

# V1.0 2024-05-12\*

©2024 by Pablo González†

CTAN: https://www.ctan.org/pkg/enumext

https://github.com/pablgonz/enumext

#### **Abstract**

This package provides "enumerated list" environments for creating "simple exercise sheets" along with "multiple choice questions", storing the  $\langle answers \rangle$  to these in memory using the multicol package and the l3seq and l3prop modules.

### **Contents**

1	Introduction	2	4	The storage system	ç

# Motivation and acknowledgments

Usually it is enough to use the classic enumerate environment to generate "simple exercise sheets" or "multiple choice questions", the basic idea behind enumext is to cover three points:

- 1. To have a simple interface to be able to write "lists of exercises" with "answers".
- 2. To have a simple interface for writing "multiple choice questions".
- 3. To have a simple interface for placing "columns" and "drawings" or "tables".

This package would not be possible without Phelype Oleinik who has collaborated and adapted a large part of the code and all Large Text team for their great work and to the different members of the TeX-SX community who have provided great answers and ideas. Here a note of the main ones:

- 1. Answer given by Alan Munn in \topsep, \itemsep, \partopsep, \parsep what do they each mean (and what about the bottom)?
- 2. Answer given by Enrico Gregorio in Understanding minipages aligning at top
- 3. Answer given by Ulrich Diez in Different mechanics of hyperlink vs. hyperref
- 4. Answer given by Enrico Gregorio in Minipage and multicols, vertical alignment

# **License and Requirements**

Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License (lppl), version 1.3 or later (https://www.latex-project.org/lppl.txt). The software has the status "maintained".

The enumext package loads and requires multicol[3] package, need to have a modern TeX distribution such as TeX Live or MiKTeX. It has been tested with the standard classes provided by ETeX: book, report, article and letter on 10pt, 11pt and 12pt.

§.1 Introduction enumext v1.0

# Introduction

In the ETFX world world there are many useful packages and classes for creating "lists of exercises", "worksheets" or "multiple choice questions", classes like exam[1] and packages like xsim[2] do the job perfectly, but they don't always fit the basic day to day needs.

In my work (and in the work of many teachers) it is common to use "simple exercise sheets" also known as "informal lists of exercises", as an example:

- 1. Factor  $x^2 2x + 1$
- 2. Factor 3x + 3y + 3z
- 3. True False
  - (a)  $\alpha > \delta$
  - (b) LaTeX2e is cool?
- 4. Related to Linux

- (a) You use linux?
- (b) Usually uses the package manager?
- (c) Rate the following package and class
  - xsim-exam
  - ii. xsim
  - iii. exsheets

Sometimes we are also interested in showing the "answers" along with the questions:

- 1. Factor  $x^2 2x + 1$
- $(x-1)^2$
- 2.  $\overline{\text{Factor } 3x} + 3y + 3z$
- 3(x+y+z)
- 3. True False
  - (a)  $\alpha > \delta$ \* False
  - (b) LATEX2e is cool? \* | Very True!
- 4. Related to Linux

- (a) You use linux?
  - Yes
- (b) Usually uses the package manager?
  - \* Yes, dnf
- (c) Rate the following package and class
  - xsim-exam doesn't exist for now:(
  - xsim
  - \* | very good
  - iii. exsheets
  - \* obsolete

Or we are interested in referring to a specific question and its "answer", for example:

The answer to 3.(b) is "Very True!" and the answer to 4.(c).ii is "very good".

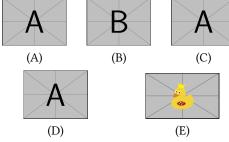

Or we are interested in printing all the "answers":

- 1.  $(x-1)^2$
- 2. 3(x+y+z)
- 3. (a) False
  - (b) Very True!
- 4. (a) Yes

- (b) Yes, dnf
- (c) i. doesn't exist for now :(
  - ii. very good
  - iii. obsolete
- Another very common thing to use in my work is "multiple choice questions", for example:
- 1. First type of questions
  - (A) value
- (C) value
- (B) correct
- (D) value
- 2. Second type of questions
  - $2\alpha + 2\delta = 90^{\circ}$
  - II.  $\alpha = \delta$
  - III.  $\angle EDF = 45^{\circ}$
  - (A) I only
- (D) I and III only
- (B) II only
- (E) I, II, and III
- (C) I and II only

4. Question with image and label below:

5. Question with image on left side:

- $\star$  3. Third type of questions
  - (1)  $2\alpha + 2\delta = 90^\circ$
  - (2)  $\angle EDF = 45^{\circ}$
  - (A) value
- (D) value
- (B) value (C) value
- (E) value

(A) value

(B) value

(C) value

(D) correct (E) value

Where what we are interested in the  $\langle label \rangle$  and a "short note" that we leave as an explanation, and then print them:

- 1. (B), x = 5
- 2. (D)
- 3. (C), some note

- \* 4. (B)
- 5. (D), "other note"

These "simple worksheets" or "multiple choice questions" appear to be easy to obtain using a combination of the enumerate, minipage and multicols environments, but like many things, what "looks simple" is not so simple.

The enumext package was created and designed to meet these small requirements in the creation of "simple worksheets" and "multiple choice questions".

### 1.1 Description and usage

The enumext package defines enumerated environments using the list environment provided by LTEX, but "does not redefine" any internal commands associated with it such as \list, \endlist or \item outside of the "scope" in which they are defined.

This package is NOT intend to replace the enumerate environment nor replace the powerful enumitem[5], the approach is intended to work without hindering either of them.

This package can be used with xelatex, lualatex, pdflatex and the classical latex»dvips»ps2pdf and is present in TeX Live and MiKTeX, use the package manager to install. For manual installation, download enumext.zip and unzip it, run lualatex enumext.dtx and move all files to appropriate locations, then run mktexlsr. To produce the documentation run lualatex enumext.dtx two times.

The package is loaded in the usual way:

```
\usepackage{enumext}
```

## 1.2 The concept of left margin

There is a direct relationship between the parameters \leftmargin, \itemindent, \labelwidth and \labelsep plus an "extra space" that makes it difficult to obtain the desired horizontal spaces in a list environment.

Usually we don't want the list to go beyond the left margin of the page, but since these four values are related, that causes a problem. The enumitem[5] package adds the \labelindent parameter to solve some of these problems. A simplified representation of this in the figure 1.

Figure 1: Representation of horizontal lengths in enumitem.

The enumext package does NOT provide a user interface to set the values for \leftmargin and \itemindent, instead it provides the keys list-offset and list-indent which internally set the values for \leftmargin and \itemindent. The concepts of \leftmargin and \itemindent are different in enumext. The figure 2 shows the visual representation of idea.

Figure 2: Representation of horizontal lengths concept in enumext.

In this way we reduce a *little* the amount of parameters we have to pass. With the default values of keys list-offset, list-indent, labelwidth and labelsep the lists will have the (usually) expected output for "simple worksheets". The figure 3 shows the visual representation.

 $Figure \ 3: \ Default\ horizontal\ lengths\ \verb|list-offset=0pt|, \ \verb|list-indent=| \ labelwidth+| \ labelsep\ in\ enumext.$ 

# 1.3 User interface

The user interface consists in enumext, enumext\*, keyans, keyans\* and keyanspic environments, \anskey, \item\* and \anspic\* commands to  $\langle stored\ content \rangle$ , \getkeyans command to get the individual  $\langle stored\ content \rangle$ , \printkeyans to print all  $\langle stored\ content \rangle$ , \miniright for minipage and \setenumext to config all  $\lceil \langle key = val \rangle \rceil$  options.

#### 1.3.1 Internal counters

The package enumext uses internally the enumXi, enumXii, enumXii, enumXiv counters for the four nesting levels of the enumext environment, the enumXv counter for the keyans environment, the enumXvi counter for the keyanspic environment, the counter enumXviii for enumext\* environment and the counter enumXviii for keyans\* environment.

If any package defines these counters or they are user-defined in the document, the package will return a missing error and abort the load.

#### 1.3.2 Support for multicol

The package provides direct support for using the multicol[3] package. This allows to obtain directly a two-column output as shown in the figure 4.

Figure 4: Representation of the two column output for a nested level in enumext environment.

The "non starred" version of the multicols environment is always used together with the \raggedcolumns command and is controlled by columns and columns-sep keys. The environment is available for all nesting levels, and can can together with the mini-env key. If you need to force a start a new column \columnbreak must be used (see §3.5).

The \columnseprule command is not available as a key and is set to "zero" for the inner levels and the keyans environment. If the value of this is set inside the document, it will affect "all environments" that use the columns key.

#### 1.3.3 Support for minipage

The package provides direct support for minipage environment, this allows you to obtain an output like the one shown in figure 5.

Figure 5: Representation of the mini-env output for a nested level enumext environment.

The minipage environments (left and right) is always used with "aligned on top" [t], the minipage environment on the "right side" always starts with \centering. It can be used at all nesting levels and is controlled by mini-env and mini-sep keys. In order to switch from the "left" side minipage environment to the "right" side one must use the command \miniright (see §3.6).

#### 1.3.4 The \label and \ref system

This package provides a user interface like the <code>enumitem[5]</code> package to customize the references which is activated by the <code>ref</code> key (§3.1), the standard <code>ETEX \label</code> and <code>\ref</code> commands work as usual. It also provides an "internal reference" system for the "stored content" by means of the key <code>save-ref</code> (§4.2) when the key <code>save-ans(§4.1)</code> is active.

The implementation of \label and \ref together with the save-ref key are compatible with the hyperref[7] package.

#### 1.3.5 Support for \footnote

This package provides an internal implementation for the \footnote command which is compatible with the hyperref package, but, it will not produce the expected links, and when using the mini-env key or the starred environments enumext\* and keyans\* the output will look like the classic way they are displayed in the minipage environment.

