         label .initial:n = #3,
562         label .value_required:n = true,
563         ref .code:n = \__enumext_standar_ref:n {##1},
564         ref .value_required:n = true,
565     }
566 }
567 \__enumext_tmp:nnn { level-1 } { i } { \arabic*. }
568 \__enumext_tmp:nnn { level-2 } { ii } { (\alph*. ) }
569 \__enumext_tmp:nnn { level-3 } { iii } { \roman*. }
570 \__enumext_tmp:nnn { level-4 } { iv } { \Alph*. }

```

(End of definition for label and others.)

The `__enumext_standar_ref:n` first we will pass the key argument to `\l__enumext_ref_key_arg_tl` and we will analyze its state, if it is not *empty* we will make a copy of the current counter in `\l__enumext_ref_the_count_tl` and we will execute the function `__enumext_regex_counter_style:` which will return the modified `\l__enumext_ref_key_arg_tl` and we make the value of `\l__enumext_ref_the_count_tl` the same as that `\l__enumext_the_counter_X_tl` which contains `\theenumX` and finally we set `\l__enumext_renew_the_count_X_tl` with the renewed command.

```

571 \cs_new_protected:Npn \__enumext_standar_ref:n #1
572 {
573     \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
574     \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
575     {
576         \msg_error:nnn { enumext } { key-ref-empty } { enumext }
577     }
578     {
579         \tl_set_eq:Nc
580         \l__enumext_ref_the_count_tl { l__enumext_counter_ \__enumext_level: _tl }
581         \__enumext_regex_counter_style:
582         \tl_set_eq:Nc
583         \l__enumext_ref_the_count_tl { l__enumext_the_counter_ \__enumext_level: _tl }
584         \tl_put_right:ce { l__enumext_renew_the_count_ \__enumext_level: _tl }
585         {
586             \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl }
587             { \exp_not:V \l__enumext_ref_key_arg_tl }
588         }
589     }
590 }

```

Finally the function `__enumext_standar_ref:` will execute the modification for the reference system in the second argument of the environment definition `enumext`.

```

591 \cs_new_protected:Nn \__enumext_standar_ref:
592 {
593   \tl_if_empty:cF { \__enumext_renew_the_count_ \__enumext_level: _tl }
594   {
595     \tl_use:c { \__enumext_renew_the_count_ \__enumext_level: _tl }
596   }
597 }

```

(End of definition for `__enumext_standar_ref:n` and `__enumext_standar_ref:`.)

12.13.2 Define and set label and ref keys for enumext* and keyans* environments

Here we set the default *labels* for `enumext*` and `keyans*` environments, along with the default value for `labelwidth` key and `ref` key.

```

\l__enumext_label_vii_tl
\l__enumext_label_viii_tl
598 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
599 {
600   \keys_define:nn { enumext / #1 }
601   {
602     label .code:n = {
603       \__enumext_label_style:cvn { \__enumext_label_#2_tl }
604       { \__enumext_counter_#2_tl } {##1}
605       \dim_set_eq:cN { \__enumext_labelwidth_#2_dim }
606       \__enumext_current_widest_dim
607     },
608     label .initial:n = #3,
609     label .value_required:n = true,
610     ref .code:n = \__enumext_starred_ref:n {##1},
611     ref .value_required:n = true,
612   }
613 }
614 \__enumext_tmp:nnn { enumext* } { vii } { \arabic*.}
615 \__enumext_tmp:nnn { keyans* } { viii } { \Alph*.}

```

(End of definition for `label` and others.)

The implementation of `__enumext_starred_ref:n` is the same as that used for the environment `enumext`.

```

616 \cs_new_protected:Npn \__enumext_starred_ref:n #1
617 {
618   \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
619   \int_compare:nNnT { \l__enumext_level_h_int } = { 1 }
620   {

668         }
669     }
670 }

```

(End of definition for `__enumext_starred_ref:n` and `__enumext_starred_ref:`.)

12.13.3 Define and set label and ref keys for keyans and keyanspic environments

Here we set the default `<label>` for `keyans` and `keyanspic` environment, along with the default value for `labelwidth` and `ref` key. The `keyanspic` environment use the same `<label>` as the `keyans` environment.

```

\l__enumext_label_v_tl
\l__enumext_label_vi_tl
671 \keys_define:nn { enumext / keyans }
672 {
673     label .code:n = {
674         \__enumext_label_style:cnv { \l__enumext_label_v_tl }
675         { \l__enumext_counter_v_tl } {#1}
676         \dim_set_eq:cN { \l__enumext_labelwidth_v_dim }
677         \l__enumext_current_widest_dim
678         \__enumext_label_style:cnv { \l__enumext_label_vi_tl }
679         { \l__enumext_counter_vi_tl } {#1}
680         \dim_set_eq:cN { \l__enumext_labelwidth_v_dim }
681         \l__enumext_current_widest_dim
682     },
683     label .initial:n = \Alph*,
684     label .value_required:n = true,
685     ref .code:n = \__enumext_keyans_ref:n {#1},
686     ref .value_required:n = true,
687 }

```

(End of definition for `label` and others.)

The implementation of `__enumext_keyans_ref:n` is the same as that used for the environment `enumext`.

```

688 \cs_new_protected:Npn \__enumext_keyans_ref:n #1
689 {
690     \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
691     \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
692     {
693         \msg_error:nnn { enumext } { key-ref-empty } { keyans }
694     }
695     {
696         \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_counter_v_tl
697         \__enumext_regex_counter_style:
698         \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_v_tl
699         \tl_put_right:Ne \l__enumext_renew_the_count_v_tl
700         {
701             \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl }
702             { \exp_not:V \l__enumext_ref_key_arg_tl }
703         }
704     }
705 }

```

Finally the function `__enumext_keyans_ref:` will execute the modification for the reference system in the second argument of the `keyans*` environment definition.

```

706 \cs_new_protected:Nn \__enumext_keyans_ref:
707 {
708   \tl_if_empty:NF \__enumext_renew_the_count_v_tl
709   {
710     \tl_use:N \__enumext_renew_the_count_v_tl
711   }
712 }
```

(End of definition for `__enumext_keyans_ref:n` and `__enumext_keyans_ref:.`)

12.14 Setting start, start* and widest keys

```

\__enumext_start_from:NNn
\__enumext_start_from:ccn
\__enumext_start_from:cce
```

The function `__enumext_start_from:NNn` used by `start` and `start*` keys take three arguments:

```

#1: \__enumext_label_X_tl
#2: \__enumext_start_X_int
#3: <integer or string>
```

The first argument of this function are the “counter style” set by `label` key, the second argument is returned by the function, the third argument can be an *<integer>* or *<string>* of the form `\Alph`, `\alph`, `\Roman` or `\roman`. This effectively allows `start=A` or `start=1` to be used.

```

713 \cs_new_protected:Npn \__enumext_start_from:NNn #1 #2 #3
714 {
715   \__enumext_if_is_int:nTF { #3 }
716   {
717     \int_set:Nn #2 {#3}
718   }
719   {
720     \regex_match:nVT { \c{Alph} | \c{alph} } {#1}
721     { \int_set:Nn #2 { \int_from_alph:n {#3} } }
722     \regex_match:nVT { \c{Roman} | \c{roman} } {#1}
723     { \int_set:Nn #2 { \int_from_roman:n {#3} } }
724   }
725 }
726 \cs_generate_variant:Nn \__enumext_start_from:NNn { ccn, cce }
```

(End of definition for `__enumext_start_from:NNn.`)

```

\__enumext_widest_from:nNNn
\__enumext_widest_from:nccn
```

The function `__enumext_widest_from:nNNn` used by the `widest` key take four arguments:

```

#1: The counter associated with the environment level
#2: \__enumext_label_X_tl
#3: \__enumext_labelwidth_X_dim
#4: <integer or string>
```

The second and third arguments of this function are the values set by `label` and `labelwidth` keys, the four argument can be an *<integer>* or *<string>* of the form `\Alph`, `\alph`, `\Roman` or `\roman`. The value of the four argument is set temporarily for the identified counter in this point (level), then the value is expanded into a “box” and the “width” of the “box” is returned.

```

727 \cs_new_protected:Npn \__enumext_widest_from:nNNn #1 #2 #3 #4
728 {
729   \__enumext_if_is_int:nTF {#4}
730   {
731     \setcounter{enumX#1} { #4 }
732   }
733   {
734     \regex_match:nVT { \c{Alph} | \c{alph} } {#2}
735     { \setcounter{enumX#1} { \int_from_alph:n {#4} } }
736     \regex_match:nVT { \c{Roman} | \c{roman} } {#2}
737     { \setcounter{enumX#1} { \int_from_roman:n {#4} } }
738   }
739   \__enumext_label_width_by_box:cv
740   { \__enumext_labelwidth_#1_dim } { \__enumext_label_#1_tl }
741 }
742 \cs_generate_variant:Nn \__enumext_widest_from:nNNn { nccn }
```

(End of definition for `__enumext_widest_from:nNNn.`)

Now define and set `start`, `start*` and `widest` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```

widest
743 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
744 {
```

```

745 \keys_define:nn { enumext / #1 }
746 {
747   start .code:n = {
748     \__enumext_start_from:ccn
749     { l__enumext_label_#2_tl }
750     { l__enumext_start_#2_int } {##1}
751   },
752   start .initial:n = 1,
753   start .value_required:n = true,
754   start* .code:n = {
755     \__enumext_start_from:cce
756     { l__enumext_label_#2_tl }
757     { l__enumext_start_#2_int } { \int_eval:n {##1} }
758   },
759   start* .value_required:n = true,
760   widest .code:n = {
761     \__enumext_widest_from:nccn {#2}
762     { l__enumext_label_#2_tl }
763     { l__enumext_labelwidth_#2_dim } {##1}
764   },
765   widest .value_required:n = true,
766 }
767 }
768 \clist_map_inline:Nn \__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for `start`, `start*`, and `widest`.)

12.15 Setting keys for vertical spaces

Define and set `topsep`, `partopsep`, `parsep`, `itemsep`, `noitemsep` and `nosep` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```

topsep 769 \cs_set_protected:Npn \__enumext_tmp:nnnnnn #1 #2 #3 #4 #5 #6
partopsep 770 {
parsep 771   \keys_define:nn { enumext / #1 }
noitemsep 772   {
nosep 773     topsep .skip_set:c = { l__enumext_topsep_#2_skip },
774     topsep .initial:n = {#3},
775     topsep .value_required:n = true,
776     partopsep .skip_set:c = { l__enumext_partopsep_#2_skip },
777     partopsep .initial:n = {#4},
778     partopsep .value_required:n = true,
779     parsep .skip_set:c = { l__enumext_parsep_#2_skip },
780     parsep .initial:n = {#5},
781     parsep .value_required:n = true,
782     itemsep .skip_set:c = { l__enumext_itemsep_#2_skip },
783     itemsep .initial:n = {#6},
784     itemsep .value_required:n = true,
785     noitemsep .meta:n = { itemsep = 0pt, parsep = 0pt },
786     noitemsep .value_forbidden:n = true,
787     nosep .meta:n = {
788       itemsep = 0pt, parsep = 0pt,
789       topsep = 0pt, partopsep = 0pt,
790     },
791     nosep .value_forbidden:n = true,
792   }
793 }

```

Now we set the values based on standard `article` class in `10pt`.

```

794 \__enumext_tmp:nnnnnn { level-1 } { i } { 8.0pt plus 2.0pt minus 4.0pt }
795 { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
796 { 4.0pt plus 2.0pt minus 1.0pt }
797 \__enumext_tmp:nnnnnn { level-2 } { ii } { 4.0pt plus 2.0pt minus 1.0pt }
798 { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
799 { 2.0pt plus 1.0pt minus 1.0pt }
800 \__enumext_tmp:nnnnnn { level-3 } { iii } { 2.0pt plus 1.0pt minus 1.0pt }
801 { 1.0pt minus 1.0pt } { 0pt } { 2.0pt plus 1.0pt minus 1.0pt }
802 \__enumext_tmp:nnnnnn { level-4 } { iv } { 2.0pt plus 1.0pt minus 1.0pt }
803 { 1.0pt minus 1.0pt } { 0pt } { 2.0pt plus 1.0pt minus 1.0pt }
804 \__enumext_tmp:nnnnnn { keyans } { v } { 4.0pt plus 2.0pt minus 1.0pt }
805 { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
806 { 2.0pt plus 1.0pt minus 1.0pt }
807 \__enumext_tmp:nnnnnn { enumext* } { vii } { 8.0pt plus 2.0pt minus 4.0pt }

```

```

808 { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
809 { 4.0pt plus 2.0pt minus 1.0pt }
810 \__enumext_tmp:nnnnnn { keyans* } { viii } { 4.0pt plus 2.0pt minus 1.0pt }
811 { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
812 { 2.0pt plus 1.0pt minus 1.0pt }

```

(End of definition for `topsep` and others.)

12.16 Setting base-fix key

When nesting starting right after `\item` (without material between them) there is a problem with the alignment of the baseline between the two environments. One way to get around this problem is to place `\mode_leave_vertical:` and then apply `\vspace{-\baselineskip}` and set `topsep=0pt` for the “first level” of the nested `enumext` or `enumext*` environments.

```

base-fix
\__enumext_nested_base_line_fix:
813 \cs_set_protected:Npn \__enumext_tmp:n #1
814 {
815   \keys_define:nn { enumext / #1 }
816   {
817     base-fix .bool_set:N = \__enumext_base_line_fix_bool,
818     base-fix .initial:n = false,
819     base-fix .value_forbidden:n = true,
820   }
821 }
822 \clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }

```

The function `__enumext_nested_base_line_fix:` will be in charge of applying the baseline correction and adjusting the `\keys`. This function is passed to the function `__enumext_parse_keys:n` in the `enumext` environment definition (§12.38) and to the function `__enumext_parse_keys_vii:n` in the `enumext*` environment definition (§12.43)

```

823 \cs_new_protected:Nn \__enumext_nested_base_line_fix:
824 {
825   \bool_lazy_and:nnT
826   { \bool_if_p:N \__enumext_standar_first_bool }
827   { \bool_if_p:N \__enumext_base_line_fix_bool }
828   {
829     \mode_leave_vertical:
830     \vspace { -\baselineskip }
831     \keys_set:nn { enumext / level-1 }
832     {
833       topsep = 0pt, above = 0pt, above* = 0pt,
834     }
835   }
836   \bool_lazy_and:nnT
837   { \bool_if_p:N \__enumext_starred_first_bool }
838   { \bool_if_p:N \__enumext_base_line_fix_bool }
839   {
840     \mode_leave_vertical:
841     \vspace { -\baselineskip }
842     \keys_set:nn { enumext / enumext* }
843     {
844       topsep = 0pt, above = 0pt, above* = 0pt,
845     }
846   }
847   \bool_set_false:N \__enumext_base_line_fix_bool
848 }

```

👉 This key is enabled by default in the command `\printkeyans` (§12.46).

(End of definition for `base-fix` and `__enumext_nested_base_line_fix:`.)

12.17 Setting keys for horizontal spaces

Define and set `itemindent`, `rightmargin`, `listparindent`, `list-offset` and `list-indent` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```

849 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
850 {
851   \keys_define:nn { enumext / #1 }
852   {
853     itemindent .dim_set:c = { \__enumext_fake_item_indent_#2_dim },
854     itemindent .value_required:n = true,
855     rightmargin .dim_set:c = { \__enumext_rightmargin_#2_dim },

```

```

856     rightmargin .value_required:n = true,
857     listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
858     listparindent .value_required:n = true,
859     list-offset .dim_set:c = { l__enumext_listoffset_#2_dim },
860     list-offset .value_required:n = true,
861     list-indent .code:n =
862         \bool_set_true:c { l__enumext_leftmargin_tmp_#2_bool }
863         \dim_set:cn { l__enumext_leftmargin_tmp_#2_dim } {##1},
864     list-indent .value_required:n = true,
865 }
866 }
867 \clist_map_inline:nn
868 {
869     {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {keyans}{v}
870 }
871 { \__enumext_tmp:nn #1 }

```

(End of definition for *itemindent* and others.)

For `enumext*` and `keyans*` environments the situation is a bit different, the `list-indent` key behaves like the `list-offset` key.

```

872 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
873 {
874     \keys_define:nn { enumext / #1 }
875     {
876         itemindent .dim_set:c = { l__enumext_fake_item_indent_#2_dim },
877         itemindent .value_required:n = true,
878         rightmargin .dim_set:c = { l__enumext_rightmargin_#2_dim },
879         rightmargin .value_required:n = true,
880         listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
881         listparindent .value_required:n = true,
882         list-offset .dim_set:c = { l__enumext_listoffset_#2_dim },
883         list-offset .value_required:n = true,
884         list-indent .meta:n = { list-offset = ##1 },
885         list-indent .value_required:n = true,
886     }
887 }
888 \clist_map_inline:nn
889 {
890     {enumext*}{vii}, {keyans*}{viii}
891 }
892 { \__enumext_tmp:nn #1 }

```

12.17.1 Functions for setting the fake `itemindent`

The `itemindent` key does not set the value of `\itemindent`, it only sets the value of the *horizontal space* applied using `\skip_horizontal:N`. We will store this value in the variable and only apply it when it is greater than `\opt`. Here I will need to place `\mode_leave_vertical:` and the plain \TeX macro `\ignorespaces` to avoid unwanted extra space when using the `itemindent` key.

```

893 \cs_set_protected:Nn \__enumext_fake_item:
894 {
895     \dim_compare:nNnT
896     { \dim_use:c { l__enumext_fake_item_indent_ \__enumext_level: _dim } }
897     >
898     { \c_zero_dim }
899     {

944 }

```

(End of definition for `__enumext_fake_item:` and others.)

12.18 Setting show-length key

Define and set `show-length` key for `enumext`, `enumext*`, `keyans` and `keyans*` environments. The function sets the boolean variable `\l__enumext_show_length_X_bool` used in the definition of all environments to “true” and calls the function `__enumext_show_length:nnn` which prints all the values of the “vertical” and “horizontal” parameters calculated and used.

```

945 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
946 {
947     \keys_define:nn { enumext / #1 }
948     {
949         show-length .bool_set:c = { \l__enumext_show_length_#2_bool },
950         show-length .initial:n = false,
951     }
952 }
953 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for `show-length`.)

12.19 Setting before, after and first keys

Define and set `before`, `before*`, `after` and `first` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```

before
before*
after
first
954 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
955 {
956     \keys_define:nn { enumext / #1 }
957     {
958         before .tl_set:c = { \l__enumext_before_no_starred_key_#2_tl },
959         before .value_required:n = true,
960         before* .tl_set:c = { \l__enumext_before_starred_key_#2_tl },
961         before* .value_required:n = true,
962         after .tl_set:c = { \l__enumext_after_stop_list_#2_tl },
963         after .value_required:n = true,
964         first .tl_set:c = { \l__enumext_after_list_args_#2_tl },
965         first .value_required:n = true,
966     }
967 }
968 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for `before` and others.)

12.19.1 Functions for before, after and first keys in enumext

`__enumext_before_args_exec:` The function `__enumext_before_args_exec:` executes the `{⟨code⟩}` set by the `before*` key “before” the `enumext` environment is started. The `{⟨code⟩}` is executed “without” knowing any definition of the `{⟨arg two⟩}` of the list: `{⟨code⟩}\list{⟨arg one⟩}{⟨arg two⟩}`.

```
969 \cs_new_protected:Nn \__enumext_before_args_exec:
970 {
971     \tl_use:c { l__enumext_before_starred_key_ \__enumext_level: _tl }
972 }
```

The function `__enumext_before_keys_exec:` executes the `{⟨code⟩}` set by the `before` key “before” the `enumext` environment is started in *second argument* of the list. The `{⟨code⟩}` is executed “knowing” all definition and values provides by `⟨keys⟩: \list{⟨arg one⟩}{⟨arg two⟩}{⟨code⟩}`

```
973 \cs_new_protected:Nn \__enumext_before_keys_exec:
974 {
975     \tl_use:c { l__enumext_before_no_starred_key_ \__enumext_level: _tl }
976 }
```

The function `__enumext_after_stop_list:` executes the `{⟨code⟩}` set by the `after` key “after” the `enumext` environment has finished: `\endlist{⟨code⟩}`.

```
977 \cs_new_protected:Nn \__enumext_after_stop_list:
978 {
979     \tl_use:c { l__enumext_after_stop_list_ \__enumext_level: _tl }
980 }
```

The function `__enumext_after_args_exec:` executes the `{⟨code⟩}` set by the `first` key after the end of the second argument of the list defining the `enumext` environment, just before the first occurrence of `\item: \list{⟨arg one⟩}{⟨arg two⟩}{⟨code⟩}\item.`

```
981 \cs_new_protected:Nn \__enumext_after_args_exec:
982 {
983     \tl_use:c { l__enumext_after_list_args_ \__enumext_level: _tl }
984 }
```

(End of definition for `__enumext_before_args_exec:` and others.)

12.19.2 Functions for before, after and first keys in keyans

Same implementation as the one used in the `enumext` environment.

```
\__enumext_before_args_exec_v:
\__enumext_before_keys_exec_v:
\__enumext_after_stop_list_v:
\__enumext_after_args_exec_v:
985 \cs_new_protected:Nn \__enumext_before_args_exec_v:
986 {
987     \tl_use:N \l__enumext_before_starred_key_v_tl
988 }
989 \cs_new_protected:Nn \__enumext_before_keys_exec_v:
990 {
991     \tl_use:N \l__enumext_before_no_starred_key_v_tl
992 }
993 \cs_new_protected:Nn \__enumext_after_stop_list_v:
994 {
995     \tl_use:N \l__enumext_after_stop_list_v_tl
996 }
997 \cs_new_protected:Nn \__enumext_after_args_exec_v:
998 {

1000 }
```

(End of definition for `__enumext_before_args_exec_v:` and others.)

12.19.3 Functions for before, after and first keys in enumext* and keyans*

Same implementation as the one used in the `enumext` environment.

```
\__enumext_before_args_exec_vii:
\__enumext_before_keys_exec_vii:
\__enumext_after_stop_list_vii:
\__enumext_after_args_exec_vii:
1001 \cs_new_protected:Nn \__enumext_before_args_exec_vii:
1002 {
1003     \tl_use:N \l__enumext_before_starred_key_vii_tl
1004 }
1005 \cs_new_protected:Nn \__enumext_before_args_exec_viii:
1006 {
1007     \tl_use:N \l__enumext_before_starred_key_viii_tl
1008 }
1009 \cs_new_protected:Nn \__enumext_before_keys_exec_vii:
1010 {
1011     \tl_use:N \l__enumext_before_no_starred_key_vii_tl
1012 }
1013 \cs_new_protected:Nn \__enumext_before_keys_exec_viii:
1014 {
```

```

1015     \tl_use:N \l__enumext_before_no_starred_key_viii_tl
1016   }
1017 \cs_new_protected:Nn \__enumext_after_stop_list_vii:
1018 {
1019     \tl_use:N \l__enumext_after_stop_list_vii_tl
1020   }
1021 \cs_new_protected:Nn \__enumext_after_stop_list_viii:
1022 {
1023     \tl_use:N \l__enumext_after_stop_list_viii_tl
1024   }
1025 \cs_new_protected:Nn \__enumext_after_args_exec_vii:
1026 {
1027     \tl_use:N \l__enumext_after_list_args_vii_tl
1028   }
1029 \cs_new_protected:Nn \__enumext_after_args_exec_viii:
1030 {
1031     \tl_use:N \l__enumext_after_list_args_viii_tl
1032   }

```

(End of definition for `__enumext_before_args_exec_vii:` and others.)

