Abstract

This package provides "enumerated list" environments for creating "simple exercise sheets" along with "multiple choice questions", storing the $\langle answers \rangle$ to these in memory using the multicol package and the l3seq and l3prop modules.

Motivation and acknowledgments

Usually it is enough to use the classic enumerate environment to generate "simple exercise sheets" or "multiple choice questions", the basic idea behind enumext is to cover three points:

- 1. To have a simple interface to be able to write "lists of exercises" with "answers".
- 2. To have a simple interface for writing "multiple choice questions".
- 3. To have a simple interface for placing "columns" and "drawings" or "tables".

This package would not be possible without Phelype Oleinik who has collaborated and adapted a large part of the code and all MEX team for their great work and to the different members of the TeX-SX community who have provided great answers and ideas. Here a note of the main ones:

- 1. Answer given by Alan Munn in \topsep, \itemsep, \partopsep, \parsep what do they each mean (and what about the bottom)?
- 2. Answer given by Enrico Gregorio in Understanding minipages aligning at top
- 3. Answer given by Ulrich Diez in Different mechanics of hyperlink vs. hyperref
- 4. Answer given by Enrico Gregorio in Minipage and multicols, vertical alignment

^{*}This file describes a documentation for v1.0, last revised 2024-05-15.

License and Requirements

Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License (lppl), version 1.3 or later (https://www.latex-project.org/lppl.txt). The software has the status "maintained".

The enumext package loads and requires multicol[3] package, need to have a modern TeX distribution such as TeX Live or MiKTeX. It has been tested with the standard classes provided by ETeX: book, report, article and letter on 10pt, 11pt and 12pt.

Introduction

In the ETFX world world there are many useful packages and classes for creating "lists of exercises", "worksheets" or "multiple choice questions", classes like exam[1] and packages like xsim[2] do the job perfectly, but they don't always fit the basic day to day needs.

In my work (and in the work of many teachers) it is common to use "simple exercise sheets" also known as "informal lists of exercises", as an example:

- 1. Factor $x^2 2x + 1$
- 2. Factor 3x + 3y + 3z
- 3. True False
 - (a) $\alpha > \delta$
 - (b) LaTeX2e is cool?
- 4. Related to Linux

- (a) You use linux?
- (b) Usually uses the package manager?
- (c) Rate the following package and class
 - xsim-exam
 - ii. xsim
 - iii. exsheets

Sometimes we are also interested in showing the "answers" along with the questions:

- 1. Factor $x^2 2x + 1$
- $(x-1)^2$
- 2. $\overline{\text{Factor } 3x} + 3y + 3z$
- 3(x+y+z)
- 3. True False
 - (a) $\alpha > \delta$ * False
 - (b) LATEX2e is cool? * | Very True!
- 4. Related to Linux

- (a) You use linux?
 - Yes
- (b) Usually uses the package manager?
 - * Yes, dnf
- (c) Rate the following package and class
 - xsim-exam doesn't exist for now:(
 - xsim
 - * | very good
 - iii. exsheets
 - * obsolete

Or we are interested in referring to a specific question and its "answer", for example:

The answer to 3.(b) is "Very True!" and the answer to 4.(c).ii is "very good".

Or we are interested in printing all the "answers":

- 1. $(x-1)^2$
- 2. 3(x+y+z)
- 3. (a) False
 - (b) Very True!
- 4. (a) Yes

- (b) Yes, dnf
- (c) i. doesn't exist for now :(

4. Question with image and label below:

R

(B)

- ii. very good
- iii. obsolete

Another very common thing to use in my work is "multiple choice questions", for example:

- 1. First type of questions
 - (A) value
- (C) value
- (B) correct
- (D) value
- 2. Second type of questions
 - $2\alpha + 2\delta = 90^{\circ}$
 - II. $\alpha = \delta$
 - III. $\angle EDF = 45^{\circ}$
 - (A) I only
- (D) I and III only
- (B) II only
- (E) I, II, and III
- (C) I and II only

(A)

(D)

5. Question with image on left side:

(C) (E)

- \star 3. Third type of questions
 - (1) $2\alpha + 2\delta = 90^\circ$
 - (2) $\angle EDF = 45^{\circ}$
 - (A) value
- (D) value
- (B) value (C) value
- (E) value
- (D) correct
- (E) value

(A) value

(B) value

(C) value

- Where what we are interested in the $\langle label \rangle$ and a "short note" that we leave as an explanation, and then print them:
- 1. (B), x = 5
- 2. (D)
- 3. (C), some note

- * 4. (B) 5. (D), "other note"
- These "simple worksheets" or "multiple choice questions" appear to be easy to obtain using a combination of the enumerate, minipage and multicols environments, but like many things, what "looks simple" is not so simple.

The enumext package was created and designed to meet these small requirements in the creation of "simple worksheets" and "multiple choice questions".

1.1 Description and usage

The enumext package defines enumerated environments using the list environment provided by LTEX, but "does not redefine" any internal commands associated with it such as \list, \endlist or \item outside of the "scope" in which they are defined.

This package is NOT intend to replace the enumerate environment nor replace the powerful enumitem[5], the approach is intended to work without hindering either of them.

This package can be used with xelatex, lualatex, pdflatex and the classical latex»dvips»ps2pdf and is present in TeX Live and MiKTeX, use the package manager to install. For manual installation, download enumext.zip and unzip it, run lualatex enumext.dtx and move all files to appropriate locations, then run mktexlsr. To produce the documentation run lualatex enumext.dtx two times.

The package is loaded in the usual way:

```
\usepackage{enumext}
```

1.2 The concept of left margin

There is a direct relationship between the parameters \leftmargin, \itemindent, \labelwidth and \labelsep plus an "extra space" that makes it difficult to obtain the desired horizontal spaces in a list environment.

Usually we don't want the list to go beyond the left margin of the page, but since these four values are related, that causes a problem. The enumitem[5] package adds the \labelindent parameter to solve some of these problems. A simplified representation of this in the figure 1.

Figure 1: Representation of horizontal lengths in enumitem.

The enumext package does NOT provide a user interface to set the values for \leftmargin and \itemindent, instead it provides the keys list-offset and list-indent which internally set the values for \leftmargin and \itemindent. The concepts of \leftmargin and \itemindent are different in enumext. The figure 2 shows the visual representation of idea.

Figure 2: Representation of horizontal lengths concept in enumext.

In this way we reduce a *little* the amount of parameters we have to pass. With the default values of keys list-offset, list-indent, labelwidth and labelsep the lists will have the (usually) expected output for "simple worksheets". The figure 3 shows the visual representation.

 $Figure \ 3: \ Default\ horizontal\ lengths\ \verb|list-offset=0pt|, \ \verb|list-indent=| \ labelwidth+| \ labelsep\ in\ enumext.$

1.3 User interface

The user interface consists in enumext, enumext*, keyans, keyans* and keyanspic environments, \anskey, \item* and \anspic* commands to $\langle stored\ content \rangle$, \getkeyans command to get the individual $\langle stored\ content \rangle$, \printkeyans to print all $\langle stored\ content \rangle$, \miniright for minipage and \setenumext to config all $[\langle key=val \rangle]$ options.

1.3.1 Internal counters

The package enumext uses internally the enumXi, enumXii, enumXii, enumXiv counters for the four nesting levels of the enumext environment, the enumXv counter for the keyans environment, the enumXvi counter for the keyanspic environment, the counter enumXviii for enumext* environment and the counter enumXviii for keyans* environment.

If any package defines these counters or they are user-defined in the document, the package will return a missing error and abort the load.

1.3.2 Support for multicol

The package provides direct support for using the multicol[3] package. This allows to obtain directly a two-column output as shown in the figure 4.

Figure 4: Representation of the two column output for a nested level in enumext environment.

The "non starred" version of the multicols environment is always used together with the \raggedcolumns command and is controlled by columns and columns-sep keys. The environment is available for all nesting levels, and can can together with the mini-env key. If you need to force a start a new column \columnbreak must be used (see §3.5).

The \columnseprule command is not available as a key and is set to "zero" for the inner levels and the keyans environment. If the value of this is set inside the document, it will affect "all environments" that use the columns key.

1.3.3 Support for minipage

The package provides direct support for minipage environment, this allows you to obtain an output like the one shown in figure 5.

Figure 5: Representation of the mini-env output for a nested level enumext environment.

The minipage environments (left and right) is always used with "aligned on top" [t], the minipage environment on the "right side" always starts with \centering. It can be used at all nesting levels and is controlled by mini-env and mini-sep keys. In order to switch from the "left" side minipage environment to the "right" side one must use the command \miniright (see §3.6).

1.3.4 The \label and \ref system

This package provides a user interface like the <code>enumitem[5]</code> package to customize the references which is activated by the <code>ref</code> key (§3.1), the standard <code>ETEX \label</code> and <code>\ref</code> commands work as usual. It also provides an "internal reference" system for the "stored content" by means of the key <code>save-ref</code> (§4.2) when the key <code>save-ans(§4.1)</code> is active.

The implementation of \label and \ref together with the save-ref key are compatible with the hyperref[7] package.

1.3.5 Support for \footnote

This package provides an internal implementation for the \footnote command which is compatible with the hyperref package, but, it will not produce the expected links, and when using the mini-env key or the starred environments enumext* and keyans* the output will look like the classic way they are displayed in the minipage environment.

The best way to solve this is to use Jean-François Burnol footnotehyper[8] package, it will support keeping the links if hyperref is loaded with the hyperfootnotes=true option (default) and will show the output numbered at the bottom of the page (as opposed to how it is displayed in the minipage environment). The way to load it is as follows:

```
\usepackage{footnotehyper}
\makesavenoteenv{enumext}
\makesavenoteenv{enumext*}
```

2 The environment enumext

The enumext is an "enumerated list" environment that works in the same way as the standard enumerate environment provided by LTEX, \item and \item[\(custom \)] commands work in the usual way.

The environment can be nested with at most "four levels" and the options can be configured globally using \setenumext command and locally using $[\langle key = val \rangle]$ in the environment.

Example

- 1. This text is in the first level.
 - (a) This text is in the second level.
 - This text is in the third level.
 - A. This text is in the fourth level.
- X This text is in the first level.
- ★ 2. This text is in the first level.

```
\begin{enumext}
  \item This text is in the first level.
    \begin{enumext}
      \item This text is in the second level.
        \begin{enumext}
          \item This text is in the third level.
            \begin{enumext}
              \item This text is in the fourth level.
            \end{enumext}
        \end{enumext}
    \end{enumext}
  \item[X] This text is in the first level.
  \item* This text is in the first level.
\end{enumext}
```

The \item* in enumext 2.1

```
\item* \item*
```

```
\item*[\langle symbol \rangle]
\times [\langle symbol \rangle] [\langle offset \rangle]
```

The $\lceil \text{item}^*, \text{item}^* [\langle symbol \rangle]$ and $\lceil \text{item}^* [\langle symbol \rangle] [\langle offset \rangle]$ works like the numbered \rceil item, but placing a $\langle symbol \rangle$ to the "left" of the $\langle label \rangle$ separated from it by the value set by the labelsep key and can be $\langle offset \rangle$ using the second optional argument. The default values for $\langle symbol \rangle$ and $\langle offset \rangle$ are \$\star\$'*' and the value set by labelsep key.

The starred version '*' cannot be separated by spaces '' from the command, i.e. \item* and the first optional argument does "not support" verbatim content. Can be configure with the keys item-sym* and item-pos* locally in the environment or globally using \setenumext command (§3).

of The behavior of \item∗ in the enumext environment is NOT the same as in the keyans environment.

2.1.1 Keys for \item* in enumext

```
item-sym* = \{\langle symbol \rangle\}
```

default: \$\star\$

Sets the *symbol* to be displayed in the "left" of the box containing the current \(label \) set by labelwidth key for \item* in enumext. The symbol can be in text or math mode, for example item-sym*={\$\ast\$}.

```
item-pos* = \{ \langle rigid \ length \mid dim \ expression \rangle \}
```

Sets the offset between the box containing the current $\langle label \rangle$ defined by labelwidth key and the $\langle symbol \rangle$ set by item-sym* key. The default values are set by labelsep key at each level. If positive values are passed it will offset to the left and if negative values are passed it will offset to the right.

The command \setenumext

```
\setenumext \setenumext[\langle enumext, level \rangle] {\langle key = val \rangle}
                                                                                                                       \strut_{\langle enumext^* \rangle} \{ \langle key = val \rangle \}
                       \strut = \strut | \langle print, level \rangle | \{\langle key = val \rangle \}
                                                                                                                       \strut = \strut (keyans^*)  { \langle key = val \rangle }
                       \strut \langle keyans \rangle ] \{ \langle key = val \rangle \}
                                                                                                                       \star{|\langle print^* \rangle|} {\langle key = val \rangle}
```

The command \setenumext sets the \(\lambda \text{keys} \rangle \) on a global basis for environment enumext, the \printkeyans command and the keyans environment. It can be used both in the preamble and in the body of the document as many times as desired.

The \(\lambda \text{keys}\rangle\) set in the optional arguments of environments and commands have the highest precedence, overriding both options passed by \setenumext. If the optional argument is not passed, the first level of the environment enumext will be taken by default.

It should be kept in mind that using any $\langle key \rangle$ that sets a *rubber or rigid lengths* for vertical or horizontal space on a level will influence the vertical and horizontal space for *inners levels* and keyans and keyanspic environments. All $\langle keys \rangle$ related to vertical or horizontal spacing accept a "skip" or "dim" expression if passed between braces, i.e. you do not need to use \dimexpr or \dimeval to perform calculations.

3.1 Keys for label and ref

```
label = {\\alph* | \Alph* | \arabic* | \roman* | \Roman* \}
```

default: by levels

Sets the $\langle label \rangle$ that will be printed at the *current level*. The default value for first level are \arabic^* , for second level are \arabic^* , for third level are \arabic^* , and for fourth level are \arabic^* .

This key is intended to give the basic structure with which the $\langle label \rangle$ will be displayed, and the and the form in which it is used by standard "label and ref" and the "internal reference" system with the save-ref key. You cannot use commands with $\langle label \rangle$ as an argument, for example $\mbox{emph}\{\langle \mbox{alph}^* \rangle\}$ will return an error. For full customization of how $\langle label \rangle$ is displayed use the font or wrap-label keys.

```
ref = \{ \langle code \ \{ \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \
```

default: empty

Modifies the way *cross references* are displayed. The label key sets the default form of the *cross references*, by using this key you can define a different format, for example: $ref=\ensuremath{\tt ref} + \ensuremath{\tt membh} \{ \langle \mathtt{lph}^* \rangle \}$ is valid.

Internally, it renews the command associated with each counter when it is executed, i.e., \theenumXi is modified when the key is executed at the first level, \theenumXii when it is executed at the second level and \theenumXiii together with \theenumXiv when it is executed at the third and fourth levels.

This must be kept in mind, since the values set by the label and ref keys are not cumulative by levels, so if you have used the ref key in the first level and then want to associate the counter with label or ref in the second level you must use the direct commands, i.e. \arabic{eunumXi} to indicate the count of the first level instead of using \theenumXi.

```
labelsep = \{ \langle \mathit{rigid} \ \mathit{length} \rangle \}
```

default: 0.3333em

Sets the *horizontal space* between the box containing the current $\langle label \rangle$ defined by label key and the text of an item on the first line. Internally sets the value of \labelsep for the current level.

```
labelwidth = \{\langle rigid \ length \rangle\}
```

default: by label

Sets the *width* of the box containing the current $\langle label \rangle$ set by label key. Internally sets the value of $\label width$ for the current level. The default values are calculated by means of the *width* of a box by setting a *value* to the current counter using '0' for \arabic^* , 'M' for \arabic^* , 'm' for \arabic^* , 'm' for \arabic^* , 'WIII' for \arabic^* , and 'viii' for \arabic^* .

```
widest = \{ \langle integer \mid string \rangle \}
```

default: empty

Sets the labelwidth key pass the *(integer)* or converting the *(string)* of the form \Alph, \alph, \Roman or \roman to a *value* for the current counter defined by label key, then calculating the *width* by means of a box. For example widest={XXIII} or widest={23} are equivalent. This key is useful when the default values of the labelwidth key are smaller than those actually used.

```
font = \{\langle font \ commands \rangle\}
```

default: empty

Sets the *font style* for the current $\langle label \rangle$ defined by label key. For example font={\bfseries\small}.

```
align = \{ \langle left \mid right \mid center \rangle \}
```

default: left

Sets the *aligned* of $\langle label \rangle$ defined by label key on the current level in the label box.

```
\mathsf{wrap-label} = \{ \left\langle \mathit{code} \; \{ \texttt{\#1} \} \; \; \mathit{more} \; \mathit{code} \right\rangle \}
```

default: empty

Wraps the current $\langle label \rangle$ defined by label key referenced by $\{\#1\}$. The $\{\langle code \rangle\}$ must be passed between braces. This key does not modify the value set by the labelwidth key and is applied only on \item and \item*. When using it in the \setenumext command it is necessary to use the *double hash* ' $\{\#\#1\}$ '. For example wrap-label= $\{\footnotem\}$ or you can create a command:

and then pass it through the key $wrap-label={\langle itembx\{\#1\} \rangle}$ or $wrap-label={\langle itembx^{\#1} \rangle}$.

```
wrap-label* = \{\langle code \{ \#1 \} \mid more \ code \rangle\}
```

default: empty

The same as the wrap-label key but also applies on $\identification \]$.