The best way to solve this is to use Jean-François Burnol footnotehyper[8] package, it will support keeping the links if hyperref is loaded with the hyperfootnotes=true option (default) and will show the output numbered at the bottom of the page (as opposed to how it is displayed in the minipage environment). The way to load it is as follows:

```
\usepackage{footnotehyper}
\makesavenoteenv{enumext}
\makesavenoteenv{enumext*}
```

# 2 The environment enumext

The enumext is an "enumerated list" environment that works in the same way as the standard enumerate environment provided by LTEX, \item and \item[\( custom \) ] commands work in the usual way.

The environment can be nested with at most "four levels" and the options can be configured globally using \setenumext command and locally using  $[\langle key = val \rangle]$  in the environment.

#### Example

- 1. This text is in the first level.
  - (a) This text is in the second level.
    - This text is in the third level.
      - A. This text is in the fourth level.
- X This text is in the first level.
- ★ 2. This text is in the first level.

```
\begin{enumext}
  \item This text is in the first level.
    \begin{enumext}
      \item This text is in the second level.
        \begin{enumext}
          \item This text is in the third level.
            \begin{enumext}
              \item This text is in the fourth level.
            \end{enumext}
        \end{enumext}
    \end{enumext}
  \item[X] This text is in the first level.
  \item* This text is in the first level.
\end{enumext}
```

#### The \item\* in enumext 2.1

```
\item* \item*
```

```
\item*[\langle symbol \rangle]
\times [\langle symbol \rangle] [\langle offset \rangle]
```

The  $\lceil \text{item}^*, \text{item}^* [\langle symbol \rangle]$  and  $\lceil \text{item}^* [\langle symbol \rangle] [\langle offset \rangle]$  works like the numbered  $\rceil$  item, but placing a  $\langle symbol \rangle$  to the "left" of the  $\langle label \rangle$  separated from it by the value set by the labelsep key and can be  $\langle offset \rangle$  using the second optional argument. The default values for  $\langle symbol \rangle$  and  $\langle offset \rangle$  are \$\star\$'\*' and the value set by labelsep key.

The starred version '\*' cannot be separated by spaces '' from the command, i.e. \item\* and the first optional argument does "not support" verbatim content. Can be configure with the keys item-sym\* and item-pos\* locally in the environment or globally using \setenumext command (§3).

of The behavior of \item∗ in the enumext environment is NOT the same as in the keyans environment.

#### 2.1.1 Keys for \item\* in enumext

```
item-sym^* = \{\langle symbol \rangle\}
```

default: \$\star\$

Sets the *symbol* to be displayed in the "left" of the box containing the current \( label \) set by labelwidth key for \item\* in enumext. The symbol can be in text or math mode, for example item-sym\*={\$\ast\$}.

```
item-pos* = \{\langle rigid\ length \mid dim\ expression \rangle\}
```

Sets the offset between the box containing the current  $\langle label \rangle$  defined by labelwidth key and the  $\langle symbol \rangle$ set by item-sym\* key. The default values are set by labelsep key at each level. If positive values are passed it will offset to the left and if negative values are passed it will offset to the right.

#### **The command** \setenumext

```
\setenumext \setenumext[\langle enumext, level \rangle] {\langle key = val \rangle}
                                                                                                                              \strut_{\langle enumext^* \rangle} \{ \langle key = val \rangle \}
                        \strut = \strut | \langle print, level \rangle | \{\langle key = val \rangle \}
                                                                                                                              \star{\text{setenumext}}[\langle keyans^* \rangle] \{\langle key = val \rangle\}
                        \strut \langle keyans \rangle ] \{ \langle key = val \rangle \}
                                                                                                                              \star{|\langle print^* \rangle|} {\langle key = val \rangle}
```

The command \setenumext sets the \langle keys\rangle on a global basis for environment enumext, the \printkeyans command and the keyans environment. It can be used both in the preamble and in the body of the document as many times as desired.

The \(\lambda \text{keys}\rangle\) set in the optional arguments of environments and commands have the highest precedence, overriding both options passed by \setenumext. If the optional argument is not passed, the first level of the environment enumext will be taken by default.

It should be kept in mind that using any  $\langle key \rangle$  that sets a *rubber or rigid lengths* for vertical or horizontal space on a level will influence the vertical and horizontal space for *inners levels* and keyans and keyanspic environments. All  $\langle keys \rangle$  related to vertical or horizontal spacing accept a "skip" or "dim" expression if passed between braces, i.e. you do not need to use \dimexpr or \dimeval to perform calculations.

# 3.1 Keys for label and ref

```
label = {\\alph* | \Alph* | \arabic* | \roman* | \Roman* \}
```

default: by levels

Sets the  $\langle label \rangle$  that will be printed at the *current level*. The default value for first level are  $\arabic^*$ , for second level are  $\arabic^*$ , for third level are  $\arabic^*$ , and for fourth level are  $\arabic^*$ .

This key is intended to give the basic structure with which the  $\langle label \rangle$  will be displayed, and the and the form in which it is used by standard "label and ref" and the "internal reference" system with the save-ref key. You cannot use commands with  $\langle label \rangle$  as an argument, for example  $\mbox{emph}\{\langle \mbox{alph}^* \rangle\}$  will return an error. For full customization of how  $\langle label \rangle$  is displayed use the font or wrap-label keys.

```
ref = \{ \langle code \ \{ \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \ | \ \
```

default: empty

Modifies the way *cross references* are displayed. The label key sets the default form of the *cross references*, by using this key you can define a different format, for example:  $ref=\ensuremath{\texttt{emph}}\{\langle \mathtt{alph}^* \rangle\}$  is valid.

Internally, it renews the command associated with each counter when it is executed, i.e., \theenumXi is modified when the key is executed at the first level, \theenumXii when it is executed at the second level and \theenumXiii together with \theenumXiv when it is executed at the third and fourth levels.

This must be kept in mind, since the values set by the label and ref keys are not cumulative by levels, so if you have used the ref key in the first level and then want to associate the counter with label or ref in the second level you must use the direct commands, i.e. \arabic{eunumXi} to indicate the count of the first level instead of using \theenumXi.

```
labelsep = \{\langle rigid \ length \rangle\}
```

default: 0.3333em

Sets the *horizontal space* between the box containing the current  $\langle label \rangle$  defined by label key and the text of an item on the first line. Internally sets the value of \labelsep for the current level.

```
labelwidth = \{\langle rigid \ length \rangle\}
```

default: by label

Sets the *width* of the box containing the current  $\langle label \rangle$  set by label key. Internally sets the value of  $\label width$  for the current level. The default values are calculated by means of the *width* of a box by setting a *value* to the current counter using '0' for  $\arabic^*$ , 'M' for  $\arabic^*$ , 'm' for  $\arabic^*$ , 'm' for  $\arabic^*$ , 'WIII' for  $\arabic^*$ , and 'viii' for  $\arabic^*$ .

```
widest = \{ \langle integer \mid string \rangle \}
```

default: empty

Sets the labelwidth key pass the *(integer)* or converting the *(string)* of the form \Alph, \alph, \Roman or \roman to a *value* for the current counter defined by label key, then calculating the *width* by means of a box. For example widest={XXIII} or widest={23} are equivalent. This key is useful when the default values of the labelwidth key are smaller than those actually used.

```
font = \{\langle font \ commands \rangle\}
```

default: empty

Sets the *font style* for the current  $\langle label \rangle$  defined by label key. For example font={\bfseries\small}.

```
align = \{ \langle left \mid right \mid center \rangle \}
```

default: left

Sets the *aligned* of  $\langle label \rangle$  defined by label key on the current level in the label box.

```
\mathsf{wrap-label} = \{ \left\langle \mathit{code} \; \{ \texttt{\#1} \} \; \; \mathit{more} \; \mathit{code} \right\rangle \}
```

default: empty

Wraps the current  $\langle label \rangle$  defined by label key referenced by  $\{\#1\}$ . The  $\{\langle code \rangle\}$  must be passed between braces. This key does not modify the value set by the labelwidth key and is applied only on \item and \item\*. When using it in the \setenumext command it is necessary to use the *double hash* ' $\{\#\#1\}$ '. For example wrap-label= $\{\footnotem\}$  or you can create a command:

and then pass it through the key  $wrap-label={\langle itembx\{\#1\} \rangle}$  or  $wrap-label={\langle itembx^{\#1} \rangle}$ .

```
wrap-label* = \{ \langle code \{ #1 \} | more code \rangle \}
```

default: empty

The same as the wrap-label key but also applies on  $\idetime [\langle custom \rangle]$ .

#### 3.2 Keys for spaces

```
\texttt{show-length} = \{ \left< \textit{true} \mid \textit{false} \right> \}
```

default: false

Displays on the terminal the values for *all list parameters* at the current level. For *vertical spaces* show the values of \topsep, \itemsep, \parsep and \partopsep. For *horizontal spaces* show the values of \labelwidth, \labelsep, \itemindent, \listparindent and \leftmargin.

#### 3.2.1 Vertical spaces

 $topsep = \{\langle rubber \ length \mid rigid \ length \rangle\}$ 

default: by levels

Set the *vertical space* added to both the top and bottom of the list. Internally sets the value of \topsep for the current level. The default values for first level are 8.0pt plus 2.0pt minus 4.0pt, for second level are 4.0pt plus 2.0pt minus 1.0pt, for third and fourth level are 2.0pt plus 1.0pt minus 1.0pt.

 $parsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}$ 

default: by levels

Set the *vertical space* between paragraphs within an item. Internally sets the value of \parsep for the current level. The default values for first level are 4.0pt plus 2.0pt minus 1.0pt, for second level are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 0pt.

 $partopsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}$ 

default: by levels

Set the *vertical space* added, beyond topsep, to the "top" and "bottom" of the entire environment if the environment instance is preceded by a "blank line" or \par command. Internally sets the value of \partopsep for the current level. The default values for first and second level are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 1.0pt minus 1.0pt.

The value of this parameter also affects the inner levels and the keyans environment. Caution should be taken with "blank lines" or \par command "before" each environment or nested level when formatting the source code of document. TEX will enter ⟨vertical mode⟩ and apply this value to the "top" and "bottom" the environment or nested level.

