CTAN: https://www.ctan.org/pkg/enumext
 https://github.com/pablgonz/enumext

Abstract

This package provides "enumerated list" environments for creating "simple exercise sheets" along with "multiple choice questions", storing the $\langle answers \rangle$ to these in memory using multicol and scontents packages and the l3seq and l3prop modules.

Motivation and acknowledgments

Usually it is enough to use the classic enumerate environment to generate "simple exercise sheets" or "multiple choice questions", the basic idea behind enumext is to cover three points:

- 1. To have a simple interface to be able to write "lists of exercises" with "answers".
- 2. To have a simple interface for writing "multiple choice questions".
- 3. To have a simple interface for placing "columns" and "drawings" or "tables".

This package would not be possible without Phelype Oleinik who has collaborated and adapted a large part of the code and all MEX team for their great work and to the different members of the TeX-SX community who have provided great answers and ideas. Here a note of the main ones:

- 1. Answer given by Alan Munn in \topsep, \itemsep, \partopsep, \parsep what do they each mean (and what about the bottom)?
- 2. Answer given by Enrico Gregorio in Understanding minipages aligning at top
- 3. Answer given by Ulrich Diez in Different mechanics of hyperlink vs. hyperref
- 4. Answer given by Enrico Gregorio in Minipage and multicols, vertical alignment

^{*}This file describes a documentation for v1.0, last revised 2024-06-09.

enumext v1.0 §.1 Introduction

License and Requirements

Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License (lppl), version 1.3 or later (https://www.latex-project.org/lppl.txt). The software has the status "maintained".

The enumext package loads and requires multicol[3] and scontents[4] packages, need to have a modern TEX distribution such as TEX Live or MiKTEX. It has been tested with the standard classes provided by ETEX: book, report, article and letter on 10pt, 11pt and 12pt.

1 Introduction

In the ETeX world world there are many useful packages and classes for creating "lists of exercises", "worksheets" or "multiple choice questions", classes like exam[1] and packages like xsim[2] do the job perfectly, but they don't always fit the basic day to day needs.

In my work (and in the work of many teachers) it is common to use "simple exercise sheets" also known as "informal lists of exercises", as an example:

- 1. Factor $x^2 2x + 1$
- 2. Factor 3x + 3y + 3z
- 3. True False
 - (a) $\alpha > \delta$
 - (b) LaTeX2e is cool?
- 4. Related to Linux

- (a) You use linux?
- (b) Usually uses the package manager?
- (c) Rate the following package and class
 - i. xsim-exam
 - ii. xsim
 - iii. exsheets

Sometimes we are also interested in showing the "answers" along with the questions:

- 1. Factor $x^2 2x + 1$
- * $(x-1)^2$
- 2. Factor 3x + 3y + 3z
- * 3(x+y+z)
- 3. True False
 - (a) $\alpha > \delta$ * False
 - (b) Large is cool?

 * Very True!
- 4. Related to Linux

- (a) You use linux?
 - * Yes
- (b) Usually uses the package manager?
 - * Yes, dnf
- (c) Rate the following package and class
 - i. xsim-exam
 * doesn't exist for now :(
 - i. xsim
 - * very good
 - iii. exsheets
 - * obsolete

Or we are interested in referring to a specific question and its "answer", for example:

The answer to 3.(b) is "Very True!" and the answer to 4.(c).ii is "very good".

Or we are interested in printing all the "answers":

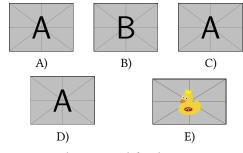

- 1. $(x-1)^2$
- 2. 3(x+y+z)
- 3. (a) False
 - (b) Very True!
- 4. (a) Yes

- (b) Yes, dnf
- (c) i. doesn't exist for now :(
 - ii. very good
 - iii. obsolete

Another very common thing to use in my work is "multiple choice questions", for example:

- 1. First type of questions
 - A) value
- C) value
- B) correct
- D) value
- 2. Second type of questions
 - I. $2\alpha + 2\delta = 90^{\circ}$
 - II. $\alpha = \delta$
 - III. $\angle EDF = 45^{\circ}$
 - A) I only
- D) I and III only
- B) II only
- E) I, II, and III
- C) I and II only
- ★ 3. Third type of questions
 - $(1) 2\alpha + 2\delta = 90^{\circ}$
 - (2) $\angle EDF = 45^{\circ}$
 - A) value
- D) value E) value
- B) value
- C) value

4. Question with image and label below:

- 5. Question with image on left side:
 - A) value
 - B) value
 - C) value
 - D) correct
 - E) value

Where what we are interested in the $\langle label \rangle$ and a "short note" that we leave as an explanation, and then print them:

```
    B), x = 5
    A duck
    D)
    D), "other note"
    C), some note
```

These "simple worksheets" or "multiple choice questions" appear to be easy to obtain using a combination of the enumerate, minipage and multicols environments, but like many things, what "looks simple" is not so simple.

The enumext package was created and designed to meet these small requirements in the creation of "simple worksheets" and "multiple choice questions".

1.1 Description and usage

The enumext package defines enumerated environments using the list environment provided by LTEX, but "does not redefine" any internal commands associated with it such as \list, \endlist or \item outside of the "scope" in which they are defined.

This package is NOT intend to replace the enumerate environment nor replace the powerful enumitem[6], the approach is intended to work without hindering either of them.

This package can be used with xelatex, lualatex, pdflatex and the classical latex»dvips»ps2pdf and is present in TeX Live and MiKTeX, use the package manager to install. For manual installation, download enumext.zip and unzip it, run lualatex enumext.dtx and move all files to appropriate locations, then run mktexlsr. To produce the documentation run lualatex enumext.dtx two times.

The package is loaded in the usual way:

```
\usepackage{enumext}
```

1.2 The concept of left margin

There is a direct relationship between the parameters \leftmargin, \itemindent, \labelwidth and \labelsep plus an "extra space" that makes it difficult to obtain the desired horizontal spaces in a list environment.

Usually we don't want the list to go beyond the left margin of the page, but since these four values are related, that causes a problem. The enumitem[6] package adds the \labelindent parameter to solve some of these problems. A simplified representation of this in the figure 1.

Figure 1: Representation of horizontal lengths in enumitem.

The enumext package does NOT provide a user interface to set the values for \leftmargin and \itemindent, instead it provides the keys list-offset and list-indent which internally set the values for \leftmargin and \itemindent. The concepts of \leftmargin and \itemindent are different in enumext. The figure 2 shows the visual representation of idea.

Figure 2: Representation of horizontal lengths concept in $\mbox{enumext}.$

In this way we reduce a *little* the amount of parameters we have to pass. With the default values of keys list-offset, list-indent, labelwidth and labelsep the lists will have the (usually) expected output for "simple worksheets". The figure 3 shows the visual representation.

Figure 3: Default horizontal lengths list-offset=0pt, list-indent=\labelwidth+\labelsep in enumext.

enumext v1.0 §.1 Introduction

1.3 User interface

The user interface consists in enumext, enumext*, anskey*, keyans, keyans* and keyanspic environments, \anskey, \item* and \anspic* commands to *stored content*, \getkeyans command to get the individual *stored content*, \printkeyans to print all *stored content*, \miniright for minipage and \setenumext to config all $[\langle key = val \rangle]$ options.

1.3.1 Internal counters

The package enumext uses internally the enumXi, enumXii, enumXii, enumXiv counters for the four nesting levels of the enumext environment, the enumXv counter for the keyans environment, the enumXvi counter for the keyanspic environment, the counter enumXvii for enumext* environment and the counter enumXviii for keyans* environment.

ilf any package defines these counters or they are user-defined in the document, the package will return a fatal error and abort the load.

1.3.2 Support for multicol

The package provides direct support for using the multicol[3] package. This allows to obtain directly a two-column output as shown in the figure 4.

Figure 4: Representation of the two column output for a nested level in enumext environment.

The "non starred" version of the multicols environment is always used together with the \raggedcolumns command and is controlled by columns and columns-sep keys. The environment is available for all nesting levels, and can can together with the mini-env key. If you need to force a start a new column \columnbreak must be used (see §4.5).

The \columnseprule command is not available as a key and is set to "zero" for the inner levels and the keyans environment. If the value of this is set inside the document, it will affect "all environments" that use the columns key.

1.3.3 Support for minipage

The package provides direct support for minipage environment, this allows you to obtain an output like the one shown in figure 5.

Figure 5: Representation of the mini-env output for a nested level enumext environment.

The minipage environments (left and right) is always used with "aligned on top" [t], the minipage environment on the "right side" always starts with \centering. It can be used at all nesting levels and is controlled by mini-env and mini-sep keys. In order to switch from the "left" side minipage environment to the "right" side one must use the command \miniright (see §4.6).

1.3.4 The \label and \ref system

This package provides a user interface like the <code>enumitem[6]</code> package to customize the references which is activated by the <code>ref</code> key (§4.1), the standard <code>ETeX \label</code> and <code>\ref</code> commands work as usual. It also provides an "internal reference" system for the "stored content" by means of the key <code>save-ref</code> (§5.1.1) when the key <code>save-ans</code> (§5.1) is active.

The implementation of \label and \ref together with the save-ref key are compatible with the hyperref[8] package.

1.3.5 Support for \footnote

This package provides an internal implementation for the \footnote command which is compatible with the hyperref package for the enumext* and keyans* environments, but will not produce the expected links, and if the mini-env key is used in enumext or keyans environments the output will look like the classic way they are displayed in the environment minipage.

The best way to solve this is to use Jean-François Burnol footnotehyper[9] package, it will support keeping the links if hyperref is loaded with the hyperfootnotes=true option (default) and will show the output numbered at the bottom of the page (as opposed to how it is displayed in the minipage environment). The way to load it is as follows:

```
\usepackage{footnotehyper}
\makesavenoteenv{enumext}
\makesavenoteenv{enumext*}
```

The environments provided

The package enumext provides two main list environments, the vertical environment enumext and the horizontal environment enumext*.

```
enumext*
```

```
enumext \begin{enumext} [\langle keyval \ list \rangle]
                                                                                                                      \lceil (keyval \ list) \rceil
                     \item ⟨item content⟩
                                                                                                                          \item ⟨item content⟩
                     \item [\langle custom \rangle] \langle item content \rangle
                                                                                                                          \item [\langle custom \rangle] \langle item content\rangle
                     \left\langle item^* \left[ \left\langle symbol \right\rangle \right] \left[ \left\langle offset \right\rangle \right] \right\rangle
                                                                                                                         \lceil \text{item}^* [\langle symbol \rangle] [\langle offset \rangle] \langle item content \rangle
                  \end{enumext}
                                                                                                                      \end{enumext*}
```

The environment enumext

The enumext is an environment that works in the same way as the standard enumerate environment provided by LTFX, \item and \item[\langle custom \rangle] commands work in the usual way. The environment can be nested with at most "four levels" and the options can be configured globally using \setenumext command and locally using $[\langle key = val \rangle]$ in the environment.

Example with columns=2

1. This text is in the first level.

A. This text is in the fourth level.

- (a) This text is in the second level.
- X This text is in the first level.
- This text is in the third level.
- ★ 2. This text is in the first level.

The environment enumext* 2.2

The enumext* environment is a horizontal list environment similar to the enumerate* environment provided by the enumitem package or task environment provided by the task package, \item and $\forall i tem[\langle custom \rangle]$ work as usual. The options can be configured globally using $\exists command$ and locally using $[\langle key = val \rangle]$ in the environment.

Some considerations to take into account for this environment:

- The environment cannot be nested within itself, but it can be nested within enumext and can contain it nested within it.
- Each "item" in the environment is placed within a minipage environment whose width is stored in the dimension \itemwidth that includes labelwith, labelsep plus the width of the content.
- You cannot have floating environments like figure or table but \footnote with hyperref support is supported if the footnotehyper package is loaded.

Example with columns=2

2. This text is in the first level. 1. This text is in the first level. X This text is in the first level. \star 3. This text is in the first level.

The command \item*

```
\item* \item*
```

```
\times [\langle symbol \rangle]
\forall item^* [\langle symbol \rangle] [\langle offset \rangle]
```

The $\forall i \neq m^* [\langle symbol \rangle]$ and $\forall i \neq m^* [\langle symbol \rangle] [\langle offset \rangle]$ works like the numbered $\forall i \neq m$, but placing a \(\sigma \) ymbol\\\ to the "left" of the \(\lambda \) separated from it by the value set by the labelsep key and can be $\langle offset \rangle$ using the second optional argument. The default values for $\langle symbol \rangle$ and $\langle offset \rangle$ are \$\star\$ '*' and the value set by labelsep key.

The starred argument '*' cannot be separated by spaces '_' from the command, i.e. \item* and the first optional argument does "not support" verbatim content. Can be configure with the keys item-sym* and item-pos* locally in the environment or globally using \setenumext command (§3).

🥑 The behavior of \item* in the enumext and enumext* environments is NOT the same as in the keyans and keyans* environments.

2.3.1 Keys for \item*

```
item-sym* = \{\langle symbol \rangle\}
```

default: \$\star\$

Sets the *symbol* to be displayed in the "left" of the box containing the current \(label \) set by labelwidth key for \item* in enumext. The symbol can be in text or math mode, for example item-sym*={\$\ast\$}.

```
item-pos* = \{\langle rigid\ length\rangle\}
```

default: by levels

Sets the offset between the box containing the current $\langle label \rangle$ defined by labelwidth key and the $\langle symbol \rangle$ set by item-sym* key. The default values are set by labelsep key at each level. If positive values are passed it will offset to the left and if negative values are passed it will offset to the right.

The command \item in enumext*

The \item command for the enumext* environment provides an optional "first argument" \item (\langle columns \rangle) which "joins items" between columns. Let's consider the following examples adapted directly from the task package:

```
\begin{enumext*} [widest=10, columns=4]
  \item The first
  \item* The second
  \item The third
  \item The fourth
  \item(3)* The fifth item is way too long for this and needs three columns
  \item The sixth
  \item the seventh
  \item(2)[X] The eighth item is way too long for this and needs two columns
  \item[Z] The ninth
  \item The tenth
\end{enumext*}
```

- 1. The first
- \star 2. The second
- 3. The third
- 4. The fourth
- \star 5. The fifth item is way too long for this and needs three columns
- 6. The sixth

- X The eighth item is way too long for this and needs Z The ninth two columns
- 8. The tenth

The command \setenumext

```
\setenumext \setenumext{\langle key = val \rangle}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          \star{keyans*} \{ \langle keyans* \rangle \} \{ \langle key = val \rangle \}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         \setenumext[\langle enumext, level \rangle] \{\langle key = val \rangle\}
                                                                                                                     \strut = \sum \{\langle enumext^* \rangle \} \{\langle key = val \rangle \}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         \startion{1}{\text{\section}} \startion{1}{\section} \startion{1}{\section}} \startion{1}{\section} \startion{1}{\section}} \startion{1}{\section} \startion{1}{\section}} \startion{1}{\section} \startion{1}{\section}} \startion{1}{\section} \startion{1}{\section}} \startion{1}{\secti
                                                                                                                     \strut \langle keyans \rangle ] \{ \langle key = val \rangle \}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          \setenumext[\langle print^* \rangle] {\langle key = val \rangle}
```

The command \setenumext sets the $\langle keys \rangle$ on a global basis for environments enumext, enumext*, keyans, keyans* and the \printkeyans command. It can be used both in the preamble and in the body of the document as many times as desired.

The $\langle keys \rangle$ set in the optional arguments of environments and commands have the highest precedence, overriding both options passed by \setenumext. If the optional argument is not passed, the first level of the environment enumext will be taken by default.

🥑 The key save-ans that activate the *"storage system"* must NOT be passed through this command and must be passed directly in the optional argument of the "first level" of the environment in which they are executed.

The keyval system

The \(\lambda ey = val \rangle \) system used by the enumext package is implemented using \(\begin{align*} \) 3keys so it must be taken into consideration that those keys marked as "value forbidden", that is $\langle key \rangle$ is different from $\langle key = \rangle$.

All \(\lambda eys \rangle \) described in this section are available for the enumext, enumext*, keyans and keyans* environments with the exception of the keys series, resume, resume* which are only available for the "first level" of the environments enumext and enumext*; and the keys mini-right, mini-right* which are only available for the enumext* and keyans* environments.

All \(\langle keys\rangle\) related to vertical or horizontal spacing accept a "skip" or "dim" expression if passed between braces, i.e. you do not need to use \dimeval or \dimexpr to perform calculations.

It should be kept in mind that using any $\langle key \rangle$ that sets a *rubber lengths* or *rigid lengths* for vertical or horizontal space on a level will influence the vertical and horizontal space for inners levels and keyans, keyans* and keyanspic environments.

4.1 Keys for label and ref

```
label = \{ \langle \text{\ } | \text{\ } |
```

default: by levels

Sets the $\langle label \rangle$ that will be printed at the *current level*. The default value for the first level of the environments enumext and enumext* are \arabic*., for second level are (\alph*), for third level are \roman*. and for fourth level are \Alph*. For keyans and keyans* environments the default value is \Alph*).

This key is intended to give the basic structure with which the $\langle label \rangle$ will be displayed, and the form in which it is used by standard "label and ref" and the "internal reference" system with the save-ref key. You cannot use commands with $\langle label \rangle$ as an argument, for example $\mbox{emph}\{\langle \mbox{alph}^* \rangle\}$ will return an error. For full customization of how $\langle label \rangle$ is displayed use the font or wrap-label keys.

```
ref = \{ \langle code \ \{ \alph^* | \arabic^* |
```

default: emptv

Modifies the way *cross references* are displayed. The label key sets the default form of the *cross references*, by using this key you can define a different format, for example: $ref=\ensuremath{\texttt{ref}}\$ is valid.

Internally it renews the command associated with each counter when it is executed, i.e., in the environment enumext the command \theenumXi is modified when the key is executed at the first level, \theenumXii when it is executed at the second level and \theenumXiii together with \theenumXiv when it is executed at the third and fourth levels.

This must be kept in mind, since the values set by the label and ref keys are not cumulative by levels, so if you have used the ref key in the first level and then want to associate the counter with label or ref in the second level you must use the direct commands, i.e. \arabic{eunumXi} to indicate the count of the first level instead of using \theenumXi.

```
labelsep = \{ \langle rigid \ length \rangle \}
```

default: 0.3333em

Sets the *horizontal space* between the box containing the current $\langle label \rangle$ defined by label key and the text of an item on the first line. Internally sets the value of \labelsep for the current level.

```
labelwidth = \{\langle rigid\ length\rangle\}
```

default: by label

Sets the *width* of the box containing the current $\langle label \rangle$ set by label key. Internally sets the value of \labelwidth for the current level. The default values are calculated by means of the *width* of a box by setting a *value* to the current counter using '0' for \arabic*, 'M' for \Alph*, 'm' for \alph*, 'VIII' for \Roman* and 'viii' for \roman*.

```
widest = \{ \langle integer \mid string \rangle \}
```

default: empty

Sets the labelwidth key pass the \(\lambda integer \rangle \) or converting the \(\lambda string \rangle \) of the form \(\lambda lph, \alpha lph, \alpha man \) or \(\rangle man \) to a \(value \) for the current counter defined by \(\lambda bel \) key, then calculating the \(width \) by means of a box. For example \(widest=\{ XXIII \} \) or \(widest=\{ 23 \} \) are equivalent. This key is useful when the default values of the \(\lambda bel width \) key are smaller than those actually used.

```
font = \{\langle font \ commands \rangle\}
```

default: empty

Sets the *font style* for the current $\langle label \rangle$ defined by label key. For example font={\bfseries\small}.

```
align = \{ \langle left \mid right \mid center \rangle \}
```

default: left

Sets the *aligned* of $\langle label \rangle$ defined by label key on the current level in the label box.

```
wrap-label = \{ \langle code \ \{ \#1 \} \ more \ code \rangle \}
```

default: empty

Wraps the *current* $\langle label \rangle$ defined by label key referenced by $\{\#1\}$. The $\{\langle code \rangle\}$ must be passed between braces. This key does not modify the value set by the labelwidth key and is applied only on \item and \item*. When using it in the \setenumext command it is necessary to use the *double hash* ' $\{\#\#1\}$ '. For example wrap-label= $\{\footnotem\}$ or you can create a command:

```
\NewDocumentCommand \itembx { s +m }
    {%
     \IfBooleanTF{#1}
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
}
```

and then pass it through the key wrap-label={\itembx{#1}} or wrap-label={\itembx*{#1}}.

```
wrap-label^* = \{\langle code \{ #1 \} \ more \ code \rangle\}
```

default: empty

The same as the wrap-label key but also applies on $\idetime [\langle custom \rangle]$.

4.2 Keys for spaces

```
show-length = \{ \langle \mathit{true} \mid \mathit{false} \rangle \}
```

default: false

Displays on the terminal the values for *all list parameters* at the current level. For *vertical spaces* show the values of \topsep, \itemsep, \parsep and \partopsep. For *horizontal spaces* show the values of \labelwidth, \labelsep, \itemindent, \listparindent and \leftmargin.

4.2.1 Vertical spaces

 $topsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}$

default: by levels

Set the *vertical space* added to both the top and bottom of the list. Internally sets the value of \topsep for the current level. The default value for the first level of the environments enumext and enumext* are 8.0pt plus 2.0pt minus 4.0pt, for second level are 4.0pt plus 2.0pt minus 1.0pt, for third and fourth level are 2.0pt plus 1.0pt minus 1.0pt. For keyans and keyans* environments the default value is 4.0pt plus 2.0pt minus 1.0pt.

 $parsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}$

default: by levels

Set the *vertical space* between paragraphs within an item. Internally sets the value of \parsep for the current level. The default value for the first level of the environments enumext and enumext* are 4.0pt plus 2.0pt minus 1.0pt, for second level are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 0pt. For keyans and keyans* environments the default value is 2.0pt plus 1.0pt minus 1.0pt.

 $partopsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}$

default: by levels

Set the *vertical space* added, beyond topsep, to the "top" and "bottom" of the entire environment if the environment instance is preceded by a "blank line" or \par command. Internally sets the value of \partopsep for the current level. The default values for first and second level in environment enumext are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 1.0pt minus 1.0pt. For keyans, keyans* and enumext* environments the default value is 2.0pt plus 1.0pt minus 1.0pt.

The value of this parameter also affects the *inner levels* and the environments keyans, keyanspic and keyans*. Caution should be taken with "blank lines" or \par command "before" each environment or nested level when formatting the source code of document. TeX will enter \(\subseteq vertical mode \rangle \) and apply this value to the "top" and "bottom" the environment or nested level.

 $itemsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}$

default: by levels

Set the *vertical space* between items, beyond the parsep. Internally sets the value of \itemsep for the current level. The default value for the first level of the environments enumext and enumext* are 4.0pt plus 2.0pt minus 1.0pt, for the rest of the levels are 2.0pt plus 1.0pt minus 1.0pt. For keyans and keyans* environments the default value is 4.0pt plus 2.0pt minus 1.0pt.

noitemsep (value for

default: not used

This is a "meta-key" that does not receive an argument. Set itemsep and parsep equal to Opt the entire level of environment.

nosep (value forbidden)

default: not used

This is a "meta-key" that does not receive an argument. Sets all keys for vertical spacing equal to opt the entire level of environment.

base-fix \(\text{value forbidden} \)

default: not used

This is a "meta-key" that does not receive an argument available only for the first level of environment enumext and environment enumext*. Fix the baseline when an environment enumext is nested in enumext* or vice versa and there is no material between the \item and the start of the environment for example \item \begin{enumext*} enumext*} within the environment enumext. Internally sets the keys topsep, above and above* at Opt.

The following $\langle keys \rangle$ should be used with "caution", they are intended to be used at the "top" and "bottom" of the environment when the columns or mini-env keys do not provide adequate vertical spaces. The values passed can be rubber or rigid lengths, the way they are applied is the way you differ, using the star '*' $\langle keys \rangle$ applies \vspace* so that LTEX does not discard this space at page break.

 $above = \{ \langle rubber\ length \mid rigid\ length \rangle \}$

default: not used

Set the *extra vertical space* added, beyond topsep, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"above"* the environment without hindering the value of the topsep key. The space is added with \vspace so is *"discardable"*.