3.2 Keys for spaces

```
\texttt{show-length} = \{ \left< \textit{true} \mid \textit{false} \right> \}
```

default: false

Displays on the terminal the values for *all list parameters* at the current level. For *vertical spaces* show the values of \topsep, \itemsep, \parsep and \partopsep. For *horizontal spaces* show the values of \labelwidth, \labelsep, \itemindent, \listparindent and \leftmargin.

3.2.1 Vertical spaces

 $topsep = \{\langle rubber \ length \mid rigid \ length \rangle\}$

default: by levels

Set the *vertical space* added to both the top and bottom of the list. Internally sets the value of \topsep for the current level. The default values for first level are 8.0pt plus 2.0pt minus 4.0pt, for second level are 4.0pt plus 2.0pt minus 1.0pt, for third and fourth level are 2.0pt plus 1.0pt minus 1.0pt.

 $parsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}$

default: by levels

Set the *vertical space* between paragraphs within an item. Internally sets the value of \parsep for the current level. The default values for first level are 4.0pt plus 2.0pt minus 1.0pt, for second level are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 0pt.

 $partopsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}$

default: by levels

Set the *vertical space* added, beyond topsep, to the "top" and "bottom" of the entire environment if the environment instance is preceded by a "blank line" or \par command. Internally sets the value of \partopsep for the current level. The default values for first and second level are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 1.0pt minus 1.0pt.

The value of this parameter also affects the inner levels and the keyans environment. Caution should be taken with "blank lines" or \par command "before" each environment or nested level when formatting the source code of document. TeX will enter ⟨vertical mode⟩ and apply this value to the "top" and "bottom" the environment or nested level.

 $itemsep = \{ \langle rubber \ length \ | \ rigid \ length \rangle \}$

lefault: by level

Set the *vertical space* between items, beyond the parsep. Internally sets the value of \itemsep for the current level. The default values for first level are 4.0pt plus 2.0pt minus 1.0pt, for the rest of the levels are 2.0pt plus 1.0pt minus 1.0pt.

noitemsep \(\nu alue forbidden

default: not used

This is a "meta-key" that does not receive an argument. Set itemsep and parsep equal to Opt the entire level of environment.

nosep (value forbidden)

default: not used

This is a "meta-key" that does not receive an argument. Sets all keys for vertical spacing equal to opt the entire level of environment.

The following $\langle keys \rangle$ should be used with "caution", they are intended to be used at the "top" and "bottom" of the environment when the columns or mini-env keys do not provide adequate vertical spaces. The values passed can be rubber or rigid lengths, the way they are applied is the way you differ, using the star '*' $\langle keys \rangle$ applies \vspace* so that LTEX does not discard this space at page break.

 $above = \{ \langle rubber\ length \mid rigid\ length \rangle \}$

default: not used

Set the *extra vertical space* added, beyond topsep, to the top of the entire level of environment. This key is intended to give a "*fine adjustment*" of the vertical space on the "*above*" the environment without hindering the value of the topsep key. The space is added with \vspace so is "*discardable*".

 $above* = \{\langle rubber\ length \mid rigid\ length \rangle\}$

default: not used

Set the *extra vertical space* added, beyond topsep, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"above"* the environment without hindering the value of the topsep key. The space is added with \vspace* so is *"not discardable"*.

 $below = \{ \langle rubber\ length \mid rigid\ length \rangle \}$

default: not used

Set the *extra vertical space* space added, beyond topsep, to the bottom of the entire level of environment. This key is intended to give a "*fine adjustment*" of the vertical space on the "*below*" the environment without hindering the value of the topsep key. The space is added with \vspace so is "*discardable*".

 $below* = \{\langle rubber\ length \mid rigid\ length \rangle\}$

default: not used

Set the *extra vertical space* space added, beyond topsep, to the bottom of the entire level of environment. This key is intended to give a "*fine adjustment*" of the vertical space on the "*below*" the environment without hindering the value of the topsep key. The space is added with \vspace* so is "not discardable".

3.2.2 Horizontal spaces

itemindent = $\{\langle rigid\ length\rangle\}$

default: 0pt

Extra *horizontal indentation*, beyond labelsep, of the *"first line"* off each item. This value is applied internally using \hspace and does not modify the value of \itemindent.

 $rightmargin = \{\langle rigid\ length \rangle\}$

default: 0pt

Set the *horizontal space* between the right margin of the environment and the right margin of the enclosing environment, the value it takes must be greater than or equal to <code>%pt</code>. Internally sets the value of <code>\rightmargin</code> for the current level.

listparindent = $\{\langle rigid \ length \rangle\}$

default: Opt

Sets the *horizontal space* indentation, beyond list-indent, for second and subsequent paragraphs within a list item. Internally sets the value of \listparindent for the current level.

 $list-offset = \{\langle rigid \ length \rangle\}$

default: 0pt

Sets the horizontal translation of the entire environment level from the left edge of the box defined by the labelwidth key. Internally sets the values of \leftmargin and \itemindent for the current level.

list-indent = $\{\langle rigid\ length\rangle\}$

default: labelwidth + labelsep

Sets the indentation of the whole environment under the box defined by labelwidth and labelsep keys. Internally sets the value of \leftmargin and \itemindent for the current level.

 $m{\emptyset}$ If list-indent=0pt the $\langle label
angle$ will be part of the text, separated by the value of the labelsep key and the firstword, in simple terms it will look like a "common paragraph". This setting is equivalent (more or less) to the wide key provided by the enumitem package.

3.3 Keys for add code

 $m{e}$ The following $\langle keys
angle$ should be used with "caution", they are intended to inject $\{\langle code
angle \}$ into different parts of the defined environments. We must keep in mind that the defined environments are based on the list base environment provided by MFX which is defined (simplified) as plain form $\text{list}(\langle arg\ one \rangle) \{\langle arg\ two \rangle\}$. Using the before* key does not allow access to the list parameters defined by $[\langle key = val \rangle]$.

before = $\{\langle code \rangle\}$

Execute $\{\langle code \rangle\}$ "before" the environment starts. The $\{\langle code \rangle\}$ must be passed between braces, is executed "after" performing all calculations related to the list parameters in the environment and the parameters sets by $[\langle key = val \rangle]$ that is, in the second argument of the list after setting all the parameters \list{\arg} $one \rangle \} \{\langle arg\ two \rangle \{\langle code \rangle \}\}.$

before* = $\{\langle code \rangle\}$

default: not used

Execute $\{\langle code \rangle\}$ "before" the environment starts. The $\{\langle code \rangle\}$ must be passed between braces, is executed "before" performing all calculations related to the list parameters and $\lfloor \langle key = val \rangle \rfloor$ sets in the environment that is, before the arguments defining the environment are executed: $\{\langle code \rangle\} \setminus \{\langle arg\ one \rangle\} \{\langle arg\ one \rangle\}$ two}.

 $first = \{\langle code \rangle\}$

default: not used

Executes $\{\langle code \rangle\}$ when "starting" the environment. The $\{\langle code \rangle\}$ must be passed between braces, is executed right "after" all list parameters are done, after the second argument of list, just before the first occurrence of \item: $\langle arg\ one \rangle$ { $\langle arg\ two \rangle$ } { $\langle code \rangle$ } \item.

🍼 Keep in mind that the code set in this key will affect the entire "body" of the environment and therefore the inner levels of the list and the keyans environment. It is recommended to set this key per level.

default: not used

Execute $\{\langle code \rangle\}$ "after" finishing the environment. The $\{\langle code \rangle\}$ must be passed between braces.

Keys for start and resume

 $start = \{ \langle integer \mid string \rangle \}$

default: 1

Sets the *start value* of the numbering on the current level. Internally $\langle string \rangle$ is passed as value to the counter defined by label key on the current level, i.e. it is equivalent to enter start=5, start=E or start=v.

resume (value forbidden)

Sets the start to value from the previous of the counter defined by label key for the "first level". This $\langle key \rangle$ does not receive an argument. The $\langle key \rangle$ can be overwritten using the start key. If the save-ans key is present and $\{\langle store\ name \rangle\}$ exist, the numbering will continue according to this key. This key is "only" available for the "first level" of enumext.

3.5 Keys for multicols

 $columns = \{ \langle integer \rangle \}$

default: 1

Set the number of columns to be used by the multicols environment within the environment. The value must be a positive integer less than or equal to 10.

 $columns-sep = \{ \langle rigid \ length \rangle \}$

default: by level

Set the space between columns used by the multicols environment within the environment. Internally sets the value of \columnsep, by default its value is equal to the sum of the values set in the keys labelwidth and labelsep of the current level.

 $m{e}$ The \footnote $\{\langle text
angle\}$ command in the nested levels of multicols will not work as expected, prefer the use of $\lceil (number) \rceil$ inside the environment and $\lceil (number) \rceil \{ (text) \}$ outside the environment and $\lceil (number) \rceil \{ (text) \}$ ment or via the after key.

3.6 Keys for minipage

 $mini-env = \{\langle rigid\ length \rangle\}$

default: not used

Sets the width of the minipage environment on the "right side". This value added to the value set by the mini-sep key to determines the width of the minipage environment on the "left side", taking \linewidth as the maximum reference value.

 $mini-sep = \{ \langle rigid \ length \rangle \}$

default: 0.3333em

Sets the *space between* the minipage environment on the "left side" and the minipage environment on the "right side". This separation is applied together with \hfill.

3.6.1 The command \miniright

\miniright*

\miniright The \miniright command close the minipage environment on the "left side" and opens the minipage environment on the "right side" by starting it with the \centering command. It must be placed "after" the last \item of the current environment and "before" starting the material to be placed on the "right side". The starred version '*' inhibits the use of \centering command i.e. the usual LTEX justification is maintained in the minipage on the "right side".

 $m{\mathscr{G}}$ The \footnote $\{\langle text
angle\}$ command in minipage environment will work as usual. If you prefer the footnotes to be numbered (not lowercase) and outside the environment, use \land footnotemark[\land number)] inside the environment and $\footnotetext[\langle number \rangle] \{\langle text \rangle\}$ outside the environment or via the after key.

3.6.2 The key miniright

In the horizontal list environments enumext* and keyans* it is not possible to use the \miniright command and the miniright key must be used instead.

```
miniright = \{ \langle code \ for \ drawing \ or \ tabular \rangle \}
```

default: not used

Set the *code* for the drawing or tabular to be placed in the minipage environment on the "right side" by starting it with the command \centering.

```
miniright* = \{ \langle code \ for \ drawing \ or \ tabular \rangle \}
```

default: not used

Same as above, but without starting with the \centering command.

The storage system

The entire mechanism for "storing content" it is activated according to save-ans key on the "first level" of enumext environment. Only when this $\langle key \rangle$ is "active" the \anskey command and the environments keyans and keyanspic are available.

```
\begin{enumext}[save-ans={\langle store\ name \rangle}]
                                                            \begin{enumext} [save-ans={\langle store name \rangle}]
  \item Text
                                                               \item Text
     \begin{keyans}
                                                                  \begin{keyanspic}
    \end{keyans}
                                                                  \end{keyanspic}
\end{enumext}
                                                             \end{enumext}
```

Keys for storage 4.1

```
save-ans = \{ \langle store \ name \rangle \}
```

default: not set

Sets the name of the \(\sequence\) and \(\setaprop list\) in which the contents will be "stored" by \anskey in enumext environment, \item* in keyans and keyans* environments and \anspic* in keyanspic environment. If the *(sequence)* or *(prop list)* does not exist, it will be created globally.

```
wrap-ans = \{\langle code \{ \#1 \} \mid more \ code \rangle \}
```

default: \fbox{#1}

Wraps the *current argument* passed \anskey command to referenced by $\{\#1\}$. The $\{\langle code \rangle\}$ must be passed between braces and only affects the \(\current argument \) passed to \anskey and NOT the "stored content" in the \(\store name\) set by save-ans key. If this key is passed using the \setenumext command it is necessary to use double '{##1}'.

```
wrap-opt = \{\langle code \{ \#1 \} \ more \ code \rangle \}
```

default: [{#1}]

Wraps the optional argument passed to the \item* and \anspic* commands referenced by {#1} in the keyans, keyans* and keyanspic environments. The $\{\langle code \rangle\}$ must be passed between braces and only affects the current *(optional argument)* and NOT the "stored content" in *(store name)* set by save-ans key. If this key is passed using the \setenumext command, it is necessary to use the double '{##1}'.

```
save-sep = \{\langle text \ symbol \rangle\}
```

Sets the *text symbol* that will separate the current $\langle label \rangle$ defined by the label key from the $\langle optional \rangle$ argument) (if present), when storing them in the \(\store\) name\(\rightarrow\) defined by the save-ans key for the \\item^* command in the keyans and keyans* environment and for the \anspic command in the keyanspic environment. The $\{\langle text \ symbol \rangle\}$ must always be passed between braces, whitespace ' \Box ' is preserved within the braces and only affects the "stored content" and not what is displayed when using the show-ans or show-pos keys.

```
\texttt{mark-ans} = \{ \langle \textit{symbol} \rangle \}
```

default: \textasteriskcentered

Sets the *symbol* to be displayed in the left margin of the "stored content" in \(\store\) name\(\rightarrow\) set by save-ans key when using show-ans key.

```
mark-pos = \{ \langle left \mid right \rangle \}
```

Sets the aligned of the symbol defined by mark-ans key. The "symbol" is aligned in a box with the same dimensions of the label box defined by labelwidth key on the current level and separated by the value of the labelsep key.

Keys for internal label and ref

```
save-ref = \{ \langle true \mid false \rangle \}
```

default: false

Activates the internal "label and ref" mechanism for referencing "stored content" in \(store name \) set by save-ans key. To reference the location of the "stored content" within the environment you must use $\mathsf{ref}\{\langle \mathsf{store}| \mathsf{name} : \mathsf{position}\rangle\}$, where $\langle \mathsf{position}\rangle$ corresponds to the position occupied by the "stored content" in the *store name* returned by the show-pos key. For example \ref{test:4} will return 3. (b) which corresponds to the location of the "stored content" at position 4 within the environment in which the key save-ans=test was set.

```
mark-ref = \{\langle symbol \rangle\}
```

 $default: \ \ \ \textit{textasterisk} centered$

Sets the *symbol* that will be displayed by the \printkeyans command only if the hyperref package is detected and the save-ref key are active. This "symbol" is used as a "link" between the environment in which the save-ans key was used and the place where the command is executed.

Keys for debugging and checking

```
show-ans = \{\langle true \mid false \rangle\}
```

default: false

Displays the *current* \(\langle argument \rangle \text{ passed to \anskey in enumext environment, the current \(\langle label \rangle \text{ for } \) \item* in keyans environment and the current $\langle label \rangle$ for \anspic* in keyanspic environment at the place where it is executed. If the optional argument is present in \item* or \anspic* it will be shown in square brackets.

```
show-pos = \{ \langle true \mid false \rangle \}
```

default: false

Displays the position occupied by the "stored content" by \anskey in enumext environment, \item* in keyans environment and \anspic* in keyanspic environment in \(\store\) name\(\righta\) set by save-ans key. This position is used by the \getkeyans command and by the \ref command if the save-ref key is

```
check-ans = \{ \langle true \mid false \rangle \}
```

default: false

Enables the *checking answer* mechanism. This key works under the logic that each question will contain "only one answer", it is intended to be used in conjunction with no-store key.

no-store (value forbidden)

default: not used

This is a meta-key that does not receive an argument. This key is used in conjunction with check-ans and is designed to be used with nested levels of enumext in which the \anskey command will not be used.

The command \anskey

 $\anskey \anskey{\langle content \rangle}$

The \anskey command takes a mandatory argument and is triggered by save-ans key. The "content" are "stored" in \(\store\) name\(\) set by save-ans key. The command does "not support" verbatim content and must NOT be nested. By design it is assumed that each \item or \item* will have a "single" occurrence of the command unless a nested level is opened or the no-store key is used. If save-ref key are active and the hyperref[7] package is detected, \hyperlink and \hypertarget will be used, otherwise the usual "label and ref" system provided by LTEX will be used.

Example

- ★ 1. Text containing our instructions or questions.
 - * | first answer

(a) Question.