12.20 Setting keys for multicols and minipage

The default value of the `columns-sep` key is handled by the state of the boolean variable `\l__enumext_columns_sep_X_bool` which is handled in the internal definition of the `enumext` and `keyans` environments. Define and set `mini-env`, `mini-sep`, `columns-sep` and `columns` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```

1033 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1034 {
1035     \keys_define:nn { enumext / #1 }
1036     {
1037         mini-env .dim_set:c = { l__enumext_minipage_right_#2_dim },
1038         mini-env .value_required:n = true,
1039         mini-sep .dim_set:c = { l__enumext_minipage_hsep_#2_dim },
1040         mini-sep .initial:n = 0.3333em,
1041         mini-sep .value_required:n = true,
1042         columns-sep .dim_set:c = { l__enumext_columns_sep_#2_dim },
1043         columns-sep .value_required:n = true,
1044         columns .int_set:c = { l__enumext_columns_#2_int },
1045         columns .initial:n = 1,
1046         columns .value_required:n = true,
1047     }
1048 }
1049 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

For `enumext*` and `keyans*` environments the situation is a bit different, the command `\miniright` is not available, so we will add the keys `mini-right` and `mini-right*` to implement support for `minipage` environment.

```

1050 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1051 {
1052     \keys_define:nn { enumext / #1 }
1053     {
1054         mini-right .tl_gset:c = { g__enumext_miniright_code_#2_tl },
1055         mini-right .value_required:n = true,
1056         mini-right* .code:n = {
1057             \bool_gset_true:c { g__enumext_minipage_center_#2_bool }
1058             \keys_set:nn { enumext / #1 } { mini-right = {##1} }
1059         },
1060         mini-right* .value_required:n = true,
1061     }
1062 }
1063 \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }

```

(End of definition for `mini-env` and others.)

12.21 Adjustment of vertical spaces for multicols

When nesting a “*list environment*” inside the `multicols` environment, the values of the “*vertical spaces*” are lost, basically the `multicols` environment takes control over them. Graphically it can be seen like in the figure 7.

To keep the desired spaces *above* and *below* in the “*list environment*” (`\topsep` + `[\partopsep]`) it is necessary to “*adjust*” the spaces added by the `multicols` environment. The most appropriate option in this case is to use a “*context sensitive*” vertical space with `\addvspace`.

Figure 7: Representation of the vertical space in `multicols` for a nested level.

I should make it clear that the implementation here is a “*bit questionable*”. At first glance doing `\multicolsep=\topsep` seemed right, but the results were not always as expected. An almost *imperceptible* detail is that in some cases the `\itemsep` values of are “*stretched*”, possibly due to the use of `\raggedcolumns` and this affects the lower space when closing the environment, which is “*smaller*” than expected. My attempts to find the correct values using `\showoutput` and `\showboxdepth` absolutely failed.

12.21.1 Adjustment of vertical spaces for multicols in enumext

`__enumext_multi_set_vskip:` The function `__enumext_multi_set_vskip:` will take care of determining the “*adjusted spaces*” that we will apply “*above*” and “*below*” the `multicols` environment in `enumext`.

We will set the default values taking into account that \TeX is in (*horizontal mode*), then we will make the settings for the (*vertical mode*) in which `\partopsep` comes into play.

Set the values of `\l__enumext_multicols_above_X_skip` and `\l__enumext_multicols_below_X_skip` equal to the value of `\topsep` in the *current level*.

```

1064 \cs_new_protected:Nn \__enumext_multi_set_vskip:
1065 {
1066   \skip_set:cn { \l__enumext_multicols_above_ \__enumext_level: } _skip {
1067     {
1068       \skip_use:c { \l__enumext_topsep_ \__enumext_level: } _skip {
1069         }
1070     }
1071   \skip_set:cn { \l__enumext_multicols_below_ \__enumext_level: } _skip {
1072     {
1073       \skip_use:c { \l__enumext_topsep_ \__enumext_level: } _skip {
1074         }
1075     }
1076   \__enumext_add_pre_parsep:
1077 }
```

(End of definition for `__enumext_multi_set_vskip:`)

`__enumext_add_pre_parsep:` The function `__enumext_add_pre_parsep:` “*adjusted*” the value of `\l__enumext_multicols_above_X_skip` detecting the value of `\parsep` from the previous level. This is necessary since `\parsep` from the previous level affects the *vertical spaces*.

```

1076 \cs_new_protected:Nn \__enumext_add_pre_parsep:
1077 {
1078   \int_case:nn { \l__enumext_level_int }
1079   {
1080     { 2 }{
1081       \skip_if_eq:nnF { \l__enumext_parsep_i_skip } { \c_zero_skip } {
1082         {
1083           \skip_add:Nn \l__enumext_multicols_above_ii_skip { \l__enumext_parsep_i_skip }
1084         }
1085       }
1086     { 3 }{
1087       \skip_if_eq:nnF { \l__enumext_parsep_ii_skip } { \c_zero_skip } {
1088         {
1089           \skip_add:Nn \l__enumext_multicols_above_iii_skip { \l__enumext_parsep_ii_skip }
1090         }

12.22 Adjustment of vertical spaces for minipage

When nesting a “list environment” within the `minipage` environment, the values of the “vertical spaces” are lost. Graphically it can be seen like in the figure 8.

Figure 8: Representation of the `minipage` spacing adjustment for a nested level.

Since we want to keep the “left” and “right” environments “aligned on top”, preserving the `\baselineskip` and keep the desired “spaces” (`\topsep` + `[\partopsep]`) it is necessary to “adjust” the “vertical spaces” for `minipage` environments.

Here there are several complications that we must circumvent, the `minipage` environment eliminates the “top” spaces, the `multicols` environment can be nested in the `minipage` environment, the “top” and “bottom” spaces are affected when `topsep=0pt` and to this is added the `\partopsep` parameter that comes into action according to whether \TeX is in *horizontal mode* or *vertical mode*. Depending on these cases, small adjustments must be made using `\vspace` and `\addvspace` to obtain the “desired vertical spacing”.

- Again I must make clear that the implementation here is a “bit questionable”, but hunting the spaces (glue) produced by the `minipage` environment is quite complicated, even more if `multicols` it is nested. The setting of the values was more “trial and error” (aprox to `\strutbox`), using the help of the `lua-visual-debug`[14] package, again my attempts to find the correct values using `\showoutput` and `\showboxdepth` absolutely failed.

12.22.1 Adjustment of vertical spaces for minipage in enumext

`__enumext_mini_set_vskip:`

The function `__enumext_mini_set_vskip:` will take care of determining the “adjust” spaces that we will apply “above” and “below” the `__enumext_mini_env*` environment in `enumext`.

We will set the default values taking into account that \TeX is in *horizontal mode*, then we will make the settings for the *vertical mode* in which `\partopsep` comes into play.

First determine if the `multicols` environment is active by comparing the value of the `\l__enumext_columns_X_int` variable handled by the `columns` key, according to this comparison we set the adjusted values for `\l__enumext_minipage_left_skip`, `\l__enumext_minipage_right_skip` and `\l__enumext_minipage_after_skip`.

```

1145 \cs_new_protected:Nn \__enumext_mini_set_vskip:
1146 {
1147     \int_compare:nNtF
1148     { \int_use:c { \l__enumext_columns_ \__enumext_level: _int } } > { 1 }
1149     {

```

If `multicols` environment is nested in `__enumext_mini_env*` environment, we will apply a correction factor to the *vertical spaces* taking into account the value of `\topsep` of the current level and the value of `\parsep` of the previous level, if these are zero we will use `\strutbox` as the basis for the calculations.

```

1150     \skip_if_eq:nnTF
1151     { \skip_use:c { \l__enumext_topsep_ \__enumext_level: _skip } } { \c_zero_skip }
1152     {
1153         \skip_set:Nn \l__enumext_minipage_left_skip
1154         {
1155             -0.150\box_dp:N \strutbox
1156         }
1157         \skip_set:Nn \l__enumext_minipage_right_skip
1158         {
1159             0.695\box_dp:N \strutbox
1160         }
1161         \skip_set:Nn \l__enumext_minipage_after_skip
1162         {
1163             \box_dp:N \strutbox
1164         }
1165         \__enumext_zero_parsep:
1166     }
1167     {
1168         \skip_set:Nn \l__enumext_minipage_left_skip
1169         {
1170             \skip_use:c { \l__enumext_topsep_ \__enumext_level: _skip }
1171         }
1172         \skip_set:Nn \l__enumext_minipage_right_skip
1173         {
1174             0.695\box_dp:N \strutbox
1175         }
1176         \skip_set:Nn \l__enumext_minipage_after_skip
1177         {
1178             1.85\box_dp:N \strutbox

(End of definition for __enumext_mini_set_vskip_vii: and __enumext_mini_set_vskip_viii:.)

__enumext_mini_addvspace_vii:
 __enumext_mini_addvspace_viii:

The functions __enumext_mini_addvspace_vii: and __enumext_mini_addvspace_viii: will apply the vertical space “only above” the `__enumext_mini_env*` environment on the *left side* when the `mini-right` key is active in the `enumext*` and `keyans*` environments.

Here we will NOT take into account whether \TeX is in $\langle horizontal\ mode \rangle$ or $\langle vertical\ mode \rangle$, since `\partopsep` is equal to `0pt` in both environments.

```

1397 \cs_new_protected:Nn \__enumext_mini_addvspace_vii:
1398 {
1399   \__enumext_mini_set_vskip_vii:
1400   \par\nopagebreak

1406   \par\nopagebreak
1407   \addvspace { \l__enumext_minipage_left_skip }
1408 }

```

(End of definition for __enumext_mini_addvspace_vii: and __enumext_mini_addvspace_viii:.)

12.22.4 The command \miniright

The command `\miniright` will close the `__enumext_mini_env*` environment on the “left side”, open the `__enumext_mini_env*` environment on the “right side” adding the *adjusted vertical space*. By default we will add `\centering` when starting the “right side” environment. The *starred argument* “*” inhibits the use of `\centering` command i.e. the usual \TeX justification is maintained in the `__enumext_mini_env*` on the “right side”.

`\miniright` First we will perform some checks to prevent the command from being executed outside the `enumext` environment or somewhere inappropriate then we will call the internal functions to execute it in the `enumext` and `keyans` environments.

```

1409 \NewDocumentCommand \miniright { s }
1410 {
1411   \int_compare:nNt { \l__enumext_keyans_pic_level_int } = { 1 }
1412   {
1413     \msg_error:nnn { enumext } { wrong-miniright-place }
1414   }
1415   % outside
1416   \bool_lazy_and:nnT
1417   { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
1418   { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
1419   {
1420     \msg_error:nnn { enumext } { wrong-miniright-place }
1421   }
1422   % starred env
1423   \bool_if:NT \l__enumext_starred_bool
1424   {
1425     \msg_error:nnn { enumext } { wrong-miniright-starred }
1426   }
1427   \int_compare:nNtF { \l__enumext_keyans_level_int } = { 1 }
1428   {
1429     \__enumext_keyans_mini_right_cmd:n {#1}
1430   }
1431   { \__enumext_mini_right_cmd:n {#1} }
1432 }

```

(End of definition for `\miniright`. This function is documented on page 10.)

`__enumext_mini_right_cmd:n`

The function `__enumext_mini_right_cmd:n` takes as argument the *starred* ‘*’ of the `\miniright` command in the `enumext` environment. We check if the `mini-env` key is active via the variable `\l__enumext_minipage_right_X_dim`, if so we close the `multicols` environment with the `__enumext__mini_env*` environment on the “left side”, then we open the `__enumext_mini_env*` environment on the “right side”, apply our adjusted “vertical spaces”, followed by adding the `\centering` command when the starred argument ‘*’ is not present and set zero `\g__enumext_minipage_stat_int`, otherwise we return an error.

```

1433 \cs_new_protected:Npn \__enumext_mini_right_cmd:n #1
1434 {
1435   \dim_compare:nNtF
1436   { \dim_use:c { \l__enumext_minipage_right_ \__enumext_level: _dim } } > { \c_zero_dim }
1437   {

1469     }
1470     \int_gzero:N \g__enumext_minipage_stat_int
1471 }
1472 { \msg_error:nnn { enumext } { wrong-miniright-use } }
1473 \RenewDocumentCommand \miniright { s }
1474 {
1475     \msg_error:nn { enumext } { many-miniright-used }
1476 }
1477 }

```

(End of definition for `__enumext_keyans_mini_right_cmd:n`.)

12.23 Setting above and below keys

While having controlled the *vertical spaces* within the `enumext` and `keyans` environments when using the `columns` or `mini-env` keys, sometimes the “vertical spaces above” or “vertical spaces below” the environments are not as expected and it is necessary to be able to apply a “fine correction” to these. As I have not been able to correct these *glitches*, the best option is to leave a couple of *keys* dedicated to this purpose, in this case it is best to use `\vspace` or `\vspace*` when convenient.

Define `above`, `above*`, `below` and `below*` keys for `enumext` and `keyans` environments.

```

1478 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1479 {
1480     \keys_define:nn { enumext / #1 }
1481     {
1482         above .skip_set:c = { \__enumext_vspace_above_#2_skip },
1483         above .value_required:n = true,
1484         above* .code:n      = \bool_set_true:c { \__enumext_vspace_a_star_#2_bool }
1485                           \keys_set:nn { enumext / #1 } { above = {##1} },
1486         above* .value_required:n = true,
1487         below .skip_set:c = { \__enumext_vspace_below_#2_skip },
1488         below .value_required:n = true,
1489         below* .code:n      = \bool_set_true:c { \__enumext_vspace_b_star_#2_bool }
1490                           \keys_set:nn { enumext / #1 } { below = {##1} },
1491         below* .value_required:n = true,
1492     }
1493 }
1494 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for `above` and others.)

12.23.1 Functions for above and below keys in enumext

`__enumext_vspace_above:` The function `__enumext_vspace_above:` apply the *vertical space above* the `enumext` environment set by the `above*` and `above` keys.

```

1495 \cs_new_protected:Nn \__enumext_vspace_above:
1496 {

1586     { \vspace { \__enumext_vspace_below_viii_skip } }
1587   }
1588 }

```

(End of definition for `__enumext_vspace_below_vii:` and `__enumext_vspace_below_viii:`)

12.24 Setting series, resume and resume* keys

The `series` key is responsible for the whole process of the `resume` and `resume*` keys. The idea behind this is to be able to absorb the *(keys)* passed to the optional argument of the “*first level*” of the environments `enumext` and `enumext*`, but, discarding some specific *(keys)*. This implementation is adapted directly from the code provided by Jonathan P. Spratte (@Skillmon) in [chat-Tex-SX](#)

`series` We define the keys `series`, `resume` and `resume*` only for the “*first level*” of `enumext` and `enumext*`.

```

1589 \cs_set_protected:Npn \__enumext_tmp:n #1
1590 {
1591   \keys_define:nn { enumext / #1 }
1592   {
1593     series .str_set:N = \__enumext_series_str,
1594     series .value_required:n = true,
1595     resume .code:n = \__enumext_resume_series:n {##1},
1596     resume* .code:n = \__enumext_resume_starred:,
1597     resume* .value_forbidden:n = true,
1598   }
1599 }
1600 \clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }

```

(End of definition for `series`, `resume`, and `resume*`.)

12.24.1 Internal functions for series key

`__enumext_filter_series:n` The function `__enumext_filter_series:n` will be in charge of filtering the *(keys)* we want to store where `{#1}` represents the optional value passed to the environment.

```

1601 \cs_new:Npn \__enumext_filter_series:n #1
1602 {
1603   \use:e
1604   {
1605     \keyval_parse:NNn
1606     \__enumext_filter_series_key:n
1607     \__enumext_filter_series_pair:nn {#1}
1608   }
1609 }

```

The function `__enumext_filter_series_key:n` will be responsible for filtering the *(keys)* that are passed “*without value*” by excluding the `resume`, `resume*` and `base-fix` keys.

```

1610 \cs_new:Npn \__enumext_filter_series_key:n #1
1611 {
1612   \str_case:nnF {#1}
1613   {
1614     { resume } {} { resume* } {} { base-fix } {}

```

```

1615     }
1616     { , { \exp_not:n {#1} } }
1617 }

```

The function `__enumext_filter_series_pair:nn` will be responsible for filtering the *(keys)* that are passed “with value” by excluding the `series`, `resume`, `start`, `start*`, `save-ans` and `save-key` keys.

```

1618 \cs_new:Npn \__enumext_filter_series_pair:nn #1#2
1619 {
1620   \str_case:nnF {#1}
1621   {
1622     { series } {} { resume } {} { start } {}
1623     { start* } {} { save-ans } {} { save-key } {}
1624   }
1625   { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
1626 }

```

(End of definition for `__enumext_filter_series:n`, `__enumext_filter_series_key:n`, and `__enumext_filter_series_pair:nn`.)

```

\__enumext_parse_series:n
\__enumext_resume_last:n

```

The function `__enumext_parse_series:n` will be responsible for storing the filtered *(keys)* in the global variable `\g__enumext_series_⟨series name⟩_tl` along with the creation of the integer variable `\g__enumext_series_⟨series name⟩_int` when the key is passed as an argument; otherwise, it will check the state of the boolean variable `\l__enumext_resume_active_bool` set by the keys `resume` and `resume*` and will call the function `__enumext_resume_last:n`.

- The value of boolean variable `\l__enumext_resume_active_bool` is set to true by the function `__enumext_resume_counter:n` which is used by the keys `resume` and `resume*`, in this case we must Make sure it is set to false so that it does not overwrite the default filtered *(keys)*. This function is passed to the function `__enumext_parse_keys:n` in the `enumext` environment definition (§12.38) and to the function `__enumext_parse_keys_vii:n` in the `enumext*` environment definition (§12.43).

```

1627 \cs_new_protected:Npn \__enumext_parse_series:n #1
1628 {
1629   \str_if_empty:NTF \l__enumext_series_str
1630   {
1631     \bool_if:NF \l__enumext_resume_active_bool
1632     {
1633       \__enumext_resume_last:n {#1}
1634     }
1635   }
1636   {
1637     \tl_gclear_new:c { g__enumext_series_ \l__enumext_series_str_tl }
1638     \tl_gset:ce { g__enumext_series_ \l__enumext_series_str_tl }
1639     { \__enumext_filter_series:n {#1} }
1640     \int_if_exist:cF { g__enumext_series_ \l__enumext_series_str_int }
1641     {
1642       \int_new:c { g__enumext_series_ \l__enumext_series_str_int }
1643     }
1644   }
1645 }

```

The function `__enumext_resume_last:n` will be in charge of saving the filtering *(keys)* when the `series` key is *not used* and will save them in the variable `\g__enumext_standar_series_tl` for the `enumext` environment and in the variable `\g__enumext_starred_series_tl` for the `enumext*` environment. Here we must use `\bool_lazy_all:nT` to make sure that the default values are not overwritten when the environment is nested and the `series` key is not being used.

```

1646 \cs_new_protected:Npn \__enumext_resume_last:n #1
1647 {
1648   \bool_if:NT \l__enumext_standar_first_bool
1649   {

1652   }
1653   \bool_if:NT \l__enumext_starred_first_bool
1654   {
1655     \tl_gclear:N \g__enumext_starred_series_tl
1656     \tl_gset:Ne \g__enumext_starred_series_tl { \__enumext_filter_series:n {#1} }
1657   }
1658 }

```

(End of definition for `__enumext_parse_series:n` and `__enumext_resume_last:n`.)

12.24.2 Internal function to save counter value

`__enumext_resume_save_counter:` The `__enumext_resume_save_counter:` function will save the last counter value to `\g__enumext_series_⟨series name⟩_int` if the `series={⟨series name⟩}` key has been passed, to `\g__enumext_resume_int` if it has passed the key `resume without value` and the key `series` is not active, in `\g__enumext_series_⟨series name⟩_int` if the key `resume={⟨series name⟩}` has been passed and in `\g__enumext_series_⟨store name⟩_int` if the key has been passed `save-ans={⟨store name⟩}`.

- The variables `\l__enumext_series_str` and `\l__enumext__resume_name_tl` contain the same `{⟨series name⟩}` but are executed at different moments, the integer variable with `\l__enumext_series_str` sets the value when execute `series={⟨series name⟩}` and the integer variable with `\l__enumext__resume_name_tl` sets the subsequent values when use `resume={⟨series name⟩}`. This function is passed to the `enumext` environment definition (§12.38) and the `enumext*` environment definition (§12.43).

```

(End of definition for `__enumext_resume_save_counter:`.)