 $above* = \{\langle rubber \ length \mid rigid \ length \rangle\}$

default: not used

Set the *extra vertical space* added, beyond topsep, to the top of the entire level of environment. This key is intended to give a "*fine adjustment*" of the vertical space on the "*above*" the environment without hindering the value of the topsep key. The space is added with \vspace* so is "*not discardable*".

 $\verb|below = \{ \langle \mathit{rubber\ length} \mid \mathit{rigid\ length} \rangle \}$

default: not used

Set the *extra vertical space* space added, beyond topsep, to the bottom of the entire level of environment. This key is intended to give a "*fine adjustment*" of the vertical space on the "*below*" the environment without hindering the value of the topsep key. The space is added with \vspace so is "*discardable*".

 $below* = \{\langle rubber\ length \mid rigid\ length \rangle\}$

default: not used

Set the *extra vertical space* space added, beyond topsep, to the bottom of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"below"* the environment without hindering the value of the topsep key. The space is added with \vspace* so is *"not discardable"*.

4.2.2 Horizontal spaces

itemindent = $\{\langle rigid\ length\rangle\}$

default: Opt

Extra *horizontal indentation*, beyond labelsep, of the "first line" off each item. This value is applied internally using \hspace and does not modify the value of \itemindent.

 $rightmargin = \{\langle rigid \ length \rangle\}$

default: 0pt

Set the *horizontal space* between the right margin of the environment and the right margin of the enclosing environment, the value it takes must be greater than or equal to <code>%pt</code>. Internally sets the value of <code>\rightmargin</code> for the current level.

listparindent = $\{\langle rigid\ length\rangle\}$

default: 0pt

Sets the *horizontal space* indentation, beyond list-indent, for second and subsequent paragraphs within a list item. Internally sets the value of \listparindent for the current level.

list-offset = $\{\langle rigid\ length\rangle\}$

default: Opt

Sets the *horizontal translation* of the entire environment level from the left edge of the box defined by the labelwidth key. Internally sets the values of \leftmargin and \itemindent for the current level.

list-indent = $\{\langle rigid \ length \rangle\}$

default: labelwidth + labelsep

Sets the *indentation* of the whole environment under the box defined by labelwidth and labelsep keys. Internally sets the value of \leftmargin and \itemindent for the current level.

If list-indent=0pt is set in the environment enumext the $\langle label \rangle$ will be part of the text, separated by the value of the labelsep key and the *first word*, in simple terms it will look like a "common paragraph". This setting is equivalent (more or less) to the wide key provided by the enumitem package.

4.3 Keys for add code

The following $\langle keys \rangle$ should be used with "caution", they are intended to inject $\{\langle code \rangle\}$ into different parts of the defined environments. We must keep in mind that the defined environments are based on the list base environment provided by LTEX which is defined (simplified) as plain form $\{\text{list}(arg\ one)\}\{\langle arg\ two\rangle\}$. Using the before* key does not allow access to the list parameters defined by $[\langle key=val\rangle]$.

before = $\{\langle code \rangle\}$

default: not used

Execute $\{\langle code \rangle\}$ "before" the environment starts. The $\{\langle code \rangle\}$ must be passed between braces, is executed "after" performing all calculations related to the *list parameters* in the environment and the parameters sets by $[\langle key = val \rangle]$ that is, in the second argument of the list after setting all the parameters $\label{eq:code}$ ($\label{eq:code}$) that is, in the second argument of the list after setting all the parameters $\label{eq:code}$ ($\label{eq:code}$).

before* = $\{\langle code \rangle\}$

default: not used

Execute $\{\langle code \rangle\}$ "before" the environment starts. The $\{\langle code \rangle\}$ must be passed between braces, is executed "before" performing all calculations related to the *list parameters* and $[\langle key = val \rangle]$ sets in the environment that is, before the arguments defining the environment are executed: $\{\langle code \rangle\} \setminus \{\langle arg \ one \rangle\} \{\langle arg \ two \rangle\}$.

 $first = \{\langle code \rangle\}$

default: not usea

Executes $\{\langle code \rangle\}$ when "starting" the environment. The $\{\langle code \rangle\}$ must be passed between braces, is executed right "after" all list parameters are done, after the second argument of list, just before the first occurrence of \item: \list{\langle arg one}\}{\langle arg two}}{\langle \langle code}\\item.

© Keep in mind that the code set in this key will affect the entire "body" of the environment and therefore the inner levels of the list and the keyans environment. It is recommended to set this key per level.

 $after = \{\langle code \rangle\}$

default: not used

Execute $\{\langle code \rangle\}$ "after" finishing the environment. The $\{\langle code \rangle\}$ must be passed between braces.

4.4 Keys for start, series and resume

 $start = \{ \langle integer \mid string \rangle \}$

default: 1

Sets the *start value* of the numbering on the current level. Internally $\langle string \rangle$ is passed as value to the counter defined by label key on the current level, i.e. it is equivalent to enter start=5, start=E or start=v.

The following $\langle keys \rangle$ are "only" available for the "first level" of enumext and enumext* and are ignored if set when nested inside each other.

 $series = \{\langle series \ name \rangle\}$

default: not used

Stores the *keys* of the optional argument of the "first level" of the environment in which it is executed in $\{\langle series\ name \rangle\}$ which is used as an argument in the key resume. The $\langle keys \rangle$ stored in $\{\langle series\ name \rangle\}$ are not cumulative and are overwritten if the same $\{\langle series\ name \rangle\}$ is used again.

resume = { \(\series name \) }

default: not used

Sets the *start value* and *options* for the *"first level"* continuing the numbering of the environment in which the $series=\{\langle series\ name\rangle\}$ key was executed. If passed *without value* this will only set *start value* continue the numbering from the last environment in which $series=\{\langle series\ name\rangle\}$ or $resume=\{\langle series\ name\rangle\}$ is not present and if the save-ans key is active it will continue the numbering from the last environment in which it was executed. The *start value* can be overwritten using the start key.

 $\langle value\ forbidden \rangle$ resume*

default: not used

Sets the start value and options for the "first level" continuing the numbering of the environment in which the series= $\{\langle series \ name \rangle\}$ or resume= $\{\langle series \ name \rangle\}$ keys are NOT present, if the save-ans key is active it will continue the numbering from the last environment in which it was executed. The start value can be overwritten using the start key.

 \blacksquare For security reasons the series key will never save in $\{\langle series name \rangle\}$ the keys series, resume, resume*, save-ans, save-key and start. When using the key resume= $\{\langle series\ name \rangle\}$ it will have hierarchy in the $\langle keys \rangle$ that are saved in $\{\langle series\ name \rangle\}$, in order to establish the value of a $\langle key \rangle$ already saved in $\{\langle series\ name \rangle\}$ it must be placed to the "right" of resume= $\{\langle series name \rangle\}$, the same thing happens with the resume* key, the exception is the save-ans key that must be placed on the "left" if you want to start the numbering with its value. The resume key passed "without value" must be exactly "without value", i.e. resume= cannot be used and if executed before resume* it will affect the start value.

Keys for multicols 4.5

```
columns = \{ \langle integer \rangle \}
```

default: 1

Set the number of columns to be used by the multicols environment within the environment. The value must be a positive integer less than or equal to 10.

```
columns-sep = \{\langle rigid \ length \rangle\}
```

default: by level

Set the space between columns used by the multicols environment within the environment. Internally sets the value of \columnsep, by default its value is equal to the sum of the values set in the keys labelwidth and labelsep of the current level.

 \bullet The \footnote $\{\langle text \rangle\}$ command in the nested levels of multicols will not work as expected, prefer the use of $footnotemark[\langle number \rangle]$ inside the environment and $footnotetext[\langle number \rangle] \{\langle text \rangle\}$ outside the environment or via the after key.

4.6 Keys for minipage

```
mini-env = \{ \langle rigid \ length \rangle \}
```

default: not used

Sets the width of the minipage environment on the "right side". This value added to the value set by the mini-sep key to determines the width of the minipage environment on the "left side", taking \linewidth as the maximum reference value.

```
mini-sep = \{\langle rigid \ length \rangle\}
```

default: 0.3333em

Sets the space between the minipage environment on the "left side" and the minipage environment on the "right side". This separation is applied together with \hfill.

4.6.1 The command \miniright

\miniright The \miniright command close the minipage environment on the "left side" and opens the minipage environment on the "right side" by starting it with the \centering command. It must be placed "after" the last \item of the current environment and "before" starting the material to be placed on the "right side". The starred argument '*' inhibits the use of \centering command i.e. the usual LTEX justification is maintained in the minipage on the "right side".

 $m{e}$ The \footnote $\{\langle text
angle\}$ command in minipage environment will work as usual. If you prefer the footnotes to be numbered (not lowercase) and outside the environment, use $\lceil \text{footnotemark} \lceil \text{number} \rceil$ inside the environment and \footnotetext[$\langle number \rangle$] { $\langle text \rangle$ } outside the environment or via the after key.

4.6.2 The key mini-right

In the horizontal list environments enumext* and keyans* it is not possible to use the \miniright command and the mini-right key must be used instead.

```
mini-right = \{ \langle code \ for \ drawing \ or \ tabular \rangle \}
```

default: not used

Set the *code* for the drawing or tabular to be placed in the minipage environment on the "right side" by starting it with \centering.

```
mini-right^* = \{\langle code \ for \ drawing \ or \ tabular \rangle\}
```

default: not used

Same as above, but without starting with \centering.

The storage system 5

The entire mechanism for "storing content" it is activated according to save-ans key on the "first level" of enumext or enumext* environments and it is ignored if they are established when they are nested inside each other. Only when this $\langle key \rangle$ is "active" the \anskey command and the environments anskey*, keyans, keyans* and keyanspic are available.

```
\begin{enumext}[save-ans={\langle store\ name \rangle}]
                                                           \begin{enumext} [save-ans=\{\langle store\ name \rangle\}]
  \item Text \anskey{answer}
                                                              \item Text \anskey{answer}
                                                              \item Text
  \item Text
    \begin{keyans}
                                                                \begin{keyanspic}
    \end{keyans}
                                                                \end{kevanspic}
\end{enumext}
                                                           \end{enumext}
```

By executing the key save-ans={ $\langle store\ name \rangle$ } the entire structure of the environment (excluding the first level) including the optional arguments passed to the inner levels or the environment nested in it, along with the content passed to \anskey, the current $\langle labels \rangle$ for \item* and \anspic* in the environments keyans, keyans* and keyanspic will be stored in a $\langle sequence \rangle$ and at the same time will be stored (without the environment structure or optional arguments) in a $\langle prop\ list \rangle$.

The optional arguments of the inner levels or the nested environment are filtered by excluding all $\langle keys \rangle$ related to the "stored system" along with the keys series, resume and resume* when storing in $\langle sequence \rangle$.

5.1 Keys for storage system

The only $\langle keys \rangle$ available for all levels of the enumext environment and the enumext* environment are no-store and save-key, the rest of the $\langle keys \rangle$ described in this section must be passed directly in the optional argument of the "first level" of the environment in which the key save-ans is executed. The key save-ans should NOT be passed with the command \setenumext.

```
save-ans = \{ \langle store \ name \rangle \}
```

default: not set

Sets the *name* of the $\langle sequence \rangle$ and $\langle prop\ list \rangle$ in which the contents will be "stored" by \anskey and anskey* in enumext and enumext* environments, \item* in keyans and keyans* environments and \anspic* in keyanspic environment. If the $\langle sequence \rangle$ or $\langle prop\ list \rangle$ does not exist, it will be created globally and will not be overwritten if the key is used again.

```
save-key = \{\langle key \, list \rangle\}
```

efault: not se

This key *overrides* the default "stored keys" of the optional arguments of the inner levels or nested environment that will be passed to the $\langle sequence \rangle$. The $\langle key \ list \rangle$ passed to this key ignores any $\langle keys \rangle$ in the "stored system" and must be passed between braces. For example, if we execute at a second level:

```
\begin{enumext}[save-ans={\store name\}]
\item Text \anskey{answer}
\item Text
\begin{enumext}[nosep, columns=2, save-key={columns=3}]
...
\end{enumext}
\end{enumext}
```

The $\langle keys \rangle$ that will be stored by default in the $\langle sequence \rangle$ would be nosep, columns=2, but using the key save-key={columns=3} will overwrite this and store it in the $\langle sequence \rangle$ only the key columns=3 ignoring all the others.

```
save-sep = \{ \langle text \ symbol \rangle \}
```

default: {,

Sets the *text symbol* that will separate the current $\langle label \rangle$ to the *optional argument* passed to the \item* and \anspic* in the keyans, keyans* and keyanspic environments and storing them in the $\langle store\ name \rangle$ defined by the save-ans key. The $\{\langle text\ symbol \rangle\}$ must always be passed between braces, whitespace ' \Box ' is preserved within the braces and only affects the "stored content" and not what is displayed when using the show-ans or show-pos keys.

5.1.1 Keys for label and ref

```
save-ref = \{ \langle true \mid false \rangle \}
```

default: false

Activates the "internal label and ref" mechanism for referencing "stored content" in $\langle store\ name \rangle$ set by save-ans key. To reference the location of the "stored content" within the environment you must use $\texttt{ref}\{\langle store\ name:position \rangle\}$, where $\langle position \rangle$ corresponds to the position occupied by the "stored content" in the $\langle store\ name \rangle$ returned by the show-pos key. For example $\texttt{ref}\{\texttt{test:4}\}$ will return 3. (b) which corresponds to the location of the "stored content" at position 4 within the environment in which the key save-ans=test was set.

```
mark-ref = \{\langle symbol \rangle\}
```

default: \textasteriskcentered

Sets the *symbol* that will be displayed by the \printkeyans command only if the hyperref package is detected and the save-ref key are active. This "*symbol*" is used as a "*link*" between the environment in which the save-ans key was used and the place where the command is executed.

5.1.2 Keys for wrap and display

```
wrap-ans = \{\langle code \{ \#1 \} \ more \ code \rangle \}
```

default: \fbox{#1}

Wraps the *argument* passed to the \anskey and the *body* in anskey* environment referenced by $\{\#1\}$ when using the show-ans or show-pos keys. The $\{\langle code \rangle\}$ must be passed between braces and only affects the *argument* or *body* and NOT the "stored content" in the sequence and *prop list* $\{\langle store\ name \rangle\}$ set by save-ans key. If this key is passed using \setenumext it is necessary to use double ' $\{\#1\}$ '.

```
wrap-opt = \{ \langle code \{ #1 \} \ more \ code \rangle \}
```

default: [{#1}]

Wraps the *optional argument* passed to the \item* and \anspic* referenced by $\{\#1\}$ in the keyans, keyans* and keyanspic environments when using the show-ans or show-pos keys. The $\{\langle code \rangle\}$ must be passed between braces and only affects the current *optional argument* and NOT the "stored content" in the sequence and prop list $\{\langle store\ name \rangle\}$ set by save-ans key. If this key is passed using \setenumext it is necessary to use double ' $\{\#1\}$ '.

```
show-ans = \{\langle true \mid false \rangle\}
```

default: false

Displays the argument passed to the \anskey, the body for anskey* environment, the $\langle label \rangle$ for \item* and \anspic* at the place where it is executed. If the optional argument is present in \item* or \anspic* it will be shown using wrap-opt key.

 $\texttt{mark-ans} = \{ \langle \textit{symbol} \rangle \}$

default: \textasteriskcentered

Sets the symbol to be displayed in the left margin for \anskey, anskey*, \item* and \anspic* in the place where they are executed when using the key show-ans.

 $mark-pos = \{ \langle left \mid right \rangle \}$

Sets the aligned of the symbol defined by mark-ans key. The "symbol" is aligned in a box with the same dimensions of the label box defined by labelwidth key on the current level and separated by the value of the labelsep key.

5.1.3 Keys for debug and checking

 $show-pos = \{ \langle true \mid false \rangle \}$

default: false

Displays the position occupied by the "stored content" by \anskey, anskey*, \item* and \anspic* in the prop list $\{\langle store\ name \rangle\}$ set by save-ans key. This position is used by the $\langle getkeyans\ command\ and\ delta$ by the \ref command if the save-ref key is active.

 $check-ans = \{ \langle true \mid false \rangle \}$

default: false

Enables the checking answer mechanism displaying an appropriate message on the terminal. This key works under the logic that each \item or \item* that does not open an inner level or nested environment contains "only one answer" or "only one execution" of the \anskey or anskey*. It is intended to be used in conjunction with the no-store key.

no-store

default: not used

This is a meta-key that does not receive an argument and disables the structure stored in the sequence {\store name}} set by save-ans key at the entire level or a nested environment in which it runs. This key is intended for use in internal levels or nested enumext or enumext* environments in which you want to use enumext or enumext* but "without" using the \anskey, "without" use anskey*, "without" interfering with the check-ans key and "without" storing an unwanted structure in the sequence $\{\langle store\ name \rangle\}$.

The command \anskey

\anskey \anskey[$\langle keys \rangle$]{ $\langle content \rangle$ }

The command \anskey takes a mandatory argument $\{\langle content \rangle\}$ and "stores" it in the sequence and prop list {\store name\range} set by save-ans key. By design the command cannot be nested or passed verbatim material in the argument and it is assumed that each \item or \item* within the environment in which it is active it has a "single execution" of \anskey unless \item or \item* open a nested level or use the no-store key.

If save-ref key are active and the <a href="https://hyperlink.google.goo will be used, otherwise the usual "label and ref" system provided by LTFX will be used.

The \anskey command is available for all levels of the enumext environment and the enumext* environment, but is disabled for the keyans, keyans* and keyanspic environments.

5.2.1 Keys for \anskey

By default the $\{\langle content \rangle\}$ passed to \anskey when "storing" in the sequence $\{\langle store\ name \rangle\}$ has the form \item $\langle content \rangle$, the following $\langle keys \rangle$ allow modifying the way in which it is "stored" in the sequence.

break-col (value forbidden)

default: not used

Stores $\{\langle content \rangle\}$ in the sequence $\{\langle store\ name \rangle\}$ of the form $\langle columnbreak \rangle$ item $\langle content \rangle$.

 $item-join = \{\langle columns \rangle\}$

default: not set

Set the *number of columns* to be used for $\forall tem(\langle columns \rangle)$ and stores $\{\langle content \rangle\}$ in the *sequence* $\{\langle store \rangle\}$ name) of the form \item($\langle columns \rangle$) $\langle content \rangle$.

item-star (value forbidden)

default: not used

Stores $\{\langle content \rangle\}\$ in the sequence $\{\langle store\ name \rangle\}\$ of the form $\backslash item^* \langle content \rangle$.

item-sym* = $\{\langle symbol \rangle\}$

Sets the symbol for $\t = m^*$ when using the key item-star and stores $\{\langle content \rangle\}$ in the sequence $\{\langle store, t \rangle\}$ $|name\rangle$ of the form $|item^*[\langle symbol\rangle] \langle content\rangle$. The symbol can be in text or math mode, for example item-sym*= $\{\$\ast\$\}\$ stores \item* $[\$\ast\$]\$ (content).

 $item-pos* = {\langle rigid \ length \rangle}$

default: not set

Sets the offset for \item* when using the keys item-star and item-sym* and stores $\{\langle content \rangle\}$ in the sequence $\{\langle store\ name \rangle\}\$ of the form $\idesign = (\langle symbol \rangle) [\langle offset \rangle] \langle content \rangle$.

Example

```
\begin{enumext} [save-ans=test, show-ans=true]
  \item* Text containing our instructions or questions. \anskey{\( first answer \) \}
  \item Text containing our instructions or questions.
  \begin{enumext}
  \item Question.\anskey{\( second answer \) \}
  \end{enumext}
  \item Text containing our instructions or questions. \anskey{\( \lambda third answer \) \}
  \item Text containing our instructions or questions. \anskey{\( \lambda fourth answer \) \}
  \end{enumext}
end{enumext}
```

- ★ 1. Text containing our instructions or questions.
 - * | first answer
 - 2. Text containing our instructions or questions.
 - (a) Question.
 - * second answer

- 3. Text containing our instructions or questions.
- * third answer
- 4. Text containing our instructions or questions.
- * fourth answer

5.3 The environment anskey*

 $anskey^* \setminus begin\{anskey^*\} \left[\left\langle \textit{key} = \textit{val} \right\rangle \right] \ \left\langle \textit{body content} \right\rangle \ \setminus \ end\{anskey^*\}$

The environment anskey* takes a mandatory $\{\langle body\ content \rangle\}$ and "stores" it in the sequence and prop list $\{\langle store\ name \rangle\}$ set by save-ans key. If save-ref key are active and the hyperref[8] package is detected, hyperlink and hypertarget will be used, otherwise the usual "label and ref" system provided by ETEX will be used.

By design the environment cannot be nested but full supports "verbatim material" in the body and it is assumed that each \item or \item* within the environment in which it is active it has a "single execution" unless \item or \item* open a nested level or use the no-store key.

The anskey* environment is implemented using the scontents package, for the correct operation \begin{anskey*} and \end{anskey*} must be in different lines, all $\langle keys \rangle$ must be passed separated by commas and "without separation" of the start of the environment. Comments "%" or "any character" after \begin{anskey*} or $[\langle key = val \rangle]$ on the same line are NOT supported, the package scontents will return an "error" message if this happens. In a similar way comments "%" or "any character" after \end{anskey*} on the same line the package scontents will return a "warning" message.

The anskey* environment uses the same $\langle keys \rangle$ as the \anskey command next to the keys write-env, force-eol and overwrite inherited from package scontents. The environment and is available for all levels of the enumext environment and the enumext* environment, but it is disabled for the keyans, keyans* and keyanspic environments.

o For security reasons the keys store-env, print-env and write-out they have been left disabled. It is recommended that you review the scontents[4] documentation to understand how the keys described here work.

Example

```
\begin{enumext}[save-ans=test,show-pos=true,start=5]
  \item* Text containing our instructions or questions.
    \begin{anskey*}[item-star]
      (first answer)
    \end{anskey*}
  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.
        \begin{anskev*}
          (second answer)
        \end{anskey*}
    \end{enumext}
  \item Text containing our instructions or questions.
    \begin{anskey*}
      ⟨third answer⟩
    \end{anskey*}
  \item Text containing our instructions or questions.
    \begin{anskey*}
      (fourth answer)
    \end{anskey*}
\end{enumext}
```

5.4 The environments keyans and keyans*

```
\label{eq:keyans} $$ \left( \ker | val \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{keyans}^* \left( \ker | val \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{keyans}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{keyans}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{keyans}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{keyans}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{keyans}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{keyans}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{keyans}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{keyans}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{keyans}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{keyans}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{keyans}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{custom}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{custom}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{custom}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \\  \operatorname{custom}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{custom}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \right) \\  \operatorname{custom}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \\  \operatorname{custom}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \\  \operatorname{custom}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \\  \operatorname{custom}^* \left( \operatorname{custom} \right) \left( \operatorname{custom} \right) \left( \operatorname{custom}^* \left( \operatorname{custom}^* \right) \right) \\  \operatorname{custom}^* \left( \operatorname{custom}^* \left( \operatorname{custom}^* \right) \left( \operatorname{custom}^* \left( \operatorname{custom}^* \right) \right) \\  \operatorname{custom}^* \left( \operatorname{custom}^* \left( \operatorname{custom}^* \right) \left( \operatorname{custom}^* \left( \operatorname{custom}^* \right) \right) \\  \operatorname{custom}^* \left( \operatorname{custom}^* \left( \operatorname{custom}^* \left( \operatorname{custom}^* \right) \right) \right) \\  \operatorname{custom}^* \left( \operatorname{custom}^* \left( \operatorname{custom}^* \left( \operatorname{custom}^* \right
```

The keyans and keyans* environments are "enumerated list" environments designed for "multiple choice" questions activated by the save-ans key. This environments can NOT be nested and must always be at the "first level" of the enumext environment, the commands \item[$\langle custom \rangle$] work in the usual and the command \item($\langle columns \rangle$) is available for the keyans* environment.

```
\begin{enumext}[save-ans=test]
                                                                                   \begin{enumext}[save-ans=test]
   \item \(\(\)item \(\)content\\)
                                                                                      \item \langle item content \rangle
      \lceil \{ keyans \} [ \langle key = val \rangle ]
                                                                                         \begin{keyans*} [\langle key = val \rangle]
         \item \(\(\)item \(\)content\\)
                                                                                             \item \(\(\ditem\) content\)
         \item [\langle custom \rangle] \langle item content \rangle
                                                                                             \item [\langle custom \rangle] \langle item content \rangle
         \item* \(\(\)item \(\)content\)
                                                                                             \item* ⟨item content⟩
         \item*[\langle content \rangle] \langle item content \rangle
                                                                                             \item*[\langle content \rangle ] \langle item content \rangle
      \end{keyans}
                                                                                          \end{keyans*}
\end{enumext}
                                                                                   \end{enumext}
```

The $\langle keys \rangle$ set in the optional argument of the environment are the same (almost) as those of the enumext and enumext* environments and have higher precedence than those set by \setenumext[$\langle keyans \rangle$] { $\langle key = val \rangle$ } or \setenumext[$\langle keyans^* \rangle$] { $\langle key = val \rangle$ }. If the optional argument is not passed or the $\langle keys \rangle$ are not set by \setenumext, the default values will be the same as the second level of the enumext environment with the difference in the $\langle label \rangle$ which will be set to label=\Alph*).