 $itemsep = \{ \langle rubber \ length \ | \ rigid \ length \rangle \}$ 

efault. hy level

Set the *vertical space* between items, beyond the parsep. Internally sets the value of \itemsep for the current level. The default values for first level are 4.0pt plus 2.0pt minus 1.0pt, for the rest of the levels are 2.0pt plus 1.0pt minus 1.0pt.

noitemsep \( \nu alue forbidden

default: not use

This is a "meta-key" that does not receive an argument. Set itemsep and parsep equal to opt the entire level of environment.

nosep (value forbidden)

default: not used

This is a "meta-key" that does not receive an argument. Sets all keys for vertical spacing equal to opt the entire level of environment.

The following  $\langle keys \rangle$  should be used with "caution", they are intended to be used at the "top" and "bottom" of the environment when the columns or mini-env keys do not provide adequate vertical spaces. The values passed can be rubber or rigid lengths, the way they are applied is the way you differ, using the star '\*'  $\langle keys \rangle$  applies \vspace\* so that LTEX does not discard this space at page break.

 $above = \{ \langle rubber\ length \mid rigid\ length \rangle \}$ 

default: not used

Set the *extra vertical space* added, beyond topsep, to the top of the entire level of environment. This key is intended to give a "*fine adjustment*" of the vertical space on the "*above*" the environment without hindering the value of the topsep key. The space is added with \vspace so is "*discardable*".

 $above* = \{\langle rubber\ length \mid rigid\ length \rangle\}$ 

default not use

Set the *extra vertical space* added, beyond topsep, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"above"* the environment without hindering the value of the topsep key. The space is added with \vspace\* so is *"not discardable"*.

 $below = \{ \langle rubber\ length \mid rigid\ length \rangle \}$ 

default: not used

Set the *extra vertical space* space added, beyond topsep, to the bottom of the entire level of environment. This key is intended to give a "*fine adjustment*" of the vertical space on the "*below*" the environment without hindering the value of the topsep key. The space is added with \vspace so is "*discardable*".

 $below* = \{\langle rubber\ length \mid rigid\ length \rangle\}$ 

default: not used

Set the *extra vertical space* space added, beyond topsep, to the bottom of the entire level of environment. This key is intended to give a "*fine adjustment*" of the vertical space on the "*below*" the environment without hindering the value of the topsep key. The space is added with \vspace\* so is "not discardable".

#### 3.2.2 Horizontal spaces

itemindent =  $\{\langle rigid\ length\rangle\}$ 

default: 0pt

Extra *horizontal indentation*, beyond labelsep, of the *"first line"* off each item. This value is applied internally using \hspace and does not modify the value of \itemindent.

 $rightmargin = \{\langle rigid\ length \rangle\}$ 

default: 0pt

Set the *horizontal space* between the right margin of the environment and the right margin of the enclosing environment, the value it takes must be greater than or equal to <code>%pt</code>. Internally sets the value of <code>\rightmargin</code> for the current level.

listparindent =  $\{\langle rigid \ length \rangle\}$ 

default: Opt

Sets the *horizontal space* indentation, beyond list-indent, for second and subsequent paragraphs within a list item. Internally sets the value of \listparindent for the current level.

 $list-offset = \{\langle rigid\ length\rangle\}$ 

default: 0pt

Sets the horizontal translation of the entire environment level from the left edge of the box defined by the labelwidth key. Internally sets the values of \leftmargin and \itemindent for the current level.

list-indent =  $\{\langle rigid\ length\rangle\}$ 

default: labelwidth + labelsep

Sets the indentation of the whole environment under the box defined by labelwidth and labelsep keys. Internally sets the value of \leftmargin and \itemindent for the current level.

 $m{\sigma}$  If list-indent=0pt the  $\langle label
angle$  will be part of the text, separated by the value of the labelsep key and the firstword, in simple terms it will look like a "common paragraph". This setting is equivalent (more or less) to the wide key provided by the enumitem package.

# 3.3 Keys for add code

 $m{e}$  The following  $\langle keys 
angle$  should be used with "caution", they are intended to inject  $\{\langle code 
angle \}$  into different parts of the defined environments. We must keep in mind that the defined environments are based on the list base environment provided by MFX which is defined (simplified) as plain form  $\text{list}(\langle arg\ one \rangle) \{\langle arg\ two \rangle\}$ . Using the before\* key does not allow access to the list parameters defined by  $[\langle key = val \rangle]$ .

before =  $\{\langle code \rangle\}$ 

Execute  $\{\langle code \rangle\}$  "before" the environment starts. The  $\{\langle code \rangle\}$  must be passed between braces, is executed "after" performing all calculations related to the list parameters in the environment and the parameters sets by  $[\langle key = val \rangle]$  that is, in the second argument of the list after setting all the parameters \list{\arg}  $one \rangle \} \{ \langle arg \ two \rangle \{ \langle code \rangle \} \}.$ 

before\* =  $\{\langle code \rangle\}$ 

default: not used

Execute  $\{\langle code \rangle\}$  "before" the environment starts. The  $\{\langle code \rangle\}$  must be passed between braces, is executed "before" performing all calculations related to the list parameters and  $\lfloor \langle key = val \rangle \rfloor$  sets in the environment that is, before the arguments defining the environment are executed:  $\{\langle code \rangle\} \setminus \{\langle arg\ one \rangle\} \{\langle arg\ one \rangle\}$ two}.

 $first = \{ \langle code \rangle \}$ 

default: not used

Executes  $\{\langle code \rangle\}$  when "starting" the environment. The  $\{\langle code \rangle\}$  must be passed between braces, is executed right "after" all list parameters are done, after the second argument of list, just before the first occurrence of \item:  $\langle arg\ one \rangle$  {  $\langle arg\ two \rangle$ } {  $\langle code \rangle$ } \item.

🍼 Keep in mind that the code set in this key will affect the entire "body" of the environment and therefore the inner levels of the list and the keyans environment. It is recommended to set this key per level.

default: not used

Execute  $\{\langle code \rangle\}$  "after" finishing the environment. The  $\{\langle code \rangle\}$  must be passed between braces.

#### Keys for start and resume

 $start = \{ \langle integer \mid string \rangle \}$ 

default: 1

Sets the *start value* of the numbering on the current level. Internally  $\langle string \rangle$  is passed as value to the counter defined by label key on the current level, i.e. it is equivalent to enter start=5, start=E or start=v.

resume (value forbidden)

Sets the start to value from the previous of the counter defined by label key for the "first level". This  $\langle key \rangle$  does not receive an argument. The  $\langle key \rangle$  can be overwritten using the start key. If the save-ans key is present and  $\{\langle store\ name \rangle\}$  exist, the numbering will continue according to this key. This key is "only" available for the "first level" of enumext.

## 3.5 Keys for multicols

 $columns = \{ \langle integer \rangle \}$ 

default: 1

Set the number of columns to be used by the multicols environment within the environment. The value must be a positive integer less than or equal to 10.

 $columns-sep = \{ \langle rigid \ length \rangle \}$ 

default: by level

Set the space between columns used by the multicols environment within the environment. Internally sets the value of \columnsep, by default its value is equal to the sum of the values set in the keys labelwidth and labelsep of the current level.

 $m{e}$  The \footnote $\{\langle text
angle\}$  command in the nested levels of multicols will not work as expected, prefer the use of  $\lceil (number) \rceil$  inside the environment and  $\lceil (number) \rceil \{ (text) \}$  outside the environment and  $\lceil (number) \rceil \{ (text) \}$  outside the environment and  $\lceil (number) \rceil \{ (text) \}$ ment or via the after key.

# 3.6 Keys for minipage

 $mini-env = \{\langle rigid\ length \rangle\}$ 

default: not used

Sets the width of the minipage environment on the "right side". This value added to the value set by the mini-sep key to determines the width of the minipage environment on the "left side", taking \linewidth as the maximum reference value.

 $mini-sep = \{\langle rigid\ length \rangle\}$ 

default: 0.3333em

Sets the *space between* the minipage environment on the "left side" and the minipage environment on the "right side". This separation is applied together with \hfill.

#### 3.6.1 The command \miniright

\miniright\*

\miniright The \miniright command close the minipage environment on the "left side" and opens the minipage environment on the "right side" by starting it with the \centering command. It must be placed "after" the last \item of the current environment and "before" starting the material to be placed on the "right side". The starred version '\*' inhibits the use of \centering command i.e. the usual LTEX justification is maintained in the minipage on the "right side".

 $m{\mathscr{G}}$  The \footnote $\{\langle text
angle\}$  command in minipage environment will work as usual. If you prefer the footnotes to be numbered (not lowercase) and outside the environment, use  $\land$  footnotemark[ $\land$  number)] inside the environment and  $\lceil \text{footnotetext}[\langle number \rangle]$  { $\langle text \rangle$ } outside the environment or via the after key.

#### 3.6.2 The key miniright

In the horizontal list environments enumext\* and keyans\* it is not possible to use the \miniright command and the miniright key must be used instead.

```
miniright = \{ \langle code \ for \ drawing \ or \ tabular \rangle \}
```

default: not used

Set the *code* for the drawing or tabular to be placed in the minipage environment on the "right side" by starting it with the command \centering.

```
miniright* = \{ \langle code \ for \ drawing \ or \ tabular \rangle \}
```

default: not used

Same as above, but without starting with the \centering command.