12.24.3 Internal functions for resume key

`__enumext_resume_series:n`

The function `__enumext_resume_series:n` will handle the argument passed to the `resume` key in `enumext` and `enumext*` environments. If the key is passed *without value* the function `__enumext_resume_counter:` is executed which will set the counter according to the numbering of the last `enumext` or `enumext*` environments in which `series={⟨series name⟩}` key is not present, if the `save-ans` key is active it will set the counter according to the value of the integer variable created by that key, otherwise it will verify that the `\g__enumext_series_⟨series name⟩_tl` variable set by the `series` key exists, if so it will pass these keys to the *first level* of the environment, otherwise it will return an error.

```

1716 \cs_new_protected:Npn \__enumext_resume_series:n #1
1717 {
1718   \tl_if_empty:NTF {#1}
1719   {
1720     \__enumext_resume_counter:n { }
1721   }
1722   {
1723     \tl_if_exist:cTF { g__enumext_series_ \tl_to_str:n {#1} _tl }
1724     {
1725       \__enumext_resume_counter:n {#1}
1726       \bool_if:NT \g__enumext_standar_bool
1727       {
1728         \keys_set:nv { enumext / level-1 }
1729         { g__enumext_series_ \tl_to_str:n {#1} _tl }
1730       }
1731       \bool_if:NT \g__enumext_starred_bool
1732       {
1733         \keys_set:nv { enumext / enumext* }
1734         { g__enumext_series_ \tl_to_str:n {#1} _tl }
1735       }
1736     }
1737   }
1738   \bool_if:NT \g__enumext_standar_bool
1739   {
1740     \msg_error:nnn { enumext } { unknown-series } {#1}
1741   }
1742   \bool_if:NT \g__enumext_starred_bool
1743   {
1744     \msg_error:nnn { enumext } { unknown-series } {#1}
1745   }
1746 }
1747 }
1748 }

```

(End of definition for `__enumext_resume_series:n`)

`__enumext_resume_counter:n`
`__enumext_resume_counter:`
`__enumext_resume_counter_series:`
`__enumext_resume_counter_save_ans:`

The function `__enumext_resume_counter:n` will set the variable `\l__enumext_resume_active_bool` to true and pass the value of the key `resume` to the variable `\l__enumext_series_name_tl` which will contain the `{⟨series name⟩}`. If the variable `\l__enumext_series_name_tl` is empty, that is, we are passing the key `resume without value`, we will execute the function `__enumext_resume_counter:` otherwise, when we pass `resume={⟨series name⟩}` we will execute the function `__enumext_resume_counter_series:`, finally we will execute the function `__enumext_resume_counter_save_ans:` which is associated with the key `save-ans`.

```

1749 \cs_new_protected:Npn \__enumext_resume_counter:n #1
1750 {
1751   \bool_set_true:N \l__enumext_resume_active_bool
1752   \tl_set:Nn \l__enumext_resume_name_tl {#1}
1753   \tl_if_empty:NTF \l__enumext_resume_name_tl
1754   {
1755     \__enumext_resume_counter:
1756   }
1757   {
1758     \__enumext_resume_counter_series:
1759   }
1760   \__enumext_resume_counter_save_ans:
1761 }

```

The `__enumext_resume_counter:` function is executed when the `resume` key is used *without value*, only the counters for the “*first level*” of the environments will be set.

```

1762 \cs_new_protected:Nn \__enumext_resume_counter:
1763 {
1764   \bool_if:NT \g__enumext_standar_bool

```

```

1765     {
1766         \int_gincr:N \g__enumext_resume_int
1767         \int_set_eq:NN \l__enumext_start_i_int \g__enumext_resume_int
1768     }
1769     \bool_if:NT \g__enumext_starred_bool
1770     {
1771         \int_gincr:N \g__enumext_resume_vii_int
1772         \int_set_eq:NN \l__enumext_start_vii_int \g__enumext_resume_vii_int
1773     }
1774 }

```

The function `__enumext_resume_counter_series:` will be executed when the `resume={⟨series name⟩}` key is active, setting the counters for the “first level” of the environments according to the value of the integer variables created by the `series` key.

```

1775 \cs_new_protected:Nn \__enumext_resume_counter_series:
1776 {
1777     \bool_if:NT \g__enumext_standar_bool
1778     {
1779         \int_set:Nn \l__enumext_start_i_int
1780         {
1781             \int_use:c { g__enumext_series_ \l__enumext_resume_name_tl _int } + 1
1782         }
1783     }
1784     \bool_if:NT \g__enumext_starred_bool
1785     {
1786         \int_set:Nn \l__enumext_start_vii_int
1787         {
1788             \int_use:c { g__enumext_series_ \l__enumext_resume_name_tl _int } + 1
1789         }
1790     }
1791 }

```

The function `__enumext_resume_counter_save_ans:` will be executed when the `save-ans` key is active along with the `resume` key, setting the counters for the “first level” of the environments according to the value of the integer variables created by the `save-ans` key.

```

1792 \cs_new_protected:Nn \__enumext_resume_counter_save_ans:
1793 {
1794     \bool_lazy_and:nnT
1795     { \bool_if_p:N \l__enumext_standar_first_bool }
1796     { \bool_if_p:N \l__enumext_store_active_bool }
1797     {
1798         \int_set:Nn \l__enumext_start_i_int
1799         {
1800             \int_use:c { g__enumext_resume_ \l__enumext_store_name_tl _int } + 1
1801         }
1802     }
1803     \bool_lazy_and:nnT
1804     { \bool_if_p:N \l__enumext_starred_first_bool }
1805     { \bool_if_p:N \l__enumext_store_active_bool }
1806     {
1807         \int_set:Nn \l__enumext_start_vii_int
1808         {
1809             \int_use:c { g__enumext_resume_ \l__enumext_store_name_tl _int } + 1
1810         }
1811     }
1812 }

```

(End of definition for `__enumext_resume_counter:n` and others.)

12.24.4 Internal function for `resume*` key

`__enumext_resume_starred:` The function `__enumext_resume_starred:` will handle the `resume*` key in the `enumext` and `enumext*` environments. This function will execute the filtered `⟨keys⟩` in the last one and will continue with the numbering according to the last execution of the environment `enumext` or `enumext*` in which the keys `resume={⟨series name⟩}` or `series={⟨series name⟩}` were not active.

```

1813 \cs_new_protected:Nn \__enumext_resume_starred:
1814 {
1815     \bool_if:NT \g__enumext_standar_bool
1816     {
1817         \tl_if_empty:NF \g__enumext_standar_series_tl
1818         {
1819             \__enumext_resume_counter:n { }

```

```

1820         \keys_set:nV { enumext / level-1 } \g__enumext_standar_series_tl
1821     }
1822 }
1823 \bool_if:NT \g__enumext_starred_bool
1824 {
1825     \tl_if_empty:NF \g__enumext_starred_series_tl
1826     {
1827         \__enumext_resume_counter:n { }
1828         \keys_set:nV { enumext / enumext* } \g__enumext_starred_series_tl
1829     }
1830 }
1831 }

```

(End of definition for __enumext_resume_starred:.)

12.25 Setting save-ans, check-ans and no-store keys

The key `save-ans` is directly associated with the keys `check-ans`, `no-store`, `resume` and `resume*`, this will activate the entire “storage system” in the `enumext` package.

12.25.1 Setting save-ans key

`save-ans` We define the keys `save-ans` only for the “first level” of `enumext` and `enumext*`.

```

1832 \cs_set_protected:Npn \__enumext_tmp:n #1
1833 {
1834     \keys_define:nn { enumext / #1 }
1835     {
1836         save-ans .code:n = \__enumext_storing_set:n {##1},
1837         save-ans .value_required:n = true,
1838     }
1839 }
1840 \clist_map_inline:nn { level-1, enumext* } { { \__enumext_tmp:n {#1} } }

```

(End of definition for `save-ans`.)

12.25.2 Internal functions for save-ans key

`__enumext_start_save_ans_msg:` The functions `__enumext_start_save_ans_msg:` and `__enumext_stop_save_ans_msg:` will display in the terminal and `.log` file the environment in which the `save-ans` key was executed along with the line at the beginning and end of it. The function `__enumext_start_save_ans_msg:` will be passed to `__enumext_storing_set:n` and the function `__enumext_stop_save_ans_msg:` will be passed to the function `__enumext_execute_after_env:`.

```

1841 \cs_new_protected:Nn \__enumext_start_save_ans_msg:
1842 {
1843     \msg_term:nnVV { enumext } { save-ans-log }
1844     \g__enumext_envir_name_tl \l__enumext_store_name_tl
1845 }
1846 \cs_new_protected:Nn \__enumext_stop_save_ans_msg:
1847 {
1848     \msg_term:nnVV { enumext } { save-ans-log-hook }
1849     \g__enumext_envir_name_tl \g__enumext_store_name_tl
1850 }

```

(End of definition for `__enumext_start_save_ans_msg:` and `__enumext_stop_save_ans_msg:`.)

`__enumext_storing_set:n` The function `__enumext_storing_set:n` first pass the value of the `save-ans` key to the variable `\l__enumext_store_name_tl` which will contain the “store name” of the *⟨sequence⟩* and *⟨prop list⟩* we will use. If `\l__enumext_store_name_tl` is *empty* we return an error message, otherwise will return the appropriate message `__enumext_start_save_ans_msg:` and proceed to execute the function `__enumext_storing_exec:` for `enumext` and `enumext*` environments.

```

1851 \cs_new_protected:Npn \__enumext_storing_set:n #1
1852 {
1853     \tl_set:Nx \l__enumext_store_name_tl {#1}
1854     \tl_if_empty:NTF \l__enumext_store_name_tl
1855     {
1856         \bool_lazy_or:nnT
1857         { \l__enumext_standar_first_bool } { \l__enumext_starred_first_bool }
1858         {
1859             \msg_error:nnV { enumext } { save-ans-empty } \g__enumext_envir_name_tl
1860         }
1861     }
1862     {
1863         \bool_lazy_or:nnT

```

```

1864         { \l__enumext_standar_first_bool } { \l__enumext_starred_first_bool }
1865     {
1866         \__enumext_start_save_ans_msg:
1867         \__enumext_storing_exec:
1868     }
1869 }
1870 }

```

The function `__enumext_storing_exec`: will set to true the variable `\l__enumext_store_active_bool` which activates the use of the `\anskey` command and the `keyans`, `keyans*` and `keyanspic` environments and will set to true the variable `\l__enumext_check_answers_bool` used for checking answers by the `check-ans` and `no-store` keys, copy `{\store name}` into the global variable `\g__enumext_store_name_tl` and execute the function `__enumext_anskey_env_make:V` creating the environment `anskey*` (§12.30). The `\prop list` `\g__enumext_series_{store name}_prop` and the `\sequence` `\g__enumext_series_{store name}_seq` will be created globally to “store content” in case they do not exist together with the integer variable `\g__enumext_series_{store name}_int` used by the keys `resume` and `resume*`.

```

1871 \cs_new_protected:Nn \__enumext_storing_exec:
1872 {
1873     \bool_set_true:N \l__enumext_store_active_bool

1889         \msg_log:nnV { enumext } { store-int } \l__enumext_store_name_tl
1890         \int_new:c { g__enumext_resume_ \l__enumext_store_name_tl _int }
1891     }
1892 }

```

(End of definition for `__enumext_storing_set:n` and `__enumext_storing_exec:.`)

12.25.3 The check answer mechanism

The mechanism for checking that all questions are answered follows this logic:

If the line begins with `\item` or `\item*` and does NOT open a nested environment, each `\item` or `\item*` must contain a *single* execution of the `\anskey` command, i.e. the counter of the executions of the `\anskey` command must be equal to the counter associated with the sum of executions of `\item` and `\item*`.

If the line begins with `\item` or `\item*` and opens a nested environment each `\item` or `\item*` in the nested environment must have a *single* execution of the `\anskey` command and the counter associated to the sum of `\item` and `\item*` executions must decrementing by “one” to maintain equality.

In order for the mechanism for the check-answer to work (not counting `keyans`, `keyans*` and `keyanspic`) we need:

1. We must keep track of the total number of `\item` and `\item*` (enumerated) that appear within the environment including the nested levels.
2. We must keep track of the total number of `\item` and `\item*` (enumerated) that appear per level of nesting.
3. Keeping track of the number of times the environment nests.

The integer variable associated to the sum of each `\item` and `\item*` in the environment `\g__enumext_item_number_int` must match the integer variable `\g__enumext_item_anskey_int` associated to the execution of the command `\anskey`. We analyze the cases:

- a) If the list only has one level the number of `\item` + `\item*` = `\anskey`
- b) If the list has *nested levels*, for each level of nesting we need to decrementing by one (for the `\item` or `\item*` that opens the nest) so that the account remains the same.

With `keyans`, `keyans*` and `keyanspic` it is enough to increase in one the integer of `\anskey`. The integers created must be global if they are not lost in the interior levels of nesting and to execute the test we will use a “hook” function after closing the first level of the environment.

12.25.4 Setting check-ans and no-store keys

Now we define the keys `check-ans` and `no-store` for all levels of `enumext` and `enumext*` environments.

check-ans

no-store

```

1893 \cs_set_protected:Npn \__enumext_tmp:n #1
1894 {
1895   \keys_define:nn { enumext / #1 }
1896   {
1897     check-ans .bool_set:N = \l__enumext_check_ans_key_bool,
1898     check-ans .initial:n = false,
1899     check-ans .value_required:n = true,
1900     no-store .code:n = {
1901       \bool_set_false:N \l__enumext_check_answers_bool
1902       \bool_set_false:N \l__enumext_check_ans_key_bool
1903     },
1904     no-store .value_forbidden:n = true,
1905   }
1906 }
1907 \clist_map_inline:nn
1908 {
1909   level-1, level-2, level-3, level-4, enumext*
1910 }
1911 { \__enumext_tmp:n {#1} }
```

(End of definition for `check-ans` and `no-store`.)

12.25.5 Set-up check answer mechanism

__enumext_check_ans_active:
__enumext_check_ans_level:

The function `__enumext_check_ans_active:` will first check the state of the variable `\l__enumext_store_name_tl`, that is, the `save-ans` key is active, if so it will check the state of the variable `\l__enumext_check_answers_bool` handled by the key `no-store` and will execute the function `__enumext_check_ans_level:` only if “true”, i.e. the key `no-store` is not active.

```

1912 \cs_new_protected:Nn \__enumext_check_ans_active:
1913 {
1914   \tl_if_empty:NF \l__enumext_store_name_tl
1915   {
1916     \bool_if:NT \l__enumext_check_answers_bool
1917     {
1918       \__enumext_check_ans_level:
1919     }
1920   }
1921 }
```

The function `__enumext_check_ans_level:` will decrement by “one” the value of the variable `\g__enumext_item_number_int` which keeps track of the executions of `\item` and `\item*` for each level of nesting of the environment `enumext`, taking into account whether it is nested within `enumext*` or the opposite and set `\l__enumext_item_number_bool` to “false”.

```

1922 \cs_new_protected:Nn \__enumext_check_ans_level:
1923 {
1924   \int_case:nn { \l__enumext_level_int }
1925   {
1926     { 1 }{
1927       \bool_lazy_all:nT
1928       {
1929         { \bool_if_p:N \g__enumext_starred_bool }
1930         { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
1931       }
1932       {
1933         \int_gdecr:N \g__enumext_item_number_int
1934         \bool_set_false:N \l__enumext_item_number_bool
1935       }
1936     }
1937     { 2 }{
1938       \int_gdecr:N \g__enumext_item_number_int
1939       \bool_set_false:N \l__enumext_item_number_bool
1940     }
1941     { 3 }{
1942       \int_gdecr:N \g__enumext_item_number_int
1943       \bool_set_false:N \l__enumext_item_number_bool
1944     }
1945   }
```

```

1945         { 4 }{
1946             \int_gdecr:N \g__enumext_item_number_int
1947             \bool_set_false:N \l__enumext_item_number_bool
1948         }
1949     }

```

We should only execute this if `enumext*` is nested in the first level of `enumext`, for the rest of the cases the value of `\g__enumext_item_number_int` is already decreased.

```

1950     \int_case:nn { \l__enumext_level_h_int }
1951     {
1952         { 1 }{
1953             \bool_lazy_all:nT
1954             {
1955                 { \bool_if_p:N \g__enumext_standar_bool }
1956                 { \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
1957             }
1958             {
1959                 \int_gdecr:N \g__enumext_item_number_int
1960                 \bool_set_false:N \l__enumext_item_number_bool
1961             }
1962         }
1963     }
1964 }

```

(End of definition for `__enumext_check_ans_active:` and `__enumext_check_ans_level:`)

`__enumext_check_ans_key_hook:`

The function `__enumext_check_ans_key_hook:` will *export* the status of the local variable `\l__enumext_check_ans_key_bool` to the global variable `\g__enumext_check_ans_key_bool` only if the key `check-ans` is active.

```

1965 \cs_new_protected:Nn \__enumext_check_ans_key_hook:
1966 {
1967     \bool_lazy_and:nnT
1968     { \bool_if_p:N \l__enumext_check_ans_key_bool }
1969     { \bool_if_p:N \g__enumext_standar_bool }
1970     {
1971         \bool_gset_true:N \g__enumext_check_ans_key_bool
1972     }
1973     \bool_lazy_and:nnT
1974     { \bool_if_p:N \l__enumext_check_ans_key_bool }
1975     { \bool_if_p:N \g__enumext_starred_bool }
1976     {
1977         \bool_gset_true:N \g__enumext_check_ans_key_bool
1978     }
1979 }

```

(End of definition for `__enumext_check_ans_key_hook:`)

`__enumext_item_answer_diff:`

The function `__enumext_item_answer_diff:` will set the value of the variable `\g__enumext_item_answer_diff_int` which is used by the functions `__enumext_check_ans_show:` for the key `save-ans` and by the function `__enumext_check_ans_log:` by the internal “*check answer*” mechanism. This function will be passed to the function `__enumext_execute_after_env:`.

```

1980 \cs_new_protected:Nn \__enumext_item_answer_diff:
1981 {
1982     \int_gset:Nn \g__enumext_item_answer_diff_int
1983     {
1984         \int_sign:n { \g__enumext_item_number_int - \g__enumext_item_anskey_int }
1985     }
1986 }

```

(End of definition for `__enumext_item_answer_diff:`)

`__enumext_check_ans_show:`

The function `__enumext_check_ans_show:` will be executed within the function `__enumext_execute_after_env:` when the key `check-ans` is active, that is, when `\g__enumext_check_ans_key_bool` is “*true*” and will return the appropriate message according to the value of `\g__enumext_item_answer_diff_int` set by the function `__enumext_item_answer_diff:`.

```

1987 \cs_new_protected:Nn \__enumext_check_ans_show:
1988 {
1989     \int_case:nn { \g__enumext_item_answer_diff_int }
1990     {
1991         { -1 }{ \__enumext_check_ans_msg_less: }
1992         { 0 }{ \__enumext_check_ans_msg_same_ok: }

```

```

1993         { 1 }{ \__enumext_check_ans_msg_greater: }
1994     }
1995 }
1996 \cs_new_protected:Nn \__enumext_check_ans_msg_less:
1997 {
1998     \msg_warning:nneee { enumext } { item-less-answer } { \g__enumext_store_name_tl }
1999     { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2000 }
2001 \cs_new_protected:Nn \__enumext_check_ans_msg_same_ok:
2002 {

2023     { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2024 }
2025 \cs_new_protected:Nn \__enumext_check_ans_log_msg_same_ok:
2026 {
2027     \msg_log:nneee { enumext } { items-same-answer } { \g__enumext_store_name_tl }
2028     { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2029 }
2030 \cs_new_protected:Nn \__enumext_check_ans_log_msg_greater:
2031 {
2032     \msg_log:nneee { enumext } { item-greater-answer } { \g__enumext_store_name_tl }
2033     { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2034 }

```

(End of definition for __enumext_check_ans_log: and others.)

12.25.6 Check for \item* and \anspic* commands

__enumext_check_starred_cmd:n The function __enumext_check_starred_cmd:n performs an extra check for the `keyans`, `keyans*` and `keyanspic` environments. Unlike the check executed by `check-ans` key this one is not controlled by any key, it is intended to prevent the forgetting of `\item*` or `\anspic*` in these environments.

```

2035 \cs_new_protected:Npn \__enumext_check_starred_cmd:n #1
2036 {
2037     \int_compare:nNnT
2038     { \g__enumext_check_starred_cmd_int } = { 0 }
2039     {
2040         \msg_warning:nnnV
2041         { enumext } { missing-starred }{ #1 } \l__enumext_check_start_line_env_tl
2042     }
2043     \int_compare:nNnT
2044     { \g__enumext_check_starred_cmd_int } > { 1 }
2045     {
2046         \msg_warning:nnnV
2047         { enumext } { many-starred }{ #1 } \l__enumext_check_start_line_env_tl
2048     }
2049     \int_gzero:N \g__enumext_check_starred_cmd_int

```

```

2050 \tl_clear:N \l__enumext_check_start_line_env_tl
2051 }

```

(End of definition for `__enumext_check_starred_cmd:n`.)

12.26 Keys and functions associated with storage

We add the keys `wrap-ans`, `wrap-opt`, `save-sep`, `mark-ans`, `mark-pos`, `show-ans`, `show-pos`, `mark-ref` and `save-ref` related to the “*storage system*” and internal mechanism of “*label and ref*” only at the *first level* of `enumext` and `enumext*`.

```

2052 \cs_set_protected:Npn \__enumext_tmp:n #1
2053 {
2054   \keys_define:nn { enumext / #1 }
2055   {

```

```

2109     }
2110 }
2111 \clist_map_inline:nn { keyans, keyans* } { \__enumext_tmp:n {#1} }

```

(End of definition for mark-pos, show-ans, and show-pos.)

12.26.1 Store optional arguments of the environments

The idea behind “storing” in the *sequence* is to have a copy of the structure of the environment in which the key `save-ans` is being executed so we must capture the optional arguments passed to the levels of the environment in which it is executed and “storing” them.

```

\__enumext_store_active_keys:n
\__enumext_store_active_keys_vii:n

```

The functions `__enumext_store_active_keys:n` and `__enumext_store_active_keys_vii:n` will be responsible for “storing” the *keys* filtered from the optional arguments of the environment in which the key `save-ans` is executed and the levels within this for the `enumext` and `enumext*` environments. We will execute this function only if the variable `__enumext_store_save_key_X_bool` is false, that is, the key `store-key` is not active, establishing the variable `__enumext_store_save_key_X_tl` with the filtered *keys*.

```

2112 \cs_new_protected:Npn \__enumext_store_active_keys:n #1
2113 {
2114   \bool_if:cF { \__enumext_store_save_key_ \__enumext_level: _bool }
2115   {
2116     \tl_clear:c { \__enumext_save_key_ \__enumext_level: _tl }
2117     \tl_set:ce
2118       { \__enumext_store_save_key_ \__enumext_level: _tl }
2119       { \__enumext_filter_save_key:n {#1} }
2120   }
2121 }
2122 \cs_new_protected:Npn \__enumext_store_active_keys_vii:n #1
2123 {
2124   \bool_if:NF \__enumext_store_save_key_vii_bool
2125   {
2126     \tl_clear:N \__enumext_store_save_key_vii_tl
2127     \tl_set:Ne \__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
2128   }
2129 }

```

(End of definition for `__enumext_store_active_keys:n` and `__enumext_store_active_keys_vii:n`.)

12.26.2 Setting save-key key

Since this list structure will be stored in the *sequence* established by the `save-ans` key when executing `\anskey`, we will not be able to modify it. The best thing here is to have a key that allows you to modify the optional argument of the list stored in the *sequence*.

save-key

The values set by this key passed in the optional arguments of the `enumext` and `enumext*` environments will override the values of the `__enumext_store_save_key_X_tl` variable set by the functions `__enumext_store_active_keys:n` and `__enumext_store_active_keys_vii:n`.

Define the key `save-key` for all levels of `enumext` and `enumext*` environments.

```

2130 \cs_set_protected:Npn \__enumext_tmp:n #1
2131 {
2132   \keys_define:nn { enumext / enumext* }
2133   {
2134     save-key .code:n = \__enumext_parse_save_key_vii:n {##1},
2135     save-key .value_required:n = true,
2136   }
2137   \keys_define:nn { enumext / #1 }
2138   {
2139     save-key .code:n = \__enumext_parse_save_key:n {##1},
2140     save-key .value_required:n = true,
2141   }
2142 }
2143 \clist_map_inline:nn { level-1, level-2, level-3, level-4 } { \__enumext_tmp:n {#1} }

```

(End of definition for save-key.)

```

\__enumext_parse_save_key:n
\__enumext_parse_save_key_vii:n

```

The functions `__enumext_parse_save_key:n` and `__enumext_parse_save_key_vii:n` will be responsible for storing the filtered *keys* in the variable `__enumext_store_save_key_X_tl` for `enumext` and `enumext*`.

```

2144 \cs_new_protected:Npn \__enumext_parse_save_key:n #1
2145 {
2146   \bool_set_true:c { \__enumext_store_save_key_ \__enumext_level: _bool }

```

```

2147 \tl_clear:c { \__enumext_save_key_ \__enumext_level: _tl }
2148 \tl_set:ce
2149 { \__enumext_store_save_key_ \__enumext_level: _tl }
2150 { \__enumext_filter_save_key:n {#1} }
2151 }
2152 \cs_new_protected:Npn \__enumext_parse_save_key_vii:n #1
2153 {
2154 \bool_set_true:N \__enumext_store_save_key_vii_bool
2155 \tl_clear:N \__enumext_store_save_key_vii_tl
2156 \tl_set:Nx \__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
2157 }

```

(End of definition for __enumext_parse_save_key:n and __enumext_parse_save_key_vii:n.)