5.4.1 The \item* in keyans and keyans*

The \item* and \item* [$\langle content \rangle$] command "store" the current $\langle label \rangle$ set by label key next to the $\langle content \rangle$ (if it is present) in sequence and prop list { $\langle store\ name \rangle$ } set by save-ans key in the "first level" of the enumext or enumext* environments.

The *starred argument* '*' cannot be separated by spaces '__' from the command, i.e. \item* and the optional argument does "not support" verbatim content. By design it is assumed that the \item* will only appear "once" within the environment.

The behavior of \item* in keyans and keyans* environments is NOT the same as in the enumext or enumext* environments.

Example

```
\begin{enumext}[save-ans=test,columns=2,show-ans=true]
  \item Text containing a question.
    \begin{keyans*}[nosep,columns=2]
      \item Choice
      \item* Correct choice
      \item Choice
      \item Choice
      \item Choice
    \end{keyans*}
  \item Text containing a question and image.
    \begin{keyans}[nosep,mini-env={0.4\linewidth}]
      \item Choice
      \item Choice
      \item Choice
      \item Choice
      \times [(note)] Correct choice
      \miniright
      \includegraphics[scale=0.25]{example-image-a}
      Some text
    \end{keyans}
\end{enumext}
```

Some text

The environment keyanspic 5.5

keyanspic \begin{keyanspic}[$\langle n^o above, n^o below \rangle$]\anspic{ $\langle drawing \rangle$ }\anspic*[$\langle content \rangle$]{ $\langle drawing \rangle$ }

The keyanspic is a "fake enumerated list" environment that which uses the \anspic command instead of \item. It is activated by the save-ans key and has the same settings as the keyans environment. It is intended for placing "drawings" or "tabular" with an in-line or above and below layout. A representation of the output can be seen in the figure 6.

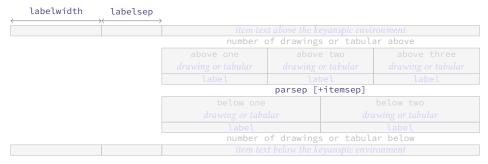

Figure 6: Representation of the keyanspic environment with optional argument [3,2] in enumext.

The optional argument determines the number drawings or tabular "above" and "below" within the environment. The vertical separation between "above" and "below" is controlled by the values set by parsep and itemsep keys passed to keyans environment. If the optional argument or the second part of it is omitted the drawings or tabular will be put on a single line.

The command \anspic

```
\anspic \anspic{\langle drawing \ or \ tabular \rangle}
                 \arrowvert anspic*[\langle content \rangle] \{\langle drawing \ or \ tabular \rangle\}
```

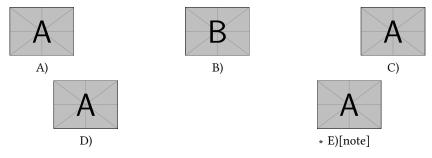

The \anspic command take three arguments, the starred argument '*' store the current $\langle label \rangle$ next to the $\langle content \rangle$ (if it is present) in $\langle store\ name \rangle$ set by save-ans key.

The starred argument '*' cannot be separated by spaces 'u' from the command, i.e. \anspic* and the optional argument does "not support" verbatim content. By design it is assumed that the starred argument '*' will only appear "once" within the environment.

Example

```
\begin{enumext}[save-ans=test,show-ans,nosep]
 \item Question with images.
   \begin{keyanspic}[3,2]
     \anspic{\includegraphics[scale=0.15]{example-image-a}}
     \anspic{\includegraphics[scale=0.15]{example-image-b}}
     \anspic{\includegraphics[scale=0.15]{example-image-a}}
     \anspic{\includegraphics[scale=0.15]{example-image-a}}
     \verb|\end{keyanspic}|
\end{enumext}
```

1. Question with images.

Printing stored content 5.6

5.6.1 The command \getkeyans

```
\getkeyans \getkeyans{\langle store name: position\rangle}
```

The command \getkeyans prints the "stored content" in prop list {\store name\} defined by save-ans key in the *(position)* returned by the show-pos key. The "stored content" can only be accessed after it is stored, if $\{\langle store\ name \rangle\}$ does not exist the command will return an error.

The form taken by the argument { \(\store \ name : position \) \} is the same as that used to generate the "internal label and ref" system when save-ref key are active, so to refer to a "stored content". For example \getkeyans{test:4} will return the "stored content" at position 4 of the environment in which the key save-ans=test was set.

5.6.2 The command \printkeyans

```
\printkeyans \printkeyans [\langle keys \rangle] {\langle store\ name \rangle}
                        \printkeyans*[\langle keys \rangle] \{\langle store\ name \rangle\}
```

The command \printkeyans prints "all stored content" in sequence {\langle store name \rangle} defined by save-ans key placing this inside the enumext environment or the enumext* environment if the starred argument '*' is used. The "stored content" can only be accessed after it is stored in the sequence, if {\langle store name \rangle \} does not exist the command will return an error.

The optional argument allows managing the $\langle keys \rangle$ in the "first level" of the environment in which the "stored content" of the sequence $\{\langle store\ name \rangle\}$ will be printed, if the starred argument '*' is used it will be enumext* otherwise enumext.

The default values for the "first level" are the same as the default values for the enumext and enumext* environments along with the keys nosep, first=\small, font=\small and columns=2. For the inner levels of the environment enumext saved in the sequence {\store name\}} the default values are the same as those established for the second, third and fourth levels plus the keys nosep, first=\small, font=\small. If the environment enumext* is saved within the sequence {\langle store name \rangle} it will have the same default values plus the keys nosep, first=\small, font=\small.

Since the command encapsulates by default the enumext environment or the enumext* environment, we must take some considerations:

- If we execute \printkeyans*{\(\store name\)\)} and the sequence {\(\store name\)\)} already contains any enumext* environment an error will be returned as we cannot nest.
- If we execute $\printkeyans*{\langle store\ name \rangle}$ and the sequence $\{\langle store\ name \rangle\}$ contains any enumext environments, they will start with the $\langle keys \rangle$ set for the first level unless they are set in the optional argument or save-key is used to modify it.
- If we execute $\langle store\ name \rangle$ and the sequence $\langle store\ name \rangle$ contains any environment enumext*, they will start with the $\langle keys \rangle$ set by default unless they are set in the optional argument or save-key is used to modify it.

The default values for the "first level" of \printkeyans commands and \printkeyans* are established using \setenumext[$\langle print, 1 \rangle$] { $\langle keys \rangle$ } and \setenumext[$\langle print^* \rangle$] { $\langle keys \rangle$ }. If we need to set the $\langle keys \rangle$ for the environment enumext "saved" in the sequence {\langle store name \rangle} we will use \setenumext[\langle print , $[evel] \{ \langle keys \rangle \}$ and if we need to set the $\langle keys \rangle$ for the environment enumext* "saved" in the sequence $\{\langle store\ name \rangle\}\$ we will use \setenumext[$\langle print\ , * \rangle$] $\{\langle keys \rangle\}$.

Example

```
\begin{enumext} [save-ans=sample,columns=2,show-pos=true,nosep,save-ref=true]
  \item Factor 3x+3y+3z. \anskey5(x+y+z)
  \item True False
    \begin{enumext}[nosep]
      \item \LaTeX2e\ is cool? \anskey{Very True!}
    \end{enumext}
  \item Related to Linux
    \begin{enumext}[nosep]
      \item You use linux? \anskey{Yes}
      \item Rate the following package and class
        \begin{enumext} [nosep]
          \item \texttt{xsim} \anskey{very good}
          \item \texttt{exsheets} \anskey{obsolete}
        \end{enumext}
    \end{enumext}
```

```
\end{enumext}
The answer to \ref{sample:4} is \getkeyans{sample:4} and the answers to
all the worksheets are as follows:
\printkeyans{sample}
```

- 1. Factor 3x + 3y + 3z.
- [1] 3(x+y+z)
- 2. True False
 - (a) LATEX2e is cool?
 - [2] Very True!
- 3. Related to Linux
 - (a) You use linux?

- [3] Yes
- (b) Rate the following package and class
 - xsim [4] very good exsheets [5] obsolete

The answer to 3.(b).i is very good and the answers to all the worksheets are as follows:

```
1. 3(x+y+z)
2. (a) Very True!
3. (a) Yes
  (b) i. very good
          obsolete
```

Full examples

Here I will leave as an example some adaptations questions taken from TeX-SX. The examples are attached to this documentation and can be extracted from your PDF viewer or from the command line by running:

```
$ pdfdetach -saveall enumext.pdf
```

and then you can use the excellent arara1 tool to compile them.

Example 1

Adapted from the response given by Enrico Gregorio in Squares for answer choice options and perfect alignment to mathematical answers

- 1. La velocità di $1,00 \times 10^2$ m/s espressa in km/h è: 3. La velocità di $1,00 \times 10^2$ m/s espressa in km/h è:
 - A 36 km/h.
 - B 360 km/h.
 - C 27,8 km/h.
 - $D 3,60 \times 10^8 \, \text{km/h}.$

- A 36 km/h. B 360 km/h.
- C 27,8 km/h.
- $\boxed{\text{D}} \ 3,60 \times 10^8 \, \text{km/h}.$
- 2. In fisica nucleare si usa l'angstrom (simbolo: 1 Å = 4. In fisica nucleare si usa l'angstrom (simbolo: 1 Å = 4). 1×10^{-10} m) e il fermi o femtometro (1 fm = 1×10^{-15} m). Qual è la relazione tra queste due unità di misura?
 - A $1 \text{ Å} = 1 \times 10^5 \text{ fm}.$
 - B $1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.$
 - $C 1 Å = 1 \times 10^{-15} \text{ fm}.$
 - D $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$

- 1×10^{-10} m) e il fermi o femtometro (1 fm = 1×10^{-15} m). Qual è la relazione tra queste due unità di misura?
 - A $1 \text{ Å} = 1 \times 10^5 \text{ fm}.$
 - B $1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.$
- C $1 \text{ Å} = 1 \times 10^{-15} \text{ fm}.$
- D $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$
- 1. B 2. A 3. B 4. A

Example 2

Adapted from the response given by Florent Rougon in Multiple choice questions with proposed answers in random order — addition of automatic correction (cross mark)

- 1. La velocità di $1,00 \times 10^2$ m/s espressa in km/h è:
 - A 36 km/h.
- ✓ B | 360 km/h.
 - C 27,8 km/h.
 - D $3,60 \times 10^8 \,\text{km/h}$.
- 2. In fisica nucleare si usa l'angstrom (simbolo: $1 \text{ Å} = 1 \times 10^{-10} \text{ m}$) e il fermi o femtometro (1 fm = 1×10^{-15} m). Qual è la relazione tra queste due unità di misura?
- $\sqrt{A} 1 Å = 1 \times 10^5 \text{ fm}.$
 - B $1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.$
- $C \ 1 \text{ Å} = 1 \times 10^{-15} \text{ fm}$

©2024 by Pablo González L

¹The cool TeX automation tool: https://www.ctan.org/pkg/arara

- D $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$
- 3. La velocità di 1,00 × 10^2 m/s espressa in km/h è:
 - A 36 km/h.
- ✓ B 360 km/h.
 - C 27,8 km/h.
 - D $3,60 \times 10^8 \,\text{km/h}$.
- 4. In fisica nucleare si usa l'angstrom (simbolo: $1 \text{ Å} = 1 \times 10^{-10} \, \text{m}$) e il fermi o femtometro ($1 \, \text{fm} = 1 \times 10^{-15} \, \text{m}$). Qual è la relazione tra queste due unità di misura?
- $\sqrt{A} 1 \text{ Å} = 1 \times 10^5 \text{ fm}.$
 - $\boxed{\text{B}} \ 1 \,\text{Å} = 1 \times 10^{-5} \,\text{fm}.$
 - C $1 \text{ Å} = 1 \times 10^{-15} \text{ fm}.$
 - D $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$
- 1. B
- 2. A
- 3. B 4. A

Example 3

- A "simple multiple choice" test **=**.
- 1. First type of questions
 - (A) value
 - (B) correct
 - (C) value
 - (D) value
- 2. Second type of questions

I.
$$2\alpha + 2\delta = 90^{\circ}$$

- II. $\alpha = \delta$
- III. $\angle EDF = 45^{\circ}$
- (A) I only
- B II only
- © I and II only
- 3. Third type of questions
 - (1) $2\alpha + 2\delta = 90^{\circ}$

(2)
$$\angle EDF = 45^{\circ}$$

- (A) value
- (B) value
- C value
- (C) value
- 4. Question with image and label below:

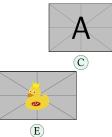

(D) value

(D) I and III only

(E) I, II, and III

- 5. Question with image on left side:
 - (A) value
 - (B) value
 - (C) value
 - (D) correct
 - (E) value

Test keys

- 1. B, x = 52. D
- 3. C, some note

- * 4. E, A duck
- * 5. D, other note

Example 4

A "simple worksheet" using ducks :) **=**.

Factor 3x + 3y + 3z

The following questions need to be cuaqtified :)

True False

- (a) $\alpha > \delta$
- (b) LaTeX2e is cool?

Related to Linux

- (a) You use linux?
- (b) Usually uses the package manager?
- (c) Rate the following package and class
 - i. xsim-exam
 - ii. xsim
 - iii. exsheets

The answer to 1 is $(x-1)^2$ and the answer to 3.(a) is False.

```
1. (x-1)^2
                                                           (b) Yes, dnf
2. 3(x+y+z)
                                                              i.
                                                                    doesn't exist for now :(
3. (a) False
                                                               ii.
                                                                   very good
  (b) Very True!
                                                               iii. obsolete
4. (a) Yes
```

Example 5

Adapted from the response given by Stephen in SAT like question format

Which choice best describes what happens in the passage?

- A) One character argues with another character who intrudes on her home.
- B) One character receives a surprising request from another character.
- C) One character reminisces about choices she has made over the years.
- D) One character criticizes another character for pursuing an unexpected course of action.

Which choice best describes what happens in the passage?

- A) One character argues with another character who intrudes on her home.
- B) One character receives a surprising request from another character.
- C) One character reminisces about choices she has made over the years.
- D) One character criticizes another character for pursuing an unexpected course of action.

2. C) 1. A) 3. B) 4. D)

The way of non-enumerated lists

It is possible to use (or abuse) the enumext environment to mimic non-enumerated list environments such as itemize and description, clearly the $\langle keys \rangle$ to "store answers", the keyans and keyanspic environments lose their sense and it is not the focus of the main of this package, but, why not to do it?.

Here I leave as an example other uses of the enumext environment that can be helpful for specific purposes. The "trick" to generate these fake environments is set label= $\{\}$ or label= $\{\}$ and play with the list-indent, list-offset, font and wrap-label keys.

Fake itemize environment

Here we set the label key using the default settings in LTFX for the four levels \textbullet, \textendash, \textasteriskcentered and \textperiodcentered together with the nosep key to reduce the vertical spaces in the left side example and set the label key in mathematical mode for the right side as \ast, \diamond, \circ and \star for the four levels together with the nosep key

- First level item
 - Second level item
 - * Third level item
 - · Fourth level item
- · First level item

- * First level item
 - ⋄ Second level item
 - o Third level item
 - ★ Fourth level item
- * First level item

Fake description environment

Here we set label={} and list-indent=2.5em, font=\bfseries.

SomeThing A short one-line description.

This is an entry without a label.

Something A short *one-line* description text.

Something long A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

If we add list-indent=Opt you get widest style:

SomeThing A short one-line description.

This is an entry without a label.

Something A short *one-line* description text.

Something long A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

The small space at the beginning of the "unlabeled entry" corresponds to \labelsep and can be removed using \hspace{-\labelsep} at the beginning of the line.

Description indented by label

Here we set label={} and we will give a convenient value to labelsep and labelwidth, for example we can take as reference our *longest label* and pass it as value using:

```
\newlength{\descitemwd}
\settowidth{\descitemwd}{\textbf{Something long}}}
```

and then use labelsep=4pt, labelwidth=\descitemwd, font=\bfseries.

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut

purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida

mauris.

The environment can be translated so that the $\langle labels \rangle$ are on the left margin calculating the value passed to the list-offset key, in this case it will be equal to the sum of the values set by the labelwidth and labelsep keys finally resulting as list-offset={-\descitemwd - 4pt}.

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

If we add align=right it will look like this:

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

At this point we have used list-offset={-\descitemwd - 4pt} instead of list-offset={-\labelwidth - \labelsep}, this is because the parameters \labelwidth and \labelsep take the default values, as if we had not set label.

Description with multi-line labels

The label key does not accept *multiline material*, this is where the wrap-label* key comes into play. Unlike the enumitem package, the align key only supports three options, so what we will do is create a command in the style \parleft of enumitem that allows us to place *multiline labels* using \parbox.

enumext v1.0 §.8 References

```
\NewDocumentCommand \itembx { s +m }
    {%
    \IfBooleanTF{#1}
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
}
```

Now we just need to set wrap-label*={\itembx{#1}}.

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, **long** vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

SoMeThInG A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, **LoNg** vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Final notes

The original implementation (if you can call it that) of the ideas that led to the creation of enumext were some macros using the enumerate[5] package for personal use created in early 2003, the code was quite questionable, but functional for these simple requirements.

With the great answers given by Christian Hupfer in Create a fake label ref using list and the answer given by David Carlisle in Change the use of label ref by data save in an array (list) I managed to create a more solid code than the original version, now using the <code>l3prop[11]</code> and <code>l3seq[11]</code> modules together with the <code>hyperref[8]</code> and <code>enumitem[6]</code> packages, which did the job, but with some limitations.

As time went by I took these limitations as a personal challenge which I called "reinventing the wheel", since there were packages and classes that did more or less what I was looking for, but did not fit my simple requirements. This "reinventing the wheel" finally ended up becoming enumext.

Why list environments?

The answer is simple, first I love the beauty of its syntax and many of what I had already written used the enumerate environment or lists created using the enumitem package. In my mind I thought: how complicated could it be to write a package that looked like enumitem? It seemed simple enough, of course I didn't have in mind the mess I was getting into working with list environments, minipage and adding support for the multicol and hyperref packages.

Of course, seeing the final result of the experiment "reinventing the wheel" I am quite satisfied.

Why not random questions and other utilities

The "random" type questions I love and hate them at the same time, although they simplify a lot the work when creating a multiple choice test, but you lose the beauty of typessetting a document with Lage X, that is to say the output does not always look as nice as it should, even if they are only alternatives these must follow a certain order when presented either numerical or presentation, that said handling that using nested lists is quite complicated so I do not classify to be implemented.

11 Implementation

The most recent publicly released version of enumext is available at CTAN: https://www.ctan.org/pkg/enumext. While general feedback via email is welcomed, specific bugs or feature requests should be reported through the issue tracker: nhttps://github.com/pablgonz/enumext/issues.

The documentation presented here is far from professional, it contains a lot of obvious information that to the eye of a Texpert are superfluous, but, after so many years developing this project is the only way to remember what does what.

11.1 General conventions

Variables containing i, ii, iii and iv are associated by level with the enumext environment, variables containing v are associated with the keyans environment, variables containing vi are associated with the keyanspic environment, variables containing vii are associated with the enumext* environment and variables containing viii are associated with the keyans* environment.

To simplify writing and documentation some variables and functions that are common to the different levels of the environments are described using a capital "X".

The temporary function __enumext_tmp:n is used in different parts of the package code for variable creation or execution of other functions that are grouped into this one.

All variables and functions defined in this package are private and are NOT intended to work or be used by another package or module.

11.2 Initial set up

Start the DocStrip guards.

```
*package
```

Identify the internal prefix (FTEX3 DocStrip convention) for l3doc class.

```
2 (@@=enumext)
```

11.3 Declaration of the package

First we will make sure we have a minimum (super updated) version of ETEX to work correctly.

```
_3 \NeedsTeXFormat{LaTeX2e}[2024-06-01]
```

Now declare the enumext package.

```
4 \ProvidesExplPackage
5 {enumext}
6 {2024-06-09}
7 {1.0}
8 {Enumerate exercise sheets}
```

Finally check if the multicol and scontents packages are loaded, if not we load it.

```
, \hook_gput_code:nnn {begindocument} {enumext}

11.4 Definition of variables

Variables that do not appear in this section are created by means of \keys_define:nn or some function described below.

```
Integer variables will control the nesting levels of the environments and \anskey command.
       \l__enumext_level_int
     \l__enumext_level_h_int
                                 28 \int_new:N \l__enumext_level_int
\l__enumext_anskey_level_int
                                 29 \int_new:N \l__enumext_level_h_int
                                 30 \int_new:N \l__enumext_anskey_level_int
\l__enumext_keyans_level_int
                                int_new:N \l__enumext_keyans_level_int
       \l__enumext_keyans_level_h_int
                                 32 \int_new:N \l__enumext_keyans_level_h_int
     \l__enumext_keyans_pic_level_int
                                 _{33} \int_new:N \l__enumext_keyans_pic_level_int

```
(End of definition for \l__enumext_wrap_label_X_bool and others.)

The variable \l__enumext_store_active_bool setting
```

\l_enumext_store_active_bool
\l_enumext_store_name_tl
\g_enumext_store_name_tl
\l_enumext_store_anskey_arg_tl
\l_enumext_store_anskey_env_tl
\l_enumext_store_anskey_opt_tl
\l_enumext_store_current_label_tl
\l_enumext_store_current_opt_arg_tl
\l_enumext_store_current_label_tmp_tl

The variable $\l_enumext_store_active_bool$ setting by save-ans key ($\S11.24.1$) activates all the mechanism related to \anskey , anskey*, keyans, keyans* and keyanspic environments.

The variable \l__enumext_store_name_tl saves the $\{\langle store\ name \rangle\}$ set by the save-ans key of the sequence and prop list in which we will store, the variable \g__enumext_store_name_tl it's just a global copy of $\{\langle store\ name \rangle\}$ used by different functions.

The variable \l__enumext_store_anskey_arg_tl save the *argument* of \anskey (§11.27) and the variables \l__enumext_store_anskey_env_tl, \l_enumext_store_anskey_opt_tl save the $\langle body \rangle$ and $\langle keys \rangle$ of the environment anskey* (§11.28).

The variables \l__enumext_store_current_label_tl and \l__enumext_store_current_opt_-arg_tl save the *current label* and *optional argument* of \item* (§11.32.2) and \anspic* (§11.37.1) for the keyans, keyans* and keyanspic environments.

The variable \l__enumext_store_current_label_tmp_tl is a temporary variable used by keyans, keyans* and keyanspic at various points.

```

11.5 Some utility functions

__enumext_at_begin_document:n

A internal "hook" function used for copying plain list and minipage environments definition and hyperref detection.