# The storage system

The entire mechanism for "storing content" it is activated according to save-ans key on the "first level" of enumext environment. Only when this  $\langle key \rangle$  is "active" the \anskey command and the environments keyans and keyanspic are available.

```
\begin{enumext}[save-ans={\langle store\ name \rangle}]
                                                            \begin{enumext} [save-ans={\langle store name \rangle}]
  \item Text
                                                               \item Text
     \begin{keyans}
                                                                  \begin{keyanspic}
    \end{keyans}
                                                                  \end{keyanspic}
\end{enumext}
                                                             \end{enumext}
```

#### **Keys for storage** 4.1

```
save-ans = \{ \langle store \ name \rangle \}
```

default: not set

Sets the name of the \(\sequence\) and \(\setaprop list\) in which the contents will be "stored" by \anskey in enumext environment, \item\* in keyans and keyans\* environments and \anspic\* in keyanspic environment. If the *(sequence)* or *(prop list)* does not exist, it will be created globally.

```
wrap-ans = \{\langle code \{ \#1 \} \mid more \ code \rangle \}
```

default: \fbox{#1}

Wraps the *current argument* passed \anskey command to referenced by  $\{\#1\}$ . The  $\{\langle code \rangle\}$  must be passed between braces and only affects the \( \current argument \) passed to \anskey and NOT the "stored content" in the \(\store name\) set by save-ans key. If this key is passed using the \setenumext command it is necessary to use double '{##1}'.

```
wrap-opt = \{\langle code \{ \#1 \} \ more \ code \rangle \}
```

default: [{#1}]

Wraps the optional argument passed to the \item\* and \anspic\* commands referenced by {#1} in the keyans, keyans\* and keyanspic environments. The  $\{\langle code \rangle\}$  must be passed between braces and only affects the current *(optional argument)* and NOT the "stored content" in *(store name)* set by save-ans key. If this key is passed using the \setenumext command, it is necessary to use the double '{##1}'.

```
save-sep = \{\langle text \ symbol \rangle\}
```

Sets the *text symbol* that will separate the current  $\langle label \rangle$  defined by the label key from the  $\langle optional \rangle$ argument) (if present), when storing them in the \(\store\) name\(\rightarrow\) defined by the save-ans key for the \\item^\* command in the keyans and keyans\* environment and for the \anspic command in the keyanspic environment. The  $\{\langle text \ symbol \rangle\}$  must always be passed between braces, whitespace ' $\Box$ ' is preserved within the braces and only affects the "stored content" and not what is displayed when using the show-ans or show-pos keys.

```
\texttt{mark-ans} = \{ \langle \textit{symbol} \rangle \}
```

default: \textasteriskcentered

Sets the *symbol* to be displayed in the left margin of the "stored content" in \(\store\) name\(\rightarrow\) set by save-ans key when using show-ans key.

```
mark-pos = \{ \langle left \mid right \rangle \}
```

Sets the aligned of the symbol defined by mark-ans key. The "symbol" is aligned in a box with the same dimensions of the label box defined by labelwidth key on the current level and separated by the value of the labelsep key.

### Keys for internal label and ref

 $save-ref = \{ \langle true \mid false \rangle \}$ 

default: false

Activates the internal "label and ref" mechanism for referencing "stored content" in \( store name \) set by save-ans key. To reference the location of the "stored content" within the environment you must use  $\mathsf{ref}\{\langle \mathsf{store} \ \mathsf{name} : \mathsf{position}\rangle\}$ , where  $\langle \mathsf{position}\rangle$  corresponds to the position occupied by the "stored content" in the *store name* returned by the show-pos key. For example \ref{test:4} will return 3. (b) which corresponds to the location of the "stored content" at position 4 within the environment in which the key save-ans=test was set.

 $mark-ref = \{\langle symbol \rangle\}$ 

 $default: \ \ \ \textit{textasterisk} centered$ 

Sets the *symbol* that will be displayed by the \printkeyans command only if the hyperref package is detected and the save-ref key are active. This "symbol" is used as a "link" between the environment in which the save-ans key was used and the place where the command is executed.

# Keys for debugging and checking

show-ans =  $\{\langle true \mid false \rangle\}$ 

default: false

Displays the *current* \(\langle argument \rangle \text{ passed to \anskey in enumext environment, the current \(\langle label \rangle \text{ for } \) \item\* in keyans environment and the current  $\langle label \rangle$  for \anspic\* in keyanspic environment at the place where it is executed. If the optional argument is present in \item\* or \anspic\* it will be shown in square brackets.

 $show-pos = \{ \langle true \mid false \rangle \}$ 

default: false

Displays the position occupied by the "stored content" by \anskey in enumext environment, \item\* in keyans environment and \anspic\* in keyanspic environment in \(\store\) name\(\) set by save-ans key. This position is used by the \getkeyans command and by the \ref command if the save-ref key is

 $check-ans = \{\langle true \mid false \rangle\}$ 

default: false

Enables the *checking answer* mechanism. This key works under the logic that each question will contain "only one answer", it is intended to be used in conjunction with no-store key.

no-store (value forbidden)

default: not used

This is a meta-key that does not receive an argument. This key is used in conjunction with check-ans and is designed to be used with nested levels of enumext in which the \anskey command will not be used.

#### The command \anskey

 $\anskey \anskey{\langle content \rangle}$ 

The \anskey command takes a mandatory argument and is triggered by save-ans key. The "content" are "stored" in \(\store\) name\(\) set by save-ans key. The command does "not support" verbatim content and must NOT be nested. By design it is assumed that each \item or \item\* will have a "single" occurrence of the command unless a nested level is opened or the no-store key is used. If save-ref key are active and the hyperref[7] package is detected, \hyperlink and \hypertarget will be used, otherwise the usual "label and ref" system provided by LTEX will be used.

#### Example

- ★ 1. Text containing our instructions or questions.
  - \* | first answer

(a) Question.

- 2. Text containing our instructions or questions.
- 3. Text containing our instructions or questions.
- third answer
- Text containing our instructions or questions.
  - fourth answer

second answer

```
\begin{enumext}[save-ans=test,show-ans=true]
  {}^{tem*} Text containing our instructions or questions. {}^{tem*}
  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.\anskey{\langle second \ answer \rangle}
    \end{enumext}
  \item Text containing our instructions or questions. \{anskey\{\langle third\ answer\}\}\}
  \item Text containing our instructions or questions. \langle fourth\ answer \rangle
\end{enumext}
```

# The environment keyans

```
\label{eq:local_local_local} $$ \left( \ker = val \right) \in \left( \operatorname{local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local
\texttt{keyans*} \setminus \texttt{begin}\{\texttt{keyans*}\} \mid \langle \textit{key} = \textit{val} \rangle \mid \texttt{item} \mid \langle \textit{custom} \rangle \mid \texttt{item*} \mid \langle \textit{content} \rangle \mid \texttt{hem} \mid
```

The keyans is an "enumerated list" environment designed for "multiple choice" questions activated by the save-ans key. This environment can NOT be nested and must always be at the "first level" of the enumext environment, the commands  $\forall i tem and \forall i tem [\langle custom \rangle]$  work in the usual.

```
\begin{enumext}[save-ans=test]
    \item \langle item content \rangle
       \lceil \{keyans\} [\langle key = val \rangle]
           \item \langle item content \rangle
           \item \lceil \langle custom \rangle \rceil \langle item content \rangle
           \item* \(\(\)item \(\)content\)
           \forall item^* [\langle content \rangle] \langle item content \rangle
       \end{keyans}
\end{enumext}
```

The \(\lambda keys\rangle\) set in the optional argument of the environment are the same (almost) as those of the enumext environment and have higher precedence than those set by \setenumext[ $\langle keyans \rangle$ ] { $\langle key = val \rangle$ }. If the optional argument is not passed or the \(\lambda keys\rangle\) are not set by \setenumext, the default values will be the same as the second level of the enumext environment with the difference in the  $\langle label \rangle$  which will be set to label=(\Alph\*).

#### 4.5.1 The \item\* in keyans

```
\item* \item*
```

```
\item*[\langle content \rangle]
```

The  $\idetimes and \idetimes [\langle content \rangle]$  command store the current  $\langle label \rangle$  set by label key next to the  $\langle content \rangle$ tent) (if it is present) in (store name) set by save-ans key in the "first level" of the enumext environment.

The starred version '\*' cannot be separated by spaces 'u' from the command, i.e. \item\* and the optional argument does "not support" verbatim content. By design it is assumed that the starred version '\*' will only appear "once" within the environment.

#### Example

```
\begin{enumext}[save-ans=test,columns=2,show-ans=true]
  \item Text containing a question.
   \begin{keyans}[nosep]
      \item Choice
      \item* Correct choice
      \item Choice
      \item Choice
    \end{keyans}
  \item Text containing a question and image.
    \begin{keyans} [nosep,mini-env={0.4\linewidth}]
      \item Choice
      \item Choice
      \item Choice
      \item Choice
      \times [(note)] Correct choice
      \miniright
      \includegraphics[scale=0.25]{example-image-a}
      Some text
    \end{keyans}
\end{enumext}
```

- 1. Text containing a question.
  - (A) Choice
- \* (B) Correct choice
  - (C) Choice
  - (D) Choice

- 2. Text containing a question and image.
  - (A) Choice
  - (B) Choice
  - (C) Choice (D) Choice
  - \* (E) [note] Correct choice

Some text

#### The environment keyanspic

keyanspic \begin{keyanspic}[ $\langle number\ above,\ number\ below \rangle]$ \anspic{ $\langle drawing \rangle$ }\anspic\*[ $\langle content \rangle$ ]{ $\langle drawing \rangle$ }

The keyanspic is a "fake enumerated list" environment that which uses the \anspic command instead of \item. It is activated by the save-ans key and has the same settings as the keyans environment. It is intended for placing "drawings" or "tabular" with an in-line or above and below layout. A representation of the output can be seen in the figure 6.

The optional argument determines the number drawings or tabular "above" and "below" within the environment. The vertical separation between "above" and "below" is controlled by the values set by parsep and itemsep keys passed to keyans environment. If the optional argument or the second part of it is omitted the drawings or tabular will be put on a single line.

Figure 6: Representation of the keyanspic environment with optional argument [3,2] in enumext.