12.26.3 Internal functions to store optional arguments

The function __enumext_filter_save_key:n will be in charge of filtering the *⟨keys⟩* we want to *store* in *⟨sequence⟩* where {#1} represents the optional value passed to the environment.

```

2158 \cs_new:Npn \__enumext_filter_save_key:n #1
2159 {
2160 \use:e
2161 {
2162 \keyval_parse:NNn
2163 \__enumext_filter_save_key_key:n
2164 \__enumext_filter_save_key_pair:nn {#1}
2165 }
2166 }

```

The function __enumext_filter_save_key_key:n will be responsible for filtering the *⟨keys⟩* that are passed “without value” by excluding the `resume`, `resume*`, `no-store` and `base-fix` keys.

```

2167 \cs_new:Npn \__enumext_filter_save_key_key:n #1
2168 {
2169 \str_case:nnF {#1}
2170 {
2171 { resume } {} { resume* } {} { no-store } {} { base-fix } {}
2172 }
2173 { , { \exp_not:n {#1} } }
2174 }

```

The function __enumext_filter_save_key_pair:nn will be responsible for filtering the *⟨keys⟩* that are passed “with value” by excluding the `series`, `resume`, `save-ans`, `save-ref`, `check-ans`, `show-ans`, `save-pos`, `wrap-ans`, `mark-ans`, `wrap-opt`, `save-sep`, `mark-ref`, `mini-env`, `mini-sep`, `mini-right` and `mini-right*` keys.

```

2175 \cs_new:Npn \__enumext_filter_save_key_pair:nn #1#2
2176 {
2177 \str_case:nnF {#1}
2178 {
2179 { series } {} { resume } {} { save-ans } {} { save-ref } {}
2180 { save-key } {} { check-ans } {} { show-ans } {} { show-pos } {}
2181 { wrap-ans } {} { mark-ans } {} { wrap-opt } {} { save-sep } {}
2182 { mark-ref } {} { mini-env } {} { mini-sep } {} { mini-right } {}
2183 { mini-right* } {}
2184 }
2185 { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
2186 }

```

(End of definition for __enumext_filter_save_key:n, __enumext_filter_save_key_key:n, and __enumext_filter_save_key_pair:nn.)

12.26.4 Function for storing content in prop list

The function __enumext_store_addto_prop:n stores the content in *⟨prop list⟩* defined by `save-ans` key. The “stored content” is retrieved by means of the `\getkeyans` command.

The form in which the content is “stored” in the *⟨prop list⟩* is {*⟨position⟩*}{*⟨content⟩*}. This function is used by `\anskey` in `enumext` and `enumext*` environments, `\item*` in `keyans` and `keyans*` environments and `\anspic*` in `keyanspic` environment.

```

2187 \cs_new_protected:Npn \__enumext_store_addto_prop:n #1
2188 {
2189 \prop_gput_if_not_in:cen { g__enumext_ \__enumext_store_name_tl _prop }
2190 {
2191 \int_eval:n { \prop_count:c { g__enumext_ \__enumext_store_name_tl _prop } + 1 }
2192 }
2193 { #1 }

```

```

2194 }
2195 \cs_generate_variant:Nn \__enumext_store_addto_prop:n { V, e }

```

(End of definition for __enumext_store_addto_prop:n.)

12.26.5 Function for storing content in sequence

The function __enumext_store_addto_seq:n stores the content in *sequence* defined by *save-ans* key. This function is used by \anskey in enumext, \item* in keyans and \anspic in keyanspic.

The form in which the content is stored in *sequence* is in a internal enumext or enumext* environments with the *same structure* in which the command was executed.

The “*stored content*” is retrieved by means of the \printkeyans command.

```

2196 \cs_new_protected:Npn \__enumext_store_addto_seq:n #1
2197 {
2198   \seq_gput_right:cn { g__enumext_ \__enumext_store_name_tl _seq } { #1 }
2199 }
2200 \cs_generate_variant:Nn \__enumext_store_addto_seq:n { v, V, e }

```

(End of definition for __enumext_store_addto_seq:n.)

12.26.6 Functions for storing the list structure in the sequence

The memorization structure of the list is handled by the functions __enumext_store_level_open: and __enumext_store_level_close: which are executed per level within the enumext environment.

```

2201 \cs_new_protected:Npn \__enumext_store_level_open:
2202 {
2203   \bool_if:NT \l__enumext_check_answers_bool
2204   {
2205     \tl_if_empty:CTF { l__enumext_store_save_key_ \__enumext_level: _tl }
2206     {
2207       \__enumext_store_addto_seq:n
2208       {
2209         \item \begin{enumext}
2210       }
2211     }
2212     {
2213       \tl_put_left:cn { l__enumext_store_save_key_ \__enumext_level: _tl }
2214       {
2215         \item \begin{enumext} [
2216       }
2217       \tl_put_right:cn { l__enumext_store_save_key_ \__enumext_level: _tl }
2218       {
2219         ]
2220       }
2221       \__enumext_store_addto_seq:v { l__enumext_store_save_key_ \__enumext_level: _tl }
2222     }
2223   }
2224 }
2225 \cs_new_protected:Npn \__enumext_store_level_close:
2226 {
2227   \bool_if:NT \l__enumext_check_answers_bool
2228   {
2229     \__enumext_store_addto_seq:n { \end{enumext} }
2230   }
2231 }

```

(End of definition for __enumext_store_level_open: and __enumext_store_level_close:.)

The memorization structure of the list is handled by the functions __enumext_store_level_open_vii: and __enumext_store_level_close_vii: which are executed in the enumext* environment.

```

2232 \cs_new_protected:Npn \__enumext_store_level_open_vii:
2233 {
2234   \bool_if:NT \l__enumext_check_answers_bool
2235   {
2236     \tl_if_empty:NTF \l__enumext_store_save_key_vii_tl
2237     {
2238       \__enumext_store_addto_seq:n
2239       {
2240         \item \begin{enumext*}
2241       }
2242     }
2243     {

```

```

2244         \tl_put_left:Nn \l__enumext_store_save_key_vii_tl
2245         {
2246             \item \begin{enumext*}[
2247             ]
2248         \tl_put_right:Nn \l__enumext_store_save_key_vii_tl
2249         {
2250             ]
2251         }
2252         \__enumext_store_addto_seq:V \l__enumext_store_save_key_vii_tl
2253     }
2254 }
2255 }
2256 \cs_new_protected:Nn \__enumext_store_level_close_vii:
2257 {
2258     \bool_if:NT \l__enumext_check_answers_bool
2259     {
2260         \__enumext_store_addto_seq:n { \end{enumext*} }
2261     }
2262 }

```

(End of definition for __enumext_store_level_open_vii: and __enumext_store_level_close_vii:.)

12.26.7 Function for show marks and position

__enumext_print_keyans_box:NN
__enumext_print_keyans_box:cc

The function __enumext_print_keyans_box:NN print a box in the left margin with \l__enumext_mark_answer_sym_tl used by the wrap-ans, show-ans and show-pos keys. The function takes two arguments:

#1: \l__enumext_labelwidth_X_dim
#2: \l__enumext_labelsep_X_dim

```

2263 \cs_new_protected:Nn \__enumext_print_keyans_box:NN
2264 {
2265     \mode_leave_vertical:
2266     \skip_horizontal:n { -\dim_use:N #2 }
2267     \makebox[0pt][ r ]
2268     {
2269         \makebox[ \dim_use:N #1 ][ \l__enumext_mark_position_str ]
2270         {
2271             \tl_use:N \l__enumext_mark_answer_sym_tl
2272         }
2273     }
2274     \skip_horizontal:n { \dim_use:N #2 }
2275 }
2276 \cs_generate_variant:Nn \__enumext_print_keyans_box:NN { cc }

```

(End of definition for __enumext_print_keyans_box:NN.)

12.27 The internal label and ref

The function __enumext_store_internal_ref: handles the internal “label and ref” system used by the save-ref and mark-ref keys for \anskey will allow to execute \ref{<store name : position>} and will return 1.(a).i.A.

__enumext_store_internal_ref:

First we will remove the dots “.” from the current <labels>, we do not want to get double dots in our references, then we will place this in the variable \l__enumext_newlabel_arg_two_tl.

```

2277 \cs_new_protected:Nn \__enumext_store_internal_ref:
2278 {
2279     \cs_set_protected:Npn \__enumext_tmp:n ##1
2280     {
2281         \tl_set_eq:cc { \l__enumext_label_copy_##1_tl } { \l__enumext_label_##1_tl }
2282         \tl_reverse:c { \l__enumext_label_copy_##1_tl }
2283         \tl_remove_once:cn { \l__enumext_label_copy_##1_tl } { . }
2284         \tl_reverse:c { \l__enumext_label_copy_##1_tl }
2285     }
2286     \clist_map_inline:nn { i, ii, iii, iv, vii } { \__enumext_tmp:n {##1} }
2287     \cs_set:Npn \__enumext_tmp:n ##1
2288     { . \tl_use:c { \l__enumext_label_copy_ \int_to_roman:n {##1} _tl } }

```

Here we need to analyse the cases where the environment is started with enumext* and if \anskey or anskey* is running alone in it or if it is running in a nested enumext environment within the starting environment.

```

2289     \bool_lazy_all:nT
2290     {

```

```

2291     { \bool_if_p:N \g__enumext_starred_bool }
2292     { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
2293   }
2294   {
2295     \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2296     { \tl_use:N \l__enumext_label_copy_vii_tl }
2297   }
2298   \bool_lazy_all:nT
2299   {
2300     { \bool_not_p:n { \g__enumext_standar_bool } }
2301     { \bool_if_p:N \l__enumext_standar_bool }
2302     { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2303   }
2304   {
2305     \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2306     {
2307       \tl_use:N \l__enumext_label_copy_vii_tl
2308       \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
2309     }
2310   }

```

If started with `enumext` and if `\anskey` or `anskey*` is running alone in it or if it is running in a nested `enumext*` environment within the starting environment.

```

2311   \bool_lazy_all:nT
2312   {
2313     { \bool_if_p:N \g__enumext_standar_bool }
2314     { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2315     { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
2316   }
2317   {
2318     \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2319     {
2320       \tl_use:N \l__enumext_label_copy_i_tl
2321       \int_step_function:nnN { 2 } { \l__enumext_level_int } \__enumext_tmp:n
2322     }
2323   }
2324   \cs_set:Npn \__enumext_tmp:n ##1
2325   { \tl_use:c { \l__enumext_label_copy_ \int_to_roman:n {##1} _tl } . }
2326   \bool_lazy_all:nT
2327   {
2328     { \bool_if_p:N \g__enumext_standar_bool }
2329     { \bool_if_p:N \l__enumext_starred_bool }
2330     { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2331   }
2332   {
2333     \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2334     {
2335       \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
2336       \tl_use:N \l__enumext_label_copy_vii_tl
2337     }
2338   }

```

Now we set the variable `\l__enumext_newlabel_arg_one_tl` which will contain $\langle \textit{store name} : \textit{position} \rangle$.

```

2339   \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
2340   {
2341     \l__enumext_store_name_tl \c_colon_str
2342     \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
2343   }

```

Now execute the function `__enumext_newlabel:nn` and save the result in the variable `\l__enumext_write_aux_file_tl` and finally we write in the `.aux` file.

```

2344   \tl_put_right:Ne \l__enumext_write_aux_file_tl
2345   {
2346     \__enumext_newlabel:nn
2347     { \exp_not:V \l__enumext_newlabel_arg_one_tl }
2348     { \l__enumext_newlabel_arg_two_tl }
2349   }
2350   \l__enumext_write_aux_file_tl
2351 }

```

(End of definition for `__enumext_store_internal_ref:.`)

12.28 Common functions for \anskey and anskey* environment

_enumext_store_anskey_code:n

The internal function _enumext_store_anskey_code:n first we pass the *argument* to the *prop list*, then checks the state of the variable _enumext_store_ref_key_bool handled by the *save-ref* key and will call the function _enumext_store_internal_ref: for the internal “*label and ref*” system. Followed by this if the *show-ans* or *show-pos* keys are active we will show the “*wrapped*” *argument*.

```

2352 \cs_new_protected:Npn \_enumext_store_anskey_code:n #1
2353 {
2354   \int_gincr:N \g__enumext_item_anskey_int
2355   \_enumext_store_addto_prop:n {#1}
2356   \bool_if:NT \_enumext_store_ref_key_bool
2357   {
2358     \_enumext_store_internal_ref:
2359   }
2360   \_enumext_anskey_show_wrap_left:n { #1 }

```

Now we start processing the [*key = val*] passed to the command to build our *item* in the variable _enumext_store_anskey_arg_tl which we will “*store*” in the *sequence*. First we clear the variable _enumext_store_anskey_arg_tl and process the *keys*, if the *break-col* key is present and the command is running under *enumext* (not in *enumext**) we will add *columnbreak* and then *item*.

```

2361 \tl_clear:N \_enumext_store_anskey_arg_tl
2362 \bool_lazy_and:nnT
2363 { \bool_if_p:N \_enumext_store_columns_break_bool }
2364 { \bool_not_p:n { \_enumext_starred_bool } }
2365 {
2366   \tl_put_left:Nn \_enumext_store_anskey_arg_tl { \columnbreak }
2367 }
2368 \tl_put_right:Nn \_enumext_store_anskey_arg_tl { \item }

```

If the *item-join* key is present and the command is running under *enumext** we will add (*number*) to _enumext_store_anskey_arg_tl.

```

2369 \bool_lazy_and:nnT
2370 { \bool_not_p:n { \_enumext_starred_bool } }
2371 { \int_compare_p:nNn { \_enumext_store_item_join_int } > { 1 } }
2372 {
2373   \tl_put_right:Ne \_enumext_store_anskey_arg_tl
2374   {
2375     ( \exp_not:V \_enumext_store_item_join_int )
2376   }
2377 }

```

And now we will review the keys *item-star*, *item-sym** and *item-pos** and pass them to _enumext_store_anskey_arg_tl along with the *argument* for *anskey* or *body* for *anskey**.

```

2378 \bool_if:NTF \_enumext_store_item_star_bool
2379 {
2380   \tl_put_right:Nn \_enumext_store_anskey_arg_tl { * }
2381   \tl_if_empty:NF \_enumext_store_item_symbol_tl
2382   {
2383     \tl_put_right:Ne \_enumext_store_anskey_arg_tl
2384     {
2385       [ \exp_not:V \_enumext_store_item_symbol_tl ]
2386     }
2387   }
2388   \dim_compare:nT
2389   {
2390     \_enumext_store_item_symbol_sep_dim != \c_zero_dim
2391   }
2392   {
2393     \tl_put_right:Ne \_enumext_store_anskey_arg_tl
2394     {
2395       [ \exp_not:V \_enumext_store_item_symbol_sep_dim ]
2396     }
2397   }
2398   \tl_put_right:Nn \_enumext_store_anskey_arg_tl {#1}
2399 }
2400 {
2401   \tl_put_right:Nn \_enumext_store_anskey_arg_tl {#1}
2402 }

```

Finally we check if the *save-ref* key are active along with the *hyperref* package load, if both conditions are met, it will create the *hyperlink* with *symbol* set by *mark-ref* key and then store in *sequence*.

```

2403 \bool_lazy_and:nnT

```

```

2404 { \bool_if_p:N \__enumext_store_ref_key_bool }
2405 { \bool_if_p:N \__enumext_hyperref_bool }
2406 {
2407   \tl_put_right:Ne \__enumext_store_anskey_arg_tl
2408   {

2410     { \exp_not:V \__enumext_mark_ref_sym_tl }
2411   }
2412 }
2413 \__enumext_store_addto_seq:V \__enumext_store_anskey_arg_tl
2414 }

```

(End of definition for `__enumext_store_anskey_code:n`.)

`__enumext_anskey_show_wrap_arg:n`

The function `__enumext_anskey_show_wrap_arg:n` “wraps” the *⟨argument⟩* passed to `\anskey` and the *⟨body⟩* for `anskey*` when using the `wrap-ans` key.

```

2415 \cs_new_protected:Npn \__enumext_anskey_show_wrap_arg:n #1
2416 {
2417   \par
2418   \bool_if:NTF \__enumext_starred_bool
2419   {
2420     \__enumext_print_keyans_box:NN \__enumext_labelwidth_vii_dim \__enumext_labelsep_vii_dim
2421   }
2422   {
2423     \__enumext_print_keyans_box:cc
2424     { \__enumext_labelwidth_ \__enumext_level: _dim }
2425     { \__enumext_labelsep_ \__enumext_level: _dim }
2426   }
2427   \__enumext_anskey_wrapper:n { #1 }
2428 }

```

(End of definition for `__enumext_anskey_show_wrap_arg:n`.)

`__enumext_anskey_show_wrap_left:n`

The function `__enumext_anskey_show_wrap_left:n` will show the “mark” defined by the `mark-ans` key or the “position” of the content stored in the *⟨prop list⟩* when using the `show-pos` key on the left margin next to the “wraps” *⟨argument⟩* passed to `\anskey` and the *⟨body⟩* in `anskey*` on the right side when using the `show-ans` key.

```

2429 \cs_new_protected:Npn \__enumext_anskey_show_wrap_left:n #1
2430 {
2431   \bool_if:NT \__enumext_show_answer_bool

2442       {
2443         \prop_count:c { g__enumext_ \__enumext_store_name_tl _prop }
2444       }
2445       ]
2446       \group_end:
2447     }
2448     \__enumext_anskey_show_wrap_arg:n { #1 }
2449   }
2450 }

```

(End of definition for `__enumext_anskey_show_wrap_left:n`.)

12.29 The command `\anskey`

Since we will be “storing content” in a list environment within *⟨sequences⟩* and can (more or less) manage the options passed to each level, it is necessary that we have a little more control over `\item` when storing.

The `\anskey` command will cover this point and give it similar behaviour to that of `\item` in the `enumext` and `enumext*` environments executed as follows `\anskey[⟨key = val⟩]{⟨content⟩}`.

```

\__enumext_anskey_unknown:n
\__enumext_anskey_unknown:nn

```

First we'll add the keys `break-col`, `item-join`, `item-star`, `item-sym*` and `item-pos*`.

```

2451 \keys_define:nn { enumext / anskey }
2452 {
2453   break-col .bool_set:N = \__enumext_store_columns_break_bool,
2454   break-col .default:n = true,
2455   break-col .value_forbidden:n = true,
2456   item-join .int_set:N = \__enumext_store_item_join_int,
2457   item-join .value_required:n = true,
2458   item-star .bool_set:N = \__enumext_store_item_star_bool,
2459   item-star .default:n = true,
2460   item-star .value_forbidden:n = true,
2461   item-sym* .tl_set:N = \__enumext_store_item_symbol_tl,
2462   item-sym* .value_required:n = true,
2463   item-pos* .dim_set:N = \__enumext_store_item_symbol_sep_dim,
2464   item-pos* .value_required:n = true,
2465   unknown .code:n = { \__enumext_anskey_unknown:n {#1} },
2466 }

```

The `<keys>` are stored in `\l_keys_key_str` and the value (if any) is passed as an argument to the function `__enumext_anskey_unknown:n`.

```

2467 \cs_new_protected:Npn \__enumext_anskey_unknown:n #1
2468 {
2469   \exp_args:NV \__enumext_anskey_unknown:nn \l_keys_key_str {#1}
2470 }
2471 \cs_new_protected:Npn \__enumext_anskey_unknown:nn #1 #2
2472 {
2473   \tl_if_blank:nTF {#2}
2474   {
2475     \msg_error:nnn { enumext } { anskey-cmd-key-unknown } {#1}
2476   }
2477   {
2478     \msg_error:nnnn { enumext } { anskey-cmd-key-value-unknown } {#1} {#2}
2479   }
2480 }

```

(End of definition for `__enumext_anskey_unknown:n` and `__enumext_anskey_unknown:nn`.)

- The `\anskey` command will only be present when using the `save-ans` key in `enumext` and `enumext*` environments, otherwise it will return an error.

`\anskey`

We will first call the function `__enumext_anskey_safe_outer:` to be sure where we execute the command, then we will check the state of the variable `\l__enumext_check_answers_bool` set by the key `no-store`, if is true we will increment `\g__enumext_item_anskey_int` for the internal “*check answer*” system and execute the function `__enumext_anskey_safe_inner:n` to ensure that the command is not nested and that the argument is not empty, finally search the `[<key = val>]` and call the function `__enumext_store_anskey_code:n`.

```

2481 \NewDocumentCommand \anskey { o +m }
2482 {
2483   \__enumext_anskey_safe_outer:
2484   \group_begin:
2485     \bool_if:NT \l__enumext_check_answers_bool
2486     {
2487       \tl_if_novalue:nF {#1}
2488       {
2489         \keys_set:nn { enumext / anskey } {#1}
2490       }
2491       \tl_if_blank:nTF {#2}
2492       {
2493         \msg_error:nn { enumext } { anskey-empty-arg }
2494       }
2495       {
2496         \__enumext_anskey_safe_inner:
2497         \__enumext_store_anskey_code:n {#2}
2498       }
2499     }
2500   \group_end:
2501 }

```

(End of definition for `\anskey`. This function is documented on page 12.)

12.29.1 Internal functions for the command

`__enumext_anskey_safe_outer:`
`__enumext_anskey_safe_inner:`

The `__enumext_store_anskey_safe_outer:` function will return the appropriate messages when the command is executed outside the environment in which the `save-ans` key was activated.

```

2502 \cs_new_protected:Nn \__enumext_anskey_safe_outer:
2503 {
2504   \bool_if:NF \__enumext_store_active_bool
2505   {
2506     \msg_error:nnnn { enumext } { anskey-wrong-place } { anskey } { enumext }
2507   }
2508   \int_compare:nNt { \__enumext_keyans_level_int } = { 1 }
2509   {
2510     \msg_error:nnnn { enumext } { command-wrong-place } { anskey } { keyans }
2511   }
2512   \int_compare:nNt { \__enumext_keyans_level_h_int } = { 1 }
2513   {
2514     \msg_error:nnnn { enumext } { command-wrong-place } { anskey } { keyans* }
2515   }
2516   \int_compare:nNt { \__enumext_keyans_pic_level_int } = { 1 }
2517   {
2518     \msg_error:nnnn { enumext } { command-wrong-place } { anskey } { keyanspic }
2519   }
2520 }

```

The `__enumext_anskey_safe_inner:` function will first check if the command is nested, if preceded by a not numbered `\item` or if it is in *math mode* returning the appropriate messages.

```

2521 \cs_new_protected:Nn \__enumext_anskey_safe_inner:
2522 {
2523   \int_incr:N \__enumext_anskey_level_int
2524   \int_compare:nNt { \__enumext_anskey_level_int } > { 1 }
2525   {
2526     \msg_error:nn { enumext } { anskey-nested }
2527   }
2528   \bool_if:NF \__enumext_item_number_bool

2530     \msg_error:nn { enumext } { anskey-unnumber-item }
2531   }
2532   \mode_if_math:T
2533   {
2534     \msg_error:nne { enumext } { anskey-math-mode } { \c_backslash_str anskey }
2535   }
2536 }

```

(End of definition for `__enumext_anskey_safe_outer:` and `__enumext_anskey_safe_inner:`)

12.30 The environment anskey*

Managing *verbatim content* in an environment is quite complicated, I learned that when creating the `scontents` package, so to be able to have support at this point it is best to play a little with the internal code of `scontents` and *hooks*. Some considerations I should have here before implementing this:

- If some package, class or user has defined the environment with the same name somewhere in the document it would be a problem, you would not know what argument has been passed to `store-env`, if you are using the key `print-env` or the `write-out` key, sure, I can detect and modify it within the `enumext` and `enumext*` environments, but it would look strange not to have some keys available when running within these environments.
- A better (perhaps a bit paranoid) option is to define it within the environment in which the `save-ans` key is executed. and have it available only when that key is executed, here I would have absolute control of the `(keys)` and I make sure that `write-out` is not used, then using *hooks after* I undefine it and using *hook before* I check if it has been created by any package, class or user and I return a error, then the user will have to see how to solve the problem.