- 2. Text containing our instructions or questions.
- 3. Text containing our instructions or questions.
 - third answer
- Text containing our instructions or questions.
- fourth answer

second answer

```
\begin{enumext}[save-ans=test,show-ans=true]
  {}^{tem*} Text containing our instructions or questions. {}^{tem*}
  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.\anskey{\langle second \ answer \rangle}
    \end{enumext}
  \item Text containing our instructions or questions. \{anskey\{\langle third\ answer\}\}\}
  \item Text containing our instructions or questions. \langle fourth\ answer \rangle
\end{enumext}
```

The environment keyans

```
\label{eq:local_local_local} $$ \left( \ker = val \right) \in \left( \operatorname{local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local
\texttt{keyans*} \setminus \texttt{begin}\{\texttt{keyans*}\} \mid \langle \textit{key} = \textit{val} \rangle \mid \texttt{item} \mid \langle \textit{custom} \rangle \mid \texttt{item*} \mid \langle \textit{content} \rangle \mid \texttt{hem} \mid
```

The keyans is an "enumerated list" environment designed for "multiple choice" questions activated by the save-ans key. This environment can NOT be nested and must always be at the "first level" of the enumext environment, the commands $\forall i tem and \forall i tem [\langle custom \rangle]$ work in the usual.

```
\begin{enumext}[save-ans=test]
    \item \langle item content \rangle
       \lceil \{keyans\} [\langle key = val \rangle]
           \item \langle item content \rangle
           \item \lceil \langle custom \rangle \rceil \langle item content \rangle
           \item* \(\(\)item \(\)content\)
           \forall item^* [\langle content \rangle] \langle item content \rangle
       \end{keyans}
\end{enumext}
```

The \(\lambda keys\rangle\) set in the optional argument of the environment are the same (almost) as those of the enumext environment and have higher precedence than those set by \setenumext[$\langle keyans \rangle$] { $\langle key = val \rangle$ }. If the optional argument is not passed or the \(\lambda keys\rangle\) are not set by \setenumext, the default values will be the same as the second level of the enumext environment with the difference in the $\langle label \rangle$ which will be set to label=(\Alph*).

4.5.1 The \item* in keyans

```
\item* \item*
```

```
\item*[\langle content \rangle]
```

The $\idetimes and \idetimes [\langle content \rangle]$ command store the current $\langle label \rangle$ set by label key next to the $\langle content \rangle$ tent) (if it is present) in (store name) set by save-ans key in the "first level" of the enumext environment.

The starred version '*' cannot be separated by spaces 'u' from the command, i.e. \item* and the optional argument does "not support" verbatim content. By design it is assumed that the starred version '*' will only appear "once" within the environment.

Example

```
\begin{enumext}[save-ans=test,columns=2,show-ans=true]
  \item Text containing a question.
   \begin{keyans}[nosep]
      \item Choice
      \item* Correct choice
      \item Choice
      \item Choice
    \end{keyans}
  \item Text containing a question and image.
    \begin{keyans} [nosep,mini-env={0.4\linewidth}]
      \item Choice
      \item Choice
      \item Choice
      \item Choice
      \times [(note)] Correct choice
      \miniright
      \includegraphics[scale=0.25]{example-image-a}
      Some text
    \end{keyans}
\end{enumext}
```

- 1. Text containing a question.
 - (A) Choice
- * (B) Correct choice
 - (C) Choice
 - (D) Choice

- 2. Text containing a question and image.
 - (A) Choice
 - (B) Choice
 - (C) Choice (D) Choice
 - * (E) [note] Correct choice

Some text

The environment keyanspic

keyanspic \begin{keyanspic}[$\langle number\ above,\ number\ below \rangle]$ \anspic{ $\langle drawing \rangle$ }\anspic*[$\langle content \rangle$]{ $\langle drawing \rangle$ }

The keyanspic is a "fake enumerated list" environment that which uses the \anspic command instead of \item. It is activated by the save-ans key and has the same settings as the keyans environment. It is intended for placing "drawings" or "tabular" with an in-line or above and below layout. A representation of the output can be seen in the figure 6.

The optional argument determines the number drawings or tabular "above" and "below" within the environment. The vertical separation between "above" and "below" is controlled by the values set by parsep and itemsep keys passed to keyans environment. If the optional argument or the second part of it is omitted the drawings or tabular will be put on a single line.

Figure 6: Representation of the keyanspic environment with optional argument [3,2] in enumext.

4.6.1 The command \anspic

```
\anspic \anspic{\langle drawing or tabular\rangle}
               \anspic^*[\langle content \rangle] \{\langle drawing \ or \ tabular \rangle\}
```

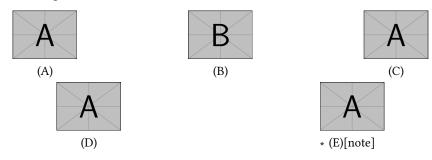

The \anspic command take three arguments, the *starred version* '*' store the current $\langle label \rangle$ next to the (content) (if it is present) in (store name) set by save-ans key.

The starred version '*' cannot be separated by spaces '_' from the command, i.e. \anspic* and the optional argument does "not support" verbatim content. By design it is assumed that the starred version '*' will only appear "once" within the environment.

Example

```
\begin{enumext}[save-ans=test,show-ans,nosep]
  \item Question with images.
    \begin{keyanspic}[3,2]
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}
\end{enumext}
```

1. Question with images.

Printing stored content

The command \getkeyans

```
\getkeyans \getkeyans \{\langle store\ name: position \rangle\}
```

The command \getkeyans prints the "only stored content" in \(store name\)\) defined by save-ans key in the $\langle position \rangle$ returned by the show-pos key.

The "content" can only be accessed "after" it is stored, if the \(store name \) does not exist the command will return an error. The form taken by the argument *\store name : position*\sigma is the same as that used to generate the internal "label and ref" system when save-ref key are active, so to refer to a stored "content". For example \getkeyans{test:4} will return the "stored content" at position 4 of the environment in which the key save-ans=test was set.

4.7.2 The command \printkeyans

```
\printkeyans \printkeyans [\langle keys \rangle ] {\langle store name \rangle}
```

The command \printkeyans prints "all stored content" in {\store name}} defined by save-ans key. The "content" can only be accessed "after" it is stored, if \(\store\) name\\) does not exist the command will return an error.

Internally it places the "stored content" inside the enumext environment with default values for label key are the same as those of the enumext environment along with the keys: nosep, first=\small, font=\small for all levels, except for the first one that adds the columns=2 key.

©2024 by Pablo González L

The optional argument allows to handle the $\langle keys \rangle$ "on the first level" of the enumext environment encapsulated by the command. If need to pass options for nested levels use \setenumext[$\langle print, level \rangle$] { $\langle store, name \rangle$ }.

Example

```
\begin{enumext} [save-ans=sample,columns=2,show-pos=true,nosep,save-ref=true]
   \item Factor 3x+3y+3z, \anskey5(x+y+z)
   \item True False
     \begin{enumext}[nosep]
       \item \LaTeX2e\ is cool? \anskey{Very True!}
     \end{enumext}
   \item Related to Linux
     \begin{enumext} [nosep]
       \item You use linux? \anskey{Yes}
       \item Rate the following package and class
         \begin{enumext} [nosep]
           \item \texttt{xsim} \anskey{very good}
           \item \texttt{exsheets} \anskey{obsolete}
         \end{enumext}
     \end{enumext}
 \end{enumext}
 The answer to \ref{sample:4} is \getkeyans{sample:4} and the answers to
 all the worksheets are as follows:
 \printkeyans{sample}
1. Factor 3x + 3y + 3z.
                                                  [3] Yes
                                                 (b) Rate the following package and class
[1] | 3(x+y+z)|
                                                         xsim
2. True False
                                                      [4] very good
  (a) LATEX2e is cool?
                                                         exsheets
   [2] Very True!
                                                      [5] obsolete
3. Related to Linux
```

The answer to 3.(b).i is very good and the answers to all the worksheets are as follows:

```
1. 3(x+y+z)
2. (a) Very True!
3. (a) Yes
4. (b) i. very good
5. ii. obsolete
4. **
```

5 Full examples

(a) You use linux?

Here I will leave as an example some adaptations questions taken from TeX-SX. The examples are attached to this documentation and can be extracted from your PDF viewer or from the command line by running:

```
$ pdfdetach -saveall enumext.pdf
```

and then you can use the excellent arara1 tool to compile them.

Example 1

Adapted from the response given by Enrico Gregorio in Squares for answer choice options and perfect alignment to mathematical answers .

```
1. La velocità di 1{,}00 \times 10^2 \,\mathrm{m/s} espressa in km/h è:
                                                                            A 1 \text{ Å} = 1 \times 10^5 \text{ fm}.
                                                                            B 1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.
   A 36 km/h.
                                                                            C 1 Å = 1 \times 10^{-15} \text{ fm}.
    B 360 km/h.
                                                                           \boxed{D} \ 1 \, \text{Å} = 1 \times 10^3 \, \text{fm}.
    C 27,8 km/h.
   D 3,60 \times 10^8 \, \text{km/h}.
                                                                        3. La velocità di 1{,}00 \times 10^2 \,\mathrm{m/s} espressa in km/h è:

Example 3

- A "simple multiple choice" test 🖹.
- 1. First type of questions
 - (A) value
 - (B) correct
 - (C) value
 - (D) value
- 2. Second type of questions
 - $2\alpha + 2\delta = 90^{\circ}$
 - II. $\alpha = \delta$
 - III. $\angle EDF = 45^{\circ}$
 - (A) I only
 - (B) II only
 - © I and II only
- 3. Third type of questions
 - (1) $2\alpha + 2\delta = 90^{\circ}$
 - (2) $\angle EDF = 45^{\circ}$
 - (A) value
 - (B) value
 - (C) value
- 4. Question with image and label below:

- (D) I and III only
- (E) I, II, and III
- (D) value
- (E) value

- 5. Question with image on left side:
 - (A) value
 - (B) value
 - (C) value
 - (D) correct
 - E value

Test keys

- 1. B, x = 5
- 2. D
- 3. C, some note

- * 4. E, A duck
- * 5. D, other note

Example 4

A "simple worksheet" using ducks :) 🖹.

Factor $x^2 - 2x + 1$

Factor 3x + 3y + 3z

The following questions need to be cuaqtified:)

True False

- (a) $\alpha > \delta$
- (b) LaTeX2e is cool?

Related to Linux

- (a) You use linux?
- (b) Usually uses the package manager?
- (c) Rate the following package and class
 - i. xsim-exam
 - ii. xsim
 - iii. exsheets

The answer to 1 is $(x-1)^2$ and the answer to 3.(a) is False.

- 1. $(x-1)^2$
- 2. 3(x+y+z)
- 3. (a) False
- (b) Very True!
- 4. (a) Yes

- (b) Yes, dnf
- (c) i. doesn't exist for now :(
- ii. very good
- iii. obsolete

Example 5

Adapted from the response given by Stephen in SAT like question format 🖹.

1

Which choice best describes what happens in the passage?

- A) One character argues with another character who intrudes on her home.
- B) One character receives a surprising request from another character.
- C) One character reminisces about choices she has made over the years.
- D) One character criticizes another character for pursuing an unexpected course of action.

2

Which choice best describes what happens in the passage?

- A) One character argues with another character who intrudes on her home.
- B) One character receives a surprising request from another character.
- C) One character reminisces about choices she has made over the years.
- D) One character criticizes another character for pursuing an unexpected course of action

3

Which choice best describes what happens in the passage?

- One character criticizes another character for pursuing an unexpected course of action.

1. A)

2. C)

3. B)

4. D)

6 The way of non-enumerated lists

It is possible to use (or abuse) the enumext environment to mimic *non-enumerated* list environments such as itemize and description, clearly the $\langle keys \rangle$ to "store answers", the keyans and keyanspic environments lose their sense and it is not the focus of the main of this package, but, why not to do it?.

Here I leave as an example other uses of the enumext environment that can be helpful for specific purposes. The "trick" to generate these fake environments is set label= $\{\$ or label= $\{\$ on label=

Fake itemize environment

Here we set the label key using the default settings in LTEX for the four levels \textbullet, \textendash, \textasteriskcentered and \textperiodcentered together with the nosep key to reduce the vertical spaces in the left side example and set the label key in mathematical mode for the right side as \ast, \diamond, \circ and \star for the four levels together with the nosep key

- First level item
 - Second level item
 - * Third level item
 - · Fourth level item
- First level item

- * First level item
 - ♦ Second level item
 - Third level item
 - ⋆ Fourth level item
- * First level item

Fake description environment

Here we set label={} and list-indent=2.5em, font=\bfseries.

SomeThing A short one-line description.

This is an entry without a label.

Something A short *one-line* description text.

Something long A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

If we add list-indent=Opt you get widest style:

SomeThing A short one-line description.

This is an entry without a label.

Something A short *one-line* description text.

Something long A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

The small space at the beginning of the "unlabeled entry" corresponds to \labelsep and can be removed using \hspace{-\labelsep} at the beginning of the line.

Description indented by label

Here we set label={} and we will give a convenient value to labelsep and labelwidth, for example we can take as reference our *longest label* and pass it as value using:

```
\newlength{\descitemwd}
\settowidth{\descitemwd}{\textbf{Something long}}
```

and then use labelsep=4pt, labelwidth=\descitemwd, font=\bfseries.

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut

purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida

mauris.

The environment can be translated so that the $\langle labels \rangle$ are on the left margin calculating the value passed to the list-offset key, in this case it will be equal to the sum of the values set by the labelwidth and labelsep keys finally resulting as list-offset={-\descitemwd - 4pt}.

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

If we add align=right it will look like this:

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

At this point we have used list-offset={-\descitemwd - 4pt} instead of list-offset={-\labelwidth - \labelsep}, this is because the parameters \labelwidth and \labelsep take the default values, as if we had not set label.

Description with multi-line labels

The label key does not accept *multiline material*, this is where the wrap-label* key comes into play. Unlike the enumitem package, the align key only supports three options, so what we will do is create a command in the style \parleft of enumitem that allows us to place *multiline labels* using \parbox.

```
\NewDocumentCommand \itembx { s +m }
    {%
     \IfBooleanTF{#1}
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
}
```

Now we just need to set $wrap-label*={\langle itembx\{#1\} \rangle}.$

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, **long** vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

SoMeThInG A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, **LoNg** vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Final notes

The original implementation (if you can call it that) of the ideas that led to the creation of enumext were some macros using the enumerate[4] package for personal use created in early 2003, the code was quite questionable, but functional for these simple requirements.

With the great answers given by Christian Hupfer in Create a fake label ref using list and the answer given by David Carlisle in Change the use of label ref by data save in an array (list) I managed to create a more solid code than the original version, now using the <code>l3prop[10]</code> and <code>l3seq[10]</code> modules together with the <code>hyperref[7]</code> and <code>enumitem[5]</code> packages, which did the job, but with some limitations.

As time went by I took these limitations as a personal challenge which I called "reinventing the wheel", since there were packages and classes that did more or less what I was looking for, but did not fit my simple requirements. This "reinventing the wheel" finally ended up becoming enumext.

Why list environments?

The answer is simple, first I love the beauty of its syntax and many of what I had already written used the enumerate environment or lists created using the enumitem package. In my mind I thought: how complicated could it be to write a package that looked like enumitem? It seemed simple enough, of course I didn't have in mind the mess I was getting into working with list environments, minipage and adding support for the multicol and hyperref packages.

Of course, seeing the final result of the experiment "reinventing the wheel" I am quite satisfied.

Why not random questions and other utilities

The "random" type questions I love and hate them at the same time, although they simplify a lot the work when creating a multiple choice test, but you lose the beauty of typessetting a document with Lage X, that is to say the output does not always look as nice as it should, even if they are only alternatives these must follow a certain order when presented either numerical or presentation, that said handling that using nested lists is quite complicated so I do not classify to be implemented.

10 Implementation

The most recent publicly released version of enumext is available at CTAN: https://www.ctan.org/pkg/enumext. While general feedback via email is welcomed, specific bugs or feature requests should be reported through the issue tracker: nhttps://github.com/pablgonz/enumext/issues.

The documentation presented here is far from professional, it contains a lot of obvious information that to the eye of a TEXpert are superfluous, but, after so many years developing this project is the only way to remember what does what

10.1 General conventions

Variables containing i, ii, iii and iv are associated by level with the enumext environment, variables containing v are associated with the keyans environment, variables containing vi are associated with the keyanspic environment, variables containing vii are associated with the enumext* environment and variables containing viii are associated with the keyans* environment.

To simplify writing and documentation some variables and functions that are common to the different levels of the environments are described using a capital "X".

The temporary function __enumext_tmp:n is used in different parts of the package code for variable creation or execution of other functions that are grouped into this one.

All variables and functions defined in this package are private and are NOT intended to work or be used by another package or module.

10.2 Initial set up

Start the DocStrip guards.

```
*package
```

Identify the internal prefix (LATEX3 DocStrip convention) for l3doc class.

```
2 (@@=enumext)
```

10.3 Declaration of the package

First we will make sure we have a minimum (super updated) version of ETFX to work correctly.

```
3 \NeedsTeXFormat{LaTeX2e} [2023-11-01]
```

Now declare the enumext package.