```
183 \cs_new_protected:Npn \__enumext_at_begin_document:n #1
184 {
185 \hook_gput_code:nnn {begindocument} {enumext} { #1 }
186 }
```

(End of definition for $\ _$ enumext_at_begin_document:n.)

__enumext_after_env:nn __enumext_before_env:nn A internal "hook" functions for execute code mini-right and mini-right* keys outside the enumext* and keyans* environments and print check-ans outside the enumext and enumext* environments.

(End of definition for __enumext_after_env:nn and __enumext_before_env:nn.)

\ enumext level:

Function for check current level in enumext.

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_level:.)$

__enumext_if_is_int:nT
__enumext_if_is_int:nF
__enumext_if_is_int:nTF

A conditional function to know if the variable we are passing is an integer used by start and widest keys. This function is taken directly from the answer given by Henri Menke in How to test if an expl3 function argument is an integer expression?.

 $(End\ of\ definition\ for\ _enumext_if_is_int:nT,\ _enumext_if_is_int:nF,\ and\ _enumext_if_is_int:nTF.)$

__enumext_regex_counter_style:

The internal function __enumext_regex_counter_style: replace the '*' with the actual counter of the running level and is used by the ref key. It loops through the defined counter styles in \c__enumext_-counter_style_tl and replace '*' by real command, for example, looking for \arabic* and replacing that by \arabic{ $\langle counter \rangle$ } defined on the current level.

 $(\mathit{End}\ of\ definition\ for\ \verb|_enumext_regex_counter_style:.)$

__enumext_show_length:nnn

Internal function used by show-length key to show "all lengths" calculated and use in enumext, enumext*, keyans and keyans* environments.

(End of definition for __enumext_show_length:nnn.)

©2024 by Pablo González L

11.5.1 Utilities for environments and levels

__enumext_is_not_nested:
 __enumext_is_on_first_level:

The function __enumext_is_not_nested: set the variables \g__enumext_standar_bool and \g__enumext_starred_bool to "true" only if the environments enumext and enumext* are nested in each other.

```
219 \cs_new_protected:Nn \__enumext_is_not_nested:
      \str_case:en { \@currenvir }
        {
          {enumext}
            {
               \bool_lazy_and:nnT
                 { \bool_not_p:n { \g__enumext_standar_bool } }
                 { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
                   \bool_gset_true:N \g__enumext_standar_bool
            }
          {enumext*}
            {
               \bool lazy and:nnT
                 { \bool_not_p:n { \g__enumext_starred_bool } }
                 { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
                   \bool_gset_true:N \g__enumext_starred_bool
                 }
            }
        }
```

The function __enumext_is_on_first_level: will set the variables \l__enumext_standar_first_bool ($\S11.24.1$), \l__enumext_starred_first_bool ($\S11.24.1$) and \l__enumext_anskey_env_bool ($\S11.28$) to "true" only if the environment is not nested and we are in the "first level" of it . We will also save the start line number of each environment in the variable \g__enumext_start_line_tl and the name of each environment in the variable \g__enumext_envir_name_tl to use in messages related to the check-ans key and .log file.

```
243 \cs_new_protected:Nn \__enumext_is_on_first_level:
    {
244
      \bool_lazy_all:nT
245
           { \bool_if_p:N \g__enumext_standar_bool }
            \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
           { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
        }
        {
           \bool_set_true:N \l__enumext_standar_first_bool
           \bool_set_true:N \l__enumext_anskey_env_bool
           \tl_gset:Nn \g__enumext_envir_name_tl { enumext }
           \tl_gset:Ne \g__enumext_start_line_tl
255
               on ~ line ~ \exp_not:V \inputlineno
257
        }
      \bool_lazy_all:nT
        {
           { \bool_if_p:N \g__enumext_starred_bool }
           { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
263
            \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
264
        }
265
        {
           \bool_set_true:N \l__enumext_starred_first_bool
           \bool_set_true:N \l__enumext_anskey_env_bool
           \tl_gset:Nn \g__enumext_envir_name_tl { enumext* }
           \tl_gset:Ne \g__enumext_start_line_tl
               on ~ line ~ \exp_not:V \inputlineno
273
274
        }
    }
```

 $(\mathit{End}\ of\ definition\ for\ \verb|_enumext_is_not_nested:\ and\ \verb|_enumext_is_on_first_level:|)$

©2024 by Pablo González L 31/136

__enumext_keyans_start_line:

__enumext_reset_global_vars:

__enumext_reset_global_bool:

__enumext_reset_global_int:

__enumext_reset_global_tl:

The function __enumext_keyans_start_line: will save the start line number of the environments keyans, keyans* and keyanspic in the variable \l__enumext _check_start_line_env_tl to use in the __enumext_check_starred_cmd:n function.

```
276 \cs_new_protected:Nn \__enumext_keyans_start_line:

                {
                   in ~ 'keyans' ~ start ~ on ~ line ~ \exp_not:V \inputlineno
            }
          {keyans*}
               \tl_set:Ne \l__enumext_check_start_line_env_tl
                   in ~ 'keyans*' ~ start ~ on ~ line ~ \exp_not:V \inputlineno
            }
          {keyanspic}
               \tl_set:Ne \l__enumext_check_start_line_env_tl
                   in ~ 'keyanspic' ~ start ~ on ~ line ~ \exp_not:V \inputlineno
            }
        }
    }
```

(End of definition for __enumext_keyans_start_line:.)

11.5.2 Utilities for log and terminal

The function __enumext_reset_global_vars: will be passed to the function __enumext_execute_-after_env: and will return the global variables to their default values after being used.

```
303 \cs_new_protected:Nn \__enumext_reset_global_vars:
304
       \__enumext_reset_global_int:
      \__enumext_reset_global_bool:
      \__enumext_reset_global_tl:
    }
309 \cs_new_protected:Nn \__enumext_reset_global_int:
310
      \int_gzero:N \g__enumext_item_number_int
311
      \int_gzero:N \g__enumext_item_anskey_int
      \int_gzero:N \g__enumext_item_answer_diff_int
314
315 \cs_new_protected:Nn \__enumext_reset_global_bool:
316
      \bool_gset_false:N \g__enumext_check_ans_key_bool
318
      \bool_gset_false:N \g__enumext_standar_bool
      \bool_gset_false:N \g__enumext_starred_bool
    }
321 \cs_new_protected:Nn \__enumext_reset_global_tl:
322
      \tl_gclear:N \g__enumext_store_name_tl
323
      \tl_gclear:N \g__enumext_start_line_tl
      \tl_gclear:N \g__enumext_envir_name_tl
325
    }
```

 $(\textit{End of definition for } \verb|_-enumext_reset_global_vars: and others.)$

__enumext_log_global_vars:
__enumext_log_answer_vars:

The function __enumext_log_global_vars: will be passed to the function __enumext_execute_-after_env: and write to the .log file the number of elements saved in the $\langle prop \; list \rangle$ and $\langle sequence \rangle$ created by the save-ans key along with the value of the integer variable created for the resume key.

```
327 \cs_new_protected:Nn \__enumext_log_global_vars:
328 {
329 \msg_log:nneeee { enumext } { prop-seq-int-hook }
330 { \g_enumext_store_name_tl }
```

©2024 by Pablo González L

```
{ \prop_count:c { g__enumext_ \g__enumext_store_name_tl _prop } }
{ \seq_count:c { g__enumext_ \g__enumext_store_name_tl _seq } }
{ \int_use:c { g__enumext_resume_ \g__enumext_store_name_tl _int } }
}
```

The function __enumext_log_answer_vars: will be passed to the function __enumext_execute_-after_env: and write to the .log file the number of items and answers along with the difference between them.

(End of definition for __enumext_log_global_vars: and __enumext_log_answer_vars:.)

11.6 Copying list and minipage environments

The list environment provided by LATEX has the following plain form:

```
\label{eq:cont} $$ \left( arg \ one \right) \left\{ \left\langle arg \ two \right\rangle \right\} $$ \left( opt \right) $$ \end{supersent} $$ \left( opt \right) $$ \end{supersent} $$ \end{supersent} $$ \left( opt \right) $$ \end{supersent} $$ \end{supersent} $$ \end{supersent} $$ \left( opt \right) $$ \end{supersent} $$ \end{supersen
```

As a precaution we copy them using __enumext_at_begin_document:n in case any package redefines the list environment or a related command.

__enumext_start_list:nn
__enumext_stop_list:
__enumext_item_std:w

The functions __enumext_start_list:nn, __enumext_stop_list: and __enumext_item_-std:w correspond to copies of \list, \endlist and \item from plain definition of list environment.

(End of definition for __enumext_start_list:nn, __enumext_stop_list:, and __enumext_item_std:w.)
The minipage environment provided by ETEX has the following (simplified) plain form:

```
\label{eq:continuous_problem} $$\min[age[\langle pos\rangle][\langle height\rangle][\langle inner-pos\rangle]\{\langle width\rangle\}\}$$ $$\langle internal\ implement\rangle$$ $$\end{substitute} $$\end{substitute} $$\end{substitute} $$\end{substitute} $$\lambda$ $$\end{substitute} $$\end{su
```

As a precaution we copy them using __enumext_at_begin_document:n in case any package redefines the minipage environment or a related command.

__enumext_minipage:w
__enumext_endminipage:

The functions __enumext_minipage:w, __enumext_endminipage: and correspond to copies of \minipage, \endminipage from plain definition of minipage environment.

```
348 \__enumext_at_begin_document:n
349 {
350     \cs_new_eq:NN \__enumext_minipage:w \minipage
351     \cs_new_eq:NN \__enumext_endminipage: \endminipage
352 }
```

 $(\mathit{End}\ of\ definition\ for\ \verb|_=numext_minipage:w|\ and\ \verb|_=numext_endminipage:.)$

11.7 The internal minipage environment

__enumext_internal_mini_page:
 __enumext_mini_env*

The function __enumext_internal_mini_page: creates a internal __enumext_mini_env* environment (custom version of minipage) setting the \if@minipage switch to "false" to allow spaces at the "above" of the environment, plus we will add \vspace{\opt} to maintain alignment on "top". This environment will be used internally by the mini-env key, it is not documented in the user interface and is for internal use only. This function is passed to the function __enumext_safe_exec: in the enumext environment definition (\setminus 11.35) and __enumext_safe_exec_vii: in the enumext* environment definition (\setminus 11.39)

33 / 136

(End of definition for __enumext_internal_mini_page: and __enumext_mini_env*.)

11.8 Compatibility with hyperref and footnotehyper

First we define the necessary rules using "hooks" to determine if the hyperref package is loaded.

```
366 \hook_gput_code:nnn { begindocument } { enumext } { \__enumext_after_hyperref: }
367 \hook_gset_rule:nnnn { begindocument } { enumext } { after } { hyperref }
```

__enumext_after_hyperref:
__enumext_hypertarget:nn
__enumext_phantomsection:

The function __enumext_after_hyperref: sets the state of the boolean variable \l__enumext_-hyperref_bool to "true" if the package is loaded. At this point we will use the public macro \IfHyperBoolean to determine if the hyperfootnotes=true key is present, if so, we set the state of the boolean variable __enumext_footnotes_key_bool to "true".

If the state of the variable \l__enumext_footnotes_key_bool is true we will check if the package footnotehyper is loaded, in case it is not present, we will set the value of \l__enumext_footnotes_-key_bool to false and we will redefine \footnote.

```
\bool_if:NT \l__enumext_footnotes_key_bool

{

\IfPackageLoadedTF { footnotehyper }

{

\msg_info:nnn { enumext } { package-load } { footnotehyper }

}

{

\typeout{No ~ footnotehyper ~ load}

\typeout{Load ~ and ~ use ~ \string\makesavenoteenv{enumext*}}

\bool_set_false:N \l__enumext_footnotes_key_bool

}

}

}
```

 $(\textit{End of definition for } \verb|_=enumext_after_hyperref: , \verb|_=enumext_hypertarget:nn|, and \verb|_==enumext_phantomsection:.)|$

\ enumext newlabel:nn

The function __enumext_newlabel:nn write the information to the .aux file when using the save-ref key. The arguments taken by the function are:

```
#1: \l__enumext_newlabel_arg_one_tl
```

©2024 by Pablo González L 34/136

```
#2: \l__enumext_newlabel_arg_two_tl
```

The trick here is to manage the number of arguments passed to \newlabel{#1}{#2} according to the presence of the hyperref package.

```
404 \cs_new_protected:Npn \__enumext_newlabel:nn #1 #2
405
       \protected@write \@auxout { }
           \token_to_str:N \newlabel {#1}
             {
               {#2}
               \bool_if:NT \l__enumext_hyperref_bool
411
                 { { \thepage } {#2} {#1} }
412
               { }
413
414
415
       \__enumext_hypertarget:nn {#1} { }
416
       \__enumext_phantomsection:
```

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_newlabel:nn.|)$

11.9 Definition of counters

__enumext_define_counters:Nn __enumext_define_counters:cn To create the necessary "counters" we must first make sure that they are not already defined by the user or a package such as enumitem, otherwise a error will be returned and the package loading will be aborted. The arguments taken by the function are:

#1: A token list \l__enumext_counter_X_tl for "store" the counter's name.

#2: The counter's name.

(End of definition for __enumext_define_counters:Nn.)

enumXii The counters created here are enumXi, enumXii, enumXiii and enumXiv for enumext environment, enumXvi for keyans environment, enumXvi for keyanspic environment, enumXvii for enumext* and enumXiii enumXviiii for the keyans* environments.

 $(End\ of\ definition\ for\ enumXi\ \ and\ others.)$

11.10 Definition of labels

This part of the code is inspired by the enumitem package. The idea is to be able to access the counters using \arabic*, \Alph*, \alph*, \Roman* and \roman* to use them in the label key.

__enumext_register_counter_style:Nn

These $\langle counters \rangle$ will be used as default $\langle labels \rangle$ if the label key is not used for the different levels of the enumext environment and the keyans environment, so it is necessary to get a default value for labelwidth from these $\langle labels \rangle$ at the same time.

```
436 \cs_new_protected:Npn \__enumext_register_counter_style:Nn #1 #2
437 {
438    \tl_const:cn { c__enumext_widest_ \cs_to_str:N #1 _tl } {#2}
439    \tl_gput_right:Nn \g__enumext_counter_styles_tl {#1}
440    }
441 \__enumext_register_counter_style:Nn \arabic { 0 }
442 \__enumext_register_counter_style:Nn \Alph { M }
443 \__enumext_register_counter_style:Nn \alph { m }
444 \__enumext_register_counter_style:Nn \Roman { VIII }
445 \__enumext_register_counter_style:Nn \roman { viii }
©2024 by Pablo González L
```

(End of definition for __enumext_register_counter_style:Nn.)

(End of definition for $\label{lem:label_width_by_box:Nn.}$)

__enumext_label_width_by_box:Nn
__enumext_label_width_by_box:cv

The function __enumext_label_width_by_box: Nn set the default \labelwidth using a box width if no labelwidth key is passed.

```
446 \cs_new_protected:Npn \__enumext_label_width_by_box:Nn #1 #2
447 {
448     \hbox_set:Nn \l__enumext_label_width_by_box {#2}
449     \dim_set:Nn #1 { \box_wd:N \l__enumext_label_width_by_box }
450 }
451 \cs_generate_variant:Nn \__enumext_label_width_by_box:Nn { cv }
```

__enumext_label_style:Nnn
__enumext_label_style:cvn

The function __enumext_label_style: Nnn is used by the label key to creates the variables containing the $\langle label\ style \rangle$ and will allow to use \arabic*, \Alph*, \alph*, \Roman* and \roman* as arguments. It loops through the defined counter styles in \g__enumext_counter_styles_tl (\arabic, \alph, \alph, \roman, and \Roman) for example, looking for \roman* and replacing that by \roman{\cunter\}, and doing the same for the \g__enumext_widest_label_tl to keep both in sync.

```
452 \cs_new_protected:Npn \__enumext_label_style:Nnn #1 #2 #3
453
      \tl_clear_new:N #1
      \tl_put_right:Ne #1 { \tl_trim_spaces:n {#3} }

11.12 Setting label and ref keys

The implementation of the keys label and ref are part of the core of the package enumext, here the default values for $\langle label \rangle$, the value of the variables $\l_enumext_label_X_tl$, the default values for $\l_enumext_label_X_tl$, and $\l_enumext_label_X_tl$, the default values for $\l_enumext_label_X_tl$, the default values for $\l_enumext_label_X_tl$, and $\l_enumext_label_X_tl$, the default values for $\l_enumext_label_X_tl$, and $\l_enumext_label_X$

11.12.1 Define and set label and ref keys for enumext environment

label Here we set the default $\langle labels \rangle$ of the *four levels* of enumext environment, along with the default value for

```
labelwidth key and ref key.
 \l enumext label i tl
                           _{538} \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
 \l__enumext_label_ii_tl
                               {
                           539
\l__enumext_label_iii_tl
                                  \keys_define:nn { enumext / #1 }
                           540
\l__enumext_label_iv_tl
                           541
                                      label .code:n
                                                        = {
                                                            \__enumext_label_style:cvn { l__enumext_label_#2_tl }
                                                              { l__enumext_counter_#2_tl } {##1}
                                                            \dim_set_eq:cN { l__enumext_labelwidth_#2_dim }
                                                              \l__enumext_current_widest_dim
```

(End of definition for label and others.)

__enumext_standar_ref:n
__enumext_standar_ref:

The __enumext_standar_ref:n first we will pass the key argument to \l__enumext_ref_key_arg_tl and we will analyze its state, if it is not *empty* we will make a copy of the current counter in \l__enumext _ref_the_count_tl and we will execute the function __enumext_regex_counter_style: which will return the modified \l__enumext_ref_key_arg_tl and we make the value of \l__enumext_ref_the_count_tl the same as that \l__enumext_the_counter_X_tl which contains \theenumX and finally we set \l__enumext_renew_the_count_X_tl with the renewed command.

```
558 \cs_new_protected:Npn \__enumext_standar_ref:n #1
559
      \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
      \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
          \msg_error:nnn { enumext } { key-ref-empty } { enumext }
        }
        {
          \tl_set_eq:Nc
            \l__enumext_ref_the_count_tl { l__enumext_counter_ \__enumext_level: _tl }
           \__enumext_regex_counter_style:
          \tl_set_eq:Nc
            \l__enumext_ref_the_count_tl { l__enumext_the_counter_ \__enumext_level: _tl }
          \tl_put_right:ce { l__enumext_renew_the_count_ \__enumext_level: _tl }
              \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl }
                 { \exp_not:V \l__enumext_ref_key_arg_tl }
        }
576
577
```

Finally the function __enumext_standar_ref: will execute the modification for the reference system in the second argument of the environment definition enumext.

(End of definition for $\ensuremath{\backslash}$ enumext_standar_ref:n and $\ensuremath{\backslash}$ enumext_standar_ref:.)

11.12.2 Define and set label and ref keys for enumext* and keyans* environments

Here we set the default $\langle labels \rangle$ for enumext* and keyans* environments, along with the default value ref for labelwidth key and ref key.

```
ref
\l__enumext_label_vii_tl
\l__enumext_label_viii_tl
```

```
585 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
    {
586
      \keys_define:nn { enumext / #1 }
587
        {
588
          label .code:n
                                \__enumext_label_style:cvn { l__enumext_label_#2_tl }
                                  { l__enumext_counter_#2_tl } {##1}
                                \dim_set_eq:cN { l__enumext_labelwidth_#2_dim }
                                  \l__enumext_current_widest_dim
          label .initial:n = #3,
          label .value_required:n = true,
                 .code:n = \__enumext_starred_ref:n {##1},
          ref
                 .value_required:n = true,
          ref
        }
```

(End of definition for label and others.)

__enumext_starred_ref:n
__enumext_starred_ref:

The implementation of __enumext_starred_ref:n is the same as that used for the environment enumext.

```
603 \cs_new_protected:Npn \__enumext_starred_ref:n #1
605

11.12.3 Define and set label and ref keys for keyans and keyanspic environments

ret
\l__enumext_label_v_tl
\l__enumext_label_vi_tl

Here we set the default $\langle label \rangle$ for keyans and keyanspic environment, along with the default value for labelwidth and ref key. The keyanspic environment use the same $\langle label \rangle$ as the keyans environment.

```
658 \keys_define:nn { enumext / keyans }
    {
659
       label .code:n
                        = {
660
                             \__enumext_label_style:cvn { l__enumext_label_v_tl }
661
                               { l__enumext_counter_v_tl } {#1}
662
                             \dim_set_eq:cN { l__enumext_labelwidth_v_dim }
663
                               \l__enumext_current_widest_dim
                             \__enumext_label_style:cvn { l__enumext_label_vi_tl }
                                { l__enumext_counter_vi_tl } {#1}
                             \dim_set_eq:cN { l__enumext_labelwidth_v_dim }
                                \l__enumext_current_widest_dim
                          },
       label .initial:n = \Alph*),
       label .value_required:n = true,
671
       ref
            .code:n
                      = \__enumext_keyans_ref:n {#1},
672
       ref
             .value_required:n = true,
673
    }
```

(End of definition for label and others.)

__enumext_keyans_ref:n
__enumext_keyans_ref:

The implementation of __enumext_keyans_ref:n is the same as that used for the environment enumext.

```
675 \cs_new_protected:Npn \__enumext_keyans_ref:n #1
676
      \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
677
      \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
           \msg_error:nnn { enumext } { key-ref-empty } { keyans }
        }
681
        {
682
           \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_counter_v_tl
683
           \__enumext_regex_counter_style:
684
           \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_v_tl
          \tl_put_right:Ne \l__enumext_renew_the_count_v_tl
               \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl }
                 { \exp_not:V \l__enumext_ref_key_arg_tl }
        }
```

Finally the function __enumext_keyans_ref: will execute the modification for the reference system in the second argument of the keyans* environment definition.

(End of definition for $_$ enumext_keyans_ref:n and $_$ enumext_keyans_ref:.)

11.13 Setting start and widest keys

__enumext_start_from:NNn
__enumext_start_from:ccn

The function __enumext_start_from: NNn used by the start key take three arguments:

```
#1: \l_enumext_label_X_tl
#2: \l_enumext_start_X_int
#3: \langle integer or string \rangle
```

The first argument of this function are the "counter style" set by label key, the second argument is returned by the function, the third argument can be an $\langle integer \rangle$ or $\langle string \rangle$ of the form \Alph, \alph, \Roman or \roman. This effectively allows start=A or start=1 to be used.

©2024 by Pablo González L

__enumext_widest_from:nNNn
__enumext_widest_from:nccn

The function __enumext_widest_from:nNNn used by the widest key take four arguments:

#1: The counter associated with the environment level

```
#2: \l__enumext_label_X_tl
#3: \l__enumext_labelwidth_X_dim
```

#4: \langle integer or string \rangle

The second and third arguments of this function are the values set by label and labelwidth keys, the four argument can be an $\langle integer \rangle$ or $\langle string \rangle$ of the form \Alph, \alph, \Roman or \roman. The value of the four argument is set temporarily for the identified counter in this point (level), then the value is expanded into a "box" and the "width" of the "box" is returned.

```
714 \cs_new_protected:Npn \__enumext_widest_from:nNNn #1 #2 #3 #4
      \__enumext_if_is_int:nTF {#4}
716
           \setcounter{enumX#1} { #4 }
        }
        {
           \regex_match:nVT { \c{Alph} | \c{alph} } {#2}
             { \setcounter{enumX#1} { \int_from_alph:n {#4} } }
722
           \regex_match:nVT { \c{Roman} | \c{roman} } {#2}
723
             { \setcounter{enumX#1} { \int_from_roman:n {#4} } }
724
725
       \__enumext_label_width_by_box:cv
726
          { l__enumext_labelwidth_#1_dim } { l__enumext_label_#1_tl }
\cs_generate_variant:Nn \__enumext_widest_from:nNNn { nccn }
```

(End of definition for $\ensuremath{\setminus}$ enumext_widest_from:nNNn.)

widest \l__enumext_start_X_int

start

Now define and set start and widest keys for enumext, enumext*, keyans and keyans* environments.