#### 4.6.1 The command \anspic

```
\anspic \anspic{\langle drawing or tabular\rangle}
               \anspic^*[\langle content \rangle] \{\langle drawing \ or \ tabular \rangle\}
```

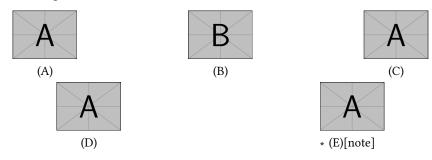

The \anspic command take three arguments, the *starred version* '\*' store the current  $\langle label \rangle$  next to the (content) (if it is present) in (store name) set by save-ans key.

The starred version '\*' cannot be separated by spaces '\_' from the command, i.e. \anspic\* and the optional argument does "not support" verbatim content. By design it is assumed that the starred version '\*' will only appear "once" within the environment.

## Example

```
\begin{enumext}[save-ans=test,show-ans,nosep]
  \item Question with images.
    \begin{keyanspic}[3,2]
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}
\end{enumext}
```

#### 1. Question with images.

## **Printing stored content**

#### The command \getkeyans

```
\getkeyans \getkeyans \{\langle store\ name: position \rangle\}
```

The command \getkeyans prints the "only stored content" in \(store name\)\) defined by save-ans key in the  $\langle position \rangle$  returned by the show-pos key.

The "content" can only be accessed "after" it is stored, if the \( store name \) does not exist the command will return an error. The form taken by the argument *\store name : position*\sigma is the same as that used to generate the internal "label and ref" system when save-ref key are active, so to refer to a stored "content". For example \getkeyans{test:4} will return the "stored content" at position 4 of the environment in which the key save-ans=test was set.

#### 4.7.2 The command \printkeyans

```
\printkeyans \printkeyans [\langle keys \rangle ] {\langle store name \rangle}
```

The command \printkeyans prints "all stored content" in {\store name}} defined by save-ans key. The "content" can only be accessed "after" it is stored, if \( \store name \) does not exist the command will return an error.

Internally it places the "stored content" inside the enumext environment with default values for label key are the same as those of the enumext environment along with the keys: nosep, first=\small, font=\small for all levels, except for the first one that adds the columns=2 key.

©2024 by Pablo González L

The optional argument allows to handle the  $\langle keys \rangle$  "on the first level" of the enumext environment encapsulated by the command. If need to pass options for nested levels use \setenumext[ $\langle print, level \rangle$ ] { $\langle store, name \rangle$ }.

#### Example

```
\begin{enumext} [save-ans=sample,columns=2,show-pos=true,nosep,save-ref=true]
   \item Factor 3x+3y+3z. \anskey5(x+y+z)
   \item True False
     \begin{enumext}[nosep]
       \item \LaTeX2e\ is cool? \anskey{Very True!}
     \end{enumext}
   \item Related to Linux
     \begin{enumext} [nosep]
       \item You use linux? \anskey{Yes}
       \item Rate the following package and class
         \begin{enumext} [nosep]
           \item \texttt{xsim} \anskey{very good}
           \item \texttt{exsheets} \anskey{obsolete}
         \end{enumext}
     \end{enumext}
 \end{enumext}
 The answer to \ref{sample:4} is \getkeyans{sample:4} and the answers to
 all the worksheets are as follows:
 \printkeyans{sample}
1. Factor 3x + 3y + 3z.
                                                  [3] Yes
                                                 (b) Rate the following package and class
[1] | 3(x+y+z)
                                                         xsim
2. True False
                                                      [4] very good
  (a) LATEX2e is cool?
                                                         exsheets
   [2] Very True!
                                                      [5] obsolete
3. Related to Linux
```

The answer to 3.(b).i is very good and the answers to all the worksheets are as follows:

```
1. 3(x+y+z)
2. (a) Very True!
3. (a) Yes
4. (b) i. very good
5. ii. obsolete
4. **
```

# 5 Full examples

(a) You use linux?

Here I will leave as an example some adaptations questions taken from TeX-SX. The examples are attached to this documentation and can be extracted from your PDF viewer or from the command line by running:

```
$ pdfdetach -saveall enumext.pdf
```

and then you can use the excellent arara1 tool to compile them.

#### Example 1

Adapted from the response given by Enrico Gregorio in Squares for answer choice options and perfect alignment to mathematical answers .

```
1. La velocità di 1{,}00 \times 10^2 \,\mathrm{m/s} espressa in km/h è:
                                                                           A 1 \text{ Å} = 1 \times 10^5 \text{ fm}.
                                                                            B 1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.
   A 36 km/h.
                                                                           C 1 Å = 1 \times 10^{-15} \text{ fm}.
    B 360 km/h.
                                                                           \boxed{D} \ 1 \text{ Å} = 1 \times 10^3 \text{ fm}.
    C 27,8 km/h.
   D 3,60 \times 10^8 \, \text{km/h}.
                                                                       3. La velocità di 1{,}00 \times 10^2 \,\mathrm{m/s} espressa in km/h è:
2. In fisica nucleare si usa l'angstrom (simbolo: 1 \text{ Å} =
                                                                           A 36 km/h.
   1 \times 10^{-10} m) e il fermi o femtometro (1 fm =
                                                                            B | 360 km/h.
   1 \times 10^{-15}\,\mathrm{m}). Qual è la relazione tra queste due
                                                                            C 27,8 km/h.
   unità di misura?
                                                                           D 3,60 \times 10^{8} \, \text{km/h}.
```

©2024 by Pablo González L

- 4. In fisica nucleare si usa l'angstrom (simbolo:  $1 \, \text{Å} = 1 \times 10^{-10} \, \text{m}$ ) e il fermi o femtometro ( $1 \, \text{fm} = 1 \times 10^{-15} \, \text{m}$ ). Qual è la relazione tra queste due unità di misura?
- A  $1 \text{ Å} = 1 \times 10^5 \text{ fm}.$ B  $1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.$
- C  $1 \text{ Å} = 1 \times 10^{-15} \text{ fm}.$
- $\boxed{D} 1 \text{ Å} = 1 \times 10^3 \text{ fm}.$

1. B 2. A

4. A

## Example 2

Adapted from the response given by Florent Rougon in Multiple choice questions with proposed answers in random order — addition of automatic correction (cross mark) .

3. B

- ı. La velocità di  $1{,}00 \times 10^2\,\mathrm{m/s}$  espressa in km/h è:
  - A 36 km/h.
- ✓ B 360 km/h.
  - C 27,8 km/h.
  - D  $3,60 \times 10^8 \,\text{km/h}$ .
- 2. In fisica nucleare si usa l'angstrom (simbolo:  $1 \text{ Å} = 1 \times 10^{-10} \, \text{m}$ ) e il fermi o femtometro ( $1 \, \text{fm} = 1 \times 10^{-15} \, \text{m}$ ). Qual è la relazione tra queste due unità di misura?
- $\checkmark$  A 1 Å = 1 × 10<sup>5</sup> fm.
  - B  $1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.$
  - C  $1 \text{ Å} = 1 \times 10^{-15} \text{ fm}.$
  - D  $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$
- 3. La velocità di  $1{,}00 \times 10^2 \,\mathrm{m/s}$  espressa in km/h è:
  - A 36 km/h.
- $\checkmark$  B  $360 \,\mathrm{km/h}$ .
  - C 27,8 km/h.
  - D  $3,60 \times 10^8 \,\text{km/h}$ .
- 4. In fisica nucleare si usa l'angstrom (simbolo:  $1 \text{ Å} = 1 \times 10^{-10} \, \text{m}$ ) e il fermi o femtometro (1 fm =  $1 \times 10^{-15} \, \text{m}$ ). Qual è la relazione tra queste due unità di misura?
- $\checkmark$  A 1Å = 1 × 10<sup>5</sup> fm.
  - $B 1 Å = 1 \times 10^{-5} \text{ fm}.$
  - $C 1 Å = 1 \times 10^{-15} \text{ fm}.$
  - D  $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$

- 2. A
- 2. A 3. B
- 4. A

#### Example 3

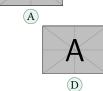

- A "simple multiple choice" test 🖹.
- 1. First type of questions
  - (A) value
  - (B) correct
  - (C) value
  - (D) value
- 2. Second type of questions
  - $2\alpha + 2\delta = 90^{\circ}$
  - II.  $\alpha = \delta$
  - III.  $\angle EDF = 45^{\circ}$
  - (A) I only
  - (B) II only
  - © I and II only
- 3. Third type of questions
  - (1)  $2\alpha + 2\delta = 90^{\circ}$
  - (2)  $\angle EDF = 45^{\circ}$
  - (A) value
  - (B) value
  - (C) value
- 4. Question with image and label below:

(D) I and III only

(E) I, II, and III

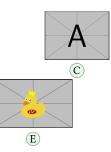

- 5. Question with image on left side:
  - (A) value
  - (B) value
  - (C) value
  - (D) correct
  - (E) value

#### Test keys

- 1. B, x = 5
- 2. D
- 3. C, some note

- \* 4. E, A duck
- \* 5. D, other note

# Example 4

A "simple worksheet" using ducks :) 🖹.

Factor  $x^2 - 2x + 1$ Factor 3x + 3y + 3z

The following questions need to be cuaqtified:)

True False

- (a)  $\alpha > \delta$
- (b) LaTeX2e is cool?

Related to Linux

- (a) You use linux?
- (b) Usually uses the package manager?
- (c) Rate the following package and class
  - i. xsim-exam
  - ii. xsim
  - iii. exsheets

The answer to 1 is  $(x-1)^2$  and the answer to 3.(a) is False.

- 1.  $(x-1)^2$
- 2. 3(x+y+z)
- 3. (a) False
- (b) Very True! 4. (a) Yes

- (b) Yes, dnf
- (c) i. doesn't exist for now :(
- ii. very good
- iii. obsolete

#### Example 5

Adapted from the response given by Stephen in SAT like question format 🖹.

1

Which choice best describes what happens in the passage?

- A) One character argues with another character who intrudes on her home.
- B) One character receives a surprising request from another character.
- C) One character reminisces about choices she has made over the years.
- D) One character criticizes another character for pursuing an unexpected course of action.