`__enumext_undefine_anskey_env:`

The function `__enumext_undefine_anskey_env:` will undefine the environment `anskey*` and will be passed to the function `__enumext_execute_after_env:` (§12.31) which is executed after the environment in which the key `save-ans` is active.

```

2537 \cs_new_protected:Nn \__enumext_undefine_anskey_env:
2538 {
2539   \cs_undefine:c { anskey* }
2540   \cs_undefine:c { endanskey* }
2541   \cs_undefine:c { __scontents_anskey*_env_begin: }
2542   \cs_undefine:c { __scontents_anskey*_env_end: }
2543 }

```

Detection of the `anskey*` environment outside the `enumext` and `enumext*` environments.

```

2544 \__enumext_before_env:nn { enumext }
2545 {
2546   \bool_lazy_and:nnT
2547     { \int_compare_p:nNn { \__enumext_level_int } = { 0 } }
2548     { \int_compare_p:nNn { \__enumext_level_h_int } = { 0 } }

2587   {
2588     \msg_error:nnn { enumext } { anskey-math-mode } { anskey* }
2589   }
2590 }

```

(End of definition for `__enumext_undefine_anskey_env:.`)

`anskey*`

The function `__enumext_anskey_env_make:n` creates the environment `anskey*` (*custom version of `scontents` environment*) by setting the initial keys `store-env={⟨store name⟩}` and `print-env=false`. To maintain the *scope* of the environment and that it is only active when the key `save-ans` is active we will pass this function to the function `__enumext_storing_exec: (§12.25.1)` and we will execute it only if the variable `__enumext_anskey_env_bool` is true, with this we prevent it from being executed again when the environment is nested and the key `save-ans` is active, which returns an error for part of the package `scontents`.

```

2591 \cs_new_protected:Npn \__enumext_anskey_env_make:n #1
2592 {
2593   \bool_if:NT \__enumext_anskey_env_bool
2594   {
2595     \newenvsc{anskey*}[store-env=#1,print-env=false]
2596     \__enumext_anskey_env_exec:
2597   }
2598 }
2599 \cs_generate_variant:Nn \__enumext_anskey_env_make:n { V }

```

The function `__enumext_anskey_env_define_keys:` will add the keys `break-col`, `item-join`, `item-join`, `item-star`, `item-sym*` and `item-pos*` and will leave the keys `print-env`, `store-env` and `write-out` undefined. We will apply this function using the *hook* function `__enumext_before_env:nn`.

```

2600 \cs_new_protected:Nn \__enumext_anskey_env_define_keys:
2601 {
2602   \keys_define:nn { scontents / scontents }
2603   {
2604     break-col .bool_gset:N = \g__enumext_store_columns_break_bool,
2605     break-col .default:n   = true,
2606     break-col .value_forbidden:n = true,
2607     item-join .int_gset:N   = \g__enumext_store_item_join_int,
2608     item-join .value_required:n = true,
2609     item-star .bool_gset:N = \g__enumext_store_item_star_bool,
2610     item-star .default:n   = true,
2611     item-star .value_forbidden:n = true,
2612     item-sym* .tl_gset:N   = \g__enumext_store_item_symbol_tl,
2613     item-sym* .value_required:n = true,
2614     item-pos* .dim_gset:N  = \g__enumext_store_item_symbol_sep_dim,
2615     item-pos* .value_required:n = true,
2616     print-env .undefine:,
2617     store-env .undefine:,
2618     write-out .undefine:,
2619     unknown   .code:n      = { \__enumext_anskey_env_unknown:n {##1} },
2620   }
2621 }

```

The *⟨keys⟩* are stored in `\l_keys_key_str` and the value (if any) is passed as an argument to the function `__enumext_anskey_env_unknown:n`.

```

2622 \cs_new_protected:Npn \__enumext_anskey_env_unknown:n #1
2623 {
2624   \exp_args:NV \__enumext_anskey_env_unknown:nn \l_keys_key_str {#1}
2625 }
2626 \cs_new_protected:Npn \__enumext_anskey_env_unknown:nn #1#2
2627 {
2628   \tl_if_blank:nTF {#2}
2629   {
2630     \msg_error:nnn { enumext } { anskey-env-key-unknown } {#1}
2631   }
2632   {
2633     \msg_error:nnnn { enumext } { anskey-env-key-value-unknown } {#1} {#2}
2634   }
2635 }

```

The function `__enumext_anskey_env_reset_keys:` will leave the keys `break-col`, `item-join`, `item-join`, `item-star`, `item-sym*` and `item-pos*` undefined. We will apply this function using the *hook* function `__enumext_after_env:nn`.

```

2636 \cs_new_protected:Nn \__enumext_anskey_env_reset_keys:
2637 {
2638   \keys_define:nn { scontents / scontents }
2639   {
2640     break-col .undefine:,
2641     item-join .undefine:,
2642     item-star .undefine:,
2643     item-sym* .undefine:,
2644     item-pos* .undefine:,
2645     write-out .code:n      = {
2646       \bool_set_false:N \l__scontents_storing_bool
2647       \bool_set_true:N  \l__scontents_writing_bool
2648       \tl_set:Nn \l__scontents_fname_out_tl {##1}
2649     },
2650     write-out .value_required:n = true,
2651     print-env .meta:nn         = { scontents } { print-env = ##1 },
2652     print-env .default:n       = true,
2653     store-env .meta:nn         = { scontents } { store-env = ##1 },
2654     unknown   .code:n          = { \__scontents_parse_environment_keys:n {##1} },
2655   }
2656 }

```

The function `__enumext_rescan_anskey_env:n` will be responsible for bringing the *⟨body⟩* of the environment saved in the sequence `\g__scontents_name_⟨store name⟩_seq` to pass it to our *sequence* and *prop list*.

```

2657 \cs_new_protected:Npn \__enumext_rescan_anskey_env:n #1
2658 {
2659   \group_begin:
2660     \int_set:Nn \tex_newlinechar:D { ``^^J }
2661     \__scontents_rescan_tokens:x
2662     {
2663       \endgroup % This assumes \catcode`\=0... Things might go off otherwise.
2664       #1
2665     }
2666 }

```

(End of definition for `anskey*` and others. This function is documented on page 13.)

`__enumext_anskey_env_exec:` The function `__enumext_anskey_env_exec:` will be responsible for processing all the code necessary for the execution of the environment. The first thing will be to add our *keys*.

```

2667 \cs_new_protected:Nn \__enumext_anskey_env_exec:
2668 {
2669   \__enumext_before_env:nn { anskey* }
2670   {
2671     \__enumext_anskey_env_define_keys:
2672   }

```

Now we will execute our actions after the `anskey*` environment is closed. We'll fetch the contents of the *environment body* that is now saved in `\g__scontents_name_⟨store name⟩_seq` and store it in the variable `\l__enumext_store_anskey_env_tl` then we execute the rest of the functions.

```

2673   \hook_if_empty:nF {env/anskey*/after}
2674   {
2675     \hook_gremove_code:nn {env/anskey*/after} { * }
2676   }
2677   \__enumext_after_env:nn { anskey* }
2678   {
2679     \__enumext_anskey_env_save_keys:
2680     \tl_clear:N \l__enumext_store_anskey_env_tl
2681     \tl_clear:N \l__enumext_store_anskey_opt_tl
2682     \bool_if:NT \l__enumext_check_answers_bool
2683     {
2684       \tl_gset:Ne \l__enumext_store_anskey_env_tl
2685       {
2686         \seq_item:ce { g__scontents_name_ \l__enumext_store_name_tl _seq } { -1 }
2687       }
2688       \regex_match:nVTF
2689       { ^\s* \z | ^\s* \u{c__scontents_hidden_space_str} \z }
2690       \l__enumext_store_anskey_env_tl
2691       {
2692         \msg_error:nn { enumext } { anskey-empty-arg }
2693       }
2694       {
2695         \__enumext_anskey_env_store:
2696       }
2697     }
2698     \__enumext_anskey_env_clean_vars:
2699     \__enumext_anskey_env_reset_keys:
2700   }
2701 }

```

The use of `\hook_gremove_code:nn` is necessary here, otherwise the `{⟨code⟩}` passed to `__enumext_after_env:nn{anskey*}` will be accumulated for each execution. The last function `__enumext_anskey_env_reset_keys:` is necessary so as not to hinder any `scontents` environment running within `enumext` or `enumext*`.

(End of definition for `__enumext_anskey_env_exec:`.)

`__enumext_anskey_env_save_keys:` The function `__enumext_anskey_env_save_keys:` processing the `[⟨key = val⟩]` passed to the environment and save this in the variable `\l__enumext_store_anskey_opt_tl`. If the `break-col` key is present and the environment is running under `enumext` (not in `enumext*`) we will add the key `break-col`.

`__enumext_anskey_env_store:`

`__enumext_anskey_env_clean_vars:`

```

2702 \cs_new_protected:Nn \__enumext_anskey_env_save_keys:
2703 {
2704   \bool_lazy_and:nnT
2705   { \bool_if_p:N \g__enumext_store_columns_break_bool }
2706   { \bool_not_p:n { \l__enumext_starred_bool } }
2707   {
2708     \tl_put_left:Ne \l__enumext_store_anskey_opt_tl { ,break-col, }
2709   }

```

If the `item-join` key is present and the command is running under `enumext*` we will add to `\l__enumext_store_anskey_opt_tl`.

```

2710   \bool_lazy_and:nnT
2711   { \bool_not_p:n { \l__enumext_starred_bool } }
2712   { \int_compare_p:nNn { \g__enumext_store_item_join_int } > { 1 } }
2713   {
2714     \tl_put_left:Ne \l__enumext_store_anskey_opt_tl
2715     {
2716       ,item-join = \exp_not:V \g__enumext_store_item_join_int,
2717     }
2718   }

```

And now we will review the keys `item-star`, `item-sym*` and `item-pos*` and pass them to `\l__enumext_store_anskey_opt_tl`.

```

2719   \bool_if:NT \g__enumext_store_item_star_bool
2720   {
2721     \tl_put_left:Ne \l__enumext_store_anskey_opt_tl
2722     {
2723       ,item-star,
2724     }
2725     \tl_if_empty:NF \g__enumext_store_item_symbol_tl
2726     {
2727       \tl_put_left:Ne \l__enumext_store_anskey_opt_tl
2728       {
2729         ,item-sym* = \exp_not:V \g__enumext_store_item_symbol_tl,
2730       }
2731     }
2732     \dim_compare:nT
2733     {
2734       \g__enumext_store_item_symbol_sep_dim != \c_zero_dim
2735     }
2736     {
2737       \tl_put_left:Ne \l__enumext_store_anskey_opt_tl
2738       {
2739         ,item-pos* = \exp_not:V \g__enumext_store_item_symbol_sep_dim,
2740       }
2741     }
2742   }
2743 }

```

The function `__enumext_anskey_env_store:` will be responsible for storing the content of the environment using the functions `__enumext_store_anskey_code:n` and `__enumext_rescan_anskey_env:n`.

```

2744 \cs_new_protected:Nn \__enumext_anskey_env_store:
2745 {
2746   \group_begin:
2747   \tl_if_empty:NTF \l__enumext_store_anskey_opt_tl
2748   {
2749     \exp_args:Ne
2750     \__enumext_store_anskey_code:n
2751     {
2752       \__enumext_rescan_anskey_env:n { \l__enumext_store_anskey_env_tl }
2753     }
2754   }
2755   {
2756     \keys_set_known:nV { enumext / anskey } \l__enumext_store_anskey_opt_tl
2757     \exp_args:Ne
2758     \__enumext_store_anskey_code:n
2759     {
2760       \__enumext_rescan_anskey_env:n { \l__enumext_store_anskey_env_tl }
2761     }
2762   }
2763   \group_end:
2764 }

```

The function `__enumext_anskey_env_clean_vars:` will return the global variables used by the `(keys)` to their initial state.

```

2765 \cs_new_protected:Nn \__enumext_anskey_env_clean_vars:
2766 {
2767   \bool_gset_false:N \g__enumext_store_columns_break_bool
2768   \int_gzero:N       \g__enumext_store_item_join_int
2769   \bool_gset_false:N \g__enumext_store_item_star_bool

```

```

2770     \tl_gclear:N          \g__enumext_store_item_symbol_tl
2771     \dim_gzero:N         \g__enumext_store_item_symbol_sep_dim
2772 }

```

(End of definition for `__enumext_anskey_env_save_keys:`, `__enumext_anskey_env_store:`, and `__enumext_anskey_env_clean_vars:`.)

12.31 Executing anskey*, check-ans and write .log

`__enumext_execute_after_env:`

The `__enumext_execute_after_env:` function will first return the appropriate message for the end of the environment in which the `save-ans` key is being executed, then call the `__enumext_item_answer_diff:` function and then will write the values of the global variables used to the `.log` file. If the key `check-ans` is active it will execute the function `__enumext_check_ans_show:` and show the result in the terminal, otherwise it will execute the function `__enumext_check_ans_log:` and write the results in the `.log` file, undefine the environment `anskey*` (§12.30) through the function `__enumext_undefine_anskey_env:` and finally we execute the function `__enumext_reset_global_vars:` returning the used variables to their original state.

```

2773 \cs_new_protected:Nn \__enumext_execute_after_env:
2774 {
2775     \int_compare:nNnT { \l__enumext_level_int } = { 0 }
2776     {

2787             { \__enumext_check_ans_log: }
2788             \__enumext_undefine_anskey_env:
2789         }
2790         \__enumext_reset_global_vars:
2791     }
2792 }

```

(End of definition for `__enumext_execute_after_env:`.)

- This function is passed to the function `__enumext_after_env:n` for the environments `enumext` (§12.38) and `enumext*` (§12.43) and it is executed only when the environments are not nested or at some level of these..

12.32 Common functions for keyans, keyans* and keyanspic

12.32.1 Storing content in prop list

`__enumext_keyans_addto_prop:n`

The function `__enumext_keyans_addto_prop:n` will pass the contents of the current `<label>` `\l__enumext_label_v_tl` for the `keyans` environment and the current `<label>` `\l__enumext_label_vi_tl` for the `keyanspic` environment when using `\item*` and `\anspic*`, followed by the *contents* of the optional argument of both commands to the `\l__enumext_store_current_label_tl` variable, which will be passed to the `<prop list>` defined by the `save-ans` key using the `__enumext_store_addto_prop:V`.

```

2793 \cs_new_protected:Npn \__enumext_keyans_addto_prop:n #1
2794 {
2795     \tl_clear:N \l__enumext_store_current_label_tl
2796     \int_compare:nNnTF { \l__enumext_keyans_pic_level_int } = { 1 }
2797     {
2798         \tl_put_right:Ne \l__enumext_store_current_label_tl { \l__enumext_label_vi_tl }
2799     }
2800     {
2801         \tl_put_right:Ne \l__enumext_store_current_label_tl { \l__enumext_label_v_tl }
2802     }
2803     \tl_if_novalue:nF { #1 }
2804     {
2805         % Set save-sep
2806         \tl_if_empty:NF \l__enumext_store_keyans_item_opt_sep_tl
2807         {
2808             \tl_put_right:Ne \l__enumext_store_current_label_tl { \l__enumext_store_keyans_item_opt_sep_tl }
2809         }
2810         \tl_put_right:Ne \l__enumext_store_current_label_tl { #1 }
2811     }
2812     \__enumext_store_addto_prop:V \l__enumext_store_current_label_tl

```

```
2813 }
```

(End of definition for `__enumext_keyans_addto_prop:n`.)

12.32.2 The save-ref key for keyans, keyans* and keyanspic

The “*internal label and ref*” system for the `keyans`, `keyans*` and `keyanspic` environments has slight differences with the one implemented for the `\anskey` command, basically because in this environments we are interested in the current `\label`. The mechanism defined here will allow to execute `\ref{<store name : position>}` and will return 1. (A).

The function `__enumext_keyans_store_ref:` handles the internal “*label and ref*” system used by the `save-ref` key for `\item*` and `\anspic*` commands. First we will create copies of the current `\labels` and remove the dots “.” from them, we do not want to get double dots in our references.

```
2814 \cs_new_protected:Nn \__enumext_keyans_store_ref:
2815 {
2816   \bool_if:NT \l__enumext_store_ref_key_bool
2817   {
2818     \cs_set_protected:Npn \__enumext_tmp:n ##1
2819     {
2820       \tl_set_eq:cc { \__enumext_label_copy_##1_tl } { \__enumext_label_##1_tl }
2821       \tl_reverse:c { \__enumext_label_copy_##1_tl }
2822       \tl_remove_once:cn { \__enumext_label_copy_##1_tl } { . }
2823       \tl_reverse:c { \__enumext_label_copy_##1_tl }
2824     }
2825     \clist_map_inline:nn { i, v, vi, vii, viii } { \__enumext_tmp:n {##1} }
2826     \__enumext_keyans_store_ref_aux_i:
2827   }
2828 }
```

The auxiliary function `__enumext_keyans_store_ref_aux_i:` set the variable `\l__enumext_newlabel_arg_one_tl` which will contain `{<store name : position>}` analyzing whether the environment in which they are executed is `enumext*` or `enumext`.

```
2829 \cs_new_protected:Nn \__enumext_keyans_store_ref_aux_i:
2830 {
2831   \bool_if:NT \g__enumext_starred_bool
2832   {
2833     \tl_set_eq:NN \l__enumext_label_copy_i_tl \l__enumext_label_copy_vii_tl
2834   }
2835   \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
2836   {
2837     \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2838     { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_vi_tl }
2839   }
2840   \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
2841   {
2842     \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2843     { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_v_tl }
2844   }
2845   \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
2846   {
2847     \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2848     { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_viii_tl }
2849   }
2850   \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
2851   {
2852     \l__enumext_store_name_tl \c_colon_str
2853     \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
2854   }
2855   \__enumext_keyans_store_ref_aux_ii:
2856 }
```

Now auxiliary function `__enumext_keyans_store_ref_aux_ii:` save the result in the variable `\l__enumext_write_aux_file_tl` and finally we write in the `.aux` file.

```
2857 \cs_new_protected:Nn \__enumext_keyans_store_ref_aux_ii:
2858 {
2859   \tl_put_right:Ne \l__enumext_write_aux_file_tl
2860   {
2861     \__enumext_newlabel:nn
2862     { \exp_not:V \l__enumext_newlabel_arg_one_tl }
2863     { \l__enumext_newlabel_arg_two_tl }
2864   }
2865 }
```

```

2865 \l__enumext_write_aux_file_tl
2866 }

```

(End of definition for `__enumext_keyans_store_ref:`, `__enumext_keyans_store_ref_aux_i:`, and `__enumext_keyans_store_ref_aux_ii:`.)

12.32.3 Storing content in sequence

```

\__enumext_keyans_addto_seq:n
\__enumext_keyans_addto_seq_link:

```

The function `__enumext_keyans_addto_seq:n` will pass the contents of the current *⟨label⟩* `\l__enumext_label_v_tl` for the `keyans` environment and the `\l__enumext_label_vi_tl` for the `keyanspic` environment when using `\item*` and `\anspic*`, followed by the *⟨contents⟩* of the optional argument of both commands to the `\l__enumext_store_current_label_tl` variable to the sequence defined by the `save-ans` key.

```

2867 \cs_new_protected:Npn \__enumext_keyans_addto_seq:n #1
2868 {
2869   \tl_clear:N \l__enumext_store_current_label_tl
2870   \int_compare:nNnTF { \l__enumext_keyans_pic_level_int } = { 1 }
2871   {
2872     \tl_put_right:Ne \l__enumext_store_current_label_tl { \item \l__enumext_label_vi_tl }
2873   }
2874   {
2875     \tl_put_right:Ne \l__enumext_store_current_label_tl { \item \l__enumext_label_v_tl }
2876   }
2877   \tl_if_novalue:nF { #1 }
2878   {
2879     \tl_if_empty:NF \l__enumext_store_keyans_item_opt_sep_tl
2880     {
2881       \tl_put_right:Ne \l__enumext_store_current_label_tl
2882       {
2883         \l__enumext_store_keyans_item_opt_sep_tl
2884       }
2885     }
2886     \tl_put_right:Ne \l__enumext_store_current_label_tl { #1 }
2887   }
2888   \__enumext_keyans_addto_seq_link:
2889 }

```

Checks if the `save-ref` key is active along with the `hyperref` package load, if both conditions are met, it will create the `\hyperlink` and then store using the `__enumext_store_addto_seq:V` function. Finally, copy the contents of the variable `\l__enumext_store_current_label_tl` into the global variable `\g__enumext_check_ans_item_tl` to be used by the function `__enumext_check_starred_cmd:n` and increment the value of the integer variable `\g__enumext_item_anskey_int` handled by the `check-ans` key.

```

2890 \cs_new_protected:Nn \__enumext_keyans_addto_seq_link:
2891 {
2892   \bool_lazy_and:nnT

(End of definition for `__enumext_keyans_show_left:n` and others.)

12.33 Redefining `\item` and `\makeLabel` in `enumext`

Redefining the `\item` command is not as simple as I thought. This command works in conjunction with the `\makeLabel` command so I have to redefine both of them, in addition to this, we will have to use a couple of *global* variables to pass the values from one command to the other.

The `\item` and `\item[⟨custom⟩]` commands work in the usual way on `enumext` and we will add `\item*`, `\item*[⟨symbol⟩]` and `\item*[⟨symbol⟩][⟨offset⟩]`.

`__enumext_default_item:n`

First we will see if the optional argument is present, if it is NOT present we will check the state of the variable `\l__enumext_check_answers_bool` set by the key `no-store`, set the boolean variable `\l__enumext_wrap_label_X_bool` to “true” for the key `wrap-label` and execute `__enumext_item_std:w` and the key `itemindent`, otherwise we will check the state of the boolean variable `\l__enumext_wrap_label_opt_X_bool` set by the key `wrap-label*` and execute `__enumext_item_std:w` with the optional argument and the key `itemindent`.

```

2991 \cs_new_protected:Npn \__enumext_default_item:n #1
2992 {
2993     \tl_if_novalue:nTF {#1}
2994     {
2995         \bool_if:NT \l__enumext_check_answers_bool
2996         {
2997             \int_gincr:N \g__enumext_item_number_int
2998             \bool_set_true:N \l__enumext_item_number_bool
2999         }
3000         \bool_set_true:c { \l__enumext_wrap_label_ \__enumext_level: _bool }
3001         \__enumext_item_std:w \tl_use:c { \l__enumext_fake_item_indent_ \__enumext_level: _tl }
3002     }
3003     {
3004         \bool_set_eq:cc
3005         { \l__enumext_wrap_label_ \__enumext_level: _bool }
3006         { \l__enumext_wrap_label_opt_ \__enumext_level: _bool }
3007         \__enumext_item_std:w [#1] \tl_use:c { \l__enumext_fake_item_indent_ \__enumext_level: _tl }
3008     }
3009 }

```

(End of definition for `__enumext_default_item:n`.)

`__enumext_starred_item:nn`
`__enumext_item_star_exec:`

The `\item*`, `\item*[⟨symbol⟩]` and `\item*[⟨symbol⟩][⟨offset⟩]` works like the *numbered* `\item`, but placing a `⟨symbol⟩` to the “left” of the `⟨label⟩` separated from it by the value the second optional argument `⟨offset⟩`.