```
4 \ProvidesExplPackage
5 {enumext}
6 {2024-05-15}
7 {1.0}
8 {Enumerate exercise sheets}
```

Finally check if the multicol package is loaded, if not we load it.

10.4 Definition of variables

Variables that do not appear in this section are created by means of \keys_define:nn or some function described below.

\l_enumext_level_int
\l_enumext_level_h_int
\l_enumext_keyans_level_h_int
\l_enumext_keyans_level_h_int
\l_enumext_keyans_pic_level_int
\l_enumext_starred_bool
\g_enumext_starred_bool
\l_enumext_starred_level_one_bool
\l_enumext_standar_bool
\g_enumext_standar_bool
\l_enumext_standar_level_one_bool
\l_enumext_standar_level_one_bool

Integer variables will control the nesting levels of the environments and boolean variables will be used to determine if they are present (nested) in each other. The boolean variables $\g_{enumext_starred_bool}$ and $\g_{enumext_standar_bool}$ will be set to "true" when the enumext and enumext* environments are not nested with each other.

```
20 \int_new:N \l__enumext_level_int
21 \int_new:N \l__enumext_level_h_int
22 \int_new:N \l__enumext_keyans_level_int
23 \int_new:N \l__enumext_keyans_level_h_int

\l_enumext_keyans_tmpb_tl
\l_enumext_keyans_tmpa_dim

The boolean variable $\l_enumext_store_active_bool$ setting by save-ans key (\S 10.21) activates all the mechanism related to \anskey , keyans, keyans* and keyanspic.

The variable $\l_enumext_store_name_tl$ sets the name for the storage in $\langle sequence \rangle$ and $\langle prop \ list \rangle$, the variable $\g_enumext_store_name_tl$ is just a copy of the storage name used by the check-ans key (§10.21).

The variable $\l_enumext_store_anskey_arg_tl$ stores the contents of \anskey ($\S10.24$) and the variable $\l_enumext_store_keyans_label_tl$ stores the contents of \t_em^* ($\S10.28.2$) for the keyans and keyans* environments and the contents of \anspic^* ($\S10.34.1$) for the keyanspic environment.

The variable \l__enumext_keyans_tmpa_tl is a temporary variable used by keyans and keyanspic at various points.

186 }
```

(End of definition for $_=$ enumext_at_begin_document:n.)

__enumext_after_env:nn

A internal "hook" function for execute code minirigth and minirigth* keys outside the enumext* and keyans* environments and print check-ans outside the enumext and enumext* environments.

 $(End\ of\ definition\ for\ \verb|_-enumext_after_env:nn.|)$

__enumext_level:

Function for check current level in enumext.

 $(End\ of\ definition\ for\ __enumext_level:.)$

__enumext_if_is_int:nT
__enumext_if_is_int:nF
__enumext_if_is_int:nTF

A conditional function to know if the variable we are passing is an integer used by start and widest keys. This function is taken directly from the answer given by Henri Menke in How to test if an expl3 function argument is an integer expression?.

 $(\textit{End of definition for } \\ _\texttt{enumext_if_is_int:nT}, \\ \\ _\texttt{enumext_if_is_int:nF}, \\ \textit{and } \\ \\ \\ _\texttt{enumext_if_is_int:nTF}.)$

__enumext_show_length:nnn

Internal function used by show-length key to show "all lengths" calculated and use in enumext, enumext*, keyans and keyans* environments.

(End of definition for __enumext_show_length:nnn.)

__enumext_zero_count_level:

Internal function used by check-ans key.

 $(\mathit{End}\ of\ definition\ for\ \verb|__enumext_zero_count_level:.)$

__enumext_current_env_set_bool:

The function __enumext_current_env_set_bool: will set the global variables \g__enumext_-standar_bool and \g__enumext_starred_bool with which we will distinguish whether the environments enumext and enumext* are nested in each other. This function is passed to the __enumext_-safe_exec: function in the definition of the enumext environment (pag 74) and to the __enumext_-safe_exec_vii: function in the definition of the enumext* environment (pag 87).

10.6 Copying list and minipage environments

The list environment provided by LATEX has the following plain form:

```
\label{eq:cone} $$ \left( arg \ one \right) \left\{ \left\langle arg \ two \right\rangle \right\} $$ $$ \left( opt \right) $$ \end{superstandard} $$$ \end{superstandard} $$ \end{superstandard} $$$ \end{superstandard} $$$ \end{superstandard} $$$ \end{superstandard} $$$ \end{superstandard} $$$ \end{su
```

As a precaution we copy them using __enumext_at_begin_document:n in case any package redefines the list environment or a related command.

__enumext_start_list:nn
 __enumext_stop_list:
 __enumext_item_std:w

The functions __enumext_start_list:nn, __enumext_stop_list: and __enumext_item_-std:w correspond to copies of \list, \endlist and \item from plain definition of list environment.

```
243 \__enumext_at_begin_document:n
244 {
245    \cs_new_eq:NN \__enumext_start_list:nn \list
246    \cs_new_eq:NN \__enumext_stop_list: \endlist
247    \cs_new_eq:NN \__enumext_item_std:w \item
248 }
```

(End of definition for __enumext_start_list:nn, __enumext_stop_list:, and __enumext_item_std:w.)
The minipage environment provided by ETFX has the following (simplified) plain form:

```
\label{eq:continuous_problem} $$\min[age[\langle pos\rangle][\langle height\rangle][\langle inner-pos\rangle]\{\langle width\rangle\}\}$$ $$\langle internal\ implement\rangle$$ $$\end{substitute} $$\operatorname{endminipage}$
```

As a precaution we copy them using __enumext_at_begin_document:n in case any package redefines the minipage environment or a related command.

__enumext_minipage:w
__enumext_endminipage:

The functions __enumext_minipage:w, __enumext_endminipage: and correspond to copies of \minipage, \endminipage from plain definition of minipage environment.

```
249 \__enumext_at_begin_document:n
250 {
251      \cs_new_eq:NN \__enumext_minipage:w \minipage
252      \cs_new_eq:NN \__enumext_endminipage: \endminipage
253 }
```

(End of definition for __enumext_minipage:w and __enumext_endminipage:.)

10.7 Compatibility with hyperref and footnotehyper

First we define the necessary rules using "hooks" to determine if the hyperref package is loaded.

```
_{254} \rightarrow \\ -254 \rightarrow \\ -254 \rightarrow \\ -255 \rightarrow \\ -256 \rightarrow \\ -256 \rightarrow \\ -256 \rightarrow \\ -257 \rightarrow \\
```

__enumext_after_hyperref:
 __enumext_hypertarget:nn
 __enumext_phantomsection:

The function __enumext_after_hyperref: sets the state of the boolean variable \l__enumext_-hyperref_bool to "true" if the package is loaded. At this point we will use the public macro \IfHyperBoolean to determine if the hyperfootnotes=true key is present, if so, we set the state of the boolean variable __enumext_footnotes_key_bool to "true".

```
256 \cs_new_protected:Nn \__enumext_after_hyperref:
       \IfPackageLoadedTF { hyperref }
258
259
        {
           \msg_info:nnn { enumext } { package-load } { hyperref }
260
           \bool_set_true:N \l__enumext_hyperref_bool
261
           \IfHyperBoolean{hyperfootnotes}
263
               \typeout{hyperfootnotes=true}
               \bool_set_true:N \l__enumext_footnotes_key_bool
             }
             { \typeout{hyperfootnotes=false} }
        }
         {
           }
```

If the state of the variable \l__enumext_footnotes_key_bool is true we will check if the package footnotehyper is loaded, in case it is not present, we will set the value of \l__enumext_footnotes_-key_bool to false and we will redefine \footnote.

```
bool_if:NT \l__enumext_footnotes_key_bool
{

ifPackageLoadedTF { footnotehyper }

{

msg_info:nnn { enumext } { package-load } { footnotehyper }

}

f

typeout{No ~ footnotehyper ~ load}

typeout{Load ~ and ~ use ~ \string\makesavenoteenv{enumext*}}

bool_set_false:N \l__enumext_footnotes_key_bool
}

}
```

The functions __enumext_hypertarget:nn and __enumext_phantomsection: correspond to the internal copies of \hypertarget and \phantomsection. If the boolean variable \l__enumext_hyperref_bool is false the functions __enumext_hypertarget:nn and __enumext_phantomsection: will be disabled.

```
\bool_if:NTF \l__enumext_hyperref_bool

{

\cs_new_eq:NN \__enumext_hypertarget:nn \hypertarget

\cs_new_eq:NN \__enumext_phantomsection: \phantomsection

}

{

\cs_new_eq:NN \__enumext_hypertarget:nn \use_none:nn

\cs_new_eq:NN \__enumext_phantomsection: \prg_do_nothing:

}

}
```

 $(\textit{End of definition for } __enumext_after_hyperref:, \\ __enumext_hypertarget:nn, \\ and \\ __enumext_phantomsection:.)$

__enumext_newlabel:nn

The function __enumext_newlabel:nn write the information to the .aux file when using the save-ref key. The arguments taken by the function are:

```
#1: \l__enumext_newlabel_arg_one_tl
#2: \l__enumext_newlabel_arg_two_tl
```

The trick here is to manage the number of arguments passed to \newlabel{#1}{#2} according to the presence of the hyperref package.

```
292 \cs_new_protected:Npn \__enumext_newlabel:nn #1 #2
293 {
294 \protected@write \@auxout { }
295 {
296 \token_to_str:N \newlabel {#1}
```

©2024 by Pablo González L

(End of definition for $_$ enumext_newlabel:nn.)

10.8 Definition of counters

__enumext_define_counters:Nn __enumext_define_counters:cn To create the necessary "counters" we must first make sure that they are not already defined by the user or a package such as enumitem, otherwise a error will be returned and the package loading will be aborted. The arguments taken by the function are:

#1: A token list \l__enumext_counter_X_tl for "store" the counter's name.

#2: The counter's name.

(End of definition for __enumext_define_counters:Nn.)

enumXi enumXii enumXiii The counters created here are enumXi, enumXii, enumXiii and enumXiv for enumext environment, enumXv for keyans environment, enumXvi for keyanspic environment, enumXviii for enumext* and enumXviiii for the keyans* environments.

```
enumXiv
           316 \__enumext_define_counters:Nn \l__enumext_counter_i_tl
  enumXv
           \__enumext_define_counters:Nn \l__enumext_counter_ii_tl
                                                                       √ enumXii
 enumXvi
           318 \__enumext_define_counters:Nn \l__enumext_counter_iii_tl { enumXiii
           319 \__enumext_define_counters:Nn \l__enumext_counter_iv_tl { enumXiv
enumXvii
           320 \__enumext_define_counters:Nn \l__enumext_counter_v_tl
                                                                       { enumXv
enumXviii
           321 \__enumext_define_counters:Nn \l__enumext_counter_vi_tl
                                                                       { enumXvi
           322 \__enumext_define_counters:Nn \l__enumext_counter_vii_tl { enumXvii
           323 \__enumext_define_counters:Nn \l__enumext_counter_viii_tl { enumXviii }
```

(End of definition for enumXi and others.)

10.9 Definition of labels

This part of the code is inspired by the enumitem package. The idea is to be able to access the counters using \arabic*, \Alph*, \alph*, \Roman* and \roman* to use them in the label key.

__enumext_register_counter_style:Nn

These $\langle counters \rangle$ will be used as default $\langle labels \rangle$ if the label key is not used for the different levels of the enumext environment and the keyans environment, so it is necessary to get a default value for labelwidth from these $\langle labels \rangle$ at the same time.

 $(\textit{End of definition for } \verb|_-enumext_register_counter_style:Nn.)$

©2024 by Pablo González L

__enumext_label_width_by_box:cv

__enumext_label_width_by_box:Nn set the default \labelwidth using a box width if no labelwidth key is passed.

```
334 \cs_new_protected:Npn \__enumext_label_width_by_box:Nn #1 #2
335
      \hbox_set:Nn \l__enumext_label_width_by_box {#2}
      \dim_set:Nn #1 { \box_wd:N \l__enumext_label_width_by_box }
337
    }
339 \cs_generate_variant:Nn \__enumext_label_width_by_box:Nn { cv }
```

(End of definition for $\label{lem:label_width_by_box:Nn.}$)

__enumext_label_style:Nnn __enumext_label_style:cvn

The function __enumext_label_style: Nnn is used by the label key to creates the variables containing the \(\lambda label style\) and will allow to use \arabic*, \Alph*, \alph*, \Roman* and \roman* as arguments. It loops through the defined counter styles in \g__enumext_counter_styles_tl (\arabic, \alph, Alph, \roman, and \Roman) for example, looking for \roman* and replacing that by \roman{\current} counter\}, and doing the same for the \g__enumext_widest_label_tl to keep both in sync.

```
340 \cs_new_protected:Npn \__enumext_label_style:Nnn #1 #2 #3

415

416 417 418

10.11 Setting label and ref keys

align .value_required:n = true,

_enumext_regex_label_ref_key:

The internal function __enumext_regex_label_ref_key: replace the * with the actual counter of the running level and is used by the __enumext_set_label_ref:n function.

419 \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { __enumext_tmp:nn #1 }

It loops through the defined counter styles in \c__enumext_counter_style_tl and replace * by real command, for example, looking for \arabic* and replacing that by \arabic{\langle counter}} defined on the current level.

```
\cs_new_protected:Nn \__enumext_regex_label_ref_key:
     {
421
       \tl_map_inline:Nn \c__enumext_counter_style_tl
422
         {
423
            \regex_replace_once:nnN { \c{##1}\* }
424
              { \c{\#1}\cB{\u{l}_enumext\_ref\_aux\_tl}\cE} } \label{ce} \\ \label{ce} \\ \label{ce} \label{ce} 
425
         }
     }
```

(End of definition for __enumext_regex_label_ref_key:.)

__enumext_set_label_ref:n

The __enumext_set_label_ref:n function controlled by the ref key is in charge of handling the customization of the reference system.

First we will set the variable \l__enumext_the_counter_X_tl according to the command created for each counter, apply the regex function __enumext_regex_label_ref_key: and then renew the command and save it in the variable \l__enumext_counter_style_for_ref_X_tl.

```
428 \cs_new_protected:Npn \__enumext_set_label_ref:n #1
      \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
```

©2024 by Pablo González L

```
\tl_set_eq:Nc \l__enumext_ref_aux_tl { l__enumext_counter_ \__enumext_level: _tl }

\__enumext_regex_label_ref_key:

\tl_set_eq:Nc \l__enumext_ref_aux_tl { l__enumext_the_counter_ \__enumext_level: _tl }

\tl_put_right:ce { l__enumext_counter_style_for_ref_ \__enumext_level: _tl }

{

\exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_aux_tl }

{
\exp_not:V \l__enumext_ref_key_arg_tl }

}

}
```

__enumext_use_key_ref:

Finally the function __enumext_use_key_ref: will execute the modification for the reference system in the second argument of the environment definition enumext.

(End of definition for __enumext_use_key_ref:.)

(End of definition for __enumext_set_label_ref:n.)

For enumext* and keyans* environments the situation is a bit different since hyperref interferes here (I am not clear why), so we will define a new function to execute the task.

To handle that we will look at the nesting level of the starred environments, later I will run the constraint functions to make everything OK.

__enumext_set_label_ref_h:n

The __enumext_set_label_ref_h:n function controlled by the ref key is in charge of handling the customization of the reference system.

First we will set the variable \l__enumext_the_counter_X_tl according to the command created for *each counter*, apply the *regex* function __enumext_regex_label_ref_key: and then renew the command and save it in the variable \l__enumext_counter_style_for_ref_X_tl.

```
447 \cs_new_protected:Npn \__enumext_set_label_ref_h:n #1
      \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
      \int_compare:nNnTF { \l__enumext_level_h_int } = { 1 }
451
          \tl_set_eq:NN \l__enumext_ref_aux_tl \l__enumext_counter_vii_tl
452
          \__enumext_regex_label_ref_key:
453
          \tl_set_eq:NN \l__enumext_ref_aux_tl \l__enumext_the_counter_vii_tl
454
          \tl_put_right:Ne \l__enumext_counter_style_for_ref_vii_tl
455
               \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_aux_tl }
                 { \exp_not:V \l__enumext_ref_key_arg_tl }
        }
        {
          \tl_set_eq:NN \l__enumext_ref_aux_tl \l__enumext_counter_viii_tl
          \__enumext_regex_label_ref_key:
          \tl_set_eq:NN \l__enumext_ref_aux_tl \l__enumext_the_counter_viii_tl
          \tl_put_right:Ne \l__enumext_counter_style_for_ref_vii_tl
               \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_aux_tl }
                 { \exp_not:V \l__enumext_ref_key_arg_tl }
        }
    }
471
```

(End of definition for $_$ enumext_set_label_ref_h:n.)

__enumext_use_key_ref_h:

Finally the function __enumext_use_key_ref_h: will execute the modification for the reference system in the second argument of the environment definition enumext* and keyans*.

(End of definition for __enumext_use_key_ref_h:.)