2

Which choice best describes what happens in the passage?

- A) One character argues with another character who intrudes on her home.
- B) One character receives a surprising request from another character.
- C) One character reminisces about choices she has made over the years.
- D) One character criticizes another character for pursuing an unexpected course of action

3

Which choice best describes what happens in the passage?

3. B)

4. D)

# 6 The way of non-enumerated lists

It is possible to use (or abuse) the enumext environment to mimic *non-enumerated* list environments such as itemize and description, clearly the  $\langle keys \rangle$  to "store answers", the keyans and keyanspic environments lose their sense and it is not the focus of the main of this package, but, why not to do it?.

Here I leave as an example other uses of the enumext environment that can be helpful for specific purposes. The "trick" to generate these fake environments is set label= $\{\$  or label= $\{\$  on label=

#### Fake itemize environment

Here we set the label key using the default settings in LTEX for the four levels \textbullet, \textendash, \textasteriskcentered and \textperiodcentered together with the nosep key to reduce the vertical spaces in the left side example and set the label key in mathematical mode for the right side as \ast, \diamond, \circ and \star for the four levels together with the nosep key

- First level item
  - Second level item
    - \* Third level item
    - · Fourth level item
- First level item

- \* First level item
  - ♦ Second level item
    - $\circ$  Third level item
      - ⋆ Fourth level item
- \* First level item

#### Fake description environment

Here we set label={} and list-indent=2.5em, font=\bfseries.

**SomeThing** A short one-line description.

This is an entry without a label.

**Something** A short *one-line* description text.

**Something long** A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

If we add list-indent=Opt you get widest style:

**SomeThing** A short one-line description.

This is an entry without a label.

**Something** A short *one-line* description text.

**Something long** A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

The small space at the beginning of the "unlabeled entry" corresponds to \labelsep and can be removed using \hspace{-\labelsep} at the beginning of the line.

# Description indented by label

Here we set label={} and we will give a convenient value to labelsep and labelwidth, for example we can take as reference our *longest label* and pass it as value using:

```
\newlength{\descitemwd}
\settowidth{\descitemwd}{\textbf{Something long}}
```

and then use labelsep=4pt, labelwidth=\descitemwd, font=\bfseries.

**SomeThing** A short one-line description.

This is an entry without a label.

**Something** A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut

purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida

mauris.

The environment can be translated so that the  $\langle labels \rangle$  are on the left margin calculating the value passed to the list-offset key, in this case it will be equal to the sum of the values set by the labelwidth and labelsep keys finally resulting as list-offset={-\descitemwd - 4pt}.

**SomeThing** A short one-line description.

This is an entry without a label.

**Something** A short one-line description.

**Something long** A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

If we add align=right it will look like this:

**SomeThing** A short one-line description.

This is an entry without a label.

**Something** A short one-line description.

**Something long** A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

At this point we have used list-offset={-\descitemwd - 4pt} instead of list-offset={-\labelwidth - \labelsep}, this is because the parameters \labelwidth and \labelsep take the default values, as if we had not set label.

#### Description with multi-line labels

The label key does not accept *multiline material*, this is where the wrap-label\* key comes into play. Unlike the enumitem package, the align key only supports three options, so what we will do is create a command in the style \parleft of enumitem that allows us to place *multiline labels* using \parbox.

```
\NewDocumentCommand \itembx { s +m }
    {%
     \IfBooleanTF{#1}
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
}
```

Now we just need to set wrap-label\*={\itembx{#1}}.

**SomeThing** A short one-line description.

This is an entry without a label.

**Something** A short one-line description.

**Something** A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, **long** vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

**SoMeThInG** A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, **LoNg** vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

#### Final notes

The original implementation (if you can call it that) of the ideas that led to the creation of enumext were some macros using the enumerate[4] package for personal use created in early 2003, the code was quite questionable, but functional for these simple requirements.

With the great answers given by Christian Hupfer in Create a fake label ref using list and the answer given by David Carlisle in Change the use of label ref by data save in an array (list) I managed to create a more solid code than the original version, now using the <code>l3prop[10]</code> and <code>l3seq[10]</code> modules together with the <code>hyperref[7]</code> and <code>enumitem[5]</code> packages, which did the job, but with some limitations.

As time went by I took these limitations as a personal challenge which I called "reinventing the wheel", since there were packages and classes that did more or less what I was looking for, but did not fit my simple requirements. This "reinventing the wheel" finally ended up becoming enumext.

#### Why list environments?

The answer is simple, first I love the beauty of its syntax and many of what I had already written used the enumerate environment or lists created using the enumitem package. In my mind I thought: how complicated could it be to write a package that looked like enumitem? It seemed simple enough, of course I didn't have in mind the mess I was getting into working with list environments, minipage and adding support for the multicol and hyperref packages.

Of course, seeing the final result of the experiment "reinventing the wheel" I am quite satisfied.

#### Why not random questions and other utilities

The "random" type questions I love and hate them at the same time, although they simplify a lot the work when creating a multiple choice test, but you lose the beauty of typessetting a document with ETeX, that is to say the output does not always look as nice as it should, even if they are only alternatives these must follow a certain order when presented either numerical or presentation, that said handling that using nested lists is quite complicated so I do not classify to be implemented.

# 10 Implementation

The most recent publicly released version of enumext is available at CTAN: https://www.ctan.org/pkg/enumext. While general feedback via email is welcomed, specific bugs or feature requests should be reported through the issue tracker: Ohttps://github.com/pablgonz/enumext/issues.

The documentation presented here is far from professional, it contains a lot of obvious information that to the eye of a TEXpert are superfluous, but, after so many years developing this project is the only way to remember what does what

#### 10.1 General conventions

Variables containing i, ii, iii and iv are associated by level with the enumext environment, variables containing v are associated with the keyans environment, variables containing vi are associated with the keyanspic environment, variables containing vii are associated with the enumext\* environment and variables containing viii are associated with the keyans\* environment.

To simplify writing and documentation some variables and functions that are common to the different levels of the environments are described using a capital "X".

The temporary function \\_\_enumext\_tmp:n is used in different parts of the package code for variable creation or execution of other functions that are grouped into this one.

All variables and functions defined in this package are private and are NOT intended to work or be used by another package or module.

## 10.2 Initial set up

Start the DocStrip guards.

```
*package
```

Identify the internal prefix (LATEX3 DocStrip convention) for l3doc class.

```
2 (@@=enumext)
```

## 10.3 Declaration of the package

First we will make sure we have a minimum (super updated) version of ETFX to work correctly.

```
3 \NeedsTeXFormat{LaTeX2e} [2023-11-01]
```

Now declare the enumext package.

```
4 \ProvidesExplPackage
5 {enumext}
6 {2024-05-12}
7 {1.0}
8 {Enumerate exercise sheets}
```

Finally check if the multicol package is loaded, if not we load it.

# 10.4 Definition of variables

Variables that do not appear in this section are created by means of \keys\_define: nn or some function described below.

```
\l_enumext_level_int
\l_enumext_level_h_int
\l_enumext_keyans_level_int
\l_enumext_keyans_pic_level_int
\l_enumext_starred_bool
\g_enumext_starred_bool
\l_enumext_standar_bool
\g_enumext_standar_bool
\l_enumext_standar_bool
\l_enumext_standar_bool
```