```
730 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
731
      \keys_define:nn { enumext / #1 }
732
        {
733
          start .code:n
734
                                  \__enumext_start_from:ccn
735
                                    { l__enumext_label_#2_tl }
                                    { l__enumext_start_#2_int } {##1}
738
           start .initial:n = 1,
          widest .code:n
                                  \__enumext_widest_from:nccn {#2}
                                    { l__enumext_label_#2_tl }
                                    { l__enumext_labelwidth_#2_dim } {##1}
                               },
          widest .value_required:n = true,
745
           start .value_required:n = true,
747
749 \clist_map_inline:Nn \c_enumext_all_envs_clist { \_enumext_tmp:nn #1 }
```

(End of definition for start, widest, and $\l_{enumext_start_X_int.}$)

11.14 Setting keys for vertical spaces

©2024 by Pablo González L 41/136

```
.skip_set:c = { l__enumext_topsep_#2_skip },
          topsep
                    .initial:n = {#3},
          topsep
                    .value_required:n = true,
          topsep
          partopsep .skip_set:c = { l__enumext_partopsep_#2_skip },
          partopsep .initial:n = {#4},
          partopsep .value_required:n = true,
          parsep .skip_set:c = { l__enumext_parsep_#2_skip },
                    .initial:n = {#5},
                    .value_required:n = true,
          parsep
                   .skip_set:c = { l__enumext_itemsep_#2_skip },
          itemsep
                   .initial:n = {#6},
          itemsep
          itemsep
                    .value required:n = true,
          noitemsep .meta:n = { itemsep = 0pt, parsep = 0pt },
766
          noitemsep .value_forbidden:n = true,
767
                    .meta:n
                                = {
          nosep
                                    itemsep = 0pt, parsep= 0pt,
                                    topsep = 0pt, partopsep = 0pt,
770
          nosep
                    .value_forbidden:n = true,
```

Now we set the values based on standard article class in 10pt.

```
775 \__enumext_tmp:nnnnnn { level-1 } { i } { 8.0pt plus 2.0pt minus 4.0pt }
_{776} { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
    { 4.0pt plus 2.0pt minus 1.0pt }
_{778} \__enumext_tmp:nnnnnn { level-2 } { ii } { 4.0pt plus 2.0pt minus 1.0pt }
   { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
    { 2.0pt plus 1.0pt minus 1.0pt }
781 \__enumext_tmp:nnnnnn { level-3 } { iii } { 2.0pt plus 1.0pt minus 1.0pt }
    { 1.0pt minus 1.0pt }{ 0pt }{ 2.0pt plus 1.0pt minus 1.0pt }
_{783} \__enumext_tmp:nnnnnn { level-4 } { iv } { 2.0pt plus 1.0pt minus 1.0pt }
    { 1.0pt minus 1.0pt }{ 0pt }{ 2.0pt plus 1.0pt minus 1.0pt }
_{785} \__enumext_tmp:nnnnnn { keyans \ } { v }{ 4.0pt plus 2.0pt minus 1.0pt }
   { 2.0pt plus 1.0pt minus 1.0pt }{ 2.0pt plus 1.0pt minus 1.0pt }
    { 2.0pt plus 1.0pt minus 1.0pt }
788 \__enumext_tmp:nnnnnn { enumext* } { vii } { 8.0pt plus 2.0pt minus 4.0pt }
   { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
    { 4.0pt plus 2.0pt minus 1.0pt }
791 \__enumext_tmp:nnnnnn { keyans* } { viii } { 4.0pt plus 2.0pt minus 1.0pt }
    { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
    { 2.0pt plus 1.0pt minus 1.0pt }
```

(End of definition for topsep and others.)

11.15 Setting base-fix key

When nesting starting right after \item (without material between them) there is a problem with the alignment of the baseline between the two environments. One way to get around this problem is to place \mode_leave_vertical: and then apply \vspace{-\baselineskip} and set topsep=0pt for the "first level" of the nested enumext or enumext* environments.

base-fix
__enumext_nested_base_line_fix:

We define the key base-fix only for the "first level" of enumext and enumext * .

The function __enumext_nested_base_line_fix: will be in charge of applying the baseline correction and adjusting the $\langle keys \rangle$. This function is passed to the function __enumext_parse_keys:n in the enumext environment definition ($\S11.35$) and to the function __enumext_parse_keys_vii:n in the enumext* environment definition ($\S11.39$)

```
804 \cs_new_protected:Nn \__enumext_nested_base_line_fix:
805 {
806 \bool_lazy_and:nnT
```

```
{ \bool_if_p:N \l__enumext_standar_first_bool }
         { \bool_if_p:N \l__enumext_base_line_fix_bool }
           \mode_leave_vertical:
           \vspace { -\baselineskip }
811
           \keys_set:nn { enumext / level-1 }
812
813
               topsep = Opt, above = Opt, above* = Opt,
815
        }
       \bool_lazy_and:nnT
         { \bool_if_p:N \l__enumext_starred_first_bool }
818
         { \bool_if_p:N \l__enumext_base_line_fix_bool }
810
         {
           \mode_leave_vertical:
821
           \vspace { -\baselineskip }
822
           \keys_set:nn { enumext / enumext* }
823
824
               topsep = Opt, above = Opt, above* = Opt,
825
        }
       \bool_set_false:N \l__enumext_base_line_fix_bool
```

(End of definition for base-fix and __enumext_nested_base_line_fix:.)

11.16 Setting keys for horizontal spaces

itemindent rightmargin listparindent list-offset list-indent Define and set itemindent, rightmargin, listparindent, list-offset and list-indent keys for enumext, enumext*, keyans and keyans* environments.

```
830 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
831
       \keys_define:nn { enumext / #1 }
832
        {
833
           itemindent
                         .dim_set:c = { l__enumext_fake_item_indent_#2_dim },
           itemindent
                         .value_required:n = true,
                         .dim_set:c = { l__enumext_rightmargin_#2_dim },
           rightmargin
836
                         .value_required:n = true,
           rightmargin
837
           listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
838
           listparindent .value_required:n = true,
839
                         .dim_set:c = { l__enumext_listoffset_#2_dim },
           list-offset
840
           list-offset
                         .value_required:n = true,
841
           list-indent
                         .code:n
                                  =
                           \bool_set_true:c { l__enumext_leftmargin_tmp_#2_bool }
                           \dim_set:cn { l__enumext_leftmargin_tmp_#2_dim } {##1},
                         .value_required:n = true,
           list-indent
        }
846
848 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(End of definition for itemindent and others.)

For enumext* and keyans* environments the situation is a bit different, the list-indent key behaves like the list-offset key.

11.16.1 Functions for setting the fake itemindent

__enumext_fake_item:
__enumext_keyans_fake_item:
__enumext_fake_item_vii:
__enumext_fake_item_viii:

The itemindent key does not set the value of \itemindent, it only sets the value of the *horizontal space* applied using \skip_horizontal:N. We will store this value in the variable and only apply it when it is greater than <code>Opt</code>. Here I will need to place \mode_leave_vertical: and the plain TeX macro \ignorespaces to avoid unwanted extra space when using the itemindent key.

```
\tl_set:ce { l__enumext_fake_item_indent_ \__enumext_level: _tl }
             {
               \exp_not:N \mode_leave_vertical:
               \exp_not:n { \skip_horizontal:n }
                 { \dim_use:c { l__enumext_fake_item_indent_ \__enumext_level: _dim } }
               \ignorespaces
        }
     }

11.19 Setting keys for multicols and minipage

mini-env The default value of the columns-sep key is handled by the state of the boolean variable \l_enumext_mini-sep columns_sep_X_bool which is handled in the internal definition of the enumext and keyans environcolumns-sep ments. Define and set mini-env, mini-sep, columns-sep and columns keys for enumext, enumext*, columns keyans and keyans* environments.

```
994 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
995
       \keys_define:nn { enumext / #1 }
996
997
                       .dim_set:c = { l__enumext_minipage_right_#2_dim },
          mini-env
                       .value_required:n = true,
                       .dim_set:c = { l__enumext_minipage_hsep_#2_dim },
           mini-sep
                       .initial:n = 0.3333em,
          mini-sep
©2024 by Pablo González L
```

```
mini-sep .value_required:n = true,
columns-sep .dim_set:c = { l__enumext_columns_sep_#2_dim },
columns-sep .value_required:n = true,
columns .int_set:c = { l__enumext_columns_#2_int },
columns .initial:n = 1,
columns .value_required:n = true,
}
columns .value_required:n = true,
}
columns .value_required:n = true,
columns .value_required:n = true,
columns .value_required:n = true,
```

For enumext* and keyans* environments the situation is a bit different, the command \miniright is not available, so we will add the keys mini-right and mini-right* to implement support for minipage environment.

(End of definition for mini-env and others.)

11.20 Adjustment of vertical spaces for multicols

When nesting a "list environment" inside the multicols environment, the values of the "vertical spaces" are lost, basically the multicols environment takes control over them. Graphically it can be seen like in the figure 7.

Figure 7: Representation of the vertical space in multicols for a nested level.

To keep the desired spaces *above* and *below* in the "*list environment*" (\topsep + [\partopsep]) it is necessary to "*adjust*" the spaces added by the multicols environment. The most appropriate option in this case is to use a "*context sensitive*" vertical space with \addvspace.

I should make it clear that the implementation here is a "bit questionable". At first glance doing \multicolsep=\topsep seemed right, but the results were not always as expected. An almost imperceptible detail is that in some cases the \itemsep values of are "stretched", possibly due to the use of \raggedcolumns and this affects the lower space when closing the environment, which is "smaller" than expected. My attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

11.20.1 Adjustment of vertical spaces for multicols in enumext

__enumext_multi_set_vskip:

The function __enumext_multi_set_vskip: will take care of determining the "adjusted spaces" that we will apply "above" and "below" the multicols environment in enumext.

We will set the default values taking into account that TeX is in $\langle horizontal \ mode \rangle$, then we will make the settings for the $\langle vertical \ mode \rangle$ in which $\langle vertical \ mode$

Set the values of \l__enumext_multicols_above_X_skip and \l__enumext_multicols_below_-X_skip equal to the value of \topsep in the current level.

(End of definition for __enumext_multi_set_vskip:.)

__enumext_add_pre_parsep:

The function $_$ _enumext_add_pre_parsep: "adjusted" the value of $_$ _enumext_multicols_above_X_skip detecting the value of $_$ parsep from the previous level. This is necessary since $_$ parsep from the previous level affects the *vertical spaces*.

```
\cs_new_protected:Nn \__enumext_add_pre_parsep:
      \int_case:nn { \l__enumext_level_int }
1039
        {
           { 2 }{
1041
                  \skip_if_eq:nnF { \l__enumext_parsep_i_skip } { \c_zero_skip }
                      \skip_add:Nn \l__enumext_multicols_above_ii_skip { \l__enumext_parsep_i_skip }
           { 3 }{
                  \skip_if_eq:nnF { \l__enumext_parsep_ii_skip } { \c_zero_skip }
                      \skip_add:Nn \l__enumext_multicols_above_iii_skip { \l__enumext_parsep_ii_skip
           { 4 }{
                  \skip_if_eq:nnF { \l__enumext_parsep_iii_skip } { \c_zero_skip }
                      \skip_add:Nn \l__enumext_multicols_above_iv_skip { \l__enumext_parsep_iii_skip
                }
        }
```

(End of definition for $_$ enumext_add_pre_parsep:.)

__enumext_multi_addvspace:

The function __enumext_multi_addvspace: will apply the spaces set using \addvspace "above" the multicols environment in enumext, taking into account whether TeX is in $\langle horizontal\ mode \rangle$ or $\langle vertical\ mode \rangle$.

11.20.2 Adjustment of vertical spaces for multicols in keyans

__enumext_keyans_multi_set_vskip:
__enumext_keyans_multi_addvspace:

The function __enumext_keyans_multi_set_vskip: will take care of determining the "adjusted spaces" that we will apply "above" and "below" the multicols environment in keyans. The implementation of this function is the same as the one used in enumext.

11.21 Adjustment of vertical spaces for minipage

When nesting a "list environment" within the minipage environment, the values of the "vertical spaces" are lost. Graphically it can be seen like in the figure 8.

Figure 8: Representation of the minipage spacing adjustment for a nested level.

Since we want to keep the "left" and "right" environments "aligned on top", preserving the \baselineskip and keep the desired "spaces" (\topsep + [\partopsep]) it is necessary to "adjust" the "vertical spaces" for minipage environments.

Here there are several complications that we must circumvent, the minipage environment eliminates the "top" spaces, the multicols environment can be nested in the minipage environment, the "top" and "bottom" spaces are affected when topsep=%pt and to this is added the \partopsep parameter that comes into action according to whether TeX is in \(\lambda \text{horizontal mode} \rangle \) or \(\lambda \text{vertical mode} \rangle \). Depending on these cases, small adjustments must be made using \vspace and \addvspace to obtain the "desired vertical spacing".

1.21.1 Adjustment of vertical spaces for minipage in enumext

__enumext_mini_set_vskip:

The function __enumext_mini_set_vskip: will take care of determining the "adjust" spaces that we will apply "above" and "below" the __enumext_mini_env* environment in enumext.

We will set the default values taking into account that T_EX is in $\langle horizontal\ mode \rangle$, then we will make the settings for the $\langle vertical\ mode \rangle$ in which $\langle partopsep \rangle$ comes into play.

First determine if the multicols environment is active by comparing the value of the \l__enumext_-columns_X_int variable handled by the columns key, according to this comparison we set the adjusted values for \l__enumext_minipage_left_skip, \l__enumext_minipage_right_skip and \l__enumext_minipage_after_skip.

If multicols environment is nested in __enumext_mini_env* environment, we will apply a correction factor to the *vertical spaces* taking into account the value of \topsep of the current level and the value of \parsep of the previous level, if these are zero we will use \strutbox as the basis for the calculations.

©2024 by Pablo González L

```
}
                \skip_set:Nn \l__enumext_minipage_right_skip

__enumext_keyans_mini_addvspace:

The function __enumext_keyans_mini_addvspace: will apply the spaces set using \addvspace "above" the __enumext_mini_env* environment in keyans, taking into account whether TeX is in \(\lambda \text{horizontal mode} \rangle \text{ or } \lambda \text{vertical mode} \rangle. For the latter we will make some adjustments since the \partopsep parameter comes into play and this affects the vertical spacing. The implementation of this function is the same as the one used in enumext.

11.21.4 The command \miniright

The command \miniright will close the __enumext_mini_env* environment on the "left side", open the __enumext_mini_env* environment on the "right side" adding the adjusted vertical space. By default we will add \centering when starting the "right side" environment. The starred argument '*' inhibits the use of \centering command i.e. the usual LTEX justification is maintained in the __enumext_mini_env* on the "right side".

\miniright

First we will perform some checks to prevent the command from being executed outside the enumext environment or from being executed inside the keyanspic environment, then we call the internal functions for the enumext and keyans environments.

```
1370 \NewDocumentCommand \miniright { s }
    {
       \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
         {
           \msg_error:nnn { enumext } { wrong-miniright-place }
       \int_compare:nNnT { \l__enumext_level_int } = { 0 }
           \msg_error:nnn { enumext } { wrong-miniright-place }
         }
       \int_compare:nNnTF { \l__enumext_keyans_level_int } = { 1 }
         {
1381
             _enumext_keyans_mini_right_cmd:n {#1}
1382
1383
         { \__enumext_mini_right_cmd:n {#1} }
1384
1385
```

(End of definition for \miniright. This function is documented on page 10.)

__enumext_mini_right_cmd:n

The function __enumext_mini_right_cmd:n takes as argument the starred '*' of the \miniright command in the enumext environment. We check if the mini-env key is active via the variable \l__-enumext_minipage_right_X_dim, if so we close the multicols environment with the __enumext_mini_env* environment on the "left side", then we open the __enumext_mini_env* environment on the "right side", apply our adjusted "vertical spaces", followed by adding the \centering command when the starred argument '*' is not present and set zero \g__enumext_minipage_stat_int, otherwise we return an error.

```

Setting above and below keys

While having controlled the vertical spaces within the enumext and keyans environments when using the columns or mini-env keys, sometimes the "vertical spaces above" or "vertical spaces below" the environments are not as expected and it is necessary to be able to apply a "fine correction" to these. As I have not been able to correct these *glitches*, the best option is to leave a couple of $\langle keys \rangle$ dedicated to this purpose, in this case it is best to use \vspace or \vspace* when convenient.

Define above, above*, below and below* keys for enumext and keyans environments.

```
above
ahove*
        \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
 below
        1423
                \keys_define:nn { enumext / #1 }
below*
        1424
                  {
        1425
                           .skip_set:c = { l__enumext_vspace_above_#2_skip },
        1426
                          .value_required:n = true,
        1427
                    above* .code:n
                                        = \bool_set_true:c { l__enumext_vspace_a_star_#2_bool }
                                          \keys_set:nn { enumext / #1 } { above = {##1} },
                    above* .value_required:n = true,
                    helow
                           .skip_set:c = { l__enumext_vspace_below_#2_skip },
                    below
                           .value required:n = true,
                    below*
                                        = \bool_set_true:c { l__enumext_vspace_b_star_#2_bool }
                           .code:n

11.23 Setting series, resume and resume* keys

The series key is responsible for the whole process of the resume and resume* keys. The idea behind this is to be able to absorb the $\langle keys \rangle$ passed to the optional argument of the "first level" of the environments enumext and enumext*, but, discarding some specific (keys). This implementation is adapted directly from the code provided by Jonathan P. Spratte (@Skillmon) in chat-TeX-SX

We define the keys series, resume and resume* only for the "first level" of enumext and enumext*.

```
series
resume
         \cs_set_protected:Npn \__enumext_tmp:n #1
resume*
                \keys_define:nn { enumext / #1 }
         1536
                     series .str_set:N = \l__enumext_series_str,
                     series .value_required:n = true,
         1538
                     resume .code:n = \__enumext_resume_series:n {##1},
                     resume* .code:n = \__enumext_resume_starred:,
                     resume* .value_forbidden:n = true,

11.23.1 Internal functions for series key

__enumext_filter_series:n
 __enumext_filter_series_key:n
 __enumext_filter_series_pair:nn

The function $_$ enumext_filter_series:n will be in charge of filtering the $\langle keys \rangle$ we want to store where $\{\#1\}$ represents the optional value passed to the environment.

The function $\ensuremath{\mbox{\mbox{$\setminus$}}}$ enumext_filter_series_key:n will be responsible for filtering the $\langle keys \rangle$ that are passed "without value" by excluding the resume and resume* keys.

The function $_$ enumext_filter_series_pair:nn will be responsible for filtering the $\langle keys \rangle$ that are passed "with value" by excluding the series, resume, start, save-ans and save-key keys.

(End of definition for $_$ enumext_filter_series:n, $_$ enumext_filter_series_key:n, and $_$ enumext_filter_series_pair:nn.)

__enumext_parse_series:n
__enumext_resume_last:n

The function __enumext_parse_series:n will be responsible for storing the filtered $\langle keys \rangle$ in the global variable \g__enumext_series_ $\langle series\ name \rangle$ _tl along with the creation of the integer variable \g__enumext_series_ $\langle series\ name \rangle$ _int when the key is passed as an argument; otherwise, it will check the state of the boolean variable \l_enumext_resume_active_bool set by the keys resume and resume* and will call the function _enumext_resume_last:n.

The value of boolean variable \l__enumext_resume_active_bool is set to true by the function __enumext_resume_counter:n which is used by the keys resume and resume*, in this case we must Make sure it is set to false so that it does not overwrite the default filtered (keys). This function is passed to the function __enumext_parse_keys:n in the enumext environment definition (§11.35) and to the function __enumext_parse_keys_vii:n in the enumext* environment definition (§11.39).

```
\cs_new_protected:Npn \__enumext_parse_series:n #1
1576
       \str_if_empty:NTF \l__enumext_series_str
1578
           \bool_if:NF \l__enumext_resume_active_bool
                  _enumext_resume_last:n {#1}
         }
1582
         {
1584
           \tl_gclear_new:c { g__enumext_series_ \l__enumext_series_str _tl }
1585
           \tl_gset:ce { g__enumext_series_ \l__enumext_series_str _tl }
1586
             { \__enumext_filter_series:n {#1} }
1587
           \int_if_exist:cF { g__enumext_series_ \l__enumext_series_str _int }
                \int_new:c { g__enumext_series_ \l__enumext_series_str _int }
         }
```

```
93
```

The function $_$ enumext_resume_last:n will be in charge of saving the filtering $\langle keys \rangle$ when the series key is *not used* and will save them in the variable $_$ enumext_standar_series_tl for the enumext environment and in the variable $_$ enumext_starred_series_tl for the enumext* environment. Here we must use $\$ bool_lazy_all:nT to make sure that the default values are not overwritten when the environment is nested and the series key is not being used.

11.23.2 Internal function to save counter value

__enumext_resume_save_counter:

The __enumext_resume_save_counter: function will save the last counter value to \g__enumext_-series_ $\langle series\ name \rangle$ _int if the series= $\{\langle series\ name \rangle\}$ key has been passed, to \g__enumext_-resume_int if it has passed the key resume without value and the key series is not active, in \g__-enumext_series_ $\langle series\ name \rangle$ _int if the key resume= $\{\langle series\ name \rangle\}$ has been passed and in \g_-enumext_series_ $\langle store\ name \rangle$ _int if the key has been passed save-ans= $\{\langle store\ name \rangle\}$.

The variables \l__enumext_series_str and \l__enumext__resume_name_tl contain the same {\series name\} but are executed at different moments, the integer variable with \l__enumext_series_str sets the value when execute series={\series name\} and the integer variable with \l__enumext__resume_name_tl sets the subsequent values when use resume={\series name\}. This function is passed to the enumext environment definition (\series 11.35) and the enumext* environment definition (\series 11.39).

11.24.3 The check answer mechanism

The mechanism for checking that all questions are answered follows this logic:

(End of definition for __enumext_storing_set:n and __enumext_storing_exec:.)

If the line begins with \item or \item* and does NOT open a nested environment, each \item or \item* must contain a single execution of the \anskey command, i.e. the counter of the

©2024 by Pablo González L

executions of the \anskey command must be equal to the counter associated with the sum of executions of $\identitien*$.

If the line begins with \item or \item* and opens a nested environment each \item or \item* in the nested environment must have a single execution of the \anskey command and the counter associated to the sum of \item and \item* executions must decrementing by "one" to maintain equality.

In order for the mechanism for the check-answer to work (not counting keyans, keyans* and keyanspic) we need:

- 1. We must keep track of the total number of \item and \item* (enumerated) that appear within the environment including the nested levels.
- We must keep track of the total number of \item and \item* (enumerated) that appear per level of nesting.
- 3. Keeping track of the number of times the environment nests.

The integer variable associated to the sum of each $\idesign*$ in the environment \g_{enumext} item_number_int must match the integer variable \g_{enumext} intem_anskey_int associated to the execution of the command \anskey . We analyze the cases:

- a) If the list only has one level the number of \item + \item* = \anskey
- b) If the list has *nested levels*, for each level of nesting we need to decrementing by one (for the \item or \item* that opens the nest) so that the account remains the same.

With keyans, keyans* and keyanspic it is enough to increase in one the integer of \anskey. The integers created must be global if they are not lost in the interior levels of nesting and to execute the test we will use a "hook" function after closing the first level of the environment.

11.24.4 Setting check-ans and no-store keys

check-ans

Now we define the keys check-ans and no-store for all levels of enumext and enumext* environments.

```
1841 \cs_set_protected:Npn \__enumext_tmp:n #1
1842
    {
       \keys_define:nn { enumext / #1 }
1843
1844
           check-ans .bool_set:N = \l__enumext_check_ans_key_bool,
1845
           check-ans .initial:n = false,
1846
           check-ans .value_required:n = true,
1847
           no-store .code:n = {
                                 \bool_set_false:N \l__enumext_check_answers_bool
                                 \bool_set_false:N \l__enumext_check_ans_key_bool
                               },
           no-store .value_forbidden:n = true,
         }
1853
1854
1855 \clist_map_inline:nn
1856
       level-1, level-2, level-3, level-4, enumext*
1857
1858
```

(End of definition for check-ans and no-store.)

11.24.5 Set-up check answer mechanism

__enumext_check_ans_active:
__enumext_check_ans_level:

The function __enumext_check_ans_active: will first check the state of the variable \l__enumext_-store_name_tl, that is, the save-ans key is active, if so it will check the state of the variable \l__enumext_check_answers_bool handled by the key no-store and will execute the function __enumext_check_ans_level: only if "true", i.e. the key no-store is not active.

The function __enumext_check_ans_level: will decrement by "one" the value of the variable \g__-enumext_item_number_int which keeps track of the executions of \item and \item* for each level of

nesting of the environment enumext, taking into account whether it is nested within enumext* or the opposite.