10.11.1 Define and set label key for enumext environment

Here we set the default $\langle labels \rangle$ of the four levels of enumext environment, along with the default value for labelwidth key.

```
\l__enumext_label_i_tl
\l__enumext_label_ii_tl
\l__enumext_label_iii_tl
\l__enumext_label_iv_tl
```

```
488 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
      \keys_define:nn { enumext / #1 }
          label .code:n
                          = {
                              \__enumext_label_style:cvn { l__enumext_label_#2_tl }
                                { l__enumext_counter_#2_tl } {##1}
                              \dim_set_eq:cN { l__enumext_labelwidth_#2_dim }
                                \l__enumext_current_widest_dim
                            },
          label .initial:n = #3,
          label .value_required:n = true,
          ref
                         = \__enumext_set_label_ref:n {##1},
               .code:n
          ref
               .value_required:n = true,
        }
<sub>505</sub> \__enumext_tmp:nnn { level-2 } { ii } { (\alph*) }
506 \__enumext_tmp:nnn { level-3 } { iii } { \roman*. }
507 \__enumext_tmp:nnn { level-4 } { iv } { \Alph*. }
```

(End of definition for label and others.)

10.11.2 Define and set label key for enumext* and keyans* environments

Here we set the default $\langle labels \rangle$ for enumext* and keyans* environments, along with the default value for labelwidth key.

```
ref
\l__enumext_label_vii_tl
\l__enumext_label_viii_tl
```

```
508 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
509
      \keys_define:nn { enumext / #1 }
         label .code:n
                         = {
                             \__enumext_label_style:cvn { l__enumext_label_#2_tl }
                               { l__enumext_counter_#2_tl } {##1}
                             \dim_set_eq:cN { l__enumext_labelwidth_#2_dim }
                               \l__enumext_current_widest_dim
516
                           },
         label .initial:n = #3,
518
         label .value_required:n = true,
                         = \__enumext_set_label_ref_h:n {##1},
         ref
               .code:n
               .value_required:n = true,
         ref
521
522
  \__enumext_tmp:nnn { enumext* } { vii } { \arabic*.}
```

(End of definition for label and others.)

10.11.3 Define and set label key for keyans and keyanspic environment

label
\l__enumext_label_v_tl
\l__enumext_label_vi_tl

Here we set the default $\langle label \rangle$ for keyans and keyanspic environment, along with the default value for labelwidth. The keyanspic environment use the same $\langle label \rangle$ as the keyans environment.

Define and set label key for keyans environment.

34/117

```
\dim_set_eq:cN { l__enumext_labelwidth_v_dim }
\l_enumext_current_widest_dim
\_enumext_label_style:cvn { l__enumext_label_vi_tl }

{ l__enumext_counter_vi_tl } {#1}
\dim_set_eq:cN { l__enumext_labelwidth_v_dim }
\l_enumext_current_widest_dim
},

label .initial:n = (\Alph*),

label .value_required:n = true,
}
```

 $(\textit{End of definition for label}, \verb|\l_enumext_label_v_tl|, and \verb|\l_enumext_label_vi_tl|)$

10.12 Setting start and widest keys

__enumext_start_from:NNn
__enumext_start_from:ccn

The function __enumext_start_from: NNn used by the start key take three arguments:

```
#1: \l__enumext_label_X_tl
#2: \l__enumext_start_X_int
#3: \langle integer or string \rangle
```

The first argument of this function are the "counter style" set by label key, the second argument is returned by the function, the third argument can be an $\langle integer \rangle$ or $\langle string \rangle$ of the form \Alph, \alph, \Roman or \roman. This effectively allows start=A or start=1 to be used.

```
541 \cs_new_protected:Npn \__enumext_start_from:NNn #1 #2 #3
    {
542
         _enumext_if_is_int:nTF { #3 }
543
           \int_set:Nn #2 {#3}
         }
         {
           \regex_match:nVT { \c{Alph} | \c{alph} } {#1}
             { \int_set:Nn #2 { \int_from_alph:n {#3} } }
           \regex_match:nVT { \c{Roman} | \c{roman} } {#1}
             { \int_set:Nn #2 { \int_from_roman:n {#3} } }
         }
552
    }
\cs_generate_variant:Nn \__enumext_start_from:NNn { ccn }
```

__enumext_widest_from:nNNn
_enumext_widest_from:nccn

The function __enumext_widest_from:nNNn used by the widest key take four arguments:

#1: The counter associated with the environment level

```
#2: \l__enumext_label_X_tl
#3: \l__enumext_labelwidth_X_dim
#4: \langle integer or string \rangle
```

(End of definition for $_$ enumext_start_from:NNn.)

The second and third arguments of this function are the values set by label and labelwidth keys, the four argument can be an $\langle integer \rangle$ or $\langle string \rangle$ of the form \Alph, \alph, \Roman or \roman. The value of the four argument is set temporarily for the identified counter in this point (level), then the value is expanded into a "box" and the "width" of the "box" is returned.

```
555 \cs_new_protected:Npn \__enumext_widest_from:nNNn #1 #2 #3 #4
556
    {
      \__enumext_if_is_int:nTF {#4}

645
          list-offset
                         .value_required:n = true,
          list-indent
647
                           \bool_set_true:c { l__enumext_leftmargin_tmp_#2_bool }
                           \dim_set:cn { l__enumext_leftmargin_tmp_#2_dim } {##1},
          list-indent
                         .value_required:n = true,
        }
653 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(End of definition for itemindent and others.)

For enumext* and keyans* environments the situation is a bit different, the list-indent key behaves like the list-offset key.

```
654 \cs_set_protected:Npn \__enumext_tmp:n #1
655 {
656      \keys_define:nn { enumext / #1 } { list-indent .initial:n = 0pt, }
657    }
658 \clist_map_inline:nn { enumext*, keyans* } { \__enumext_tmp:n {#1} }
```

10.14.1 Functions for setting the fake itemindent

__enumext_fake_item:
__enumext_keyans_fake_item:
__enumext_fake_item_vii:
__enumext_fake_item_viii:

The itemindent key does not set the value of \itemindent, it only sets the value of the *horizontal space* applied using \skip_horizontal:N. We will store this value in the variable and only apply it when it is greater than <code>Opt</code>. Here I will need to place \mode_leave_vertical: and the plain TeX macro \ignorespaces to avoid unwanted extra space when using the itemindent key.

```

         { \l__enumext_fake_item_indent_vii_dim } > { \c_zero_dim }
```

(End of definition for $__enumext_fake_item$: and others.)

10.15 Setting show-length key

show-length

before

Define and set show-length key for enumext, enumext*, keyans and keyans* environments. The function sets the boolean variable \l__enumext_show_length_X_bool used in the definition of all environments to "true" and calls the function __enumext_show_length:nnn which prints all the values of the "vertical" and "horizontal" parameters calculated and used.

(End of definition for show-length.)

10.16 Setting before, after and first keys

Define and set before, before*, after and first keys for enumext and keyans environments.

```
before*
         \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
 after
         721
  first
                \keys_define:nn { enumext / #1 }
         722
         723
                    before .tl_set:c = { l__enumext_before_no_starred_key_#2_tl },
         724
                    before .value_required:n = true,
                    before* .tl_set:c = { l__enumext_before_starred_key_#2_tl },
                    before* .value_required:n = true,
                    after
                            .tl_set:c = { l__enumext_after_stop_list_#2_tl },
                            .value_required:n = true,

10.18 Adjustment of vertical spaces for multicols

When nesting a "list environment" inside the multicols environment, the values of the "vertical spaces" are lost, basically the multicols environment takes control over them. Graphically it can be seen like in the figure 7.

Figure 7: Representation of the vertical space in multicols for a nested level.

To keep the desired spaces *above* and *below* in the "*list environment*" (\topsep + [\partopsep]) it is necessary to "*adjust*" the spaces added by the multicols environment. The most appropriate option in this case is to use a "*context sensitive*" vertical space with \addvspace.

I should make it clear that the implementation here is a "bit questionable". At first glance doing \multicolsep=\topsep seemed right, but the results were not always as expected. An almost imperceptible detail is that in some cases the \itemsep values of are "stretched", possibly due to the use of \raggedcolumns and this affects the lower space when closing the environment, which is "smaller" than expected. My attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

10.18.1 Adjustment of vertical spaces for multicols in enumext

_enumext_multi_set_vskip:

The function __enumext_multi_set_vskip: will take care of determining the "adjusted spaces" that we will apply "above" and "below" the multicols environment in enumext.

We will set the default values taking into account that TeX is in $\langle horizontal\ mode \rangle$, then we will make the settings for the $\langle vertical\ mode \rangle$ in which $\langle partopsep$ comes into play.

Set the values of \l__enumext_multicols_above_X_skip and \l__enumext_multicols_below_-X_skip equal to the value of \topsep in the *current level*.

```
_{83^{1}} \cs_new_protected:Nn \__enumext_multi_set_vskip:
832
    {
      \skip_set:cn { l__enumext_multicols_above_ \__enumext_level: _skip }
833
834
            \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
835
836
       \skip_set:cn { l__enumext_multicols_below_ \__enumext_level: _skip }
837
         {
            \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
         }
         _enumext_add_pre_parsep:
     }
```

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_multi_set_vskip:.)$

©2024 by Pablo González L

enumext add pre parsep: T

The function __enumext_add_pre_parsep: "adjusted" the value of \l__enumext_multicols_-above_X_skip detecting the value of \parsep from the previous level. This is necessary since \parsep from the previous level affects the *vertical spaces*.

41/117

```
\skip_add:Nn \l_enumext_multicols_above_iii_skip { \l_enumext_parsep_ii_skip
}

\skip_add:Nn \l_enumext_multicols_above_iii_skip { \l_enumext_parsep_ii_skip
}

\skip_if_eq:nnF { \l_enumext_parsep_iii_skip } { \c_zero_skip }

\skip_add:Nn \l_enumext_multicols_above_iv_skip { \l_enumext_parsep_iii_skip
}

\skip_add:Nn \l_enumext_multicols_above_iv_skip { \l_enumext_parsep_iii_skip
}

\skip_add:Nn \l_enumext_multicols_above_iv_skip { \l_enumext_parsep_iii_skip
}
```

__enumext_multi_addvspace:

The function __enumext_multi_addvspace: will apply the spaces set using \addvspace "above" the multicols environment in enumext, taking into account whether T_EX is in $\langle horizontal\ mode \rangle$ or $\langle vertical\ mode \rangle$.

```
\cs_new_protected:Nn \__enumext_multi_addvspace:
    {
       \__enumext_multi_set_vskip:
      \mode_if_vertical:T
          \skip_add:cn { l__enumext_multicols_above_ \__enumext_level: _skip }

10.19 Adjustment of vertical spaces for minipage

When nesting a "list environment" within the minipage environment, the values of the "vertical spaces" are lost. Graphically it can be seen like in the figure 8.

Figure 8: Representation of the minipage spacing adjustment for a nested level.

Since we want to keep the "left" and "right" environments "aligned on top", preserving the \baselineskip and keep the desired "spaces" (\topsep + [\partopsep]) it is necessary to "adjust" the "vertical spaces" for minipage environments.

Here there are several complications that we must circumvent, the minipage environment eliminates the "top" spaces, the multicols environment can be nested in the minipage environment, the "top" and "bottom" spaces are affected when topsep=0pt and to this is added the \partopsep parameter that comes into action according to whether TeX is in \(\lambda \text{horizontal mode} \rangle \) or \(\lambda \text{vertical mode} \rangle \). Depending on these cases, small adjustments must be made using \vspace and \addvspace to obtain the "desired vertical spacing".

again I must make clear that the implementation here is a "bit questionable", but hunting the spaces (glue) produced by the minipage environment is quite complicated, even more if multicols it is nested. The setting of the values was more "trial and error" (aprox to \strutbox), using the help of the lua-visual-debug[12] package, again my attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

__enumext_mini_env*

Creates a __enumext_mini_env* environment (custom version of minipage) setting the \if@minipage switch to "false" to allow spaces at the "above" of the environment, plus we will add \vspace{opt} to maintain alignment on "top". This environment will be used internally by the mini-env key, it is not documented in the user interface and is for internal use only.

(End of definition for __enumext_mini_env*.)

10.19.1 Adjustment of vertical spaces for minipage in enumext

__enumext_mini_set_vskip:

The function __enumext_mini_set_vskip: will take care of determining the "adjust" spaces that we will apply "above" and "below" the __enumext_mini_env* environment in enumext.

We will set the default values taking into account that TeX is in $\langle horizontal\ mode \rangle$, then we will make the settings for the $\langle vertical\ mode \rangle$ in which $\langle partopsep$ comes into play.

First determine if the multicols environment is active by comparing the value of the \l__enumext_-columns_X_int variable handled by the columns key, according to this comparison we set the adjusted values for \l__enumext_minipage_left_skip, \l__enumext_minipage_right_skip and \l__enumext_minipage_after_skip.

If multicols environment is nested in __enumext_mini_env* environment, we will apply a correction factor to the *vertical spaces* taking into account the value of \topsep of the current level and the value of \parsep of the previous level, if these are zero we will use \strutbox as the basis for the calculations.

```
\skip_set:Nn \l__enumext_minipage_after_skip
                   \box_dp:N \strutbox
                }
               \__enumext_zero_parsep:
            }
               \skip_set:Nn \l__enumext_minipage_left_skip
                   \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
                 }
               \skip_set:Nn \l__enumext_minipage_right_skip
                {
                   0.695\box_dp:N \strutbox
                 }
               \skip_set:Nn \l__enumext_minipage_after_skip
                {
                   1.85\box_dp:N \strutbox
                   + \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
953
            }
        }
```

If only enumext environment is nested in __enumext_mini_env* environment, we will apply a correction factor to the *vertical spaces* taking into account the value of \topsep, if this is zero we will use \strutbox as the basis for the calculations.

```
\skip_if_eq:nnTF
            { \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip } } { \c_zero_skip }
959

47 / 117

10.19.4 The command \miniright

The command \miniright will close the __enumext_mini_env* environment on the "left side", open the __enumext_mini_env* environment on the "right side" adding the adjusted vertical space. By default we will add \centering when starting the "right side" environment. The starred version '*' inhibits the use of \centering command i.e. the usual ETEX justification is maintained in the __enumext_mini_env* on the "right side".

\miniright

First we will perform some checks to prevent the command from being executed outside the enumext environment or from being executed inside the keyanspic environment, then we call the internal functions for the enumext and keyans environments.

```
1183 \NewDocumentCommand \miniright { s }
1184
       \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
1185
1186
            \msg_error:nnn { enumext } { wrong-miniright-place }
1187
         }
       \int_compare:nNnT { \l__enumext_level_int } = { 0 }
1189
            \msg_error:nnn { enumext } { wrong-miniright-place }
         }
       \int_compare:nNnTF { \l__enumext_keyans_level_int } = { 1 }
              _enumext_keyans_mini_right_cmd:n {#1}
1196
         { \__enumext_mini_right_cmd:n {#1} }
1197
1198
```

(End of definition for $\mbox{\sc miniright}$. This function is documented on page 9.)

__enumext_mini_right_cmd:n

The function __enumext_mini_right_cmd:n takes as argument the starred version '*' of the \miniright command in the enumext environment. We check if the mini-env key is active via the variable \l__-enumext_minipage_right_X_dim, if so we close the multicols environment with the __enumext_mini_env* environment on the "left side", then we open the __enumext_mini_env* environment on the "right side", apply our adjusted "vertical spaces", followed by adding the \centering command when the starred argument '*' is not present and set zero \g__enumext_minipage_stat_int, otherwise we return an error.

(End of definition for __enumext_mini_right_cmd:n.)

__enumext_keyans_mini_right_cmd:n

The function __enumext_keyans_mini_right_cmd:n takes as argument the starred version '*' of the \miniright command in the keyans environment. The implementation of this function is the same as that of the __enumext_mini_right_cmd:n function of the enumext environment.

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_keyans_mini_right_cmd:n.)$

10.20 Setting above and below keys

While having controlled the *vertical spaces* within the enumext and keyans environments when using the columns or mini-env keys, sometimes the "vertical spaces above" or "vertical spaces below" the environments are not as expected and it is necessary to be able to apply a "fine correction" to these. As I have not been able to correct these *glitches*, the best option is to leave a couple of $\langle keys \rangle$ dedicated to this purpose, in this case it is best to use \vspace or \vspace* when convenient.

above Define above, above*, below and below* keys for enumext and keyans environments.

```
above*
        \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
 below
        1236
below*
                \keys_define:nn { enumext / #1 }
        1237
        1238
                           .skip_set:c = { l__enumext_vspace_above_#2_skip },
                    above
                           .value_required:n = true,
                    above* .code:n
                                       = \bool_set_true:c { l__enumext_vspace_a_star_#2_bool }
                                          \keys_set:nn { enumext / #1 } { above = {##1} },
                    above* .value_required:n = true,
                           .skip_set:c = { l__enumext_vspace_below_#2_skip },
                    below
                           .value_required:n = true,
                    below
                    below* .code:n
                                        = \bool_set_true:c { l__enumext_vspace_b_star_#2_bool }

10.21.1 Internal function for save-ans key

__enumext_storing_set:n
__enumext_storing_exec:

The function __enumext_storing_set:n executed by the save-ans key sets the parameters for the operation of \anskey, keyans, keyans* and keyanspic. The variable \l__enumext_store_name_tl will have the "store name" with which the $\langle sequence \rangle$ and $\langle prop \ list \rangle$ will be created, if it does not exist it will create it globally.

The boolean var \l_enumext_store_active_bool will be set to true activating the entire internal *storage mechanism*, then the integer variable for the resume key will be created (if not exist).

10.21.2 Internal function for series key

The series key is responsible for the whole process of the resume and resume* keys. The idea behind this is to be able to absorb the $\langle keys \rangle$ passed to the optional argument of the first level of the environments, but, discarding some specific $\langle keys \rangle$.

__enumext_filter_series:n
 __enumext_filter_series_key:n
 __enumext_filter_series_pair:nn

The function $_$ _enumext_filter_series:n will be in charge of filtering the $\langle keys \rangle$ we want to store where $\{\#1\}$ represents the optional value passed to the environment.

The function $_$ enumext_filter_series_key:n will be responsible for filtering the $\langle keys \rangle$ that are passed *without value* by excluding the resume and resume* keys.

The function __enumext_filter_series_pair:nn will be responsible for filtering the $\langle keys \rangle$ that are passed with value by excluding the series, resume, save-ans and save-key keys.