```

#1: \l__enumext_item_symbol_X_tl
#2: \l__enumext_item_symbol_sep_X_dim

```

First we will make a copy of `\l__enumext_item_symbol_X_tl` which is set by the key `item-sym*` or passed as “*first*” optional argument in the global variable `\g__enumext_item_symbol_aux_tl`, followed by setting the variable `\l__enumext_item_symbol_sep_X_dim` set by the key `item-pos*` or by the “*second*” optional argument, then we will see the state of the variable `\l__enumext_check_answers_bool` set by the key `no-store`, set the boolean variable `\l__enumext_wrap_label_X_bool` to “true” for the key `wrap-label` and execute `__enumext_item_std:w` and the key `itemindent`.

```

3010 \cs_new_protected:Npn \__enumext_starred_item:nn #1 #2

3066             \__enumext_item_star_exec:
3067             \use:c { __enumext_wrapper_label_ \__enumext_level: :n } { ##1 }
3068         }
3069         { ##1 }
3070         \tl_use:c { l__enumext_label_fill_right_ \__enumext_level: _tl }
3071         \tl_gclear:N \g__enumext_item_symbol_aux_tl
3072     }
3073 }

```

(End of definition for `__enumext_redefine_item:` and `__enumext_make_label:`.)

🌱 This functions are passed to `__enumext_list_arg_two_X:` used in the definition of the `enumext` environment (§12.38).

12.34 Setting item-sym* and item-pos* keys

In order to have a cleaner implementation of `\item*` for the `enumext` and `enumext*` environments it is best to define a couple of keys that allow us to control and set by default the `<symbol>` and its `<offset>`.

```

item-sym* Define and set item-sym* and item-pos* keys for enumext and enumext*.
item-pos*
3074 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
3075 {
3076   \keys_define:nn { enumext / #1 }
3077   {
3078     item-sym* .tl_set:c = { \__enumext_item_symbol_#2_tl },
3079     item-sym* .value_required:n = true,
3080     item-sym* .initial:n = { $\star$ },
3081     item-pos* .dim_set:c = { \__enumext_item_symbol_sep_#2_dim },
3082     item-pos* .value_required:n = true,
3083   }
3084 }
3085 \clist_map_inline:nn
3086 {
3087   {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {enumext*}{vii}
3088 }
3089 { \__enumext_tmp:nn #1 }
```

(End of definition for item-sym* and item-pos*.)

12.35 Handling unknown keys

At this point in the code I already know that I will not add more `<keys>` and since I have already been quite *paranoid and restrictive* with the definitions of environments and commands, the only thing left to do is do it with the `<keys>` (you have to be consistent in life).

12.35.1 Handling unknown keys for keyans and keyans*

Define and set unknown key for `keyans` and `keyans*` environments.

```

unknown
\__enumext_keyans_unknown_keys:n
\__enumext_keyans_unknown_keys:nn
3090 \cs_set_protected:Npn \__enumext_tmp:n #1
3091 {
3092   \keys_define:nn { enumext / #1 }
3093   {
3094     unknown .code:n = { \__enumext_keyans_unknown_keys:n {##1} }
3095   }
3096 }
3097 \clist_map_inline:nn { keyans, keyans* } { \__enumext_tmp:n {#1} }
```

Internal functions for handling unknown key.

```

3098 \cs_new_protected:Npn \__enumext_keyans_unknown_keys:n #1
3099 {
3100   \exp_args:NV \__enumext_keyans_unknown_keys:nn \l_keys_key_str {#1}
3101 }
3102 \cs_new_protected:Npn \__enumext_keyans_unknown_keys:nn #1#2
3103 {
3104   \tl_if_blank:nTF {#2}
3105   {
3106     \msg_error:nnn { enumext } { keyans-unknown-key } {#1}
3107   }
3108   {
3109     \msg_error:nnnn { enumext } { keyans-unknown-key-value } {#1} {#2}
3110   }
3111 }
```

(End of definition for unknown, __enumext_keyans_unknown_keys:n, and __enumext_keyans_unknown_keys:nn.)

12.35.2 Handling unknown keys for enumext*

Define and set unknown key for `enumext*` environment.

```

unknown
\__enumext_starred_unknown_keys:n
\__enumext_starred_unknown_keys:nn
3112 \keys_define:nn { enumext / enumext* }
3113 {
3114   unknown .code:n = { \__enumext_starred_unknown_keys:n {#1} }
3115 }
```

Internal functions for handling unknown key.

```

3116 \cs_new_protected:Npn \__enumext_starred_unknown_keys:n #1
3117 {
3118   \exp_args:NV \__enumext_starred_unknown_keys:nn \l_keys_key_str {#1}
3119 }
3120 \cs_new_protected:Npn \__enumext_starred_unknown_keys:nn #1#2
```

```

3121 {
3122     \tl_if_blank:nTF {#2}
3123     {
3124         \msg_error:nnn { enumext } { starred-unknown-key } {#1}
3125     }
3126     {
3127         \msg_error:nnnn { enumext } { starred-unknown-key-value } {#1} {#2}
3128     }
3129 }

```

(End of definition for `unknown`, `__enumext_starred_unknown_keys:n`, and `__enumext_starred_unknown_keys:nn`.)

12.35.3 Handling unknown keys for enumext

`unknown`

Defines and set the key `unknown` for `enumext` environment.

```

__enumext_standar_unknown_keys:n
__enumext_standar_unknown_keys:nn
3130 \cs_set_protected:Npn __enumext_tmp:n #1
3131 {
3132     \keys_define:nn { enumext / #1 }
3133     {
3134         unknown .code:n = { __enumext_standar_unknown_keys:n {##1} }
3135     }
3136 }
3137 \clist_map_inline:nn { level-1,level-2,level-3,level-4 } { __enumext_tmp:n {#1} }

```

Internal functions for handling `unknown` key.

```

3138 \cs_new_protected:Npn __enumext_standar_unknown_keys:n #1
3139 {
3140     \exp_args:NV __enumext_standar_unknown_keys:nn \l_keys_key_str {#1}
3141 }
3142 \cs_new_protected:Npn __enumext_standar_unknown_keys:nn #1#2
3143 {
3144     \tl_if_blank:nTF {#2}
3145     {
3146         \msg_error:nnn { enumext } { standar-unknown-key } {#1}
3147     }
3148     {
3149         \msg_error:nnnn { enumext } { standar-unknown-key-value } {#1} {#2}
3150     }
3151 }

```

(End of definition for `unknown`, `__enumext_standar_unknown_keys:n`, and `__enumext_standar_unknown_keys:nn`.)

12.36 Redefining `\item` and `\makeLabel` in keyans

The `\item` and `\item[⟨custom⟩]` commands work in the usual way in `keyans`, but the `\item*` and `\item*[⟨content⟩]` commands *store* the current `⟨label⟩` next to the `⟨content⟩` if it is present in the `⟨sequence⟩` and `⟨prop list⟩` defined by `save-ans` key.

`__enumext_keyans_default_item:n`

The function `__enumext_keyans_default_item:n` executes the original behavior of the `\item`.

```

3152 \cs_new_protected:Npn __enumext_keyans_default_item:n #1
3153 {
3154     \tl_if_novalue:nTF { #1 }
3155     {
3156         \bool_set_true:N \l__enumext_wrap_label_v_bool
3157         __enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl
3158     }
3159     {
3160         \bool_set_eq:NN \l__enumext_wrap_label_v_bool \l__enumext_wrap_label_opt_v_bool
3161         __enumext_item_std:w [#1] \tl_use:N \l__enumext_fake_item_indent_v_tl
3162     }
3163 }

```

(End of definition for `__enumext_keyans_default_item:n`.)

`__enumext_keyans_starred_item:n`

The function `__enumext_keyans_starred_item:n` which will make a temporary copy of the current `⟨label⟩`, execute the `show-ans` or `show-pos` keys using the function `__enumext_keyans_show_left:n` and will display the contents of that item using the internal copy `__enumext_item_std:w`, this is necessary to prevent incrementing the current “counter” of the original `⟨label⟩`.

```

3164 \cs_new_protected:Npn __enumext_keyans_starred_item:n #1
3165 {
3166     \tl_set_eq:NN \l__enumext_store_current_label_tmp_tl \l__enumext_label_v_tl
3167     __enumext_keyans_show_left:n { #1 }
3168     \bool_set_true:N \l__enumext_wrap_label_v_bool
3169     __enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl __enumext_keyans_show_item

```

Recover the original value of the current $\langle label \rangle$ and *store* it first in the $\langle prop list \rangle$ (including the optional argument), run the internal “*label and ref*” system if the *save-ref* key is active and finally *store* it in the $\langle sequence \rangle$.

```

3170 \tl_set_eq:NN \l__enumext_label_v_tl \l__enumext_store_current_label_tmp_tl
3171 \__enumext_keyans_addto_prop:n { #1 }
3172 \__enumext_keyans_store_ref:
3173 \__enumext_keyans_addto_seq:n { #1 }
3174 \int_gincr:N \g__enumext_check_starred_cmd_int
3175 }

```

(End of definition for $\backslash_enumext_keyans_starred_item:n$.)

$\backslash item^*$ The function $\backslash_enumext_keyans_redefine_item:$ is responsible for adding the *starred* and *optional* argument by the $\backslash_enumext_list_arg_two_v:$ function in the definition of the *keyans* environment. Here we need to use $\backslash peek_remove_spaces:n$ to prevent an unwanted space when using $\backslash item^*$ in conjunction with the *itemindent* key.

```

3176 \cs_new_protected:Nn \__enumext_keyans_redefine_item:
3177 {
3178   \RenewDocumentCommand \item { s o }
3179   {
3180     \bool_if:nTF {##1}
3181     {
3182       \peek_remove_spaces:n
3183       {
3184         \__enumext_keyans_starred_item:n {##2}
3185       }
3186     }
3187     {
3188       \__enumext_keyans_default_item:n {##2}
3189     }
3190   }
3191 }

```

The function $\backslash_enumext_keyans_make_label:$ redefine $\backslash makeLabel$ for the keys *align*, *font*, *wrap-label*, *wrap-label^** and $\backslash item^*$ for *keyans* environment.

```

3192 \cs_new_protected:Nn \__enumext_keyans_make_label:
3193 {
3194   \RenewDocumentCommand \makeLabel { m }
3195   {

```

(End of definition for $\backslash item^*$, $\backslash_enumext_keyans_redefine_item:$, and $\backslash_enumext_keyans_make_label:$. This function is documented on page 14.)

- These functions are passed to $\backslash_enumext_list_arg_two_v:$ used in the definition of the *keyans* environment (§12.37.2).

12.37 Second argument of the lists

At this point of the code we have already programmed most the necessary tools to create a custom *list* environment, remember that the function $\backslash_enumext_start_list:nn$ takes two arguments, the first one we have ready, the second one we will define for all the levels of the environment *enumext* and the environment *keyans*.

12.37.1 Calculation of $\backslash leftmargin$ and $\backslash itemindent$

Consider the figure 9 where the default margins (on the left) of a list are represented. The idea is to have control over these margins so that our list does not overlap the left margin of the page. The key relationship is that the right edge of the $\backslash labelsep$ equals the right edge of the $\backslash itemindent$, so that the left edge of the *label box* is at $\backslash leftmargin + \backslash itemindent$ minus $\backslash labelwidth + \backslash labelsep$. Thus, the handling of the margins by the package will be as shown in the figure 10. Where the default values will look like in the figure 11.

Figure 9: Representation of standard horizontal lengths in `list` environment.Figure 10: Representation of horizontal lengths concept in list in `enumext`.

```
\__enumext_calc_hspace:NNNNNN
\__enumext_calc_hspace:ccccccc
```

The function `__enumext_calc_hspace:NNNNNN` takes seven arguments to be able to determine horizontal spaces for all list environment:

```
#1: \l__enumext_labelwidth_X_dim      #2: \l__enumext_labelsep_X_dim
#3: \l__enumext_listoffset_X_dim      #4: \l__enumext_leftmargin_tmp_X_dim
#5: \l__enumext_leftmargin_X_dim      #6: \l__enumext_itemindent_X_dim
#7: \l__enumext_leftmargin_tmp_X_bool
```

And returns the “adjusted” values of `\leftmargin` and `\itemindent`.

This function is passed to `__enumext_list_arg_two_X:` which is used in the definition of the `enumext` and `keyans` environments (§12.37.2).

```
3206 \cs_new_protected:Npn \__enumext_calc_hspace:NNNNNN #1 #2 #3 #4 #5 #6 #7
3207 {
3208   \dim_compare:nNt { #1 } < { \c_zero_dim }
3209   {
3210     \msg_warning:nnnV { enumext } { width-non-positive } { labelwidth } { #1 }
3211     \dim_set:Nn #1 { \dim_abs:n { #1 } }
3212   }
3213   \dim_compare:nNt { #2 } < { \c_zero_dim }
3214   {
3215     \msg_warning:nnnV { enumext } { width-negative } { labelsep } { #2 }
3216     \dim_set:Nn #2 { \dim_abs:n { #2 } }
3217   }
3218 }
```

If no value has been passed to the `labelwidth` and `labelsep` keys we set the default values for `\l__enumext_leftmargin_tmp_X_dim`.

```
3218 \bool_if:nF #7 { \dim_set:Nn #4 { #1 + #2 } }
```

We now analyze the cases and set the values for `\leftmargin` and `\itemindent`.

```
3219 \dim_compare:nNtTF { #4 } < { \c_zero_dim }
3220 {
3221   \dim_set:Nn #6 { #1 + #2 - #4 }
3222   \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
3223 }
3224 {
3225   \dim_compare:nNt { #4 } = { #1 + #2 }
3226   { \dim_set:Nn #6 { \c_zero_dim } }
3227   \dim_compare:nNt { #4 } < { #1 + #2 }
3228   { \dim_set:Nn #6 { #1 + #2 - #4 } }
3229   \dim_compare:nNt { #4 } > { #1 + #2 }
3230   {
```

Figure 11: Default horizontal lengths in `enumext`.

```

3231         \dim_set:Nn #6 { -#1 - #2 + #4}
3232         \dim_set:Nn #6 { #6*-1}
3233     }
3234     \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
3235 }
3236 }
3237 \cs_generate_variant:Nn \__enumext_calc_hspace:NNNNNNN { cccccc }

```

(End of definition for __enumext_calc_hspace:NNNNNNN.)

12.37.2 Setting second argument of the lists

We will “not set” `\leftmargini`, `\leftmarginii`, `\leftmarginiii` or `\leftmarginiv`, in this case, we will directly set the parameters for vertical and horizontal list spacing per level.

```

3238 \cs_set_protected:Npn \__enumext_tmp:n #1
3239 {
3240     \cs_new_protected:cpn { __enumext_list_arg_two_#1: }
3241     {
3242         \__enumext_calc_hspace:ccccc
3243         { \__enumext_labelwidth_#1_dim } { \__enumext_labelsep_#1_dim }
3244         { \__enumext_listoffset_#1_dim } { \__enumext_leftmargin_tmp_#1_dim }
3245         { \__enumext_leftmargin_#1_dim } { \__enumext_itemindent_#1_dim }

3273             }
3274         }
3275     }
3276 }
3277 \clist_map_inline:nn { i, ii, iii, iv, v } { \__enumext_tmp:n {#1} }

```

(End of definition for __enumext_list_arg_two_i: and others.)

For the horizontal environments `enumext*` and `keyans*` the implementation is similar, but, the value of `\partopsep` is always `\opt`. At this point we will modify the `parsep` key to make it take the value of the `itemsep` key and later, in the environment definition, we will modify `parindent` to make it set the value of `lisparindent` and `parsep` to set the value of `\parskip` locally.

```

3278 \cs_set_protected:Npn \__enumext_tmp:n #1

(End of definition for `__enumext_list_arg_two_vii:` and `__enumext_list_arg_two_viii:`)

12.38 The environment enumext

enumext We create the `enumext` environment based on `list` environment by levels.

```

3313 \NewDocumentEnvironment{enumext}{0} { }
3314 {
3315   \__enumext_safe_exec:
3316   \__enumext_parse_keys:n {#1}
3317   \__enumext_before_list:
3318   \__enumext_start_store_level:
3319   \__enumext_start_list:nn
3320     { \tl_use:c { l__enumext_label_ \__enumext_level: _tl } }
3321     {
3322       \use:c { __enumext_list_arg_two_ \__enumext_level: : }
3323       \__enumext_before_keys_exec:
3324     }
3325   \__enumext_set_item_width:
3326   \__enumext_after_args_exec:
3327 }
3328 {
3329   \__enumext_stop_list:
3330   \__enumext_stop_store_level:
3331   \__enumext_after_list:
3332 }

```

(End of definition for `enumext`. This function is documented on page 4.)

`__enumext_set_item_width:` The function `__enumext_set_item_width:` will set the value of `\itemwidth` taking into account the value established by the `list-offset` key for each level of the environment.

```

3333 \cs_new_protected:Nn \__enumext_set_item_width:
3334 {
3335   \dim_set:Nn \itemwidth
3336   {
3337     \linewidth
3338   }
3339   \dim_compare:nT
3340   {
3341     \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim } != \c_zero_dim
3342   }
3343   {
3344     \dim_sub:Nn \itemwidth
3345     {
3346       \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim }
3347     }
3348   }
3349 }

```

(End of definition for `__enumext_set_item_width:`)

`__enumext_safe_exec:` The `__enumext_safe_exec:` function first call the function `__enumext_internal_mini_page:` to create the environment `__enumext_mini_env*`, then the function `__enumext_is_not_nested:` which sets `\g__enumext_standar_bool` to “true” if we are not nested within `enumext*`, we will increment `\l__enumext_level_int` to restrict nesting of the environment, set `\l__enumext_standar_bool` to “true” and finally call the function `__enumext_is_on_first_level:` which sets `\l__enumext_standar_first_bool` to “true” only if the environment is not nested and we are at the “first level”.

```

3350 \cs_new_protected:Nn \__enumext_safe_exec:
3351 {
3352   \__enumext_internal_mini_page:
3353   \__enumext_is_not_nested:

3402   {
3403     \bool_set_true:c { \__enumext_store_upper_level_ \__enumext_level: _bool }
3404     \__enumext_store_level_open:
3405   }
3406 }
3407 }

```

Close the stored structure.

```

3408 \cs_new_protected:Nn \__enumext_stop_store_level:
3409 {
3410   \bool_if:cT { \__enumext_store_upper_level_ \__enumext_level: _bool }
3411   {
3412     \__enumext_store_level_close:
3413   }
3414 }

```

(End of definition for `__enumext_start_store_level:` and `__enumext_stop_store_level:`)

`__enumext_before_list:` The function `__enumext_before_list:` first calls the function `__enumext_vspace_above:` used by the keys `above` and `above*`, then calls the function `__enumext_before_args_exec:` used by the key `before*` and finally execute the function `__enumext_check_ans_active:` for the check answer mechanism.

```

3415 \cs_new_protected:Nn \__enumext_before_list:
3416 {
3417   \__enumext_vspace_above:
3418   \__enumext_before_args_exec:
3419   \__enumext_check_ans_active:

```

When the `mini-env` key is active it will set the value of the `__enumext_minipage_right_X_dim` to be the *width* of the `__enumext_mini_env*` environment on the “right side”, using this value together with the value of the `__enumext_minipage_hsep_X_dim` set by the `mini-sep` key, the value of `__enumext_minipage_left_X_dim` will be set, which will be the *width* of `__enumext_mini_env*` environment on the “left side”, always having a current `\linewidth` as *maximum width* between them.

```

3420 \dim_compare:nNnT
3421 { \dim_use:c { \__enumext_minipage_right_ \__enumext_level: _dim } } > { \c_zero_dim }
3422 {
3423   \dim_set:cn { \__enumext_minipage_left_ \__enumext_level: _dim }
3424   {
3425     \linewidth
3426     - \dim_use:c { \__enumext_minipage_right_ \__enumext_level: _dim }
3427     - \dim_use:c { \__enumext_minipage_hsep_ \__enumext_level: _dim }
3428   }

```

The boolean variable `__enumext_minipage_active_X_bool` will be activated and the integer variable `\g__enumext_minipage_stat_int` used by the `\miniright` command will be incremented, then the function `__enumext_mini_addvspace:` is called and the `__enumext_mini_env*` environment on the “left side” will be initialized followed by the “vertical spacing” applied to preserve the “baseline” between the *left* and *right* side environments. After these actions, the function `__enumext_multicols_start:` is called to handle the `multicols` environment.