```
1870 \cs_new_protected:Nn \__enumext_check_ans_level:
     {
1871
       \int_case:nn { \l__enumext_level_int }
1872
         {
1873
           { 1 }{
1874
                   \bool_lazy_all:nT
1875
                     {
1876
                       { \bool_if_p:N \g__enumext_starred_bool }
1877
                       { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
1878
                        \int_gdecr:N \g__enumext_item_number_int
                 7
           { 2 }{
                   \int_gdecr:N \g__enumext_item_number_int
                3
           { 3 }{
                   \int_gdecr:N \g__enumext_item_number_int
                }
           { 4 }{
                   \int_gdecr:N \g__enumext_item_number_int
                 }
```

We should only execute this if enumext* is nested in the first level of enumext, for the rest of the cases the value of \g__enumext_item_number_int is already decreased.

```
| Image: I
```

 $(\textit{End of definition for } \verb|\|_enumext_check_ans_active: and \verb|\|_enumext_check_ans_level:.)$

__enumext_check_ans_key_hook:

The function $_$ enumext_check_ans_key_hook: will *export* the status of the local variable $_$ enumext_check_ans_key_bool to the global variable $_$ enumext_check_ans_key_bool only if the key check-ans is active.

(End of definition for __enumext_check_ans_key_hook:.)

__enumext_item_answer_diff:

The function __enumext_item_answer_diff: will set the value of the variable \g__enumext_item_-answer_diff_int which is used by the functions __enumext_check_ans_show: for the key saveans and by the function __enumext_check_ans_log: by the internal "check answer" mechanism. This function will be passed to the function __enumext_execute_after_env:.

11.26.1 Store optional arguments of the environments

The idea behind "storing" in the $\langle sequence \rangle$ is to have a copy of the structure of the environment in which the key save-ans is being executed so we must capture the optional arguments passed to the levels of the environment in which it is executed and "storing" them.

__enumext_store_active_keys:n
__enumext_store_active_keys_vii:n

The functions __enumext_store_active_keys:n and __enumext_store_active_keys_vii:n will be responsible for "storing" the $\langle keys \rangle$ filtered from the optional arguments of the environment in which the key save-ans is executed and the levels within this for the enumext and enumext* environments. We will execute this function only if the variable \l__enumext_store_save_key_X_bool is false, that is, the key store-key is not active, establishing the variable \l__enumext_store_save_key_X_tl with the filtered $\langle keys \rangle$.

```
\cs_new_protected:Npn \__enumext_store_active_keys:n #1
```

©2024 by Pablo González L 68/136

           \tl_set:Ne \l__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
2087
2088
```

 $(\textit{End of definition for } \verb|_enumext_store_active_keys:n and \verb|_enumext_store_active_keys_vii:n.|)$

11.26.2 Setting save-key key

Since this list structure will be stored in the $\langle sequence \rangle$ established by the save-ans key when executing $\langle anskey \rangle$, we will not be able to modify it. The best thing here is to have a key that allows you to modify the optional argument of the list stored in the $\langle sequence \rangle$.

save-key

The values set by this key passed in the optional arguments of the enumext and enumext* environments will override the values of the \l_enumext_store_save_key_X_tl variable set by the functions _enumext_store_active_keys:n and _enumext_store_active_keys_vii:n.

Define the key save-key for all levels of enumext and enumext* environments.

(End of definition for save-key.)

__enumext_parse_save_key:n
\ enumext parse save kev vii:n

The functions __enumext_parse_save_key:n and __enumext_parse_save_key_vii:n will be responsible for storing the filtered $\langle keys \rangle$ in the variable \l__enumext_store_save_key_X_tl for enumext and enumext*.

 $(\textit{End of definition for } \climate{--} enumext_parse_save_key:n and \climate{--} enumext_parse_save_key_vii:n.)$

11.26.3 Internal functions to store optional arguments

__enumext_filter_save_key:n
 __enumext_filter_save_key_pair:nn

The function __enumext_filter_save_key:n will be in charge of filtering the $\langle keys \rangle$ we want to *store* in $\langle sequence \rangle$ where $\{\#1\}$ represents the optional value passed to the environment.

The function __enumext_filter_save_key_key:n will be responsible for filtering the $\langle keys \rangle$ that are passed "without value" by excluding the resume, resume* and no-store keys.

The function $\ensuremath{\mbox{\mbox{$\setminus$}}}$ enumext_filter_save_key_pair:nn will be responsible for filtering the $\langle keys \rangle$ that are passed "with value" by excluding the series, resume, save-ans, save-ref, check-ans, show-ans, save-pos, wrap-ans, mark-ans, wrap-opt, save-sep, mark-ref, mini-env, mini-sep, mini-right and mini-right* keys.

```
\cs_new:Npn \__enumext_filter_save_key_pair:nn #1#2
       \str_case:nnF {#1}
         {
2138
           { series
                       } {} { resume } {} { save-ans } {}
                       } {} { save-key } {} { check-ans } {} { show-ans } {}
           { save-ref
2140
           { show-pos } {} { wrap-ans } {} { mark-ans } {} { wrap-opt } {}
2141
           { save-sep } {} { mark-ref } {} { mini-env } {} { mini-sep } { }
           { mini-right } {} { mini-right* } {}
2144
          , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
2145
```

11.26.4 Function for storing content in prop list

__enumext_store_addto_prop:n
\ enumext store addto prop:V

The function $\ensuremath{\mbox{\mbox{$\setminus$}}}$ enumext_store_addto_prop:n stores the content in $\langle prop\ list \rangle$ defined by save-ans key. The "stored content" is retrieved by means of the $\ensuremath{\mbox{$\setminus$}}$ getkeyans command.

The form in which the content is "stored" in the $\langle prop \ list \rangle$ is $\{\langle position \rangle\} \{\langle content \rangle\}$. This function is used by \anskey in enumext and enumext* environments, \item* in keyans and keyans* environments and \anspic* in keyanspic environment.

 $(\mathit{End of definition for} \setminus __enumext_store_addto_prop:n.)$

11.26.5 Function for storing content in sequence

__enumext_store_addto_seq:n __enumext_store_addto_seq:v __enumext_store_addto_seq:V

The function __enumext_store_addto_seq:n stores the content in $\langle sequence \rangle$ defined by save-ans key. This function is used by \anskey in enumext, \item* in keyans and \anspic in keyanspic. The form in which the content is stored in $\langle sequence \rangle$ is in a internal enumext or enumext* environments with the same structure in which the command was executed.

The "stored content" is retrieved by means of the \printkeyans command.

```

11.26.7 Function for show marks and position

__enumext_print_keyans_box:NN
__enumext_print_keyans_box:cc

The function __enumext_print_keyans_box: NN print a box in the left margin with \l__enumext_-mark_answer_sym_tl used by the wrap-ans, show-ans and show-pos keys. The function takes two arguments:

(End of definition for __enumext_print_keyans_box:NN.)

11.27 The command \anskey and internal label and ref

Since we will be "storing content" in a list environment within $\langle sequences \rangle$ and can (more or less) manage the options passed to each level, it is necessary that we have a little more control over \item when storing.

The \anskey command will cover this point and give it similar behaviour to that of \item in the enumext and enumext* environments executed as follows: $\anskey[\langle key = val \rangle] \{\langle content \rangle\}$ so first we'll add the keys break-col, item-join, item-star, item-sym* and item-pos*.

```
2237 \keys_define:nn { enumext / anskey }
2238
       break-col .bool_set:N = \l__enumext_store_columns_break_bool,
       break-col .default:n = true,
       break-col .value_forbidden:n = true,
2241
       item-join .int_set:N = \l__enumext_store_item_join_int,
       item-join .value_required:n = true,
       item-star .bool_set:N = \l__enumext_store_item_star_bool,
       item-star .default:n = true,
2245
       item-star .value_forbidden:n = true,
2246
       item-sym* .tl_set:N = \l__enumext_store_item_symbol_tl,
2247
       item-sym* .value_required:n = true,
       item-pos* .dim_set:N = \l__enumext_store_item_symbol_sep_dim,
       item-pos* .value_required:n = true,
```

The \anskey command will only be present when using the save-ans key in enumext and enumext* environments, otherwise it will return an error.

\anskey

We will first call the function __enumext_anskey_safe_outer: to be sure where we execute the command, then we will check the state of the variable \l__enumext_check_answers_bool set by the key no-store, if is true we will increment \g__enumext_item_anskey_int for the internal "check answer" system and execute the function __enumext_anskey_safe_inner:n to ensure that the command is not nested and that the argument is not empty, finally we call the function __enumext_store_anskey_code:nn.

(End of definition for \anskey. This function is documented on page 12.)

11.27.1 Internal functions for the command

__enumext_anskey_safe_outer:
__enumext_anskey_safe_inner:n

The __enumext_store_anskey_safe_outer: function will return the appropriate messages when the command is executed outside the environment in which the save-ans key was activated.

```
\cs_new_protected:Nn \__enumext_anskey_safe_outer:
       \bool_if:NF \l__enumext_store_active_bool
2266
2267
           \msg_error:nnnn { enumext } { anskey-wrong-place }{ anskey }{ enumext }
2268
       \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
           \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyans }
         }
       \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
         {
           \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyans* }
       \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
2278
         {
           \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyanspic }
2280
2282
```

The __enumext_anskey_safe_inner:n function will first check to see if the passed argument is empty and then check to see if the command is nested by returning the appropriate messages.

 $(\textit{End of definition for } \verb|_enumext_anskey_safe_outer: and \verb|_enumext_anskey_safe_inner:n.)|$

__enumext_store_anskey_code:nn

The internal function __enumext_store_anskey_code:nn first we pass the $\langle argument \rangle$ to the $\langle prop\ list \rangle$, then checks the state of the variable \l_enumext_store_ref_key_bool handled by the save-ref key and will call the function _enumext_store_internal_ref: for the internal "label and ref" system. Followed by this if the show-ans or show-pos keys are active we will show the "wrapped" $\langle argument \rangle$ passed to the command.

```
cs_new_protected:Npn \__enumext_store_anskey_code:nn #1 #2
code
code:nn #1 #2
code:nn #2
code:nn #1 #2
code:nn #1 #2
code:nn #1 #2
code:nn #2
code:nn #1 #2
code:nn #2
code:nn #1 #2
code:nn #1
```

Now we start processing the $\lceil \langle key = val \rangle \rceil$ passed to the command to build our \item in the variable \l_enumext_store_anskey_arg_tl which we will "store" in the $\langle sequence \rangle$. First we clear the variable \l_enumext_store_anskey_arg_tl and process the $\langle keys \rangle$, if the break-col key is present and the command is running under enumext (not in enumext*) we will add \columnbreak and then \item.

```
\bool_lazy_and:nnT
          { \bool_if_p:N \l__enumext_store_columns_break_bool }
          { \bool_not_p:n { \l__enumext_starred_bool } }
          {
            \tl_put_left:Nn \l__enumext_store_anskey_arg_tl { \columnbreak }
        \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { \item }
If the item-join key is present and the command is running under enumext* we will add (\langle number \rangle)
to \l_enumext\_store\_anskey\_arg\_tl.
       \bool_lazy_and:nnT
          { \bool_not_p:n { \l__enumext_starred_bool } }
          { \int_compare_p:nNn { \l__enumext_store_item_join_int } > { 1 } }
2218
            \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
               {
                 ( \exp_not:V \l__enumext_store_item_join_int )
           }
And now we will review the keys item-star, item-sym* and item-pos* and pass them to \l__-
enumext_store_anskey_arg_tl along with the \langle argument \rangle.
        \bool_if:NTF \l__enumext_store_item_star_bool
            \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { * }
2326
            \tl_if_empty:NF \l__enumext_store_item_symbol_tl
              {
2328
                \tl_put_right:Ne \l__enumext_store_anskey_arg_tl

2471
```

 $(End\ of\ definition\ for\ _enumext_anskey_show_wrap_left:n.)$

11.28 The environment anskey*

Managing *verbatim content* in an environment is quite complicated, I learned that when creating the **scontents** package, so to be able to have support at this point it is best to play a little with the internal code of **scontents** and *hooks*. Some considerations I should have here before implementing this:

- If some package, class or user has defined the environment with the same name somewhere in the document it would be a problem, you would not know what argument has been passed to store-env, if you are using the key print-env or the write-out key, sure, I can detect and modify it within the enumext and enumext* environments, but it would look strange not to have some keys available when running within these environments.
- A better (perhaps a bit paranoid) option is to define it within the environment in which the save-ans key is executed. and have it available only when that key is executed, here I would have absolute control of the \(\lambda \text{keys} \rangle \) and I make sure that write-out is not used, then using hooks after I undefine it and using hook before I check if it has been created by any package, class or user and I return a error, then the user will have to see how to solve the problem.

__enumext_undefine_anskey_env:

The function __enumext_undefine_anskey_env: will undefine the environment anskey* and will be passed to the function __enumext_execute_after_env: (§11.25) which is executed after the environment in which the key save-ans is active.

```
2472 \cs_new_protected:Nn \__enumext_undefine_anskey_env:
2473 {
2474 \cs_undefine:c { anskey* }
2475 \cs_undefine:c { endanskey* }
2476 \cs_undefine:c { __scontents_anskey*_env_begin: }
2477 \cs_undefine:c { __scontents_anskey*_env_end: }
2478 }
```

Detection of the anskey* environment outside the enumext and enumext* environments.

```
_enumext_before_env:nn { enumext }
2480
       \bool_lazy_and:nnT
2481
         { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
2482
         { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
2483
2484
           \cs_if_free:cF { __scontents_anskey*_env_begin: }
               \msg_error:nnn { enumext } { anskey-env-error } { anskey* }
         }
   \__enumext_before_env:nn { enumext* }
       \bool_lazy_and:nnT

         { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
2494
         { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
2495
           \cs_if_free:cF { __scontents_anskey*_env_begin: }
               \msg_error:nnn { enumext } { anskey-env-error } { anskey* }
         }
```

Detection of the anskey* environment inside the keyans, keyans* and keyanspic environments.

(End of definition for $_$ enumext_undefine_anskey_env:.)

anskey*

__enumext_anskey_env_make:n __enumext_anskey_env_make:V _enumext_anskey_env_define_keys: __enumext_rescan_anskey_env:n The function __enumext_anskey_env_make:n creates the environment anskey* (custom version of scontents environment) by setting the initial keys store-env= $\{\langle store\ name \rangle\}$ and print-env=false. To maintain the scope of the environment and that it is only active when the key save-ans is active we will pass this function to the function __enumext_storing_exec: (§11.24.1) and we will execute it ©2024 by Pablo González L

77 / 136

only if the variable \l__enumext_anskey_env_bool is true, with this we prevent it from being executed again when the environment is nested and the key save-ans is active, which returns an error for part of the package scontents.

The function __enumext_anskey_env_define_keys: will add the keys break-col, item-join, item-join, item-star, item-sym* and item-pos* and will leave the keys print-env, store-env and write-out undefined. We will apply this function using the *hook* function __enumext_before_-env:nn.

```
2527 \cs_new_protected:Nn \__enumext_anskey_env_define_keys:
      \keys_define:nn { scontents / scontents }
          break-col .bool_gset:N = \g__enumext_store_columns_break_bool,
          break-col .default:n = true,
          break-col .value_forbidden:n = true,
2533
          item-join .int_gset:N = \g__enumext_store_item_join_int,
          item-join .value_required:n = true,
2535
          item-star .bool_gset:N = \g__enumext_store_item_star_bool,
2536
          item-star .default:n = true,
          item-star .value_forbidden:n = true,
2538
          item-sym* .tl_gset:N = \g__enumext_store_item_symbol_tl,
          item-sym* .value_required:n = true,
          item-pos* .value_required:n = true,
          print-env .undefine:,
         store-env .undefine:,
          write-out .undefine:,
2545
2546
    }
2547
```

The function __enumext_anskey_env_undefine_keys: will leave the keys break-col, item-join, item-join, item-star, item-sym* and item-pos* undefined. We will apply this function using the hook function __enumext_after_env:nn.

```
2548 \cs_new_protected:Nn \__enumext_anskey_env_undefine_keys:
2549
       \keys_define:nn { scontents / scontents }
2551
        {
           break-col .undefine:,
           item-join .undefine:,
           item-star .undefine:,
           item-sym* .undefine:,
           item-pos* .undefine:,
2556
           write-out .code:n = {
                                  \bool_set_false:N \l__scontents_storing_bool
2558
                                  \bool_set_true:N \l__scontents_writing_bool
                                  \tl_set:Nn \l__scontents_fname_out_tl {##1}
                               },
           write-out .value_required:n = true,
2562
           print-env .meta:nn = { scontents } { print-env = ##1 },
2563
           print-env .default:n = true,
2564
           store-env .meta:nn = { scontents } { store-env = ##1 },
2565
                     .code:n
                               = { \__scontents_parse_environment_keys:n {##1} }
2566
2567
```

The function __enumext_rescan_anskey_env:n will be responsible for bringing the $\langle body \rangle$ of the environment saved in the sequence \g__scontents_name_ $\langle store\ name \rangle$ _seq to pass it to our sequence and prop list.

```
2569 \cs_new_protected:Npn \__enumext_rescan_anskey_env:n #1
2570 {

\[
\text{
```

(End of definition for anskey* and others. This function is documented on page 13.)

__enumext_anskey_env_exec:

The function $_$ enumext_anskey_env_exec: will be responsible for processing all the code necessary for the execution of the environment. The first thing will be to add our $\langle keys \rangle$.

```
2579 \cs_new_protected:Nn \__enumext_anskey_env_exec:
2580 {
2581 \__enumext_before_env:nn { anskey* }
2582 {
2583 \__enumext_anskey_env_define_keys:
2584 }
```

Now we will execute our actions after the anskey* environment is closed. We'll fetch the contents of the *environment body* that is now saved in $\g_scontents_name_\langle store\ name \rangle_seq$ and store it in the variable $\l_enumext_store_anskey_env_tl$ then we execute the rest of the functions.

```
\hook_if_empty:nF {env/anskey*/after}
2586
           \hook_gremove_code:nn {env/anskey*/after} { * }
2587
         }
2588
       \__enumext_after_env:nn { anskey* }
2589
2590
           \tl_clear:N \l__enumext_store_anskey_env_tl
2591
           \tl_clear:N \l__enumext_store_anskey_opt_tl
2592
           \tl_gset:Ne \l__enumext_store_anskey_env_tl
2593
             {
2594
                \seq_item:ce { g__scontents_name_ \l__enumext_store_name_tl _seq } { -1 }
             }
           \__enumext_anskey_env_keys:
           \__enumext_anskey_env_store:
           \__enumext_anskey_env_clean:
           \__enumext_anskey_env_undefine_keys:
         }
2601
```

The use of \hook_gremove_code:nn is necessary here, otherwise the {\langle code \rangle} passed to __enumext_after_-env:nn{anskey*} will be accumulated for each execution. The last function __enumext_anskey_env_-undefine_keys: is necessary so as not to hinder any scontents environment running within enumext or enumext*.

(End of definition for $\ensuremath{\backslash}$ _enumext_anskey_env_exec:.)

__enumext_anskey_env_keys:
__enumext_anskey_env_store:
__enumext_anskey_env_clean:

The function __enumext_anskey__env_keys: processing the $[\langle key = val \rangle]$ passed to the environment and save this in the variable \l__enumext_store_anskey_opt_tl. If the break-col key is present and the environment is running under enumext (not in enumext*) we will add the key break-col.

```
2603 \cs_new_protected:Nn \__enumext_anskey_env_keys:
2604 {
2605 \bool_lazy_and:nnT
2606 {\bool_if_p:N \g__enumext_store_columns_break_bool }
2607 {\bool_not_p:n {\l__enumext_starred_bool } }
2608 {
2609 \tl_put_left:Ne \l__enumext_store_anskey_opt_tl { ,break-col, }
2610 }
```

If the item-join key is present and the command is running under enumext* we will add to \l_-enumext_store_anskey_opt_tl.

And now we will review the keys item-star, item-sym* and item-pos* and pass them to \l_-enumext_store_anskey_opt_tl.

```
\bool_if:NT \g__enumext_store_item_star_bool
2621
           \tl_put_left:Ne \l__enumext_store_anskey_opt_tl
             {
                ,item-star,
             }
           \tl_if_empty:NF \g__enumext_store_item_symbol_tl
2626
             {
2627
                \tl_put_left:Ne \l__enumext_store_anskey_opt_tl
2628
                    ,item-sym* = \exp_not:V \g__enumext_store_item_symbol_tl,
2631
             }
           \dim_compare:nT
             {
                \g__enumext_store_item_symbol_sep_dim != \c_zero_dim
             }
2637
                \tl_put_left:Ne \l__enumext_store_anskey_opt_tl
2638
2639
                    ,item-pos* = \exp_not:V \g__enumext_store_item_symbol_sep_dim,
                  }
              }
          }
```

The function __enumext_anskey_env_store: will be responsible for storing the content of the environment, we will execute the code within a group and only if the variable \l__enumext_store_-anskey_env_tl is not empty using the function __enumext_rescan_anskey_env:n from package scontents.

```
2645 \cs_new_protected:Nn \__enumext_anskey_env_store:

```

(End of definition for $\ensuremath{\backslash}$ _enumext_keyans_addto_prop:n.)

11.29.2 The save-ref key for keyans, keyans* and keyanspic

The "internal label and ref" system for the keyans, keyans* and keyanspic environments has slight differences with the one implemented for the \anskey command, basically because in this environments we are interested in the current $\langle label \rangle$. The mechanism defined here will allow to execute \ref{\store name: position}} and will return 1. (A).

__enumext_keyans_store_ref:
 __enumext_keyans_store_ref_aux_i:
 __enumext_keyans_store_ref_aux_ii:

The function __enumext_keyans_store_ref: handles the internal "label and ref" system used by the save-ref key for \item* and \anspic* commands. First we will create copies of the current $\langle labels \rangle$ and remove the dots"." from them, we do not want to get double dots in our references.

The auxiliary function __enumext_keyans_store_ref_aux_i: set the variable \l__enumext_newlabel_arg_one_tl which will contain $\{\langle store\ name: position \rangle\}$ analyzing whether the environment in which they are executed is enumext* or enumext.

11.30 Setting item-sym* and item-pos* keys

In order to have a cleaner implementation of $\idesigned item^*$ it is best to define a couple of keys that allow us to control and set by default the $\langle symbol \rangle$ and its $\langle offset \rangle$.

```
item-sym*
           Define and set item-sym* and item-pos* keys for enumext and enumext*.
item-pos*
            2865 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
            2866
                   \keys_define:nn { enumext / #1 }
                       item-sym* .tl_set:c = { l__enumext_item_symbol_#2_tl },
                       item-sym* .value_required:n = true,
                       item-sym* .initial:n = {$\star$},
                       item-pos* .dim_set:c = { l__enumext_item_symbol_sep_#2_dim },
            2872
                       item-pos* .value_required:n = true,
            2873
                     }
            2874
            2875
            2876 \clist_map_inline:nn
            2877

            2878
            2879
                 { \__enumext_tmp:nn #1 }
           (End of definition for item-sym* and item-pos*.)
```

11.31 Redefining \footnote command

__enumext_footnotetext:nn
__enumext_renew_footnote:
__enumext_print_footnote:

To keep the correct numbering of \footnote and to make it work correctly with the mini-env key and in the enumext* and keyans* environments, it is necessary to redefine the command. This implementation is adapted from the answer given by Clea F. Rees (@cfr) in footnotes in boxes compatible with hyperref.