```
\tag{1443} \cs_new:Npn \__enumext_filter_series_pair:nn #1#2
     {
1444
        \str_case:nnF {#1}

          {
1446
            { series } {}
1447
            { resume } {}
            { save-key } {}
            { save-ans } {}
1450
           }
1451
          { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
1452
1453
```

(End of definition for $_$ enumext_filter_series:n, $_$ enumext_filter_series_key:n, and $_$ enumext_filter_series_pair:nn.)

__enumext_parse_series_name:n
__enumext_resume_last:n

The function __enumext_parse_series_name:n will be in charge of saving the filtered $\langle keys \rangle$ in a global variable \g__enumext_series_ $\langle series\ name \rangle$ _tl created globally when using the key series, otherwise it will call the function __enumext_resume_last:n. This function is passed to the function __enumext_parse_keys_parse_keys:n in the enumext environment definition (§10.32) and to the function __enumext_parse_keys_vii:n in the enumext* environment definition (§10.35).

```
\cs_new_protected:Npn \__enumext_parse_series_name:n #1
1455
       \str_if_empty:NTF \l__enumext_series_str
1456
1457
         {
           \ enumext resume last:n {#1}
1458
         }
1459
         {
1460
           \tl_gclear_new:c { g__enumext_series_ \l__enumext_series_str _tl }
           \tl_gset:ce { g__enumext_series_ \l__enumext_series_str _tl }
             { \__enumext_filter_series:n {#1} }
           \int_if_exist:cF { g__enumext_series_ \l__enumext_series_str _int }
             {
               \int_new:c { g__enumext_series_ \l__enumext_series_str _int }
             3
1467
         }
1468
1469
```

The function __enumext_resumext_series_default:n will be in charge of saving the filtering $\langle keys \rangle$ when the series key is *not used* and will save them in the variable \g__enumext_standar_series_tl for the enumext environment and in the variable \g__enumext_starred_series_tl for the enumext*

environment. Here we must use \bool_lazy_all:nT to make sure that the default values are not overwritten when the environment is nested and the series key is not being used.

```
1470 \cs_new_protected:Npn \__enumext_resume_last:n #1

1475
           \tl_gset:Ne \g__enumext_standar_series_tl { \__enumext_filter_series:n {#1} }
1477
       \bool_if:NT \l__enumext_starred_level_one_bool
1478
         {
           %%\typeout{[[ON-LEVEL-ONE-ENUMEXT*]]}
           \tl_gclear:N \g__enumext_starred_series_tl
           \tl_gset:Ne \g__enumext_starred_series_tl { \__enumext_filter_series:n {#1} }
1484
```

(End of definition for $\ _$ enumext_parse_series_name:n and $\ _$ enumext_resume_last:n.)

10.21.3 Internal function for resume and resume* keys

The keys resume without assigned value and resume* reset the *counter* of the list according to the last value of the counter of the previous list, the first one only the *counter* and the second one with the optional values filtered from the last non-nested list in which the key series is not present. When assigning value to resume= $\{\langle series\ name \rangle\}$ it will use the previous values of the list in which the series= $\{\langle series\ name \rangle\}$ key was executed.

__enumext_resume_series:n
__enumext_resume_counter:n
__enumext_resume_starred:

The function __enumext_resume_series:n will handle the argument passed to the resume key in the enumext environment. If the key is passed without value the function __enumext_resume_counter: is executed which will set the counter according to the numbering of the last enumext environment in which the series= $\{\langle series\ name \rangle\}$ key is not present, if the save-ans key is active it will set the counter according to the value of the integer variable created by that key, otherwise it will verify that the \g__enumext_series_ $\langle series\ name \rangle$ _tl variable set by the series key exists, if so it will pass these keys to the first level of the environment, otherwise it will return an error.

```

10.22 The check answer mechanism

The mechanism for checking that all questions are answered follows this logic:

If the line begins with \item or \item* and does NOT open a nested environment, each \item or \item* must contain a single execution of the \anskey command, i.e. the counter of the executions of the \anskey command must be equal to the counter associated with the sum of executions of \item and \item*.

If the line begins with \item or \item* and opens a nested environment each \item or \item* in the nested environment must have a single execution of the \anskey command and the counter associated to the sum of \item and \item* executions must decrementing by "one" to maintain equality.

resume_starred_vii:.)

In order for the mechanism for the check-answer to work (not counting keyans, keyans* and keyanspic) we need:

- We must keep track of the total number of \item and \item* (enumerated) that appear within the environment including the nested levels.
- 2. We must keep track of the total number of \item and \item* (enumerated) that appear per level of nesting.
- 3. Keeping track of the number of times the environment nests.

The integer variable associated to the sum of each $\idesigned item$ and $\idesigned interest in the environment <math>\globel{g_enumext_count_item}$ associated to the execution of the command \anskey . We analyze the cases:

- a) If the list only has one level the number of \item + \item* = \anskey
- b) If the list has *nested levels*, for each level of nesting we need to decrementing by one (for the \item or \item* that opens the nest) so that the account remains the same.

With keyans, keyans* and keyanspic it is enough to increase in one the integer of \anskey. The integers created must be global if they are not lost in the interior levels of nesting and to execute the test we will use a "hook" function after closing the first level of the environment.

10.22.1 Setting check-ans key

no-store

Now we define the keys check-ans and no-store for all levels of enumext and enumext* environments.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
       \keys_define:nn { enumext / #1 }
         {
           check-ans .bool_set:N = \l__enumext_check_ans_bool,
           check-ans .initial:n = false,
           no-store .code:n = {
1578
                                   \bool_set_false:N \l__enumext_store_ans_bool
                                   \bool_set_false:N \l__enumext_check_ans_bool
1580
                                 },
1581
           no-store .value_forbidden:n = true,
1582
1583
1584
   \clist_map_inline:nn
1586
       level-1, level-2, level-3, level-4, enumext*
1587
    }
1588
     { \__enumext_tmp:n {#1} }
1589
```

o a a Cat un abaal, anguar maabanism

(End of definition for check-ans and no-store.)

10.22.2 Set-up check answer mechanism

__enumext_check_ans_set:

The function __enumext_check_ans_set: will adjust the value of the variable \g__enumext_count_-item_number_int by decrementing its value by one each time you open a nested level enumext environment.

```
\cs_new_protected:Nn \__enumext_check_ans_set:
     {
1591
       \int_case:nn { \l__enumext_level_int }
1592

```

(End of definition for __enumext_check_ans_set:.)

__enumext_check_ans_exec:

The function __enumext_check_ans_exec: will count the number of times the \item and \item* commands appears per level within the enumext environment. The boolean variable \l__enumext_-store_ans_bool controlled by the no-store key will increment the integer variable of the level counter by 1 to preserve the equality that we will use in the final comparison of the process.

(End of definition for __enumext_check_ans_exec:.)

__enumext_check_ans_show:

wrap-ans

wrap-opt

The function __enumext_check_ans_show: compares all executions of \item and \item* with the executions of \anskey. After the function is executed, we set the integer variables to zero.

10.23.1 Function for storing content in prop list

__enumext_store_addto_prop:n
\ enumext store addto prop:V

The function $\ensuremath{\mbox{\mbox{$\setminus$}}}$ enumext_store_addto_prop:n stores the content in $\langle prop\ list \rangle$ defined by save-ans key. The "stored content" is retrieved by means of the $\ensuremath{\mbox{$\setminus$}}$ getkeyans command.

The form in which the content is "stored" in the $\langle prop \ list \rangle$ is $\{\langle position \rangle\} \{\langle content \rangle\}$. This function is used by \anskey in enumext and enumext* environments, \item* in keyans and keyans* environments and \anspic in keyanspic environment.

```
1725 \cs_generate_variant:Nn \prop_gput_if_not_in:Nnn { cen }
1726 \cs_new_protected:Npn \__enumext_store_addto_prop:n #1
1727 {
1728 \prop_gput_if_not_in:cen { g__enumext_ \l__enumext_store_name_tl _prop }
1729 {
1730 \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } + 1 }
1731 }
1732 { #1 }
1733 }
1734 \cs_generate_variant:Nn \__enumext_store_addto_prop:n { V }
```

 $(\textit{End of definition for } \verb|_-enumext_store_addto_prop:n.)$

10.23.2 Function for storing content in sequence

The function __enumext_store_addto_seq:n stores the content in $\langle sequence \rangle$ defined by save-ans key. This function is used by \anskey in enumext, \item* in keyans and \anspic in keyanspic. The form in which the content is stored in $\langle sequence \rangle$ is in a internal enumext or enumext* environments with the same structure in which the command was executed.

The "stored content" is retrieved by means of the \printkeyans command.

```
1735 \cs_new_protected:Npn \__enumext_store_addto_seq:n #1
1736 {
1737 \seq_gput_right:cn { g__enumext_ \l__enumext_store_name_tl _seq } { #1 }
1738 }
1739 \cs_generate_variant:Nn \__enumext_store_addto_seq:n { v, V }
```

 $(\mathit{End}\ of\ definition\ for\ \verb|__enumext_store_addto_seq:n.)$

10.23.3 Functions for storing the list structure in the sequence

The memorization structure of the list is handled by the functions __enumext_store_level_open: and __enumext_store_level_close: which are executed per level within the enumext environment. As this structure will be stored in the sequence set by the save-ans key, we will not be able to modify it locally, so it is better to take only two copies of the values set by the columns and columns-sep keys if they are present when changing levels within the enumext environment when executing \anskey. We will store these values in the variable \l__enumext_store_columns_X_tl if they are different from 0 and 0pt and pass them as an optional argument to the environment stored in the sequence enumext.

```

```

(End of definition for $\ensuremath{\backslash}$ _enumext_print_keyans_box:NN.)

10.24 The command \anskey and internal label and ref

Since we will be "storing content" in a list environment within \(\sequences \) and can (more or less) manage the options passed to each level, it is necessary that we have a little more control over \item when storing. The \anskey command will cover this point and give it very similar behaviour to that of \item in the enumext and enumext* environments.

\anskey We want the command to be executed as follows: $\anskey(\langle number \rangle) * [\langle key = val \rangle] {\langle content \rangle}$ so first we'll add the keys item-sym*, item-pos* and store-brk.

```
1820 \keys_define:nn { enumext / anskey }
1821 {
1822    item-sym* .tl_set:N = \l__enumext_store_item_symbol_tl,
1823    item-sym* .value_required:n = true,
1824    item-pos* .dim_set:N = \l__enumext_store_item_symbol_sep_dim,
1825    item-pos* .value_required:n = true,
1826    store-brk .bool_set:N = \l__enumext_store_columns_break_bool,
1827    store-brk .default:n = true,
1828    store-brk .value_forbidden:n = true,
1829 }
```

This command \anskey will only be present when using the save-ans key in enumext and enumext* environments, otherwise it will return an error. If the check-ans key is active, increment \g_enumext_-count_item_with_ans_int, then call internal function _enumext_store_anskey_code:nnnn will "store content" in the \(sequence \) and in the \(\lambda prop \) list\\.

```
NewDocumentCommand \anskey { d() s o +m }
1831
       \bool_if:NF \l__enumext_store_active_bool
1832
1833
           \msg_error:nnnn { enumext } { anskey-wrong-place }{ anskey }{ enumext }
1834

       \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
1837
           \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyans }
       \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
1840
1841
         {
           \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyanspic }
1842
1843
       \group_begin:
1844
         \bool_if:NT \l__enumext_store_ans_bool
             \bool_if:NT \l__enumext_check_ans_bool
                  \int_gincr:N \g__enumext_count_item_anskey_int
              \__enumext_store_anskey_code:nnnn {#1} {#2} {#3} {#4}
1851
1852
       \group_end:
1853
     }
1854
```

(End of definition for $\$ anskey. This function is documented on page 10.)

__enumext_store_anskey_code:nnnn

The internal function __enumext_store_anskey_code:nnnn first we pass the command $\langle argument \rangle$ to the $\langle prop\ list \rangle$, then checks the state of the variable \l__enumext_store_ref_key_bool handled by the save-ref key and will call the function __enumext_store_internal_ref: for the internal "label and ref" system. Followed by this if the show-ans or show-pos keys are active we will show the "wrapped" $\langle argument \rangle$ passed to the command.

```
1855 \cs_new_protected:Npn \__enumext_store_anskey_code:nnnn #1 #2 #3 #4
1856 {
1857 \__enumext_store_addto_prop:n {#4}
1858 \bool_if:NT \l__enumext_store_ref_key_bool
1859 {
1860 \__enumext_store_internal_ref:
1861 }
1862 \__enumext_store_anskey_show_left:n { #4 }
```

Now we start processing the optional arguments passed to the command to build our \item in the variable \l__enumext_store_anskey_arg_tl which we will "store" in the $\langle sequence \rangle$. First we clear the variable \l__enumext_store_anskey_arg_tl and process [$\langle key = val \rangle$], if the store-brk key is present and

the command is running under enumext (not in the starred version) we will add \columnbreak and then \item.

```
\tl_clear:N \l__enumext_store_anskey_arg_tl
       \tl_if_novalue:nF {#3}
1864
1865
         {
           \keys_set:nn { enumext / anskey } {#3}
1866
         }
1867
       \bool_lazy_and:nnT
1868
         { \bool_if_p:N \l__enumext_store_columns_break_bool }
         { \bool_not_p:n { \l__enumext_starred_bool } }
           \tl_put_left:Nn \l__enumext_store_anskey_arg_tl { \columnbreak }
         }
1873
       \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { \item }
1874
```

Now we will check the $(\langle number \rangle)$ argument and add it to \l__enumext_store_anskey_arg_tl if the command is running under enumext* (starred version).

And now we will review the starred argument * together with the keys item-sym* and item-pos* and pass them to \l__enumext_store_anskey_arg_tl.

```
\bool_if:nTF {#2}
         {
1887
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { * }
1888
           \tl_if_empty:NF \l__enumext_store_item_symbol_tl
             {
               \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
                    [ \exp_not:V \l__enumext_store_item_symbol_tl ]
                 }
             }
           \dim_compare:nT
             {
1897
               \l__enumext_store_item_symbol_sep_dim != \c_zero_dim
1898
             }
             {
               \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
                    [ \exp_not:V \l__enumext_store_item_symbol_sep_dim ]
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#4}
         }
1907
         {
1908
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#4}
1909
```

Finally we check if the save-ref key is active along with the hyperref package load, if both conditions are met, it will create the \hyperlink and then store in \langle sequence \rangle.

(End of definition for $_$ enumext_store_anskey_code:nnnn.)

__enumext_store_internal_ref:

The function __enumext_store_internal_ref: handles the internal "label and ref" system used by the save-ref and mark-ref keys for \anskey will allow to execute \ref{ $\langle store\ name: position \rangle$ } and will return 1.(a).i.A.

First we will remove the dots "." from the current $\langle labels \rangle$, we do not want to get double dots in our references, then we will place this in the variable \l_enumext_newlabel_arg_two_tl.

```
1923 \cs_new_protected:Nn \__enumext_store_internal_ref:
1924
    {
       \cs_set_protected:Npn \__enumext_tmp:n ##1
1925
           \tl_set_eq:cc { l__enumext_label_copy_##1_tl } { l__enumext_label_##1_tl }
           \tl_reverse:c { l__enumext_label_copy_##1_tl }
           \tl_remove_once:cn { l__enumext_label_copy_##1_tl } { . }
           \tl_reverse:c { l__enumext_label_copy_##1_tl }
1931
       \clist_map_inline:nn { i, ii, iii, iv, vii } { \__enumext_tmp:n {##1} }
1932
       \cs_set:Npn \__enumext_tmp:n ##1
1933
         { . \tl_use:c { l__enumext_label_copy_ \int_to_roman:n {\pmu1} _tl } }
1934
```

Here we need to analyse the cases where the environment is started with enumext* and if \anskey is running alone in it or if it is running in a nested enumext environment within the starting environment.

```
\bool_lazy_all:nT

10.25.3 Storing content in sequence

__enumext_keyans_addto_seq:n
__enumext_keyans_addto_seq_link:

The function __enumext_keyans_addto_seq:n will pass the contents of the current $\langle label \rangle$ \l__enumext_label_v_tl for the keyans environment and the \l_enumext_label_vi_tl for the keyanspic environment when using \item* and \anspic*, followed by the $\langle contents \rangle$ of the optional argument of both commands to the \l_enumext_store_keyans_label_tl variable to the sequence defined by the save-ans key.