Integer variables will control the nesting levels of the environments and boolean variables will be used to determine if they are present (nested) in each other. The boolean variables \g\_\_enumext\_starred\_bool and \g\_\_enumext\_standar\_bool will be set to "true" when the enumext and enumext\* environments are not nested with each other.

```
20 \int_new:N \l__enumext_level_int
21 \int_new:N \l__enumext_level_h_int
22 \int_new:N \l__enumext_keyans_level_int
23 \int_new:N \l__enumext_keyans_level_h_int
24 \int_new:N \l__enumext_keyans_pic_level_int
25 \bool_new:N \l__enumext_starred_bool
26 \bool_new:N \g__enumext_starred_bool
20224 by Pablo González L
```

```
27 \bool_new:N \l__enumext_standar_bool
                                _{28} \bool_new:N \g__enumext_standar_bool
                                29 \bool_new:N \l__enumext_keyans_env_bool
                              (End of definition for \l_enumert_level_int and others.)
                              Variables to store the "name of the counters" enumXi, enumXii, enumXiii and enumXiv for enumext
   \l__enumext_counter_i_tl
                              environment, enumXv for keyans environment and enumXvi for the keyanspic environment.
   \l__enumext_counter_ii_tl
                              The counters enumXviii and enumXviii are used by enumext* and keyans* environments.
  \l__enumext_counter_iii_tl
                              The initial values of these variables are set by the function \__enumext_define_counters: Nn and then
   \l enumext counter iv tl
                              modified by the function \__enumext_label_style: Nnn used by label key (§10.8).
   \l__enumext_counter_v_tl
   \l__enumext_counter_vi_tl
                               30 \cs_set_protected:Npn \__enumext_tmp:n #1
  \l__enumext_counter_vii_tl
 \l__enumext_counter_viii_tl
                                      \tl_new:c { l__enumext_counter_#1_tl }
                               32
                               _{34} \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }
                              (End of definition for \l_enumert_counter_i_tl and others.)
                              \l enumext resume bool
                              environment's will start is stored in the integer variable \g__enumext_resume_int (§10.21). The global
     \g__enumext_resume_int
                              token list \g_{\text{enumext\_item\_symbol\_tl}} is used by item-sym* key (\S10.26).
 \l__enumext_resume_vii_bool
  \g__enumext_resume_vii_int
                                35 \bool_new:N \l__enumext_resume_bool
  \g__enumext_item_symbol_tl
                                37 \bool_new:N \l__enumext_resume_vii_bool
                               _{38} \int_new:N \g__enumext_resume_vii_int
                                39 \tl_new:N \g__enumext_item_symbol_tl
                              (End of definition for \l_enumext_resume_bool and others.)
                              The variable \l__enumext_current_widest_dim stores the current label width, the variable \g__-
      \l__enumext_current_widest_dim
                              enumext_counter_styles_tl stores the default \(\lambda label \style \rangle \and \the \variable \g__enumext_widest_-
       \g__enumext_counter_styles_tl
 \g__enumext_widest_label_tl
                              label_tl the label width. These variables are used by widest (§10.12) and label (§10.10) keys.
      \l__enumext_label_width_by_box
                                40 \dim_new:N \l__enumext_current_widest_dim
                               \tl_new:N \g__enumext_counter_styles_tl
                                _{42} \tl_new:N \g__enumext_widest_label_tl
                                43 \box_new:N \l__enumext_label_width_by_box
                              (End of definition for \l__enumext_current_widest_dim and others.)
                              The boolean variable \l__enumext_leftmargin_tmp_X_bool and the dimensional variable \l__-
    \l__enumext_leftmargin_tmp_X_bool
     \l__enumext_leftmargin_tmp_X_dim
                               enumext_leftmargin_tmp_X_dim are used by the list-indent key (§10.14).
\l__enumext_leftmargin_X_dim
                              The variables \l__enumext_leftmargin_X_dim and \l__enumext_itemindent_X_dim are used (and
\l__enumext_itemindent_X_dim
                              set) by the function \__enumext_calc_hspace:NNNNNNNNNN (§10.30) which determines the internal
                              values for \leftmargin and \itemindent.
                                44 \cs_set_protected:Npn \__enumext_tmp:n #1
                                45
                                      \bool_new:c { l__enumext_leftmargin_tmp_#1_bool }

The boolean variable \l\_\_enumext\_store\_active\_bool setting by save-ans key (§10.21) activates all the mechanism related to  $\anskey$ , keyans, keyans\* and keyanspic.

The variable \l\_\_enumext\_store\_name\_tl sets the name for the storage in  $\langle sequence \rangle$  and  $\langle prop \ list \rangle$ , the variable \g\_\_enumext\_store\_name\_tl is just a copy of the storage name used by the check-ans key (§10.21).

The variable \l\_\_enumext\_store\_anskey\_arg\_tl stores the contents of \anskey (§10.24) and the variable \l\_\_enumext\_store\_keyans\_label\_tl stores the contents of \item\* (§10.28.2) for the keyans and keyans\* environments and the contents of \anspic\* (\\$10.34.1) for the keyanspic environment.

The variable \l\_\_enumext\_keyans\_tmpa\_tl is a temporary variable used by keyans and keyanspic at various points.

#### 10.5 Some utility functions

 $\verb|\__enumext_at_begin_document:n|$ 

A internal "hook" function used for copying plain list and minipage environments definition and hyperref detection.

(End of definition for  $\ \_$ enumext\_at\_begin\_document:n.)

\\_\_enumext\_after\_env:nn

A internal "hook" function for execute code minirigth and minirigth\* keys outside the enumext\* and keyans\* environments and print check-ans outside the enumext and enumext\* environments.

```
184 \cs_new_protected:Npn \__enumext_after_env:nn #1 #2
185 {
186 \hook_gput_code:nnn {env/#1/after} {enumext} {#2}
187 }
```

(End of definition for  $\_$ enumext\_after\_env:nn.)

\\_\_enumext\_level:

Function for check current level in enumext.

```
188 \cs_new:\Nn \__enumext_level:
189 {
190 \int_to_roman:n { \l__enumext_level_int }
191 }
```

(End of definition for \\_\_enumext\_level:.)

\\_\_enumext\_if\_is\_int:nT \\_\_enumext\_if\_is\_int:nF \\_\_enumext\_if\_is\_int:nTF

A conditional function to know if the variable we are passing is an integer used by start and widest keys. This function is taken directly from the answer given by Henri Menke in How to test if an expl3 function argument is an integer expression?.

 $(\textit{End of definition for } \\ \_\texttt{enumext\_if\_is\_int:nT}, \\ \\ \_\texttt{enumext\_if\_is\_int:nF}, \\ \textit{and } \\ \\ \\ \_\texttt{enumext\_if\_is\_int:nTF}.)$ 

\\_\_enumext\_show\_length:nnn

Internal function used by show-length key to show "all lengths" calculated and use in enumext, enumext\*, keyans and keyans\* environments.

 $(\textit{End of definition for } \verb|\_-enumext\_show\_length:nnn.)$ 

\_\_enumext\_zero\_count\_level:

Internal function used by check-ans key.

(End of definition for \\_\_enumext\_zero\_count\_level:.)

\\_\_enumext\_current\_env:

The function  $\_$ enumext\_current\_env: will set the global variables  $\g_$ enumext\_standar\_bool and  $\g_$ enumext\_starred\_bool with which we will distinguish whether the environments enumext and enumext\* are nested in each other.

```

(End of definition for \\_\_enumext\_current\_env:.)

# 10.6 Copying list and minipage environments

The list environment provided by LTEX has the following plain form:

```
\label{eq:cont} $$ \left( arg \ one \right) \left\{ \left\langle arg \ two \right\rangle \right\} $$ \left( opt \right) $$ \end{supersent} $$ \left( opt \right) $$ \end{supersent} $$ \end{supersent} $$ \left( opt \right) $$ \end{supersent} $$ \left( opt \right) $$ \end{supersent} $$ \end{supersen
```

As a precaution we copy them using \\_\_enumext\_at\_begin\_document:n in case any package redefines the list environment or a related command.

\\_\_enumext\_start\_list:nn
 \\_\_enumext\_stop\_list:
 \\_\_enumext\_item\_std:w

The functions \\_\_enumext\_start\_list:nn, \\_\_enumext\_stop\_list: and \\_\_enumext\_item\_-std:w correspond to copies of \list, \endlist and \item from plain definition of list environment.

```
240 \__enumext_at_begin_document:n
241 {
242     \cs_new_eq:NN \__enumext_start_list:nn \list
243     \cs_new_eq:NN \__enumext_stop_list: \endlist
244     \cs_new_eq:NN \__enumext_item_std:w \item
245 }
```

(End of definition for \\_\_enumext\_start\_list:nn, \\_\_enumext\_stop\_list:, and \\_\_enumext\_item\_std:w.)
The minipage environment provided by ETFX has the following (simplified) plain form:

```
\label{eq:continuous_section} $$\min[age[\langle pos \rangle][\langle height \rangle][\langle inner-pos \rangle]\{\langle width \rangle\} $$ \langle internal\ implement \rangle$$ \\ \\ \\endminipage
```

As a precaution we copy them using \\_\_enumext\_at\_begin\_document:n in case any package redefines the minipage environment or a related command.

\\_\_enumext\_minipage:w
\\_\_enumext\_endminipage:

The functions \\_\_enumext\_minipage:w, \\_\_enumext\_endminipage: and correspond to copies of \minipage, \endminipage from plain definition of minipage environment.

```
246 \__enumext_at_begin_document:n
247 {
248     \cs_new_eq:NN \__enumext_minipage:w \minipage
249     \cs_new_eq:NN \__enumext_endminipage: \endminipage
250 }
```

(End of definition for  $\ensuremath{\backslash}$  enumext\_minipage:w and  $\ensuremath{\backslash}$  enumext\_endminipage:.)

#### 10.7 Compatibility with hyperref and footnotehyper

First we define the necessary rules using "hooks" to determine if the hyperref package is loaded.

```
251 \hook_gput_code:nnn { begindocument } { enumext } { \__enumext_after_hyperref: }
252 \hook_gset_rule:nnnn { begindocument } { enumext } { after } { hyperref }
```

©2024 by Pablo González L

\\_\_enumext\_after\_hyperref:
\\_\_enumext\_hypertarget:nn
\\_\_enumext\_phantomsection:

The function \\_\_enumext\_after\_hyperref: sets the state of the boolean variable \l\_\_enumext\_-hyperref\_bool to "true" if the package is loaded. At this point we will use the public macro \IfHyperBoolean to determine if the hyperfootnotes=true key is present, if so, we set the state of the boolean variable \\_\_enumext\_footnotes\_key\_bool to "true".

If the state of the variable \l\_\_enumext\_footnotes\_key\_bool is true we will check if the package footnotehyper is loaded, in case it is not present, we will set the value of \l\_\_enumext\_footnotes\_-key\_bool to false and we will redefine \footnote.

The functions \\_\_enumext\_hypertarget:nn and \\_\_enumext\_phantomsection: correspond to the internal copies of \hypertarget and \phantomsection. If the boolean variable \l\_\_enumext\_hyperref\_bool is false the functions \\_\_enumext\_hypertarget:nn and \\_\_enumext\_phantomsection: will be disabled.

 $(\textit{End of definition for } \verb|\_= numext_after_hyperref:, \verb|\_= numext_hypertarget:nn, and \verb|\_= numext_phantomsection:.)|$ 

\\_\_enumext\_newlabel:nn

The function \\_\_enumext\_newlabel:nn write the information to the .aux file when using the save-ref key. The arguments taken by the function are:

```
#1: \l_enumext_newlabel_arg_one_tl
#2: \l_enumext_newlabel_arg_two_tl
```

The trick here is to manage the number of arguments passed to \newlabel{#1}{#2} according to the presence of the hyperref package.

©2024 by Pablo González L

(End of definition for  $\_$ enumext\_newlabel:nn.)

#### 10.8 Definition of counters

\\_\_enumext\_define\_counters:Nn \\_\_enumext\_define\_counters:cn

> enumXi enumXii

enumXiii

To create the necessary "counters" we must first make sure that they are not already defined by the user or a package such as <code>enumitem</code>, otherwise a error will be returned and the package loading will be aborted. The arguments taken by the function are:

#1: A token list \l\_\_enumext\_counter\_X\_tl for "store" the counter's name.

#2: The counter's name.