```
2881 \cs_new_protected:Nn \__enumext_footnotetext:nn
2882 {
2883     \footnotetext[#1]{#2}
2884 }
2885 \cs_new_protected:Nn \__enumext_renew_footnote:
2886     {
2887     \seq_gclear:N \g_enumext_footnote_arg_seq
2888     \seq_gclear:N \g_enumext_footnote_int_seq
```

```
\RenewDocumentCommand \footnote { o +m }
           \tl_if_novalue:nTF {##1}
2801
             {
               \stepcounter{footnote}
               \int_gset_eq:Nc \g__enumext_footnote_int { c@footnote }
               \int_gset:Nn \g__enumext_footnote_int { ##1 }
             }
           \footnotemark [ \g__enumext_footnote_int ]
           \seq_gput_right:Nn \g__enumext_footnote_arg_seq { ##2 }
           \seq_gput_right:NV \g__enumext_footnote_int_seq \g__enumext_footnote_int
        }
2903
   \cs_new_protected:Nn \__enumext_print_footnote:
    {
2905
       \seq_if_empty:NF \g__enumext_footnote_int_seq
2906
2907
           \seq_map_pairwise_function:NNN
             \g__enumext_footnote_int_seq
             \g__enumext_footnote_arg_seq
             \__enumext_footnotetext:nn
         }
2912
     }
2913
```

 $(\textit{End of definition for } \c --- enumext_footnotetext:nn, \c --- enumext_renew_footnote:, and \c --- enumext_print_footnote:.)$

11.32 Redefining \item command

Redefining the \item command is not as simple as I thought. This command works in conjunction with the \makelabel command so I have to redefine both of them, in addition to this, we will have to use a couple of global variables to pass the values from one command to the other.

11.32.1 The \item command in enumext

__enumext_default_item:n

The \forall item and \forall item[$\langle custom \rangle$] commands work in the usual way on enumext.

First we will see if the optional argument is present, if it is NOT present we will check the state of the variable \l__enumext_check_ans_key_bool set by the key check-ans, set the boolean variable \l__enumext_wrap_label_X_bool to "true" and execute __enumext_item_std:w.

Otherwise we will check the state of the boolean variable \l_enumext_wrap_label_opt_X_bool set by the key wrap-label* and execute _enumext_item_std:w with the optional argument.

The boolean variable \l__enumext_wrap_label_X_bool is used by the function __enumext_make_-label: (§11.33).

```
2914 \cs_new_protected:Npn \__enumext_default_item:n #1
       \tl_if_novalue:nTF {#1}
           \bool_if:NT \l__enumext_check_answers_bool
2918
2919
               \int_gincr:N \g__enumext_item_number_int
2921
           \bool_set_true:c { l__enumext_wrap_label_ \__enumext_level: _bool }
           \__enumext_item_std:w \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl }
         }
         {
           \bool_set_eq:cc
             { l__enumext_wrap_label_ \__enumext_level: _bool }
             { l__enumext_wrap_label_opt_ \__enumext_level: _bool }
           \__enumext_item_std:w [#1] \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl
2930
2931
```

(End of definition for $\ensuremath{\backslash}$ _enumext_default_item:n.)

__enumext_starred_item:nn

The \item*, \item*[$\langle symbol \rangle$] and \item*[$\langle symbol \rangle$][$\langle offset \rangle$] works like the numbered \item, but placing a [$\langle symbol \rangle$] to the "left" of the $\langle label \rangle$ separated from it by the value set by the labelsep key and can be offset using the second optional argument [$\langle offset \rangle$].

85/136

```
#1: \l_enumext_item_symbol_X_tl
#2: \l_enumext_item_symbol_sep_X_dim
```

First we will make a copy of $\l_=\text{enumext_item_symbol_X_tl}$ which is set by the key item-sym* or passed as optional argument in the global variable $\g_=\text{enumext_item_symbol_tl}$, followed by setting the variable $\l_=\text{enumext_item_symbol_sep_X_dim}$ set by the key item-pos* or by the second optional argument.

Then we will see the state of the variable $\l_enumext_check_ans_key_bool$ set by the key check-ans, set the boolean variable $\l_enumext_wrap_label_X_bool$ to "true" and execute $\l_enumext_item_std:w$.

In this function the optional argument of $\label{lem:lem:std:w}$ is omitted, we only want it to be numbered.

```
2932 \cs_new_protected:Npn \__enumext_starred_item:nn #1 #2
2933
       \tl_if_novalue:nF {#1}
         {
           \tl_set:cn { l__enumext_item_symbol_ \__enumext_level: _tl } {#1}
2937
2938
       \tl_gset_eq:Nc \g__enumext_item_symbol_tl { l__enumext_item_symbol_ \__enumext_level: _tl }
       \tl_if_novalue:nTF {#2}
         {
           \dim_set_eq:cc
             { l__enumext_item_symbol_sep_ \__enumext_level: _dim }
2942
             { l__enumext_labelsep_ \__enumext_level: _dim }
2943
         }
2944
         {
2945
           \dim_set:cn { l__enumext_item_symbol_sep_ \__enumext_level: _dim } {#2}
2946
2947
       \bool_if:NT \l__enumext_check_answers_bool
2948
           \int_gincr:N \g__enumext_item_number_int
       \bool_set_true:c { l__enumext_wrap_label_ \__enumext_level: _bool }
       \__enumext_item_std:w \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl }
2953
2954
```

The function __enumext_redefine_item: will redefine the \item command in the enumext environment for the internal mechanism of check-answers for check-ans key and adding the starred \item* version.

This function is passed to $_=$ enumext_list_arg_two_X: which is used in the definition of the enumext environment ($\S11.34.2$).

 $(End\ of\ definition\ for\ \verb|_-enumext_redefine_item:.)$

 $(\textit{End of definition for } \verb|_-enumext_starred_item:nn.)$

11.32.2 The \item command in keyans

The $\idesigned \mbox{"item*} [\langle content \rangle] \mbox{ commands store the current } \langle label \rangle \mbox{ next to the } [\langle content \rangle] \mbox{ if it is present in the } \langle sequence \rangle \mbox{ and } \langle prop \mbox{ list} \rangle \mbox{ defined by save-ans key.}$

__enumext_keyans_default_item:n

The function __enumext_keyans_default_item:n executes the original behavior of the \item.

(End of definition for __enumext_keyans_default_item:n.)

__enumext_keyans_starred_item:n

The function __enumext_keyans_starred_item:n which will make a temporary copy of the current $\langle label \rangle$, execute the show-ans or show-pos keys using the function __enumext_keyans_show_left:n and will display the contents of that item using the internal copy __enumext_item_std:w, this is necessary to prevent incrementing the current "counter" of the original $\langle label \rangle$.

```
2978 \cs_new_protected:Npn \__enumext_keyans_starred_item:n #1
2979 {
2980 \tl_set_eq:NN \l__enumext_store_current_label_tmp_tl \l__enumext_label_v_tl
2981 \__enumext_keyans_show_left:n { #1 }
2982 \bool_set_true:N \l__enumext_wrap_label_v_bool
2983 \__enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl \__enumext_keyans_show_item
```

Recover the original value of the current $\langle label \rangle$ and *store* it first in the $\langle prop \ list \rangle$ (including the optional argument), run the internal "label and ref" system if the save-ref key is active and finally *store* it in the $\langle sequence \rangle$.

```
\tl_set_eq:NN \l__enumext_label_v_tl \l__enumext_store_current_label_tmp_tl

2985 \__enumext_keyans_addto_prop:n { #1 }

2986 \__enumext_keyans_store_ref:

2987 \__enumext_keyans_addto_seq:n { #1 }

2988 \_int_gincr:N \g__enumext_check_starred_cmd_int

2989 }
```

(End of definition for $\ensuremath{\backslash}$ enumext_keyans_starred_item:n.)

\item*
__enumext_keyans_redefine_item:

The function __enumext_keyans_redefine_item: is responsible for adding the *starred* and *optional* argument by the __enumext_list_arg_two_v: function in the definition of the keyans environment. Here we need to use \peek_remove_spaces:n to prevent an unwanted space when using \item* in conjunction with the itemindent key.

This function is passed to __enumext_list_arg_two_v: which is used in the definition of the keyans environment (§11.34.2).

(End of definition for \item* and __enumext_keyans_redefine_item:. This function is documented on page 14.)

11.33 Redefining \makelabel command

Redefine \makelabel for the keys align, font, wrap-label, wrap-label* and \item* for enumext and keyans environments.

11.33.1 Redefining \makelabel for enumext

__enumext_item_starred:

The function __enumext_item_starred: will be responsible for executing \item* for the enumext environment.

```
\makebox[ Opt ][ r ]{ \g__enumext_item_symbol_tl }
\skip_horizontal:n { \dim_use:c { l__enumext_item_symbol_sep_ \__enumext_level: _dim } }

3014 }
```

(End of definition for __enumext_item_starred:.)

__enumext_make_label:

The function __enumext_make_label: redefine \makelabel for the enumext environment.

This function is passed to __enumext_list_arg_two_X: which is used in the definition of the enumext environment (§11.34.2).

```
\cs_new_protected:Nn \__enumext_make_label:
3017
       \RenewDocumentCommand \makelabel { m }

 $(\textit{End of definition for } \verb|_-enumext_keyans_make_label:.)$

11.34 Second argument of the lists

At this point of the code we have already programmed most the necessary tools to create a custom list environment, remember that the function __enumext_start_list:nn takes two arguments, the first one we have ready, the second one we will define for all the levels of the environment enumext and the environment keyans.

11.34.1 Calculation of \leftmargin and \itemindent

Consider the figure 9 where the default margins (on the left) of a list are represented.

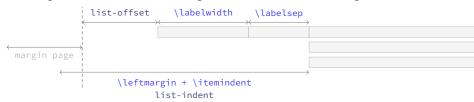

Figure 9: Representation of standard horizontal lengths in list environment.

The idea is to have control over these margins so that our list does not overlap the left margin of the page. The *key* relationship is that the right edge of the \labelsep equals the right edge of the \itemindent,

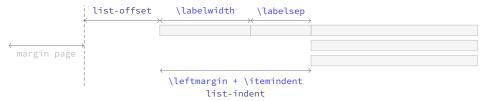

Figure 10: Representation of horizontal lengths concept in list in enumext.

so that the left edge of the *label box* is at \leftmargin+\itemindent minus \labelwidth+\labelsep. Thus, the handling of the margins by the package will be as shown in the figure 10. Where the default values will look like in the figure 11.

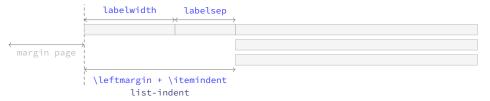

Figure 11: Default horizontal lengths in enumext.

__enumext_calc_hspace:NNNNNNN\ __enumext_calc_hspace:cccccc The function __enumext_calc_hspace:NNNNNNN takes seven arguments to be able to determine horizontal spaces for all list environment:

```
#1: \l__enumext_labelwidth_X_dim #2: \l__enumext_labelsep_X_dim
#3: \l__enumext_listoffset_X_dim #4: \l__enumext_leftmargin_tmp_X_dim
#5: \l__enumext_leftmargin_X_dim #6: \l__enumext_itemindent_X_dim
#7: \l__enumext_leftmargin_tmp_X_bool
```

And returns the "adjusted" values of \leftmargin and \itemindent.

This function is passed to __enumext_list_arg_two_X: which is used in the definition of the enumext and keyans environments (§11.34.2).

```
3046 \cs_new_protected:Npn \__enumext_calc_hspace:NNNNNNN #1 #2 #3 #4 #5 #6 #7
     {
3047
       \dim_compare:nNnT { #1 } < { \c_zero_dim }</pre>
3048
         {
3049
            \msg_warning:nnnV { enumext } { width-non-positive }{ labelwidth }{ #1 }
3050
           \dim_set:Nn #1 { \dim_abs:n { #1 } }
3051
       \dim_compare:nNnT { #2 } < { \c_zero_dim }</pre>
         {
           \msg_warning:nnnV { enumext } { width-negative }{ labelsep }{ #2 }
           \dim_set:Nn #2 { \dim_abs:n { #2 } }
3056
```

If no value has been passed to the labelwidth and labelsep keys we set the default values for \l_- enumext_leftmargin_tmp_X_dim.

```
\bool_if:nF #7 { \dim_set:Nn #4 { #1 + #2} }
```

We now analyze the cases and set the values for \leftmargin and \itemindent.

```
\dim_compare:nNnTF { #4 } < { \c_zero_dim }</pre>
         {
3060
            \dim_set:Nn #6 { #1 + #2 - #4}
3061
           \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
3062
3063
         {
           \dim_{compare:nNnT} { #4 } = { #1 + #2 }
              { \dim_set:Nn #6 { \c_zero_dim } }
           \dim_compare:nNnT { #4 } < { #1 + #2 }
              { \dim_set:Nn #6 { #1 + #2 - #4} }
           \dim_compare:nNnT { #4 } > { #1 + #2 }
              {
                \dim_set:Nn #6 { -#1 - #2 + #4}
3071
                \dim_set:Nn #6 { #6*-1}
3072
           \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
3074
         }
3075
3077 \cs_generate_variant:Nn \__enumext_calc_hspace:NNNNNNN { ccccccc }
```

__enumext_list_arg_two_vii:
 __enumext_list_arg_two_viii:

For the horizontal environments <code>enumext*</code> and <code>keyans*</code> the implementation is similar, but, the value of <code>\partopsep</code> is always <code>Opt</code>. At this point we will modify the <code>parsep</code> key to make it take the value of the <code>itemsep</code> key and later, in the environment definition, we will modify <code>parindent</code> to make it set the value of <code>lisparindent</code> and <code>parsep</code> to set the value of <code>\parskip</code> locally.

```

11.35 The environment enumext

enumext We create the enumext environment based on list environment by levels.

```
3151 \NewDocumentEnvironment{enumext}{ 0{} }
       \__enumext_safe_exec:
       \__enumext_parse_keys:n {#1}
       \__enumext_before_list:
       \ enumext start store level:
       \__enumext_start_list:nn
         { \tl_use:c { l__enumext_label_ \__enumext_level: _tl } }
3158
            \use:c { __enumext_list_arg_two_ \__enumext_level: : }
            \__enumext_before_keys_exec:
         }
       \__enumext_after_args_exec:
3165
          _enumext_stop_list:
3166
       \__enumext_stop_store_level:
3167
       \__enumext_after_list:
3168
3169
```

(End of definition for enumext. This function is documented on page 4.)

__enumext_safe_exec:

The __enumext_safe_exec: function first execute the function __enumext_is_not_nested: which will set the variable \g__enumext_standar_bool to "true" if the environment is not nested in enumext*, we increment the variable \l__enumext_level_int for the nesting levels and set the \l__enumext_standar_bool variable to "true". Finally we set the variable \l__enumext_standar_first_bool to "true" only if the environment is not nested and we are at the "first level" of it using the function __enumext_is_on_first_level:.

(End of definition for __enumext_safe_exec:.)

__enumext_parse_keys:n

The __enumext_parse_store_keys:n function will parse the $\langle keys \rangle$ passed to the optional environment argument enumext by levels only if present. First we clear the variable \l__enumext_series_str and then we check if we are at the first level, if so we process the $\langle keys \rangle$ and then execute the function __enumext_parse_series:n used by the key series, otherwise we will pass the $\langle keys \rangle$ to the inner levels of the environment and finally if the variable \l__enumext_store_active_bool established by the key save-ans is true we execute __enumext_parse_store_keys:n used by the key save-key.

__enumext_start_store_level: The __enumext_start_store

(End of definition for $_$ enumext_parse_keys:n.)

__enumext_stop_store_level:

The __enumext_start_store_level: and __enumext_stop_store_level: functions activate the level saving mechanism for storage in \(\sequence \) for the command \(\anskey \) and the environment anskey*.

```
3198 \cs_new_protected:Nn \__enumext_start_store_level:
     {
3199
       \bool_lazy_all:nT
         {

3202
           { \bool_not_p:n { \l__enumext_keyans_env_bool } }
           { \bool_if_p:N \g__enumext_standar_bool }
3204
         }
3205
         {
3206
           \int_compare:nNnT { \l__enumext_level_int } > { 1 }
                \bool_set_true:c { l__enumext_store_upper_level_ \__enumext_level: _bool }
                \__enumext_store_level_open:
             3
```

If enumext are nested in enumext* add $_$ enumext_store_level_open: to preserve the stored structure.

```
\bool_lazy_all:nT
3213
         {
           { \bool_if_p:N \l__enumext_store_active_bool }
            \bool_not_p:n { \l__enumext_keyans_env_bool } }
           { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
         }
         {
           \int_compare:nNnT { \l__enumext_level_int } > { 0 }
               \bool_set_true:c { l__enumext_store_upper_level_ \__enumext_level: _bool }
               \__enumext_store_level_open:
         }
   \cs_new_protected:Nn \__enumext_stop_store_level:
       \bool_if:cT { l__enumext_store_upper_level_ \__enumext_level: _bool }
         {
             _enumext_store_level_close:
```

(End of definition for __enumext_start_store_level: and __enumext_stop_store_level:.)

__enumext_before_list:

The function __enumext_before_list: will add the vertical spacing on the environment if the above key is active next to the $\{\langle code \rangle\}$ defined by the before* key if it is active.

```
3234 \cs_new_protected:Nn \__enumext_before_list:
3235 {
3236 \__enumext_vspace_above:
3237 \__enumext_before_args_exec:
```

The function $\ensuremath{\texttt{\check_ans_active:}}$ will handle the check answer mechanism, which will be activated with the check-ans key.

```
3238 \__enumext_check_ans_active:
```

When the mini-env key is active it will set the value of the \l__enumext_minipage_right_X_dim to be the width of the __enumext_mini_env* environment on the "right side", using this value together with the value of the \l__enumext_minipage_hsep_X_dim set by the mini-sep key, the value of \l__enumext_minipage_left_X_dim will be set, which will be the width of __enumext_mini_env* environment on the "left side", always having a current \linewidth as maximum width between them.

The boolean variable \l__enumext_minipage_active_X_bool will be activated and the integer variable \g__enumext_minipage_stat_int used by the \miniright command will be incremented, then the function __enumext_mini_addvspace: is called and the __enumext_mini_env* environment on the "left side" will be initialized followed by the "vertical spacing" applied to preserve the "baseline" between the left and right side environments. After these actions, the function __enumext_multicols_start: is called to handle the multicols environment.

Here we use the plain TEX macro \nointerlineskip to prevent baseline "glue" being added between the next pair of boxes in a vertical list.

```
bool_set_true:c { l__enumext_minipage_active_ \__enumext_level: _bool }

int_gincr:N \g__enumext_minipage_stat_int

\__enumext_mini_addvspace:

nointerlineskip\noindent

begin{__enumext_mini_env*}

{ \dim_use:c { l__enumext_minipage_left_ \__enumext_level: _dim } }

}

--enumext_multicols_start:

}
```

(End of definition for __enumext_before_list:.)

__enumext_multicols_start:

The function __enumext_multicols_start: will start the multicols environment according to the value passed by the columns key, then set the default value for \columnsep when columns-sep=0pt and set the value of \multicolsep equal to zero and leave \columnseprule equal to zero for inner levels.

```
3257 \cs_new_protected:Nn \__enumext_multicols_start:
3258
    {
       \int compare:nNnT
         {\int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }
3260
3261
           \dim_compare:nNnT
             { \dim_use:c { l__enumext_columns_sep_ \__enumext_level: _dim } } = { \c_zero_dim }
               \dim_set:cn { l__enumext_columns_sep_ \__enumext_level: _dim }
                 {
                   ( \dim_use:c { l__enumext_labelwidth_ \__enumext_level: _dim }
                     + \dim_use:c { l__enumext_labelsep_ \__enumext_level: _dim }
                   ) / \int_use:c { l__enumext_columns_ \__enumext_level: _int }
                    - \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim }
                 }
           \dim_set_eq:Nc \columnsep { l__enumext_columns_sep_ \__enumext_level: _dim }
           \skip_zero:N \multicolsep
           \int_compare:nNnT { \l__enumext_level_int } > { 1 }
               \dim_zero:N \columnseprule
```

We will calculate the *vertical spacing* settings for the multicols environment using the function __enumext_multi_addvspace:, apply our "*vertical adjust spacing*", then start the multicols environment.

(End of definition for __enumext_multicols_start:.)

__enumext_multicols_stop:

The function __enumext_multicols_stop: will stop the multicols environment. If the boolean variable \l__enumext_minipage_active_X_bool is false (not nested in __enumext_mini_env*) we will apply our "vertical adjust" spacing.

 $(End\ of\ definition\ for\ \verb|_-enumext_multicols_stop:.|)$

__enumext_after_list:

The function __enumext_after_list: will will check the state of the boolean variable \l__enumext_minipage_active_X_bool, if it is "true" a small test will be executed to check if we have omitted the use of \miniright (the __enumext_mini_env* environment has not been closed), then close __enumext_mini_env* and add the adjusted vertical space \l__enumext_minipage_after_skip, otherwise we will close the multicols environment.

If the check-ans key is active, we set the boolean variable $g_{enumext_check_ans_show_bool}$ to true and copy the "store name" to the variable $g_{enumext_store_name_tl}$.

```
\__enumext_check_ans_key_hook:
```

Now apply the $\{\langle code \rangle\}$ handled by the after key together with the *vertical space* handled by the below key if they are present, set \l__enumext_standar_bool to false and save the *current value* of the counter for series, resume and resume* keys.

```
3314 \__enumext_after_stop_list:
3315 \__enumext_vspace_below:
3316 \bool_set_false:N \l__enumext_standar_bool
3317 \__enumext_resume_save_counter:
3318 }
```

(End of definition for __enumext_after_list:.)

As we don't want our check to be executed check-ans by levels but on the complete list, we will take it out of the enumext environment using the "hook" function __enumext_after_env:nn.

```
3319 \__enumext_after_env:nn {enumext} { \__enumext_execute_after_env: }
```

11.36 The environment keyans

The environment keyans also based on lists. The main differences with the enumext environment are the *nesting* and the way the *answers* (choice) will be stored and checked, this environment is intended exclusively for "*multiple choice questions*".

keyans Now we define the environment keyans also based on lists.

```
3320 \NewDocumentEnvironment{keyans}{ O{}} }
3321
       \__enumext_keyans_safe_exec:
3322
      \__enumext_keyans_parse_keys:n {#1}
       \__enumext_before_list_v:
       \__enumext_start_list:nn
3325
        { \tl_use:N \l__enumext_label_v_tl }
             _enumext_list_arg_two_v:
3328
           \__enumext_before_keys_exec_v:
       }
       \__enumext_check_starred_cmd:n { item }
       \__enumext_stop_list:
3335
       \__enumext_after_list_v:
3336
```

(End of definition for keyans. This function is documented on page 13.)

__enumext_keyans_safe_exec:

The keyans environment will only be available if the save-ans key is active and can only be used at the first level within the enumext environment. We do not want the environment to be nested, so we will set a maximum at this point. If the conditions are not met, an error message will be returned.

```
\cs_new_protected:Nn \__enumext_keyans_safe_exec:
        \bool_if:NF \l__enumext_store_active_bool
3340
          {
3341
            \msg_error:nnnn { enumext } { wrong-place }{ keyans }{ save-ans }
          }
        \int_incr:N \l__enumext_keyans_level_int
        \bool_set_true:N \l__enumext_keyans_env_bool
        \__enumext_keyans_start_line:
        % Set false for interfering with enumext nested in keyans (yes, its possible and crayze)
3347
        \bool_set_false:N \l__enumext_store_active_bool
3348
        \int_compare:nNnT { \l__enumext_keyans_level_int } > { 1 }
3349
          {
            \msg_error:nn { enumext } { keyans-nested }
3351
        \int_compare:nNnT { \l__enumext_level_int } > { 1 }
            \msg_error:nn { enumext } { keyans-wrong-level }
          }
3356
3357
(End of definition for \ensuremath{\setminus}_enumext_keyans_safe_exec:.)
```

__enumext_keyans_parse_keys:n

Parse $[\langle key = val \rangle]$ for keyans environment.

```
3358 \cs_new_protected:Npn \__enumext_keyans_parse_keys:n #1
       \keys_set:nn { enumext / keyans } {#1}
3360
     }
```

(End of definition for $_$ enumext_keyans_parse_keys:n.)

_enumext_before_list_v:

The function __enumext_before_list_v: will add the vertical spacing above the environment if the above key is active next to the $\langle code \rangle$ defined by the before key if it is active.

```
3362 \cs_new_protected:Nn \__enumext_before_list_v:
    {
3363
       \__enumext_vspace_above_v:
       \__enumext_before_args_exec_v:
```

When the mini-env key is active it will set the value of the \l__enumext_minipage_right_v_dim to be the width of the __enumext_mini_env* environment on the left side, using this value together with the value of the \l__enumext_minipage_hsep_v_dim set by the mini-sep key, the value of \l__enumext_minipage_left_v_dim will be set, which will be the width of __enumextt_mini_env* environment on the *right side*, always having \linewidth as the maximum width between them.