Checks if the save-ref key is active along with the hyperlink and then store using the __enumext_store_addto_seq: V function. Finally, copy the contents of the variable \l__enumext_store_keyans_label_tl into the global variable \g__enumext_check_ans_item_tl to be used by the function __enumext_keyans_check_ans:nn and increment the value of the integer variable \g__enumext_count_item_anskey_int handled by the check-ans key.

10.25.4 Check for starred commands

__enumext_keyans_check_ans:nn

The function __enumext_keyans_check_ans:nn performs an extra check for the keyans and keyanspic environments. Unlike the check executed by check-ans key this one is not controlled by any key, it is intended to prevent the forgetting of \item* or \anspic* in these environments.

(End of definition for $_$ enumext_keyans_check_ans:nn.)

10.25.5 The show-ans and show-pos keys for keyans and keyanspic

The code is very similar to the \anskey code, but, if I change the order of the operations the counter off $\langle label \rangle$ are incorrect.

__enumext_keyans_show_left:n
__enumext_keyans_show_ans:
__enumext_keyans_show_pos:
__enumext_keyans_show_item_opt:

Common function to show *starred commands* \item* and $\langle position \rangle$ of stored content in $\langle prop \; list \rangle$ for keyans and keyanspic. Need add 1 to \g__enumext_ \text{t}_enumext_store_name_tl _prop for show-pos key.

10.28 Redefining \item command

Redefining the \item command is not as simple as I thought. This command works in conjunction with the \makelabel command so I have to redefine both of them, in addition to this, we will have to use a couple of *global* variables to pass the values from one command to the other.

10.28.1 The \item command in enumext

\ enumext default item:n

The \idetic{item} and \idetic{custom} commands work in the usual way on enumext.

First we will see if the optional argument is present, if it is NOT present we will check the state of the variable \l__enumext_check_ans_bool set by the key check-ans, set the boolean variable \l__enumext_wrap_label_X_bool to "true" and execute __enumext_item_std:w.

Otherwise we will check the state of the boolean variable \l_enumext_wrap_label_opt_X_bool set by the key wrap-label* and execute _enumext_item_std:w with the optional argument.

The boolean variable \l__enumext_wrap_label_X_bool is used by the function __enumext_make_-label: (§10.29).

```
\cs_new_protected:Npn \__enumext_default_item:n #1
       \tl_if_novalue:nTF {#1}
         {
           \bool_if:NT \l__enumext_check_ans_bool
2281
             {
2282
               \int_gincr:N \g__enumext_count_item_number_int
2283
2284
           \bool_set_true:c { l__enumext_wrap_label_ \__enumext_level: _bool }
2285
           \__enumext_item_std:w \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl }
         }
         {
           \bool_set_eq:cc
             { l__enumext_wrap_label_ \__enumext_level: _bool }
```

69/117

```
{ l__enumext_wrap_label_opt_ \__enumext_level: _bool }

__enumext_item_std:w [#1] \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl

__enumext_item_std:w [#1] \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl

__enumext_level: _tl
```

(End of definition for $_$ enumext_default_item:n.)

__enumext_starred_item:nn

The $\identified item^*, \iden^*[\langle symbol \rangle] \ and \iden^*[\langle symbol \rangle] \ [\langle offset \rangle] \ works like the numbered \identified item, but placing a <math>[\langle symbol \rangle]$ to the "left" of the $\langle label \rangle$ separated from it by the value set by the labelsep key and can be offset using the second optional argument $[\langle offset \rangle]$.

```
#1: \l__enumext_item_symbol_X_tl
#2: \l__enumext_item_symbol_sep_X_dim
```

First we will make a copy of $\l_=\text{enumext_item_symbol_X_tl}$ which is set by the key item-sym* or passed as optional argument in the global variable $\g_=\text{enumext_item_symbol_tl}$, followed by setting the variable $\l_=\text{enumext_item_symbol_sep_X_dim}$ set by the key item*-sep or by the second optional argument.

Then we will see the state of the variable \l__enumext_check_ans_bool set by the key check-ans, set the boolean variable \l__enumext_wrap_label_X_bool to "true" and execute __enumext_item_-std:w.

In this function the optional argument of __enumext_item_std:w is omitted, we only want it to be numbered.

```
2295 \cs_new_protected:Npn \__enumext_starred_item:nn #1 #2
       \tl_if_novalue:nF {#1}
2297
2298
           \tl_set:cn { l__enumext_item_symbol_ \__enumext_level: _tl } {#1}
       \tl_gset_eq:Nc \g__enumext_item_symbol_tl { l__enumext_item_symbol_ \__enumext_level: _tl }
       \tl_if_novalue:nTF {#2}
         {
2303
           \dim_set_eq:cc
2304
             { l__enumext_item_symbol_sep_ \__enumext_level: _dim }
2305
             { l__enumext_labelsep_ \__enumext_level: _dim }
         }
2307
         {
2308
           \dim_set:cn { l__enumext_item_symbol_sep_ \__enumext_level: _dim } {#2}
         }
       \bool_if:NT \l__enumext_check_ans_bool
           \int_gincr:N \g__enumext_count_item_number_int
       \bool_set_true:c { l__enumext_wrap_label_ \__enumext_level: _bool }
       \__enumext_item_std:w \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl }
```

__enumext_redefine_item: 7

The function __enumext_redefine_item: will redefine the \item command in the enumext environment for the internal mechanism of check-answers for check-ans key and adding the starred \item* version.

This function is passed to __enumext_list_arg_two_X: which is used in the definition of the enumext environment (\\$10.31).

 $(End\ of\ definition\ for\ \verb|_-enumext_redefine_item:.)$

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_starred_item:nn.)$

```
©2024 by Pablo González L 70/117
```

10.28.2 The \item command in keyans

The $\idesigned \mbox{"item*} \mbox{"item*} \mbox{"content"} \mbox{"content"} \mbox{"commands store} \mbox{ the current $\langle label \rangle$ next to the $[\langle content \rangle]$ if it is present in the $\langle sequence \rangle$ and $\langle prop \mbox{ list} \rangle$ defined by save-ans key.$

__enumext_keyans_default_item:n

The function __enumext_keyans_default_item:n executes the original behavior of the \item.

(End of definition for __enumext_keyans_default_item:n.)

__enumext_keyans_starred_item:n

The function __enumext_keyans_starred_item:n which will make a temporary copy of the current $\langle label \rangle$, execute the show-ans or show-pos keys using the function __enumext_keyans_show_left:n and will display the contents of that item using the internal copy __enumext_item_std:w, this is necessary to prevent incrementing the current "counter" of the original $\langle label \rangle$.

```
2341 \cs_new_protected:Npn \__enumext_keyans_starred_item:n #1
2342 {
2343  \tl_set_eq:NN \l__enumext_keyans_tmpa_tl \l__enumext_label_v_tl
2344  \__enumext_keyans_show_left:n { #1 }
2345  \bool_set_true:N \l__enumext_wrap_label_v_bool
2346  \__enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl \__enumext_keyans_show_item
```

Recover the original value of the current $\langle label \rangle$ and *store* it first in the $\langle prop \ list \rangle$ (including the optional argument), run the internal "label and ref" system if the save-ref key is active and finally *store* it in the $\langle sequence \rangle$.

(End of definition for $_$ enumext_keyans_starred_item:n.)

__enumext_keyans_redefine_item:

The function __enumext_keyans_redefine_item: is responsible for adding the *starred* and *optional* argument by the __enumext_list_arg_two_v: function in the definition of the keyans environment. Here we need to use \peek_remove_spaces:n to prevent an unwanted space when using \item* in conjunction with the itemindent key.

This function is passed to __enumext_list_arg_two_v: which is used in the definition of the keyans environment (§10.31).

 $(\textit{End of definition for } \texttt{\ lim*} \ \ \textit{and } \texttt{\ locallense} \ \texttt{\ locallense}$

10.29 Redefining \makelabel command

Redefine \makelabel for the keys align, font, wrap-label, wrap-label* and \item* for enumext and keyans environments.

10.29.1 Redefining \makelabel for enumext

(End of definition for __enumext_item_starred:.)

__enumext_item_starred:

The function __enumext_item_starred: will be responsible for executing \item* for the enumext environment.

__enumext_make_label:

The function __enumext_make_label: redefine \makelabel for the enumext environment.

This function is passed to __enumext_list_arg_two_X: which is used in the definition of the enumext environment (§10.31).

```
2378 \cs_new_protected:Nn \__enumext_make_label:
       \RenewDocumentCommand \makelabel { m }
2380
         {

2392
2393
```

 $(End\ of\ definition\ for\ \verb|_-enumext_make_label:|)$

10.29.2 Redefining \makelabel for keyans

__enumext_keyans_make_label:

The function __enumext_keyans_make_label: redefine \makelabel for keyans environment.

This function is passed to __enumext_list_arg_two_v: which is used in the definition of the keyans environment (§10.31).

 $(\textit{End of definition for } \verb|_-enumext_keyans_make_label:.)$

10.30 Calculation of \leftmargin and \itemindent

Consider the figure 9 where the default margins (on the left) of a list are represented.

The idea is to have control over these margins so that our list does not overlap the left margin of the page. The *key* relationship is that the right edge of the \labelsep equals the right edge of the \itemindent, so that the left edge of the *label box* is at \leftmargin+\itemindent minus \labelwidth+\labelsep. Thus, the handling of the margins by the package will be as shown in the figure 10.

Where the default values will look like in the figure 11.

__enumext_calc_hspace:NNNNNNN\ _enumext_calc_hspace:cccccc The function __enumext_calc_hspace: NNNNNNN takes seven arguments to be able to determine horizontal spaces for all list environment:

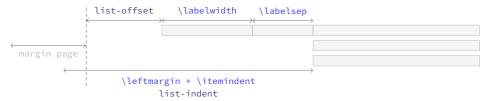

Figure 9: Representation of standard horizontal lengths in list environment.

```
list-offset \labelwidth \labelsep

wargin page \labelwidth \labelsep
\labelwidth \labelsep
\labelwidth \labelsep
\labelwidth \labelsep
```

Figure 10: Representation of horizontal lengths concept in list in enumext.

```
#1: \l__enumext_labelwidth_X_dim #2: \l__enumext_labelsep_X_dim
#3: \l__enumext_listoffset_X_dim #4: \l__enumext_leftmargin_tmp_X_dim
#5: \l__enumext_leftmargin_X_dim #6: \l__enumext_itemindent_X_dim
#7: \l__enumext_leftmargin_tmp_X_bool
```

And returns the "adjusted" values of \leftmargin and \itemindent.

This function is passed to __enumext_list_arg_two_X: which is used in the definition of the enumext and keyans environments (§10.31).

2434
2435
```

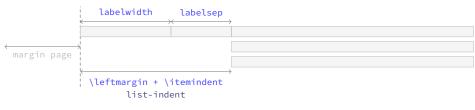

Figure 11: Default horizontal lengths in enumext.

10.31 Setting second argument of the lists

At this point of the code we have already programmed the necessary tools to create a custom list environment, remember that the function __enumext_start_list:nn takes two arguments, the first one we have ready, the second one we will define for all the levels of the environment enumext and the environment keyans.

__enumext_list_arg_two_i:
__enumext_list_arg_two_ii:
__enumext_list_arg_two_iv:
__enumext_list_arg_two_v:

In this function for the second list argument we will implement the keys start, resume and show-length together with the redefinition of \item for enumext and keyans environments.

We will "not set" \leftmargini, \leftmarginii, \leftmarginii or \leftmarginiv, in this case, we will directly set the parameters for vertical and horizontal list spacing per level.

```

         }
    }
```

2747

(End of definition for __enumext_after_list:.)

As we don't want our check to be executed check-ans by levels but on the complete list, we will take it out of the enumext environment using the "hook" function __enumext_after_env:nn.

10.33 The environment keyans

The environment keyans also based on lists. The main differences with the enumext environment are the *nesting* and the way the *answers* (choice) will be stored and checked, this environment is intended exclusively for "*multiple choice questions*".

keyans Now we define the environment keyans also based on lists.

```
2761 \NewDocumentEnvironment{keyans}{ 0{} }
     {
2762
       \__enumext_keyans_safe_exec:
2763
       \__enumext_keyans_parse_keys:n {#1}
2764
       \__enumext_before_list_v:
2765
       \__enumext_start_list:nn
         { \tl_use:N \l__enumext_label_v_tl }
         {
              _enumext_list_arg_two_v:
            \ enumext before keys exec v:
       \__enumext_after_args_exec_v:
2774
       \__enumext_keyans_check_ans:nn { item }{ keyans }
2776
       \__enumext_stop_list:
       \__enumext_after_list_v:
     }
2778
```

(End of definition for keyans. This function is documented on page 10.)

__enumext_keyans_safe_exec:

The keyans environment will only be available if the save-ans key is active and can only be used at the first level within the enumext environment. We do not want the environment to be nested, so we will set a maximum at this point. If the conditions are not met, an error message will be returned.

```
2779 \cs_new_protected:Nn \__enumext_keyans_safe_exec:
2780
       \bool_if:NF \l__enumext_store_active_bool
2781
            \msg_error:nnnn { enumext } { wrong-place }{ keyans }{ save-ans }
         }
       \int_incr:N \l__enumext_keyans_level_int
       \bool_set_true:N \l__enumext_keyans_env_bool
       % Set false for interfering with enumext nested in keyans (yes, its possible and crayze)
2787
       \bool_set_false:N \l__enumext_store_active_bool
2788
       \int_compare:nNnT { \l__enumext_keyans_level_int } > { 1 }
2789
         {
2790
            \msg_error:nn { enumext } { keyans-nested }
       \int_compare:nNnT { \l__enumext_level_int } > { 1 }
            \msg_error:nn { enumext } { keyans-wrong-level }
         }
2796
(End of definition for \__enumext_keyans_safe_exec:.)
```

__enumext_keyans_parse_keys:n Parse $[\langle key = val \rangle]$ for keyans environment.

```
2798 \cs_new_protected:Npn \__enumext_keyans_parse_keys:n #1
       \keys_set:nn { enumext / keyans } {#1}
    }
2801
```

(End of definition for $_$ enumext_keyans_parse_keys:n.)

enumext before list v:

The function __enumext_before_list_v: will add the *vertical spacing above* the environment if the above key is active next to the $\langle code \rangle$ defined by the before key if it is active.

```
2802 \cs_new_protected:Nn \__enumext_before_list_v:
       \__enumext_vspace_above_v:
       \__enumext_before_args_exec_v:
```

When the mini-env key is active it will set the value of the \l_enumext_minipage_right_v_dim to be the width of the __enumext_mini_env* environment on the left side, using this value together with the value of the \l__enumext_minipage_hsep_v_dim set by the mini-sep key, the value of \l__enumext_minipage_left_v_dim will be set, which will be the width of __enumextt_mini_env* environment on the *right side*, always having \linewidth as the maximum width between them.

```
\dim_compare:nNnT { \l__enumext_minipage_right_v_dim } > { \c_zero_dim }
           \dim_set:Nn \l__enumext_minipage_left_v_dim
2808
               \linewidth - \l__enumext_minipage_right_v_dim - \l__enumext_minipage_hsep_v_dim
2810
2811
```

The boolean variable \l__enumext_minipage_active_v_bool will be activated and the integer variable \g__enumext_minipage_stat_int used by the \miniright command will be incremented, then the function __enumext_keyans_mini_addvspace: is called and the __enumext_mini_env* environment on *left side* will be initialized followed by the *vertical spacing* \l__enumext_minipage_left_skip. Here we use the plain TeX macro \nointerlineskip to prevent baseline "glue" being added between the next pair of boxes in a vertical list.

```
\bool_set_true:N \l__enumext_minipage_active_v_bool
           \int_gincr:N \g__enumext_minipage_stat_int
           \__enumext_keyans_mini_addvspace:
2815
           \nointerlineskip\noindent
           \begin{__enumext_mini_env*}{ \l__enumext_minipage_left_v_dim }
2816
```

After these actions, the __enumext_keyans_multicols_start: function is called to handle the multicols environment.

```
\__enumext_keyans_multicols_start:
}
```

(End of definition for __enumext_before_list_v:.)

__enumext_keyans_multicols_start:

The function __enumext_keyans_multicols_start: will start the multicols environment according to the value passed by the columns key.

```
2820 \cs_new_protected:Nn \__enumext_keyans_multicols_start:
       \int_compare:nNnT { \l__enumext_columns_v_int } > { 1 }
2823
```

Set the default value for \columnsep when columns-sep key is Opt.

```
\dim_compare:nNnT { \l__enumext_columns_sep_v_dim } = { \c_zero_dim }
               \dim_set:Nn \l__enumext_columns_sep_v_dim
                 {
                     \l__enumext_labelwidth_v_dim + \l__enumext_labelsep_v_dim
                   ) / \l__enumext_columns_v_int
                  - \l__enumext_listoffset_v_dim
2832
             }
2833
           \dim_set_eq:NN \columnsep \l__enumext_columns_sep_v_dim
```

Then we will set the value of \multicolsep and \columnseprule equal to zero (we do not want a vertical rule in this environment).