Here we use the plain T_EX macro `\nointerlineskip` to prevent baseline “glue” being added between the next pair of boxes in a *vertical list*.

```

3429 \bool_set_true:c { \__enumext_minipage_active_ \__enumext_level: _bool }
3430 \int_gincr:N \g__enumext_minipage_stat_int
3431 \__enumext_mini_addvspace:
3432 \nointerlineskip\noindent
3433 \begin{\__enumext_mini_env*}
3434   { \dim_use:c { \__enumext_minipage_left_ \__enumext_level: _dim } }
3435 }
3436 \__enumext_multicols_start:
3437 }

```

(End of definition for `__enumext_before_list:`)

`__enumext_multicols_start:` The function `__enumext_multicols_start:` will start the `multicols` environment according to the value passed by the `columns` key, then set the default value for `\columnsep` when `columns-sep=opt` and set the value of `\multicolsep` equal to zero and leave `\columnseprule` equal to zero for inner levels.

```

3438 \cs_new_protected:Nn \__enumext_multicols_start:
3439 {
3440   \int_compare:nNt
3441     { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
3442   {
3443     \dim_compare:nNt
3444       { \dim_use:c { l__enumext_columns_sep_ \__enumext_level: _dim } } = { \c_zero_dim }
3445     {
3446       \dim_set:cn { l__enumext_columns_sep_ \__enumext_level: _dim }
3447       {
3448         ( \dim_use:c { l__enumext_labelwidth_ \__enumext_level: _dim }
3449           + \dim_use:c { l__enumext_labelsep_ \__enumext_level: _dim }
3450         ) / \int_use:c { l__enumext_columns_ \__enumext_level: _int }
3451         - \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim }
3452       }
3453     }
3454     \dim_set_eq:Nc \columnsep { l__enumext_columns_sep_ \__enumext_level: _dim }
3455     \skip_zero:N \multicolsep
3456     \int_compare:nNt { \l__enumext_level_int } > { 1 }
3457     {
3458       \dim_zero:N \columnseprule
3459     }
3460   }

```

We will calculate the *vertical spacing* settings for the `multicols` environment using the function `__enumext_multi_advspace:`, apply our “vertical adjust spacing”, then start the `multicols` environment.

```

3460   \bool_if:cF { l__enumext_minipage_active_ \__enumext_level: _bool }
3461   {
3462     \__enumext_multi_advspace:
3463   }
3464   \raggedcolumns
3465   \begin{multicols}{ \int_use:c { l__enumext_columns_ \__enumext_level: _int } }
3466 }
3467 }

```

(End of definition for `__enumext_multicols_start:`)

`__enumext_multicols_stop:` The function `__enumext_multicols_stop:` will stop the `multicols` environment. If the boolean variable `\l__enumext_minipage_active_X_bool` is false (not nested in `__enumext_mini_env*`) we will apply our “vertical adjust” spacing.

```

3468 \cs_new_protected:Nn \__enumext_multicols_stop:
3469 {
3470   \int_compare:nNt
3471     { \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
3472   {
3473     \end{multicols}
3474     \bool_if:cF { l__enumext_minipage_active_ \__enumext_level: _bool }
3475     {
3476       \par\addvspace{ \skip_use:c { l__enumext_multicols_below_ \__enumext_level: _skip } }
3477     }
3478   }
3479 }

```

(End of definition for `__enumext_multicols_stop:`)

`__enumext_after_list:` The function `__enumext_after_list:` first check the state of the boolean variable `\l__enumext_minipage_active_X_bool`, if it is “true” a small test will be executed to check if we have omitted the use of `\miniright` (the `__enumext_mini_env*` environment has not been closed), then close `__enumext_mini_env*` and add the *adjusted vertical space* `\l__enumext_minipage_after_skip`, otherwise we will close the `multicols` environment.

```

3480 \cs_new_protected:Nn \__enumext_after_list:
3481 {
3482   \bool_if:cTF { l__enumext_minipage_active_ \__enumext_level: _bool }
3483   {

```

```

3484 \int_compare:nNt { \g__enumext_minipage_stat_int } = { 1 }
3485 {
3486   \msg_warning:nn { enumext } { missing-miniright }
3487   \miniright
3488 }
3489 \int_gzero:N \g__enumext_minipage_stat_int
3490 \end{__enumext_mini_env*}
3491 \par\addvspace { \l__enumext_minipage_after_skip }
3492 }
3493 { \__enumext_multicols_stop: }

```

Now we will execute the functions `__enumext_after_stop_list:` used by the key `after`, `__enumext_check_ans_key_hook:` used by the key `check-ans`, `__enumext_vspace_below:` used by the keys `below` and `below*`. Finally set `\l__enumext_standar_bool` to false and call the function `__enumext_resume_save_counter:` used by the `series`, `resume` and `resume*` keys.

```

3494 \__enumext_after_stop_list:
3495 \__enumext_check_ans_key_hook:
3496 \__enumext_vspace_below:
3497 \bool_set_false:N \l__enumext_standar_bool
3498 \__enumext_resume_save_counter:
3499 }

```

As we don't want our check to be executed `check-ans` by levels but on the complete list, we will take it out of the `enumext` environment using the "hook" function `__enumext_after_env:nn`.

```

3500 \__enumext_after_env:nn {enumext} { \__enumext_execute_after_env: }

```

(End of definition for `__enumext_after_list:`)

12.39 The environment keyans

The environment `keyans` also based on lists. The main differences with the `enumext` environment are the *nesting* and the way the *answers* (choice) will be stored and checked, this environment is intended exclusively for "multiple choice questions".

`keyans` Now we define the environment `keyans` also based on lists.

```

3501 \NewDocumentEnvironment{keyans}{ 0{} }
3502 {
3503   \__enumext_keyans_safe_exec:
3504   \__enumext_keyans_parse_keys:n {#1}
3505   \__enumext_before_list_v:
3506   \__enumext_start_list:nn
3507   { \tl_use:N \l__enumext_label_v_tl }
3508   {
3509     \__enumext_list_arg_two_v:
3510     \__enumext_before_keys_exec_v:
3511   }
3512   \__enumext_keyans_set_item_width:
3513   \__enumext_after_args_exec_v:
3514 }
3515 {
3516   \__enumext_check_starred_cmd:n { item }
3517   \__enumext_stop_list:
3518   \__enumext_after_list_v:
3519 }

```

(End of definition for `keyans`. This function is documented on page 14.)

`__enumext_keyans_set_item_width:`

The function `__enumext_keyans_set_item_width:` will set the value of `\itemwidth` taking into account the value established by the `list-offset` key.

```

3520 \cs_new_protected:Nn \__enumext_keyans_set_item_width:
3521 {
3522   \dim_set:Nn \itemwidth
3523   {
3524     \linewidth
3525   }
3526   \dim_compare:nT
3527   {
3528     \l__enumext_listoffset_v_dim != \c_zero_dim
3529   }
3530   {
3531     \dim_sub:Nn \itemwidth
3532     {

```

```

3533         \l__enumext_listoffset_v_dim
3534     }
3535 }
3536 }

```

(End of definition for __enumext_keyans_set_item_width:.)

__enumext_keyans_safe_exec: The **keyans** environment will only be available if the **save-ans** key is active and can only be used at the “first level” within the **enumext** environment. We do not want the environment to be nested, so we will set a maximum at this point. If the conditions are not met, an error message will be returned.

```

3537 \cs_new_protected:Nn \__enumext_keyans_safe_exec:
3538 {
3539     \bool_if:NF \l__enumext_store_active_bool

12.40 The environment keyanspic and \anspic

The `keyanspic` environment is a list-based environment that uses the same configuration for “spacing” and `\label` as the `keyans` environment, but it does not use `\item`. The contents are passed to the environment by means of the `\anspic` command and are placed inside `minipage` environments, with the `\label` underneath, adjusting widths according to the options passed to the environment. Again it is necessary to “adjust” the spacing, both vertical and horizontal, to obtain an output like the one shown in the figure 12.

Figure 12: Representation of the `keyanspic` spacing in `enumext`.

This implementation is adapted from the answer given by Enrico Gregorio in [How to process the body of an environment and divide it by a \macro?](#).

12.40.1 The command `\anspic`

`\anspic` The `\anspic` command take three arguments, the starred (*) versions `\anspic*` and `\anspic*[\langle content \rangle]` store the current $\langle label \rangle$ next to the $[\langle content \rangle]$ if it is present in the $\langle sequence \rangle$ and $\langle prop list \rangle$ defined by `save-ans` key. This command is used as a replacement for `\item` in the `keyanspic` environment.

```
3635 \NewDocumentCommand \anspic { s o +m }
3636 {
```

We check that the command is active in the `keyanspic` environment only if the `save-ans` key is present, otherwise we return an error.

```
3637   \bool_if:NF \__enumext_store_active_bool
3638   {
3639     \msg_error:nnnn { enumext } { wrong-place } { keyanspic } { save-ans }
3640   }
3641   \int_compare:nNnT { \__enumext_level_int } > { 1 }
3642   {
3643     \msg_error:nn { enumext } { keyanspic-wrong-level }
3644   }
3645   \int_compare:nNnT { \__enumext_keyans_level_int } = { 1 }
3646   {
3647     \msg_error:nnnn { enumext } { command-wrong-place } { anspic } { keyans }
3648   }
```

The three arguments are handled by the function `__enumext_keyans_anspic_code:nnn` and stored in the sequence `__enumext_keyans_pic_body_seq` which is processed by the `keyanspic` environment.

```
3649   \seq_put_right:Nn \__enumext_keyans_pic_body_seq
3650   {
3651     \__enumext_keyans_anspic_code:nnn { #1 } { #2 } { #3 }
3652   }
3653 }
```

(End of definition for `\anspic`. This function is documented on page 15.)

`__enumext_keyans_anspic_code:nnn`

The function `__enumext_keyans_anspic_code:nnn` will be in charge of handling the “counter” and $\langle label \rangle$, which will have the same configuration as the `keyans` environment.

```
3654 \cs_new_protected:Nn \__enumext_keyans_anspic_code:nnn
3655 {
3656   \stepcounter { enumXvi }
3657   #3 \
3658   \bool_if:nT { #1 }
3659   {
3660     \__enumext_keyans_addto_prop:n { #2 }
3661     \__enumext_keyans_store_ref:
3662     \__enumext_keyans_addto_seq:n { #2 }
3663     \int_gincr:N \__enumext_check_starred_cmd_int
3664     \bool_lazy_or:nnT
3665     { \bool_if_p:N \__enumext_show_answer_bool }
3666     { \bool_if_p:N \__enumext_show_position_bool }
3667     {
3668       \tl_set_eq:NN \__enumext_label_v_tl \__enumext_label_vi_tl
3669       \__enumext_keyans_show_left:n { #2 }
3670       \tl_set_eq:NN \__enumext_label_vi_tl \__enumext_label_v_tl
3671     }
3672   }
3673   \tl_use:N \__enumext_label_font_style_v_tl
3674   \__enumext_wrapper_label_v:n { \__enumext_label_vi_tl } \__enumext_keyans_show_item_opt:
3675 }
```

(End of definition for `__enumext_keyans_anspic_code:nnn`.)

12.40.2 The environment `keyanspic`

`keyanspic` Now we define the environment `keyanspic` based on list. The optional argument $[\langle number above, number below \rangle]$ will determine the number of `minipage` environments that will be above and below separated by `\parsep+\itemsep` within it.

```
3676 \NewDocumentEnvironment{keyanspic}{ o }
3677 {
3678   \__enumext_keyans_pic_safe_exec:
3679   \__enumext_start_list:nn
3680   { }
3681   {
```

```

3682     \__enumext_keyans_pic_arg_two:
3683 }

```

We apply the “adjusted” vertical spacing above the environment

```

3684 \vspace { \__enumext_keyans_pic_above_skip }
3685 }

```

If the optional argument is not present, the number of times the `\anspic` command appears will be counted from `\l__enumext_keyans_pic_body_seq` and placed in `minipage` environments on a single line. Finally we check if `\anspic*` has been used, set the counter to zero and apply our “adjusted” vertical space below the environment.

```

3686 {
3687   \tl_if_novalue:nTF { #1 }
3688   {
3689     \__enumext_keyans_pic_do:e { \seq_count:N \l__enumext_keyans_pic_body_seq }
3690   }
3691   { \__enumext_keyans_pic_do:n { #1 } }
3692   \__enumext_stop_list:
3693   \__enumext_check_starred_cmd:n { anspic }
3694   \setcounter { enumXvi } { 0 }
3695   \vspace { \__enumext_topsep_v_skip }
3696   %\bool_set_false:N \l__enumext_store_active_bool
3697 }

```

(End of definition for `keyanspic`. This function is documented on page 15.)

`__enumext_keyans_pic_safe_exec:` The function `__enumext_keyans_pic_safe_exec:` check nested and level position inside the `enumext` environment.

```

3698 \cs_new_protected:Nn \__enumext_keyans_pic_safe_exec:
3699 {
3700   \int_incr:N \l__enumext_keyans_pic_level_int
3701   \int_compare:nNt { \l__enumext_keyans_pic_level_int } > { 1 }
3702   {
3703     \msg_error:nn { enumext } { keyanspic-nested }
3704   }
3705   \__enumext_keyans_name_and_start:
3706 }

```

(End of definition for `__enumext_keyans_pic_safe_exec:`.)

`__enumext_keyans_pic_skip_abs:N` The function `__enumext_keyans_pic_skip_abs:N` will return a positive value `\parsep`.

```

3707 \cs_new_protected:Npn \__enumext_keyans_pic_skip_abs:N #1
3708 {
3709   \dim_compare:nNt { #1 } < { 0pt }
3710   { \skip_set:Nn #1 { -#1 } }
3711 }

```

(End of definition for `__enumext_keyans_pic_skip_abs:N`.)

`__enumext_keyans_pic_arg_two:` The function `__enumext_keyans_pic_arg_two:` will be used in the second argument of the `__enumext_start_list:nn` function that defines the `keyanspic` environment, it will handle the setting of spaces.

```

3712 \cs_new_protected:Nn \__enumext_keyans_pic_arg_two:
3713 {

```

The first thing to do is to set the boolean variable `\l__enumext_leftmargin_tmp_v_bool` handled by the `list-indent` key to false, then we copy the definition of the second list argument from the `keyans` environment.

```

3714   \bool_set_false:N \l__enumext_leftmargin_tmp_v_bool
3715   \__enumext_list_arg_two_v:

```

We will add the value of `\itemsep` to `\parsep` which we will use as vertical spacing between the above and below `minipage` environments. and adjust the value of `\leftmargin`, the label and counter are handled directly by the `\anspic` command. Then we make equal to zero `\labelwidth`, `\labelsep`, `\partopsep` and `\itemsep` so that the horizontal and vertical spacing is not affected.

```

3716   \skip_add:Nn \parsep { \itemsep }
3717   \dim_add:Nn \leftmargin { -\labelwidth - \labelsep }
3718   \dim_zero:N \labelwidth
3719   \dim_zero:N \listparindent
3720   \dim_zero:N \labelsep
3721   \skip_zero:N \partopsep
3722   \skip_zero:N \itemsep

```

We set the value of `\l__enumext_keyans_pic_above_skip` which we will use to apply our “adjust” space above `keyanspic`, finally we call `__enumext_item_std:w` followed by `\scan_stop:` to prevent the error message returned by \TeX when not using the `\item` command.

```

3723 \__enumext_keyans_pic_skip_abs:N \parsep
3724 \skip_set:Nn \l__enumext_keyans_pic_above_skip
3725 {
3726   \box_dp:N \strutbox
3727   + \l__enumext_topsep_v_skip
3728   - \parsep
3729 }
3730 \__enumext_item_std:w \scan_stop:
3731 % paranoia
3732 \RenewDocumentCommand \item {}
3733 {
3734   \msg_error:nn { enumext } { keyanspic-item-cmd }
3735 }
3736 }

```

(End of definition for `__enumext_keyans_pic_arg_two:.`)

`__enumext_keyans_pic_do:n`
`__enumext_keyans_pic_do:e`

The optional argument is split by comma and is handled directly by the function `__enumext_keyans_pic_do:n` and passed to the function `__enumext_keyans_pic_row:n`.

```

3737 \cs_new_protected:Nn \__enumext_keyans_pic_do:n
3738 {
3739   \clist_map_function:nN { #1 } \__enumext_keyans_pic_row:n
3740 }
3741 \cs_generate_variant:Nn \__enumext_keyans_pic_do:n { e }

```

(End of definition for `__enumext_keyans_pic_do:n`.)

`__enumext_keyans_pic_row:n`

The function `__enumext_keyans_pic_row:n` will set the widths for the `minipage` environments and place the content $\langle stored \rangle$ by `\anspic*` in the `\l__enumext_keyans_pic_body_seq` sequence inside them.

```

3742 \cs_new_protected:Nn \__enumext_keyans_pic_row:n
3743 {
3744   \dim_set:Nn \l__enumext_keyans_pic_width_dim { \linewidth / #1 }

3754     \__enumext_endminipage:
3755   }
3756   \par
3757 }

```

(End of definition for `__enumext_keyans_pic_row:n`.)

12.41 The horizontal environments

Generating horizontal list environments is NOT as simple as standard \TeX list environments. The fundamental part of the code is adapted from the `shortlst` package to a more modern version using `expl3`. It is not possible to redefine `\item` and `\makelabel` as in the non starred versions (at least I have not achieved it) and as we will make it behave differently, we have no other option than to define a cascade of functions.

12.42 Redefining `\footnote` command

`__enumext_footnotetext:nn`
`__enumext_renew_footnote:`
`__enumext_print_footnote:`

To keep the correct numbering of `\footnote` and to make it work correctly in the `enumext*` and `keyans*` environments, it is necessary to redefine the command. This implementation is adapted from the answer given by Clea F. Rees (@cfr) in [footnotes in boxes compatible with hyperref](#).

```

3758 \cs_new_protected:Nn \__enumext_footnotetext:nn
3759 {
3760   \footnotetext[#1]{#2}
3761 }
3762 \cs_new_protected:Nn \__enumext_renew_footnote:
3763 {

```

```

3764 \seq_gclear:N \g__enumext_footnote_arg_seq
3765 \seq_gclear:N \g__enumext_footnote_int_seq
3766 \RenewDocumentCommand \footnote { o +m }
3767 {
3768   \tl_if_novalue:nTF {##1}
3769   {
3770     \stepcounter{footnote}
3771     \int_gset_eq:Nc \g__enumext_footnote_int { c@footnote }
3772   }
3773   {
3774     \int_gset:Nn \g__enumext_footnote_int { ##1 }
3775   }
3776   \footnotemark [ \g__enumext_footnote_int ]
3777   \seq_gput_right:Nn \g__enumext_footnote_arg_seq { ##2 }
3778   \seq_gput_right:NV \g__enumext_footnote_int_seq \g__enumext_footnote_int
3779 }
3780 }
3781 \cs_new_protected:Nn \__enumext_print_footnote:
3782 {
3783   \seq_if_empty:NF \g__enumext_footnote_int_seq
3784   {
3785     \seq_map_pairwise_function:NNN
3786     \g__enumext_footnote_int_seq
3787     \g__enumext_footnote_arg_seq
3788     \__enumext_footnotetext:nn
3789   }
3790 }

```

(End of definition for `__enumext_footnotetext:nn`, `__enumext_renew_footnote:`, and `__enumext_print_footnote:`.)

12.42.1 Functions for item box width

To achieve the horizontal list environment we will capture the `\item` command and the content of this in an plain `lrbox` box using `\makebox` for the `label` and a `minipage` environment for the content passed to `\item`, we will also add the optional argument (`\langle number \rangle`) to `\item` to be able to *join columns* horizontally, in simple terms, we want `\item` to behave in the same way as in the `enumext` environment but adding an optional first argument (`\langle number \rangle`).

```

\__enumext_starred_columns_set_vii:
\__enumext_starred_columns_set_viii:

```

We set the default value for the *width of the box* containing the content of the items for `enumext*` environment.

```

3791 \cs_new_protected:Nn \__enumext_starred_columns_set_vii:
3792 {

(End of definition for `__enumext_starred_joined_item_vii:n` and `__enumext_starred_joined_item_viii:n`)

12.42.3 Functions for mini-env, mini-right and mini-right* keys

The implementation of the `mini-env` key support is almost identical to the one used in the `enumext` and `keyans` environments, the difference is that the `__enumext_mini_env*` environment on the “right side” is executed “after” closing the environment, so it is necessary to make a global copy of the variable `\l__enumext_minipage_right_vii_dim` in the variable `\g__enumext_minipage_right_vii_dim`.

```

3951 \cs_new_protected:Nn \__enumext_start_mini_vii:
3952 {
3953   \dim_compare:nNnT { \l__enumext_minipage_right_vii_dim } > { \c_zero_dim }
3954   {
3955     \dim_set:Nn \l__enumext_minipage_left_vii_dim
3956     {
3957       \linewidth
3958       - \l__enumext_minipage_right_vii_dim
3959       - \l__enumext_minipage_hsep_vii_dim
3960     }
3961     \bool_set_true:N \l__enumext_minipage_active_vii_bool
3962     \dim_gset_eq:NN
3963     \g__enumext_minipage_right_vii_dim
3964     \l__enumext_minipage_right_vii_dim
3965     \__enumext_mini_addvspace_vii:
3966     \nointerlineskip\noindent
3967     \begin{__enumext_mini_env*}{ \l__enumext_minipage_left_vii_dim }
3968   }
3969 }
```

The function `__enumext_stop_mini_vii:` closes the `__enumext_mini_env*` environment on the left side, applies `\hfill` and sets the value of the variable `\g__enumext_minipage_active_vii_bool` to true which will be used in the function `__enumext_after_env:nn` to execute the `__enumext_mini_env*` on the “right side”.

```

3970 \cs_new_protected:Nn \__enumext_stop_mini_vii:
3971 {
3972   \bool_if:NT \l__enumext_minipage_active_vii_bool
3973   {
3974     \end{__enumext_mini_env*}
3975     \hfill
3976     \bool_gset_true:N \g__enumext_minipage_active_vii_bool
3977   }
3978 }
```

Finally we execute the `{\code}` passed to the `mini-right` or `mini-right*` keys stored in the variable `\g__enumext_miniright_code_vii_tl` in the `__enumext_mini_env*` environment on the “right side”. For compatibility with the `caption` package and possibly other `{\code}` passed to this key, we will pass it to a box and then print it.

```

```

(End of definition for __enumext_starred_item_vii:w and others.)

12.43.2 Real definition of \item in enumext*

__enumext_start_item_vii:w

The functions __enumext_start_item_vii:w and __enumext_stop_item_vii: executing the true definition of \item inside the enumext* environment. The first thing we will do is set the value of __enumext_stop_item_tmp_vii: equal to __enumext_stop_item_vii: which we will define later and add the [hyperref](#) compatible `enumXvii` counter, after that we will start capturing the item content in a box. Here setting the `\if@hyper@item` switch to “true” for [hyperref](#) compatible. The explanation for this is given by the master Heiko Oberdiek on `\refstepcounter{enumi}` twice (or more) creates destination with the same identifier.

```

4214 \cs_new_protected_nopar:Npn \__enumext_start_item_vii:w [#1]
4215 {
4216   \cs_set_eq:NN \__enumext_stop_item_tmp_vii: \__enumext_stop_item_vii:
4217   \legacy_if:nT { @noitemarg }
4218   {
4219     \legacy_if_set_false:n { @noitemarg }
4220     \legacy_if:nT { @nmbrrlist }
4221     {
4222       \bool_if:NT \l__enumext_hyperref_bool
4223       {
4224         \legacy_if_set_true:n { @hyper@item }
4225       }
4226       \refstepcounter{enumXvii}
4227       \bool_if:NT \l__enumext_check_answers_bool
4228       {
4229         \int_gincr:N \g__enumext_item_number_int
4230         \bool_set_true:N \l__enumext_item_number_bool
4231       }
4232     }
4233   }

```

Here we start capturing \item and its contents into a group using the plain form of the `lrbox` environment. If the state of the variable `\l__enumext_footnotes_key_bool` is false, we will redefine the command `\footnote`, followed by printing the *symbol* defined for \item* if it is present and open a new group inside which we execute `font key` next to \item and the keys `wrap-label`, `wrap-label*`, `align`, close the group and execute the key `labelsep` and then the key `first`. Finally we open the `minipage` environment and execute the `listparindent` key which will be equal to `\parindent`, the `parsep` key which will be equal to `\parskip` and the `itemindent` key.

```

4307     }
4308 }

```

As we don't want our check to be executed `check-ans` by levels but on the complete list, we will take it out of the `enumext*` environment using the “hook” function `__enumext_after_env:nn`.

```
4309 \__enumext_after_env:nn {enumext*} { \__enumext_execute_after_env: }
```

(End of definition for `__enumext_remove_extra_parsep_vii:`.)

12.44 The environment `keyans*`

`keyans*`

First we will generate the environment and we will give a temporary definition to `__enumext_stop_item_tmp_viii:` equal to `\noindent` and next to `\item` equal to `__enumext_start_item_tmp_viii:` which we will redefine later.

```
4310 \NewDocumentEnvironment{keyans*}{ o }
4311 {
4312   \__enumext_safe_exec_viii:
4313   \__enumext_parse_keys_viii:n {#1}
4314   \__enumext_before_list_viii:
4315   \__enumext_start_list:nn { }
4316   {
4317     \__enumext_list_arg_two_viii:
4318     \__enumext_before_keys_exec_viii:
4319   }
4320   \__enumext_starred_columns_set_viii:
4321   \item[] \scan_stop:
4322   \cs_set_eq:NN \__enumext_stop_item_tmp_viii: \noindent
4323   \cs_set_eq:NN \item \__enumext_start_item_tmp_viii:
4324 }
4325 {
4326   \__enumext_stop_item_tmp_viii:
4327   \__enumext_remove_extra_parsep_viii:
4328   \__enumext_check_starred_cmd:n { item }
4329   \__enumext_stop_list:
4330   \__enumext_after_list_viii:
4331 }
```

(End of definition for `keyans*`. This function is documented on page 14.)