```
\dim_compare:nNnT { \l__enumext_minipage_right_v_dim } > { \c_zero_dim }
           \dim_set:Nn \l__enumext_minipage_left_v_dim
©2024 by Pablo González L
```

```
3369 {
3370 \linewidth - \l__enumext_minipage_right_v_dim - \l__enumext_minipage_hsep_v_dim
3371 }
```

The boolean variable \l__enumext_minipage_active_v_bool will be activated and the integer variable \g__enumext_minipage_stat_int used by the \miniright command will be incremented, then the function __enumext_keyans_mini_addvspace: is called and the __enumext_mini_env* environment on left side will be initialized followed by the vertical spacing \l__enumext_minipage_left_skip. Here we use the plain TeX macro \nointerlineskip to prevent baseline "glue" being added between the next pair of boxes in a vertical list.

```
bool_set_true:N \l__enumext_minipage_active_v_bool
int_gincr:N \g__enumext_minipage_stat_int
   \__enumext_keyans_mini_addvspace:
   \nointerlineskip\noindent
   \begin{__enumext_mini_env*}{ \l__enumext_minipage_left_v_dim }
}
```

After these actions, the __enumext_keyans_multicols_start: function is called to handle the multicols environment.

```
3378 \__enumext_keyans_multicols_start:
3379 }
(End of definition for \__enumext_before_list_v:.)
```

__enumext_keyans_multicols_start:

The function __enumext_keyans_multicols_start: will start the multicols environment according to the value passed by the columns key.

```
3380 \cs_new_protected:Nn \__enumext_keyans_multicols_start:
3381 {
3382 \int_compare:nNnT { \l_enumext_columns_v_int } > { 1 }
3383 {
```

Set the default value for \columnsep when columns-sep key is Opt.

Then we will set the value of \multicolsep and \columnseprule equal to zero (we do not want a vertical rule in this environment).

```
\skip_zero:N \multicolsep
dim_zero:N \columnseprule
```

We will calculate the *vertical spacing* settings for the multicols environment using the function __enumext_keyans_multi_addvspace: and apply our "*vertical adjust spacing*", then start the multicols environment.

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_keyans_multicols_start:.)$

__enumext_keyans_multicols_stop:

The function __enumext_keyans_multicols_stop: will stop the multicols environment. If the boolean variable \l__enumext_minipage_active_v_bool is false (not nested in __enumext_mini_env*) we will apply our vertical "adjust" spacing.

```
3405 \cs_new_protected:Nn \__enumext_keyans_multicols_stop:
3406 {
3407 \int_compare:nNnT { \l_enumext_columns_v_int } > { 1 }
3408 {
3409 \end{multicols}
3410 \bool_if:NF \l_enumext_minipage_active_v_bool
©2024 by Pablo González L
```

96 / 136

(End of definition for $_$ enumext_keyans_multicols_stop:.)

__enumext_after_list_v:

The function __enumext_after_list_v: will will check the state of the boolean variable \l__enumext_minipage_active_v_bool, if it is "true" a small test will be executed to check if we have omitted the use of \miniright (the __enumext_mini_env* environment has not been closed), then close __enumext_mini_env* and add the vertical adjustment space \l__enumext_minipage_after_skip, otherwise we will close the multicols environment.

Finally we will apply the $\{\langle code \rangle\}$ handled by the after key together with the *vertical space* handled by the below key if they are present.

(End of definition for __enumext_after_list_v:.)

11.37 The environment keyanspic and \anspic

The keyanspic environment is a list-based environment that uses the same configuration for "spacing" and $\langle label \rangle$ as the keyans environment, but it does not use \item.

The contents are passed to the environment by means of the \anspic command and are placed inside minipage environments, with the $\langle label \rangle$ underneath, adjusting widths according to the options passed to the environment.

Again it is necessary to "adjust" the spacing, both vertical and horizontal, to obtain an output like the one shown in the figure 12.

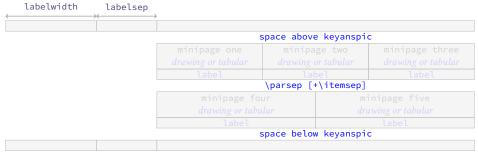

Figure 12: Representation of the keyanspic spacing in enumext.

This implementation is adapted from the answer given by Enrico Gregorio in How to process the body of an environment and divide it by a \macro?.

11.37.1 The command \anspic

\anspic The \anspic command take three arguments, the starred (*) versions \anspic* and \anspic* [\(\content \) | tent\) store the current \(\lambda \lambda bel \rangle \) next to the [\(\content \rangle \rightarrow \) if it is present in the \(\sequence \rangle \) and \(\sequence \rangle \) and \(\sequence \rangle \) defined by save-ans key. This command is used as a replacement for \item in the keyanspic environment.

```
_{3434} \NewDocumentCommand \anspic { s o +m } _{3435} {
```

We check that the command is active in the keyanspic environment only if the save-ans key is present, otherwise we return an error.

```
\bool_if:NF \l__enumext_store_active_bool
3437
           \msg_error:nnnn { enumext } { wrong-place }{ keyanspic }{ save-ans }
         }
       \int_compare:nNnT { \l__enumext_level_int } > { 1 }
         {
3441
           \msg_error:nn { enumext } { keyanspic-wrong-level }
3442
         }
3443
       \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
3444
         {
3445
            \msg_error:nnnn { enumext } { command-wrong-place }{ anspic }{ keyans }
3446
```

The three arguments are handled by the function __enumext_keyans_anspic_code:nnn and stored in the sequence \l__enumext_keyans_pic_body_seq which is processed by the keyanspic environment.

(End of definition for \anspic. This function is documented on page 15.)

__enumext_keyans_anspic_code:nnn

The function $\ensuremath{\mbox{\mbox{-}enumext_keyans_anspic_code:nnn}}$ will be in charge of handling the "counter" and $\langle label \rangle$, which will have the same configuration as the keyans environment.

```
3453 \cs_new_protected:Nn \__enumext_keyans_anspic_code:nnn
3454
       \stepcounter { enumXvi }
3455
       #3 \\
3456
       \bool_if:nT { #1 }
3457
3458
           \__enumext_keyans_addto_prop:n { #2 }
3459
           \__enumext_keyans_store_ref:
           \int_gincr:N \g__enumext_check_starred_cmd_int
3462
           \bool_lazy_or:nnT
             { \bool_if_p:N \l__enumext_show_answer_bool }
             { \bool_if_p:N \l__enumext_show_position_bool }
3465
3466
               \tl_set_eq:NN \l__enumext_label_v_tl \l__enumext_label_vi_tl
               \__enumext_keyans_show_left:n { #2 }
               \tl_set_eq:NN \l__enumext_label_vi_tl \l__enumext_label_v_tl
        }
      \verb|\tl_use:N \l__enumext_label_font_style_v_tl|
3472
         _enumext_wrapper_label_v:n { \l__enumext_label_vi_tl } \__enumext_keyans_show_item_opt:
3473
3474
```

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_keyans_anspic_code:nnn.)$

11.37.2 The environment keyanspic

keyanspic Now we define the environment keyanspic based on list. The optional argument $\lceil \langle number\ above, number\ below \rangle \rceil$ will determine the number of minipage environments that will be above and below separated by \parsep+\itemsep within it.

We apply the "adjusted" vertical spacing above the environment

```
3483 \rightarrow \text{vspace { \l_enumext_keyans_pic_above_skip }
3484 }
```

If the optional argument is not present, the number of times the \anspic command appears will be counted from \l__enumext_keyans_pic_body_seq and placed in minipage environments on a single line. Finally we check if \anspic* has been used, set the counter to zero and apply our "adjusted" vertical space below the environment.

(End of definition for keyanspic. This function is documented on page 14.)

__enumext_keyans_pic_safe_exec:

The function __enumext_keyans_pic_safe_exec: check nested and level position inside the enumext environment.

```
3497 \cs_new_protected:Nn \__enumext_keyans_pic_safe_exec:
3498 {
3499    \int_incr:N \l_enumext_keyans_pic_level_int
3500    \int_compare:nNnT { \l_enumext_keyans_pic_level_int } > { 1 }
3501    {
3502         \msg_error:nn { enumext } { keyanspic-nested }
3503    }
3504    \__enumext_keyans_start_line:
3505 }
```

(End of definition for __enumext_keyans_pic_safe_exec:.)

__enumext_keyans_pic_skip_abs:N

The function __enumext_keyans_pic_skip_abs: N will return a positive value \parsep.

(End of definition for __enumext_keyans_pic_skip_abs:N.)

__enumext_keyans_pic_arg_two:

The function __enumext_keyans_pic_arg_two: will be used in the second argument of the __enumext_-start_list:nn function that defines the keyanspic environment, it will handle the setting of spaces.

```
3511 \cs_new_protected:Nn \__enumext_keyans_pic_arg_two:
```

The first thing to do is to set the boolean variable \l__enumext_leftmargin_tmp_v_bool handled by the list-indent key to false, then we copy the definition of the second list argument from the keyans environment.

```
3513 \bool_set_false:N \l__enumext_leftmargin_tmp_v_bool
3514 \__enumext_list_arg_two_v:
```

We will add the value of \itemsep to \parsep which we will use as vertical spacing between the above and below minipage environments. and adjust the value of \leftmargin, the label and counter are handled directly by the \anspic command. Then we make equal to zero \labelwidth, \labelsep, \partopsep and \itemsep so that the horizontal and vertical spacing is not affected.

```
\skip_add:Nn \parsep { \itemsep }
\dim_add:Nn \leftmargin { -\labelwidth - \labelsep }
\dim_zero:N \labelwidth
\dim_zero:N \listparindent
\dim_zero:N \labelsep
\skip_zero:N \partopsep
\skip_zero:N \itemsep
```

We set the value of \l__enumext_keyans_pic_above_skip which we will use to apply our "adjust" space above keyanspic, finally we call __enumext_item_std:w followed by \scan_stop: to prevent the error message returned by \text{ETEX} when not using the \item command.

```
3522 \__enumext_keyans_pic_skip_abs:N \parsep
3523 \skip_set:Nn \l__enumext_keyans_pic_above_skip
3524 {
©2024 by Pablo González L
```

```
\displaystyle="font-family: square;"
\displ
```

__enumext_keyans_pic_do:n
__enumext_keyans_pic_do:e

The optional argument is split by comma and is handled directly by the function __enumext_keyans_-pic_do:n and passed to the function __enumext_keyans_pic_row:n.

(End of definition for $\ensuremath{\setminus}$ _enumext_keyans_pic_do:n.)

__enumext_keyans_pic_row:n

The function __enumext_keyans_pic_row:n will set the widths for the minipage environments and place the content $\langle stored \rangle$ by \anspic* in the \l__enumext_keyans_pic_body_seq sequence inside them.

```
3536 \cs_new_protected:Nn \__enumext_keyans_pic_row:n
       \dim_set:Nn \l__enumext_keyans_pic_width_dim { \linewidth / #1 }
3538
       \int_set:Nn \l__enumext_keyans_pic_above_int { \l__enumext_keyans_pic_below_int }
       \int_set:Nn \l__enumext_keyans_pic_below_int { \l__enumext_keyans_pic_above_int + #1 }
       \int_step_inline:nnn
3541
         { \l__enumext_keyans_pic_above_int + 1 }
3542
         { \l__enumext_keyans_pic_below_int }
         {
             _enumext_minipage:w [ b ]{ \l__enumext_keyans_pic_width_dim }
             \centering
             \seq_item:Nn \l__enumext_keyans_pic_body_seq { ##1 }
           \__enumext_endminipage:
         }
       \par
```

(End of definition for $_$ enumext_keyans_pic_row:n.)

11.38 The horizontal environments

Generating horizontal list environments is NOT as simple as standard LageX list environments. The fundamental part of the code is adapted from the shortlst package to a more modern version using expl3. It is not possible to redefine \item and \makelabel as in the non starred versions (at least I have not achieved it) and as we will make it behave differently, we have no other option than to define a cascade of functions.

To achieve the horizontal list environment we will capture the \item command and the content of this in an plain lrbox box using \makebox for the label and a minipage environment for the content passed to \item, we will also add the optional argument ($\langle number \rangle$) to \item to be able to join columns horizontally, in simple terms, we want \item to behave in the same way as in the enumext environment but adding an optional first argument ($\langle number \rangle$).

11.38.1 Functions for item box width

__enumext_starred_columns_set_vii:
__enumext_starred_columns_set_viii:

We set the default value for the width of the box containing the content of the items and create \itemwidth in a public form.

```
/ \l__enumext_columns_vii_int - \l__enumext_labelwidth_vii_dim
             \l__enumext_labelsep_vii_dim
       \dim_zero_new:N \itemwidth
3569
    }
   \cs_new_protected:Nn \__enumext_starred_columns_set_viii:
3572
       \dim_compare:nNnT { \l__enumext_columns_sep_viii_dim } = { \c_zero_dim }
           \dim_set:Nn \l__enumext_columns_sep_viii_dim
             {
               ( \l__enumext_labelwidth_viii_dim + \l__enumext_labelsep_viii_dim )
               / \l__enumext_columns_viii_int
         }
       \int_set:Nn \l__enumext_tmpa_viii_int { \l__enumext_columns_viii_int - 1 }
3581
       \dim_set:Nn \l__enumext_item_width_viii_dim
3582
         {
3583
           ( \linewidth - \l__enumext_columns_sep_viii_dim * \l__enumext_tmpa_viii_int )
3584
             \l__enumext_columns_viii_int - \l__enumext_labelwidth_viii_dim
            \l__enumext_labelsep_viii_dim
       \dim_zero_new:N \itemwidth
3589
```

(End of definition for __enumext_starred_columns_set_vii: and __enumext_starred_columns_set_viii:)

11.38.2 Functions for join item columns

__enumext_starred_joined_item_vii:n
__enumext_starred_joined_item_viii:n

The functions __enumext_starred_joined_item_vii:n and __enumext_starred_joined_item_viii:n will set the *width* of the box in which the content passed to $\langle columns \rangle$ will be stored together with the value of $\langle columns \rangle$.

```

11.38.3 Functions for mini-env, mini-right and mini-right* keys

__enumext_start_mini_vii:
__enumext_stop_mini_vii:

The implementation of the mini-env key support is almost identical to the one used in the enumext and keyans environments, the difference is that the __enumext_mini_env* environment on the "right side" is executed "after" closing the environment, so it is necessary to make a global copy of the variable \l_enumext_minipage_right_vii_dim in the variable \g_enumext_minipage_right_vii_dim.

The function __enumext_stop_mini_vii: closes the __enumext_mini_env* environment on the left side, applies \hfill and sets the value of the variable \g__enumext_minipage_active_vii_bool to true which will be used in the function __enumext_after_env:nn to execute the __enumext_mini_env* on the "right side".

Finally we execute the $\{\langle code \rangle\}$ passed to the mini-right or mini-right* keys stored in the variable \g__enumext_miniright_code_vii_tl in the __enumext_mini_env* environment on the "right side". For compatibility with the caption package and possibly other $\{\langle code \rangle\}$ passed to this key, we will pass it to a box and then print it.

```

11.39.2 Real definition of \item in enumext*

__enumext_start_item_vii:w

The functions __enumext_start_item_vii:w and __enumext_stop_item_vii: executing the true definition of \item inside the enumext* environment.

The first thing we will do is set the value of __enumext_stop_item_tmp_vii: equal to __enumext_-stop_item_vii: which we will define later and add the hyperref compatible enumXvii counter, after that we will start capturing the item content in a box. Here need setting the \ifehyper@item switch

to "true" for hyperref compatible. The explanation for this is given by the master Heiko Oberdiek on \refstepcounter{enumi} twice (or more) creates destination with the same identifier.

```
3946 \cs_new_protected_nopar:Npn \__enumext_start_item_vii:w [#1]
    {
3947
      3948
      \legacy_if:nT { @noitemarg }
3949
3950
          \legacy_if_set_false:n { @noitemarg }
3951
          \legacy_if:nT { @nmbrlist }
3952
3953
             \bool_if:NT \l__enumext_hyperref_bool
               {
                 \legacy_if_set_true:n { @hyper@item }
               }
             \refstepcounter{enumXvii}
3958
             \bool_if:NT \l__enumext_check_answers_bool
                 \int_gincr:N \g__enumext_item_number_int
               }
           }
        }
```

Here we start capturing \item and its contents into a group using the plain form of the lrbox environment. If the state of the variable \l__enumext_footnotes_key_bool is false, we will redefine the command \footnote, followed by printing the \langle symbol \rangle defined for \item* if it is present and open a new group inside which we execute font key next to \item and the keys wrap-label, wrap-label*, align, close the group and execute the key labelsep and then the key first. Finally we open the minipage environment and execute the listparindent key which will be equal to \parindent, the parsep key which will be equal to \parindent key and the itemindent key.

```

```

11.40.1 The command \item in keyans*

The idea here is to make the \item command behave in the same way as in the keyans environment with the difference of the optional argument $(\langle number \rangle)$ which works in the same way as in the enumext* environment. In simple terms we want to store the $\langle label \rangle$ next to the $\lceil \langle content \rangle \rceil$ if it is present in the $\langle sequence \rangle$ and $\langle prop \ list \rangle$ defined by save-ans key for \item*, \item* $\lceil \langle content \rangle \rceil$, \item($\langle number \rangle$)* and \item($\langle number \rangle$)* $\lceil \langle content \rangle \rceil$ commands.

__enumext_start_item_tmp_viii:

First we will call the function __enumext_stop_item_tmp_viii: that we will redefine later, we will increment the value of \l__enumext_item_column_pos_viii_int that will count the item's by rows and the value of \g__enumext_item_count_all_viii_int that will count the total of item's in the environment. After that we will call the function __enumext_item_peek_args_viii: that will handle the arguments passed to \item.

```
4097 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_viii:
4098 {
4099     \__enumext_stop_item_tmp_viii:
4100     \int_incr:N \l__enumext_item_column_pos_viii_int
4101     \int_gincr:N \g__enumext_item_count_all_viii_int
4102     \__enumext_item_peek_args_viii:
4103 }
```

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_start_item_tmp_viii:.)$

__enumext_item_peek_args_viii:

The function __enumext_item_peek_args_viii: will handle the \item($\langle number \rangle$). Look for the argument "(", if it is present we will call the function __enumext_joined_item_viii:w ($\langle number \rangle$), which is in charge of joining the item's in the same row, in case they are not present we will set the default value (1).

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_item_peek_args_viii:.)$

__enumext_joined_item_viii:w

The function __enumext_joined_item_viii:w will first call the function __enumext_starred_-joined_item_viii:n in charge of setting the *width* of the box that will store the content passed to \item. Then we will look for the argument "*", if it is present we will call the function __enumext_starred_-item_viii:w otherwise we will call the function __enumext_standar_item_viii:w.

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_joined_item_viii:w.)$

\ enumext standar item viii:w

The function __enumext_standar_item_viii:w will first look for the argument "[", if present it will set the state of the variable \l__enumext_wrap_label_opt_viii_bool equal to the state of the variable \l__enumext_wrap_label_opt_viii_bool handled by the key wrap-label* and finally execute the non-enumerated version \item[\langle custom \rangle] by means of the function __enumext_start_item_viii:w, otherwise we will set the value of the variable \l__enumext_wrap_label_viii_bool handled by the wrap-label key to true and set the switch \if@noitemarg to true to execute the enumerated version of \item by means of the function __enumext_start_item_viii:w [\l__enumext_label_viii_tl

4278
```

(End of definition for __enumext_remove_extra_parsep_viii:.)

11.41 The command \getkeyans

\getkeyans

The \getkeyans command takes a mandatory argument of the form $\{\langle store\ name: position \rangle\}$. Retrieve a "single" content stored by \anskey, \anspic* and \item* from $\langle prop\ list \rangle$ defined by save-ans key.

(End of definition for \getkeyans. This function is documented on page 15.)

__enumext_getkeyans_aux:n

The internal function $_$ _enumext_getkeyans_aux:n is in charge of *splitting* the $\langle argument \rangle$ using ":". If ":" is omitted it will return an error.

__enumext_getkeyans:nn

The internal function __enumext_getkeyans:nn will check for the existence of the $\langle prop\ list \rangle$, if it does not exist it will return an error message, then it will fetch the content specified by the second $\langle argument \rangle$ from $\langle prop\ list \rangle$.

(End of definition for $_$ enumext_getkeyans:nn.)

11.42 The command \printkeyans

The \printkeyans command prints "all stored content" in the $\langle sequence \rangle$ defined by the save-ans key. The first thing we will do is define a set of $\langle filtered\ keys \rangle$ with which we will control the options of the different nesting levels for the environment enumext and enumext* by storing their values in the list of tokens \l__enumext_print_keyans_X_tl.

The variable \l_enumext_print_keyans_starred_tl will have the default $\langle \mathit{keys} \rangle$ for \printkeyans* and will be set by \setenumext[$\langle \mathit{print*} \rangle$] and the variable \l_enumext_print_keyans_vii_tl will have the default keys for the environment enumext* nested within the $\langle \mathit{sequence} \rangle$ and will be set by \setenumext[$\langle \mathit{print*}, * \rangle$], the rest of the variables will be for the environment enumext and will be set by \setenumext[$\langle \mathit{print*}, \mathit{level} \rangle$]

```
4306 \cs_generate_variant:Nn \keys_precompile:nnN { neN }
4307 \keys_define:nn { enumext / print }
       print*
               .code:n
                           = \keys_precompile:neN { enumext / enumext* }
                                { \__enumext_filter_save_key:n {#1} }

4312
                           = \keys_precompile:neN { enumext / level-1 }
       print-1 .code:n
                                { \__enumext_filter_save_key:n {#1} }
                                \l__enumext_print_keyans_i_tl,
4315
       print-1 .initial:n = { nosep, label=\arabic*., columns=2, first=\small, font=\small },
       print-2 .code:n
                           = \keys_precompile:neN { enumext / level-2 }
                                { \__enumext_filter_save_key:n {#1} }
4318
                                \l__enumext_print_keyans_ii_tl,
       print-2 .initial:n = { nosep, label=(\alph*), first=\small, font=\small },
                           = \keys_precompile:neN { enumext / level-3 }
       print-3 .code:n
                                { \__enumext_filter_save_key:n {#1} }
                                \l__enumext_print_keyans_iii_tl,
       print-3 .initial:n = { nosep, label=\roman*., first=\small, font=\small },
       print-4 .code:n
                           = \keys_precompile:neN { enumext / level-4 }
                                { \__enumext_filter_save_key:n {#1} }
4326
                                \l__enumext_print_keyans_iv_tl,
       print-4 .initial:n = { nosep, label=\Alph*., first=\small, font=\small },
4328
       print-* .code:n
                           = \keys_precompile:neN { enumext / enumext* }
                                { \__enumext_filter_save_key:n {#1} }
                                \l__enumext_print_keyans_vii_tl, % starred nested
4331
       print-* .initial:n = { nosep, label=\arabic*., first=\small, font=\small },
```

The reason for storing $\langle keys \rangle$ in token lists using \keys_precompile:neN is because the keys are set via \setenumext but are later executed by running the command \printkeyans and they are not handled directly by its optional argument, except those related to the first opening level.

\printkeyans

Create a user command to print "all stored content" in \(\sequence \) for \\ anskey, anskey*, \\ item* and \\ anspic*. Within a group we will run our "precompiled keys" and then call the internal function __enumext_printkeyans:nnn.

```
4334 \NewDocumentCommand \printkeyans { s O{} m }
4335 {
4336 \group_begin:
©2024 by Pablo González L
```

(End of definition for \printkeyans. This function is documented on page 16.)

__enumext_printkeyans:nnn

If the starred argument is present we will check that the environment enumext* is not saved in the $\langle sequence \rangle$, then execute the variable \l__enumext_print_keyans_starred_tl that contains the default $\langle keys \rangle$ for the environment enumext*, it will open the environment enumext* passing the optional argument to the "first level", set the key base-fix and then will map the $\langle sequence \rangle$.

```