```
\skip_zero:N \multicolsep
\dim_zero:N \columnseprule
```

We will calculate the *vertical spacing* settings for the multicols environment using the function __enumext_keyans_multi_addvspace: and apply our "*vertical adjust spacing*", then start the multicols environment.

(End of definition for __enumext_keyans_multicols_start:.)

 $\verb|__enumext_keyans_multicols_stop:|$

The function __enumext_keyans_multicols_stop: will stop the multicols environment. If the boolean variable \l__enumext_minipage_active_v_bool is false (not nested in __enumext_mini_-env*) we will apply our vertical "adjust" spacing.

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_keyans_multicols_stop:.)$

__enumext_after_list_v:

The function __enumext_after_list_v: will will check the state of the boolean variable \l__enumext_minipage_active_v_bool, if it is "true" a small test will be executed to check if we have omitted the use of \miniright (the __enumext_mini_env* environment has not been closed), then close __enumext_mini_env* and add the vertical adjustment space \l__enumext_minipage_after_skip, otherwise we will close the multicols environment.

Finally we will apply the $\{\langle code \rangle\}$ handled by the after key together with the *vertical space* handled by the below key if they are present.

```
\bool_set_false:N \l__enumext_keyans_env_bool
\_enumext_after_stop_list_v:
\_enumext_vspace_below_v:
\_enumext_vspace
```

 $(\mathit{End}\ of\ definition\ for\ \verb|__enumext_after_list_v:.)$

10.34 The environment keyanspic and \anspic

The keyanspic environment is a list-based environment that uses the same configuration for "spacing" and $\langle label \rangle$ as the keyans environment, but it does not use \item.

The contents are passed to the environment by means of the \anspic command and are placed inside minipage environments, with the $\langle label \rangle$ underneath, adjusting widths according to the options passed to the environment.

Again it is necessary to "adjust" the spacing, both vertical and horizontal, to obtain an output like the one shown in the figure 12.

This implementation is adapted from the answer given by Enrico Gregorio in How to process the body of an environment and divide it by a \macro?.

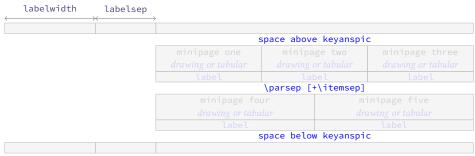

Figure 12: Representation of the keyanspic spacing in enumext.

10.34.1 The command \anspic

\anspic The \anspic command take three arguments, the starred (*) versions \anspic* and \anspic* [$\langle content \rangle$] store the current $\langle label \rangle$ next to the [$\langle content \rangle$] if it is present in the $\langle sequence \rangle$ and $\langle prop \ list \rangle$ defined by save-ans key. This command is used as a replacement for \item in the keyanspic environment.

```
_{2874} \NewDocumentCommand \anspic { s o +m } _{2875} {
```

We check that the command is active in the keyanspic environment only if the save-ans key is present, otherwise we return an error.

The three arguments are handled by the function __enumext_keyans_anspic_code:nnn and stored in the sequence \l__enumext_keyans_pic_body_seq which is processed by the keyanspic environment.

```
2888 \seq_put_right:Nn \l__enumext_keyans_pic_body_seq
2889 {
2890 \__enumext_keyans_anspic_code:nnn { #1 } { #2 } { #3 }
2891 }
2892 }
```

(End of definition for \angle anspic. This function is documented on page 12.)

(End of definition for $\ensuremath{\backslash}$ enumext_keyans_anspic_code:nnn.)

©2024 by Pablo González L

__enumext_keyans_anspic_code:nn

The function $\ensuremath{\mbox{\mbox{$\setminus$}}}$ enumext_keyans_anspic_code:nnn will be in charge of handling the "counter" and $\langle label \rangle$, which will have the same configuration as the keyans environment.

```
2893 \cs_new_protected:Nn \__enumext_keyans_anspic_code:nnn
    {
2894
       \stepcounter { enumXvi }
2895
       #3 \\
       \bool_if:nT { #1 }
         {
           \__enumext_keyans_addto_prop:n { #2 }
           \__enumext_keyans_store_ref:
           \__enumext_keyans_addto_seq:n { #2 }
           \bool_lazy_or:nnT
             { \bool_if_p:N \l__enumext_show_answer_bool }
             { \bool_if_p:N \l__enumext_show_position_bool }
               \tl_set_eq:NN \l__enumext_label_v_tl \l__enumext_label_vi_tl
               \__enumext_keyans_show_left:n { #2 }
               \tl_set_eq:NN \l__enumext_label_vi_tl \l__enumext_label_v_tl
       \tl_use:N \l__enumext_label_font_style_v_tl
2911
       \__enumext_wrapper_label_v:n { \l__enumext_label_vi_tl } \__enumext_keyans_show_item_opt:
2912
```

83 / 117

10.34.2 The environment keyanspic

keyanspic

Now we define the environment keyanspic based on list. The optional argument $\lceil \langle number\ above, number\ below \rangle \rceil$ will determine the number of minipage environments that will be above and below separated by $\parsep+\timesp$ within it.

We apply the "adjusted" vertical spacing above the environment

```
vspace { \l__enumext_keyans_pic_above_skip }

year
```

If the optional argument is not present, the number of times the \anspic command appears will be counted from \l__enumext_keyans_pic_body_seq and placed in minipage environments on a single line. Finally we check if \anspic* has been used, set the counter to zero and apply our "adjusted" vertical space below the environment.

 $(End\ of\ definition\ for\ keyanspic.\ This\ function\ is\ documented\ on\ page\ {\tt 11.})$

 $\verb|\| = \verb|\| enumext_keyans_pic_safe_exec: \\$

The function __enumext_keyans_pic_safe_exec: check nested and level position inside the enumext environment.

(End of definition for __enumext_keyans_pic_safe_exec:.)

__enumext_keyans_pic_skip_abs:N

The function __enumext_keyans_pic_skip_abs:N will return a positive value \parsep.

(End of definition for $_=$ enumext_keyans_pic_skip_abs:N.)

__enumext_keyans_pic_arg_two:

The function __enumext_keyans_pic_arg_two: will be used in the second argument of the __enumext_-start_list:nn function that defines the keyanspic environment, it will handle the setting of spaces.

```
2949 \cs_new_protected:Nn \__enumext_keyans_pic_arg_two:
2950 {
```

The first thing to do is to set the boolean variable \l_enumext_leftmargin_tmp_v_bool handled by the list-indent key to false, then we copy the definition of the second list argument from the keyans environment.

```
\bool_set_false:N \l__enumext_leftmargin_tmp_v_bool \__enumext_list_arg_two_v:
```

We will add the value of \itemsep to \parsep which we will use as vertical spacing between the above and below minipage environments. and adjust the value of \leftmargin, the label and counter are handled directly by the \anspic command. Then we make equal to zero \labelwidth, \labelsep, \partopsep and \itemsep so that the horizontal and vertical spacing is not affected.

```
\langle \
```

We set the value of \l__enumext_keyans_pic_above_skip which we will use to apply our "adjust" space above keyanspic, finally we call __enumext_item_std:w followed by \scan_stop: to prevent the error message returned by LTPX when not using the \item command.

```
2960 \__enumext_keyans_pic_skip_abs:N \parsep
2961 \skip_set:Nn \l__enumext_keyans_pic_above_skip
2962 {
2963 \box_dp:N \strutbox
+ \l__enumext_topsep_v_skip
- \parsep
2966 }
2966 }
\__enumext_item_std:w \scan_stop:
2968 }
```

(End of definition for __enumext_keyans_pic_arg_two:.)

__enumext_keyans_pic_do:n
__enumext_keyans_pic_do:e

The optional argument is split by comma and is handled directly by the function __enumext_keyans_pic_n and passed to the function __enumext_keyans_pic_row:n.

(End of definition for $_$ enumext_keyans_pic_do:n.)

__enumext_keyans_pic_row:n

The function __enumext_keyans_pic_row:n will set the widths for the minipage environments and place the content $\langle stored \rangle$ by \anspic* in the \l__enumext_keyans_pic_body_seq sequence inside them.

```
2974 \cs_new_protected:Nn \__enumext_keyans_pic_row:n
2975
       \dim_set:Nn \l__enumext_keyans_pic_width_dim { \linewidth / #1 }
       \int_set:Nn \l__enumext_keyans_pic_above_int { \l__enumext_keyans_pic_below_int }
       \int_set:Nn \l__enumext_keyans_pic_below_int { \l__enumext_keyans_pic_above_int + #1 }
       \int_step_inline:nnn
         { \l__enumext_keyans_pic_above_int + 1 }
2080
         { \l__enumext_keyans_pic_below_int }
2981
         {
2982
           \__enumext_minipage:w [ b ]{ \l__enumext_keyans_pic_width_dim }
2983
2984
             \seq_item:Nn \l__enumext_keyans_pic_body_seq { ##1 }
           \__enumext_endminipage:
         }
       \par
     7
```

 $(End\ of\ definition\ for\ \verb|_-enumext_keyans_pic_row:n.|)$

10.35 The environment enumext*

Generating horizontal list environments is NOT as simple as standard LTEX list environments. The fundamental part of the code is adapted from the shortlst package to a more modern version using expl3. It is not possible to redefine \item and \makelabel as in the non starred versions (at least I have not achieved it) and as we will make it behave differently, we have no other option than to define a cascade of functions.

To achieve the horizontal list environment we will capture the \item command and the content of this in an plain lrbox box using \makebox for the label and a minipage environment for the content passed to \item, we will also add the optional argument ($\langle number \rangle$) to \item to be able to *join columns* horizontally, in simple terms, we want \item to behave in the same way as in the enumext environment but adding an optional first argument ($\langle number \rangle$).

```
©2024 by Pablo González L
```

10.35.1 Functions for item box width

__enumext_starred_columns_set_vii:

We set the default value for the width of the box containing the content of the items and create \itemwidth in a public form.

```
\cs_new_protected:Nn \__enumext_starred_columns_set_vii:
     {
       \dim_compare:nNnT { \l__enumext_columns_sep_vii_dim } = { \c_zero_dim }
2992
2993
            \dim_set:Nn \l__enumext_columns_sep_vii_dim
2994
              {
2995
                ( \l__enumext_labelwidth_vii_dim + \l__enumext_labelsep_vii_dim )
2996
                / \l__enumext_columns_vii_int
2997
       \int_set:Nn \l__enumext_tmpa_vii_int { \l__enumext_columns_vii_int - \c_one_int }
       \dim_set:Nn \l__enumext_item_width_vii_dim
            ( \linewidth - \l__enumext_columns_sep_vii_dim * \l__enumext_tmpa_vii_int )
            / \l__enumext_columns_vii_int - \l__enumext_labelwidth_vii_dim
3004
             \l__enumext_labelsep_vii_dim
3005
3006

10.35.3 Real definition of \item in enumext*

__enumext_start_item_vii:w

The functions __enumext_start_item_vii: w and __enumext_stop_item_vii: executing the true definition of \item inside the enumext* environment.

The first thing we will do is set the value of __enumext_stop_item_tmp_vii: equal to the value of __enumext_stop_item_vii: which we will define later and add the hyperref compatible enumXvii counter, after that we will start capturing the item content in a box. Here need setting the \if@hyper@item switch to "true" for hyperref compatible. The explanation for this is given by the master Heiko Oberdiek on \refstepcounter{enumi} twice (or more) creates destination with the same identifier.

```
3306 \cs_new_protected_nopar:Npn \__enumext_start_item_vii:w [#1]
    {
3307
       \cs_set_eq:NN \__enumext_stop_item_tmp_vii: \__enumext_stop_item_vii:
3308
       \legacy_if:nT { @noitemarg }
           \legacy_if_set_false:n { @noitemarg }
           \legacy_if:nT { @nmbrlist }
             {
               \bool_if:NT \l__enumext_hyperref_bool
                 {
                   \legacy_if_set_true:n { @hyper@item }
3316
                 }
               \refstepcounter{enumXvii}
               \bool_if:NT \l__enumext_check_ans_bool
                   \int_gincr:N \g__enumext_count_item_number_int
                 }
             }
         }
```

Here we start capturing \item and its contents into a group using the plain form of the \lambda rbox environment. If the state of the variable \l__enumext_footnotes_key_bool is false, we will redefine the command \footnote, followed by printing the $\langle symbol \rangle$ defined for \item* if it is present and open a new group inside which we execute font key next to \item and the keys wrap-label, wrap-label*, align, close the group and execute the key labelsep and then the key first. Finally we open the minipage environment and execute the listparindent key which will be equal to \parindent, the parsep key which will be equal to \parindent and the itemindent key.

```
\group_begin:
         \lrbox{ \l__enumext_item_text_vii_box }

10.36.2 The command \item in keyans*

The idea here is to make the \item command behave in the same way as in the keyans environment with the difference of the optional argument $(\langle number \rangle)$ which works in the same way as in the enumext* environment. In simple terms we want to store the $\langle label \rangle$ next to the $\lceil \langle content \rangle \rceil$ if it is present in the $\langle sequence \rangle$ and $\langle prop | list \rangle$ defined by save-ans key for \item*, \item* $\lceil \langle content \rangle \rceil$, \item($\langle number \rangle$)* and \item($\langle number \rangle$)* $\lceil \langle content \rangle \rceil$ commands.

__enumext_start_item_tmp_viii:

First we will call the function __enumext_stop_item_tmp_viii: that we will redefine later, we will increment the value of \l__enumext_item_column_pos_viii_int that will count the item's by rows and the value of \g__enumext_item_count_all_viii_int that will count the total of item's in the environment. After that we will call the function __enumext_item_peek_args_viii: that will handle the arguments passed to \item.

```

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_remove_extra_parsep_viii:.)$

10.37 The command \getkeyans

\getkeyans

The \getkeyans command takes a mandatory argument of the form $\{\langle store\ name: position \rangle\}$. Retrieve a "single" content stored by \anskey, \anspic* and \item* from $\langle prop\ list \rangle$ defined by save-ans key.

(End of definition for \getkeyans. This function is documented on page 12.)

__enumext_getkeyans_aux:n

The internal function $_$ _enumext_getkeyans_aux:n is in charge of *splitting* the $\langle argument \rangle$ using ":". If ":" is omitted it will return an error.

\ enumext getkeyans:nn

The internal function __enumext_getkeyans:nn will check for the existence of the $\langle prop \ list \rangle$, if it does not exist it will return an error message, then it will fetch the content specified by the second $\langle argument \rangle$ from $\langle prop \ list \rangle$.

(End of definition for $_$ enumext_getkeyans:nn.)

(End of definition for $\ensuremath{\backslash}$ _enumext_getkeyans_aux:n.)

10.38 The command \printkeyans

The \printkeyans command prints "all stored content" in the $\langle sequence \rangle$ defined by the save-ans key. The first thing we will do is to define a set of $\langle keys \rangle$ with which we will control the options of the different nesting levels for the enumext and enumext* environment by storing the values of these in the token list variables \l_enumext_print_keyans_X_tl.

```
3787 \keys_define:nn { keyanskey / print }
     {
3788
       level-1 .code:n

10.39 The command \setenumext

First we define a "meta families" of $\langle keys \rangle$ to access from \setenumext.

```
3850 \keys_define:nn { enumext / meta-families }
   {
3851
       level-1 .code:n = { \keys_set:nn { enumext / level-1 } {#1} } ,
       level-2 .code:n = { \keys_set:nn { enumext / level-2 } {#1} } ,
      level-3 .code:n = { \keys_set:nn { enumext / level-3 } {#1} } ,
      level-4 .code:n = { \keys_set:nn { enumext / level-4 } {#1} } ,
      keyans .code:n = { \keys_set:nn { enumext / keyans } {#1} } ,
3856
      enumext* .code:n = { \keys_set:nn { enumext / enumext* } {#1} } ,
3857
      keyans* .code:n = { \keys_set:nn { enumext / keyans* } {#1} } ,
3858
      print-1 .code:n = { \keys_set:nn { keyanskey / print } { level-1 = \{#1\} } },
3859
      print-2 .code:n = { \keys_set:nn { keyanskey / print } { level-2 = {#1} } } ,
      print-3 .code:n = { \keys_set:nn { keyanskey / print } { level-3 = \{#1\} } },
      print-4 .code:n = { \keys_set:nn { keyanskey / print } { level-4 = {#1} } } } ,
      print-* .code:n = { \keys_set:nn { keyanskey / print } { level-* = {#1} } } ,
      unknown .code:n = { \msg_error:nn { enumext } { unknown-key-family } } ,
3865
```

We store them in the constant sequence \c__enumext_all_families_seq separated by commas.

```
3866 \seq_const_from_clist:Nn \c__enumext_all_families_seq
       level-1 , level-2 , level-3 , level-4 , keyans, enumext*,
       keyans* , print-1 , print-2 , print-3 , print-4 , print-*,
3869
```

Now we define the user command \setenumext.

```