`__enumext_safe_exec_viii:`

First check the maximum nesting level for the `keyans*` environment.

```
4332 \cs_new_protected:Nn \__enumext_safe_exec_viii:
4333 {
4334   \int_incr:N \__enumext_keyans_level_h_int
4335   \int_compare:nNnT { \__enumext_keyans_level_h_int } > { 1 }
4336   {
4337     \msg_error:nn { enumext } { nested }
4338   }
4339   \__enumext_keyans_name_and_start:
4340   \bool_if:NT \__enumext_starred_bool
4341   {
4342     \msg_error:nnn { enumext } { nested-horizontal } { enumext* }
4343   }
4344   \bool_set_true:N \__enumext_starred_bool
4345   % Set false for interfering with enumext nested in keyans* (yes, its possible and crayze)
4346   \bool_set_false:N \__enumext_store_active_bool
4347   \int_compare:nNnT { \__enumext_level_int } > { 1 }
4348   {
4349     \msg_error:nn { enumext } { keyans-wrong-level }
4350   }
4351 }
```

(End of definition for `__enumext_safe_exec_viii:`.)

`__enumext_parse_keys_viii:n`

Parse [`⟨key = val⟩`] for `keyans*`.

```
4352 \cs_new_protected:Npn \__enumext_parse_keys_viii:n #1
4353 {
4354   \tl_if_novalue:nF {#1}
4355   {
4356     \keys_set:nn { enumext / keyans* } {#1}
4357   }
4358 }
```

(End of definition for `__enumext_parse_keys_viii:n`.)

`__enumext_before_list_viii:` The function `__enumext_before_list_viii:` will add the vertical spacing on the environment if the `above` key is active next to the `{\code}` defined by the `before*` key if it is active, the call the function `__enumext_start_mini_viii:` handle by `mini-env`.

```
4359 \cs_new_protected:Nn \__enumext_before_list_viii:
4360 {
4361     \__enumext_vspace_above_viii:
4362     \__enumext_before_args_exec_viii:
4363     \__enumext_start_mini_viii:
4364 }
```

(End of definition for `__enumext_before_list_viii:`.)

`__enumext_after_list_viii:` The function `__enumext_after_list:` first call the function `__enumext_stop_mini_viii:`, then apply the `{\code}` handled by the `after` key together with the `vertical space` handled by the `below` key if they are present.

```
4365 \cs_new_protected:Nn \__enumext_after_list_viii:
4366 {
4367     \__enumext_stop_mini_viii:
4368     \__enumext_after_stop_list_viii:
4369     \__enumext_vspace_below_viii:
4370 }
```

(End of definition for `__enumext_after_list_viii:`.)

12.44.1 The command `\item` in `keyans*`

The idea here is to make the `\item` command behave in the same way as in the `keyans` environment with the difference of the optional argument (`\number`) which works in the same way as in the `enumext*` environment. In simple terms we want to store the `\label` next to the `[\content]` if it is present in the `\sequence` and `\prop list` defined by `save-ans` key for `\item*`, `\item*[\content]`, `\item(\number)*` and `\item(\number)*[\content]` commands.

`__enumext_start_item_tmp_viii:` First we will call the function `__enumext_stop_item_tmp_viii:` that we will redefine later, we will increment the value of `\l__enumext_item_column_pos_viii_int` that will count the item's by rows and the value of `\g__enumext_item_count_all_viii_int` that will count the total of item's in the environment. After that we will call the function `__enumext_item_peek_args_viii:` that will handle the arguments passed to `\item`.

```
4371 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_viii:
4372 {
4373     \__enumext_stop_item_tmp_viii:
4374     \int_incr:N \l__enumext_item_column_pos_viii_int
4375     \int_gincr:N \g__enumext_item_count_all_viii_int
4376     \__enumext_item_peek_args_viii:
4377 }
```

(End of definition for `__enumext_start_item_tmp_viii:`.)

`__enumext_item_peek_args_viii:` The function `__enumext_item_peek_args_viii:` will handle the `\item(\number)`. Look for the argument “(”, if it is present we will call the function `__enumext_joined_item_viii:w` (`\number`), which is in charge of joining the item's in the same row, in case they are not present we will set the default value (1).

```
4378 \cs_new_protected:Nn \__enumext_item_peek_args_viii:
4379 {
4380     \peek_meaning:NTF (
4381         { \__enumext_joined_item_viii:w }
4382         { \__enumext_joined_item_viii:w (1) }
4383     }
```

(End of definition for `__enumext_item_peek_args_viii:`.)

`__enumext_joined_item_viii:w` The function `__enumext_joined_item_viii:w` will first call the function `__enumext_starred_joined_item_viii:n` in charge of setting the `width` of the box that will store the content passed to `\item`. Then we will look for the argument “*”, if it is present we will call the function `__enumext_starred_item_viii:w` otherwise we will call the function `__enumext_standar_item_viii:w`.

```
4384 \cs_new_protected:Npn \__enumext_joined_item_viii:w (#1)
4385 {
4386     \__enumext_starred_joined_item_viii:n {#1}
4387     \peek_meaning_remove:NTF *
4388         { \__enumext_starred_item_viii:w }
4389         { \__enumext_standar_item_viii:w }
4390 }
```

(End of definition for `__enumext_joined_item_viii:w`.)

`__enumext_standar_item_viii:w`

The function `__enumext_standar_item_viii:w` will first look for the argument “[”, if present it will set the state of the variable `\l__enumext_wrap_label_opt_viii_bool` equal to the state of the variable `\l__enumext_wrap_label_opt_viii_bool` handled by the key `wrap-label*` and finally execute the *non-enumerated* version `\item[⟨custom⟩]` by means of the function `__enumext_start_item_viii:w`, otherwise we will set the value of the variable `\l__enumext_wrap_label_viii_bool` handled by the `wrap-label` key to true and set the switch `\if@noitemarg` to true to execute the enumerated version of `\item` by means of the function `__enumext_start_item_viii:w [\l__enumext_label_viii_tl]`.

```

4391 \cs_new_protected:Npn \__enumext_standar_item_viii:w
4392 {
4393   \bool_set_false:N \l__enumext_item_starred_viii_bool
4394   \peek_meaning:NTF [
4395     {
4396       \bool_set_eq:NN
4397         \l__enumext_wrap_label_viii_bool
4398         \l__enumext_wrap_label_opt_viii_bool
4399       \__enumext_start_item_viii:w
4400     }
4401     {
4402       \bool_set_true:N \l__enumext_wrap_label_viii_bool
4403       \legacy_if_set_true:n { @noitemarg }
4404       \__enumext_start_item_viii:w [ \l__enumext_label_viii_tl ]
4405     }
4406   }

```

(End of definition for `__enumext_standar_item_viii:w`.)

`__enumext_starred_item_viii:w`

The function `__enumext_starred_item_viii:w` together with the specified auxiliary functions `aux_i:w` and `aux_ii:w` execute `\item*` and `\item*[⟨content⟩]`.

`__enumext_starred_item_viii_aux_i:w`

`__enumext_starred_item_viii_aux_ii:w`

```

4407 \cs_new_protected:Npn \__enumext_starred_item_viii:w
4408 {
4409   \bool_set_true:N \l__enumext_item_starred_viii_bool
4410   \bool_set_true:N \l__enumext_wrap_label_viii_bool
4411   \peek_meaning:NTF [
4412     { \__enumext_starred_item_viii_aux_i:w }
4413     { \__enumext_starred_item_viii_aux_ii:w }
4414   }

```

The function `__enumext_starred_item_viii_aux_i:w` will save the optional argument to `\item*` in `\l__enumext_store_current_opt_arg_tl` and will save this argument along with the spacing set by the key `save-sep` in variable `\l__enumext_store_current_label_tl` if present, then call the function `__enumext_starred_item_viii_aux_ii:w`.

```

4415 \cs_new_protected:Npn \__enumext_starred_item_viii_aux_i:w [#1]
4416 {
4417   \tl_clear:N \l__enumext_store_current_label_tl
4418   \tl_if_novalue:nF { #1 }

4552     }
4553 }

```

(End of definition for `__enumext_remove_extra_parsep_viii:`.)

12.45 The command \getkeyans

`\getkeyans` The `\getkeyans` command takes a mandatory argument of the form $\langle \text{store name} : \text{position} \rangle$. Retrieve a “single” content stored by `\anskey`, `\anspic*` and `\item*` from $\langle \text{prop list} \rangle$ defined by `save-ans` key.

```
4554 \NewDocumentCommand \getkeyans { m }
4555 {
4556   \exp_args:Ne \__enumext_getkeyans_aux:n
4557   { \tl_to_str:e { \text_expand:n {#1} } }
4558 }
```

(End of definition for `\getkeyans`. This function is documented on page 16.)

`__enumext_getkeyans_aux:n` The internal function `__enumext_getkeyans_aux:n` is in charge of *splitting* the $\langle \text{argument} \rangle$ using “:”. If “:” is omitted it will return an error.

```
4559 \cs_new_protected:Npn \__enumext_getkeyans_aux:n #1
4560 {
4561   \str_if_in:nnTF {#1} { : }
4562   {
4563     \use:e
4564     {
4565       \cs_set:Npn \exp_not:N \__enumext_tmp:w ##1 \c_colon_str ##2 \scan_stop:
4566       { {##1} {##2} }
4567     }
4568     \exp_after:wN \__enumext_getkeyans:nn \__enumext_tmp:w #1 \scan_stop:
4569   }
4570   { \msg_error:nnn { enumext } { missing-colon } {#1} }
4571 }
```

(End of definition for `__enumext_getkeyans_aux:n`.)

`__enumext_getkeyans:nn` The internal function `__enumext_getkeyans:nn` will check for the existence of the $\langle \text{prop list} \rangle$, if it does not exist it will return an error message, then it will fetch the content specified by the second $\langle \text{argument} \rangle$ from $\langle \text{prop list} \rangle$.

```
4572 \cs_new_protected:Npn \__enumext_getkeyans:nn #1 #2
4573 {
4574   \prop_if_exist:cF { g__enumext_#1_prop }
4575   { \msg_error:nnn { enumext } { undefined-storage-anskey } {#1} }
4576   \group_begin:
4577   \prop_item:cn { g__enumext_#1_prop }{#2}
4578   \group_end:
4579 }
```

(End of definition for `__enumext_getkeyans:nn`.)

12.46 The command \printkeyans

The `\printkeyans` command prints “all stored content” in the $\langle \text{sequence} \rangle$ defined by the `save-ans` key. The first thing we will do is define a set of $\langle \text{filtered keys} \rangle$ with which we will control the options of the different nesting levels for the environment `enumext` and `enumext*` by storing their values in the list of tokens `__enumext_print_keyans_X_tl`.

The variable `__enumext_print_keyans_starred_tl` will have the default $\langle \text{keys} \rangle$ for `\printkeyans*` and will be set by `\setenumext[$\langle \text{print}^* \rangle$]` and the variable `__enumext_print_keyans_vii_tl` will have the default keys for the environment `enumext*` nested within the $\langle \text{sequence} \rangle$ and will be set by `\setenumext[$\langle \text{print}^*, * \rangle$]`, the rest of the variables will be for the environment `enumext` and will be set by `\setenumext[$\langle \text{print}, \text{level} \rangle$]`.

```
4580 \keys_define:nn { enumext / print }
4581 {
4582   print* .code:n = \keys_precompile:neN { enumext / enumext* }
4583               { \__enumext_filter_save_key:n {#1} }
4584               \__enumext_print_keyans_starred_tl, % starred cmd
4585   print* .initial:n = { nosep, label=\arabic*, columns=2, first=\small, font=\small },
4586   print-1 .code:n = \keys_precompile:neN { enumext / level-1 }
4587               { \__enumext_filter_save_key:n {#1} }
4588               \__enumext_print_keyans_i_tl,
4589   print-1 .initial:n = { nosep, label=\arabic*, columns=2, first=\small, font=\small },
4590   print-2 .code:n = \keys_precompile:neN { enumext / level-2 }
4591               { \__enumext_filter_save_key:n {#1} }
4592               \__enumext_print_keyans_ii_tl,
4593   print-2 .initial:n = { nosep, label=(\alph*), first=\small, font=\small },
4594   print-3 .code:n = \keys_precompile:neN { enumext / level-3 }
4595               { \__enumext_filter_save_key:n {#1} }
```

```

4596         \l__enumext_print_keyans_iii_tl,
4597     print-3 .initial:n = { nosep, label=\roman*., first=\small, font=\small },
4598     print-4 .code:n    = \keys_precompile:neN { enumext / level-4 }
4599                     { \l__enumext_filter_save_key:n {#1} }
4600         \l__enumext_print_keyans_iv_tl,
4601     print-4 .initial:n = { nosep, label=\Alph*., first=\small, font=\small },
4602     print-* .code:n    = \keys_precompile:neN { enumext / enumext* }
4603                     { \l__enumext_filter_save_key:n {#1} }
4604         \l__enumext_print_keyans_vii_tl, % starred nested
4605     print-* .initial:n = { nosep, label=\arabic*., first=\small, font=\small },
4606 }

```

- The reason for storing $\langle keys \rangle$ in token lists using `\keys_precompile:neN` is because the keys are set via `\setenumext` but are later executed by running the command `\printkeyans` and they are not handled directly by its optional argument, except those related to the first opening level.

`\printkeyans` Create a user command to print “all stored content” in $\langle sequence \rangle$ for `\anskey`, `anskey*`, `\item*` and `\anspic*`. Within a group we will run our “precompiled keys” and then call the internal function `\l__enumext_printkeyans:nnn`.

```

4607 \NewDocumentCommand \printkeyans { s O{ } m }
4608 {
4609     \group_begin:
4610     \tl_use:N \l__enumext_print_keyans_i_tl
4611     \tl_use:N \l__enumext_print_keyans_ii_tl
4612     \tl_use:N \l__enumext_print_keyans_iii_tl
4613     \tl_use:N \l__enumext_print_keyans_iv_tl
4614     \tl_use:N \l__enumext_print_keyans_vii_tl
4615     \l__enumext_printkeyans:nnn { #1 } { #2 } { #3 }
4616     \group_end:
4617 }

```

(End of definition for `\printkeyans`. This function is documented on page 16.)

`\l__enumext_printkeyans:nnn` The internal function `\l__enumext_printkeyans:nnn` will check for the existence of the $\langle sequence \rangle$, if it does not exist it will return an error message, then it will check if not empty.

```

4618 \cs_new_protected:Npn \l__enumext_printkeyans:nnn #1 #2 #3
4619 {
4620     \seq_if_exist:cTF { g__enumext_#3_seq }
4621     {
4622         \seq_if_empty:cF { g__enumext_#3_seq }
4623         {
4624             %%\seq_show:c { g__enumext_#3_seq }

```

If the starred argument is present we will check that the environment `enumext*` is not saved in the $\langle sequence \rangle$, then execute the variable `\l__enumext_print_keyans_starred_tl` that contains the default $\langle keys \rangle$ for the environment `enumext*`, it will open the environment `enumext*` passing the optional argument to the “first level”, set the key `base-fix` and then will map the $\langle sequence \rangle$.

```

4625         \bool_if:nTF {#1}
4626         {
4627             \seq_if_in:cnTF { g__enumext_#3_seq } { \end{enumext*} }
4628             {
4629                 \msg_error:nnnn { enumext } { print-starred } {#3} { enumext* }
4630             }
4631             {
4632                 \tl_use:N \l__enumext_print_keyans_starred_tl
4633                 \begin{enumext*}[#2]
4634                     \keys_set:nn { enumext / level-1 }{ base-fix }
4635                     \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
4636                     \end{enumext*}
4637             }
4638         }

```

Otherwise it will open the environment `enumext` passing the optional argument to the “first level”, set the key `base-fix` and then map the $\langle sequence \rangle$.

```

4639         {
4640             \begin{enumext}[#2]
4641             \keys_set:nn { enumext / enumext* }{ base-fix }
4642             \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
4643             \end{enumext}
4644         }
4645     }

```

```

4646     }
4647     {
4648         \msg_error:nnn { enumext } { undefined-storage-anskey } {#3}
4649     }
4650 }

```

(End of definition for `__enumext_printkeyans:nnn`.)

12.47 The command `\setenumext`

The command `\setenumext` will be in charge of managing the $\langle keys \rangle$ passed to all environments and to the `\printkeyans` command. We must take precautions with the `enumext*` environment and “*first level*” of the `enumext` environment so as not to capture $\langle keys \rangle$ that complicate us.

The function `__enumext_filter_first_level:n` will be in charge of filtering the $\langle keys \rangle$ passed to the environment `enumext*` and “*first level*” of the environment `enumext`.

```

\__enumext_filter_first_level:n
\__enumext_filter_first_level_key:n
\__enumext_filter_first_level_pair:nn
4651 \cs_new:Npn \__enumext_filter_first_level:n #1
4652 {
4653     \use:e
4654     {
4655         \keyval_parse:NNn
4656         \__enumext_filter_first_level_key:n
4657         \__enumext_filter_first_level_pair:nn {#1}
4658     }
4659 }

```

The function `__enumext_filter_first_level_key:n` will be responsible for filtering the $\langle keys \rangle$ that are passed “*without value*” by excluding the keys `resume` and `resume*`.

```

4660 \cs_new:Npn \__enumext_filter_first_level_key:n #1
4661 {
4662     \str_case:nnF {#1}
4663     {
4664         { resume } {}
4665         { resume* } {}
4666     }
4667     { , { \exp_not:n {#1} } }
4668 }

```

The function `__enumext_filter_first_level_pair:nn` will be responsible for filtering the $\langle keys \rangle$ that are passed “*with value*” by excluding the `series`, `resume` and `save-ans` keys.

```

4669 \cs_new:Npn \__enumext_filter_first_level_pair:nn #1#2
4670 {
4671     \str_case:nnF {#1}
4672     {
4673         { series } {}
4674         { resume } {}
4675         { save-ans } {}
4676     }
4677     { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
4678 }

```

(End of definition for `__enumext_filter_first_level:n`, `__enumext_filter_first_level_key:n`, and `__enumext_filter_first_level_pair:nn`.)

Now define a “*meta families*” of $\langle keys \rangle$ to access from `\setenumext`.

```

4679 \keys_define:nn { enumext / meta-families }
4680 {
4681     enumext-1 .code:n =
4682         {
4683             \keys_set:ne { enumext / level-1 }
4684             {
4685                 \__enumext_filter_first_level:n {#1}
4686             }
4687         } ,
4688     enumext-2 .code:n = { \keys_set:nn { enumext / level-2 } {#1} } ,
4689     enumext-3 .code:n = { \keys_set:nn { enumext / level-3 } {#1} } ,
4690     enumext-4 .code:n = { \keys_set:nn { enumext / level-4 } {#1} } ,
4691     keyans .code:n = { \keys_set:nn { enumext / keyans } {#1} } ,
4692     enumext* .code:n =
4693         {
4694             \keys_set:ne { enumext / enumext* }
4695             {
4696                 \__enumext_filter_first_level:n {#1}

```

```

4697         }
4698     } ,
4699     keyans* .code:n = { \keys_set:nn { enumext / keyans* } {#1} } ,
4700     print* .code:n = { \keys_set:nn { enumext / print } { print* = {#1} } } ,
4701     print-1 .code:n = { \keys_set:nn { enumext / print } { print-1 = {#1} } } ,
4702     print-2 .code:n = { \keys_set:nn { enumext / print } { print-2 = {#1} } } ,
4703     print-3 .code:n = { \keys_set:nn { enumext / print } { print-3 = {#1} } } ,
4704     print-4 .code:n = { \keys_set:nn { enumext / print } { print-4 = {#1} } } ,
4705     print-* .code:n = { \keys_set:nn { enumext / print } { print-* = {#1} } } ,
4706     unknown .code:n = { \msg_error:nn { enumext } { unknown-key-family } } ,
4707 }

```

We store them in the constant sequence `\c__enumext_all_families_seq` separated by commas.

```

4708 \seq_const_from_clist:Nn \c__enumext_all_families_seq
4709 {
4710     enumext-1, enumext-2, enumext-3, enumext-4, keyans, enumext*,
4711     keyans*, print-1, print-2, print-3, print-4, print-, print*,
4712 }

```

`\setenumext` Now we define the user command `\setenumext`.

```

4713 \NewDocumentCommand \setenumext { O{enumext,1} +m }
4714 {
4715     \tl_if_novalue:nTF {#1}
4716     {
4717         \seq_map_inline:Nn \c__enumext_all_families_seq
4718     }
4719     {
4720         \seq_clear:N \l__enumext_setkey_tmpa_seq
4721         \seq_set_from_clist:Nn \l__enumext_setkey_tmpb_seq {#1}
4722         \int_set:Nn \l__enumext_setkey_tmpa_int
4723         {
4724             \seq_count:N \l__enumext_setkey_tmpb_seq
4725         }
4726         \int_compare:nNnTF { \l__enumext_setkey_tmpa_int } > { 1 }
4727         {
4728             \seq_pop_left:NN \l__enumext_setkey_tmpb_seq \l__enumext_setkey_tmpa_tl
4729             \seq_map_function:NN \l__enumext_setkey_tmpb_seq \l__enumext_set_parse:n
4730             \seq_set_map_e:NNn \l__enumext_setkey_tmpa_seq \l__enumext_setkey_tmpa_seq
4731             {
4732                 \tl_use:N \l__enumext_setkey_tmpa_tl - ##1
4733             }
4734         }
4735         {
4736             \seq_put_right:Ne \l__enumext_setkey_tmpa_seq { \tl_trim_spaces:n {#1} }
4737         }
4738         \seq_if_empty:NTF \l__enumext_setkey_tmpa_seq
4739         { \seq_map_inline:Nn \c__enumext_all_families_seq }
4740         { \seq_map_inline:Nn \l__enumext_setkey_tmpa_seq }
4741     }
4742     {
4743         \keys_set:nn { enumext / meta-families } { ##1 = {#2} }
4744     }
4745 }

```

(End of definition for `\setenumext`. This function is documented on page 6.)

`__enumext_set_parse:n`
`__enumext_set_error:nn`

Internal functions used by the `\setenumext` command.

```

4746 \cs_new_protected:Npn \__enumext_set_parse:n #1
4747 {
4748     \tl_set:Ne \l__enumext_setkey_tmpb_tl { \tl_trim_spaces:n {#1} }
4749     \clist_map_inline:nn { 0, 1, 2, 3, 4, * } % <- max level

(End of definition for `\setenumextmeta`, `__enumext_add_meta_key:nnn`, and `__enumext_def_meta_key:nnn`. This function is documented on [page 6](#).)

12.49 The command \foreachkeyans

The command `\foreachkeyans` will be responsible for adding new “*meta-keys*” for the `enumext` and `enumext*` environments. The implementation code was given by Jonathan P. Spratte (@Skillmon) answer in [Add .meta key to existing keys \(l3keys\)](#).

We define a set of *⟨keys⟩* for command.

```