 $(End\ of\ definition\ for\ \_enumext\_define\_counters:Nn.)$ 

The counters created here are enumXi, enumXii, enumXiii and enumXiv for enumext environment, enumXv for keyans environment, enumXvi for keyanspic environment, enumXviii for enumext\* and enumXviiii for the keyans\* environments.

```
enumXiv
           313 \__enumext_define_counters:Nn \l__enumext_counter_i_tl
                                                                        { enumXi
  enumXv
           314 \__enumext_define_counters:Nn \l__enumext_counter_ii_tl
                                                                        √ enumXii
           315 \__enumext_define_counters:Nn \l__enumext_counter_iii_tl { enumXiii
  enumXvi
           316 \__enumext_define_counters:Nn \l__enumext_counter_iv_tl
                                                                       { enumXiv
 enumXvii
           \__enumext_define_counters:Nn \l__enumext_counter_v_tl
                                                                        { enumX∨
enumXviii
           318 \__enumext_define_counters:Nn \l__enumext_counter_vi_tl
                                                                       √ enumXvi
           319 \__enumext_define_counters:Nn \l__enumext_counter_vii_tl { enumXvii
           320 \__enumext_define_counters:Nn \l__enumext_counter_viii_tl { enumXviii }
```

(End of definition for enumXi and others.)

#### 10.9 Definition of labels

This part of the code is inspired by the enumitem package. The idea is to be able to access the counters using \arabic\*, \Alph\*, \alph\*, \Roman\* and \roman\* to use them in the label key.

 $\verb|\__enumext_register_counter_style:Nn|$ 

These  $\langle counters \rangle$  will be used as default  $\langle labels \rangle$  if the label key is not used for the different levels of the enumext environment and the keyans environment, so it is necessary to get a default value for labelwidth from these  $\langle labels \rangle$  at the same time.

(End of definition for \\_\_enumext\_register\_counter\_style:Nn.)

\\_\_enumext\_label\_width\_by\_box:Nn
\ enumext label width by box:cv

The function \\_\_enumext\_label\_width\_by\_box: Nn set the default \labelwidth using a box width if no labelwidth key is passed.

```
331 \cs_new_protected:Npn \__enumext_label_width_by_box:Nn #1 #2
332 {
333    \hbox_set:Nn \l__enumext_label_width_by_box {#2}
334    \dim_set:Nn #1 { \box_wd:N \l__enumext_label_width_by_box }
335 }
336 \cs_generate_variant:Nn \__enumext_label_width_by_box:Nn { cv }
```

 $(\textit{End of definition for } \verb|\_-enumext_label_width_by_box:Nn.)$ 

©2024 by Pablo González L 30/113

```
\__enumext_label_style:Nnn
\__enumext_label_style:cvn
```

The function \\_\_enumext\_label\_style: Nnn is used by the label key to creates the variables containing the  $\langle label\ style \rangle$  and will allow to use \arabic\*, \Alph\*, \alph\*, \Roman\* and \roman\* as arguments. It loops through the defined counter styles in \g\_\_enumext\_counter\_styles\_tl (\arabic, \alph, \alph, \roman, and \Roman) for example, looking for \roman\* and replacing that by \roman{\cunter\}, and doing the same for the \g\_\_enumext\_widest\_label\_tl to keep both in sync.

```
337 \cs_new_protected:Npn \__enumext_label_style:Nnn #1 #2 #3
   {
338
      \tl_clear_new:N #1
339

      \tl_gset_eq:NN \g__enumext_widest_label_tl #1
      \tl_map_inline:Nn \g__enumext_counter_styles_tl
342
343
          \tl_replace_all:Nne #1 { ##1* } { \exp_not:N ##1 {#2} }
          \tl_greplace_all:Nne \g__enumext_widest_label_tl { ##1* }
            { \tl_use:c { c_enumext_widest_ \cs_to_str:N ##1 _tl } }
      \__enumext_label_width_by_box:Nn \l__enumext_current_widest_dim
        { \tl_use:N \g__enumext_widest_label_tl }
      \tl_set_eq:cN { the #2 } #1
350
351
\cs_generate_variant:Nn \__enumext_label_style:Nnn { cvn }
```

(End of definition for  $\_$ enumext\_label\_style:Nnn.)

### 10.10 Setting keys associated with label

font Definition of keys font, labelsep, labelwidth, wrap-label and wrap-label\* keys for enumext and labelsep keyans environments.

```
labelwidth
wrap-label
wrap-label*
```

```
353 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
354
      \keys_define:nn { enumext / #1 }
355
356
        {
357
          font
                      .tl_set:c = { l__enumext_label_font_style_#2_tl },
                     .value_required:n = true,
358
          labelsep .dim_set:c = { l__enumext_labelsep_#2_dim },
          labelsep .initial:n = {0.3333em},
          labelsep
                      .value_required:n = true,
          labelwidth .dim_set:c = { l__enumext_labelwidth_#2_dim },
          labelwidth .value_required:n = true,
          wrap-label .cs_set_protected:cp = { __enumext_wrapper_label_#2:n } ##1,
          wrap-label .initial:n = {##1},
365
          wrap-label .value_required:n = true,
366
          wrap-label* .code:n = {
367
                                   \bool_set_true:c { l__enumext_wrap_label_opt_#2_bool }
                                   \keys_set:nn { enumext / #1 } { wrap-label = {##1} }
                                1.
370
          wrap-label* .value_required:n = true,
371
374 \clist_map_inline:Nn \c_enumext_all_envs_clist { \_enumext_tmp:nn #1 }
```

(End of definition for font and others.)

In this point, the following are set \\_\_enumext\_wrapper\_label\_X:n which will be used by \\_\_enumext\_make\_-label: for the different levels of the enumext environment and is set to \\_\_enumext\_wrapper\_label\_v:n which will be used by \\_\_enumext\_keyans\_make\_label: for keyans and keyanspic environments.

align The align key is implemented differently for "starred" and "non starred" environments.

```
375 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
376
      \keys_define:nn { enumext / #1 }
378
          align .choice:,
          align / left
                         .code:n =
381
                              \tl_clear:c { l__enumext_label_fill_left_#2_tl }
382
                              \tl_set:cn { l__enumext_label_fill_right_#2_tl } { \hfill }
383
                            },
          align / right .code:n =

(End of definition for align.)

# 10.11 Setting label and ref keys

\\_\_enumext\_regex\_label\_ref\_key:

The internal function \\_\_enumext\_regex\_label\_ref\_key: replace the \* with the actual counter of the running level and is used by the \\_\_enumext\_set\_label\_ref:n function.

It loops through the defined counter styles in  $\c_=\text{enumext\_counter\_style\_tl}$  and replace \* by real command, for example, looking for  $\arabic^*$  and replacing that by  $\arabic^* \arabic^* \arabic^*$  defined on the current level.

 $(\mathit{End}\ of\ definition\ for\ \verb|\_-enumext_regex_label_ref_key:.)$ 

\\_\_enumext\_set\_label\_ref:n

The \\_\_enumext\_set\_label\_ref:n function controlled by the ref key is in charge of handling the customization of the reference system.

First we will set the variable  $\l_enumext_the_counter_X_tl$  according to the command created for *each counter*, apply the *regex* function  $\l_enumext_regex_label_ref_key$ : and then renew the command and save it in the variable  $\l_enumext_counter_style_for_ref_X_tl$ .

(End of definition for  $\_$ enumext\_set\_label\_ref:n.)

\\_\_enumext\_use\_key\_ref:

Finally the function \\_\_enumext\_use\_key\_ref: will execute the modification for the reference system in the second argument of the environment definition enumext.

 $(\mathit{End}\ of\ definition\ for\ \verb|\_-enumext_use_key_ref:.)$ 

For enumext\* and keyans\* environments the situation is a bit different since hyperref interferes here (I am not clear why), so we will define a new function to execute the task.

To handle that we will look at the nesting level of the starred environments, later I will run the constraint functions to make everything OK.

\_\_enumext\_set\_label\_ref\_h:n

The \\_\_enumext\_set\_label\_ref\_h:n function controlled by the ref key is in charge of handling the customization of the reference system.

First we will set the variable \l\_\_enumext\_the\_counter\_X\_tl according to the command created for *each counter*, apply the *regex* function \\_\_enumext\_regex\_label\_ref\_key: and then renew the command and save it in the variable \l\_\_enumext\_counter\_style\_for\_ref\_X\_tl.

```
\cs_new_protected:Npn \__enumext_set_label_ref_h:n #1

481
482
         }
483
    }
484
```

(End of definition for  $\l_enumext_use_key_ref_h$ :.)

\l enumext label vii tl

\l\_\_enumext\_label\_viii\_tl

#### 10.11.1 Define and set label key for enumext environment

```
Here we set the default \langle labels \rangle of the four levels of enumext environment, along with the default value
                                                                                         for labelwidth key.
      \l__enumext_label_i_tl
                                                                                            485 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
   \l__enumext_label_ii_tl
                                                                                                           {
                                                                                            486
                                                                                                                    \keys_define:nn { enumext / #1 }
\l__enumext_label_iii_tl
                                                                                            487
                                                                                                                           {
  \label{local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_local_loc
                                                                                                                                  label .code:n
                                                                                                                                                                                                             \__enumext_label_style:cvn { l__enumext_label_#2_tl }
                                                                                                                                                                                                                    { l__enumext_counter_#2_tl } {##1}
                                                                                                                                                                                                            \dim_set_eq:cN { l__enumext_labelwidth_#2_dim }
                                                                                                                                                                                                                   \verb|\lower| \verb| l_enumext_current_widest_dim|
                                                                                                                                                                                                    },
                                                                                                                                  label .initial:n = #3,
                                                                                                                                  label .value_required:n = true,
                                                                                                                                  ref
                                                                                                                                                       .code:n
                                                                                                                                                                                         = \__enumext_set_label_ref:n {##1},
                                                                                                                                  ref
                                                                                                                                                       .value_required:n = true,
                                                                                                                           }
                                                                                             501 \__enumext_tmp:nnn { level-1 } { i } { \arabic*.}
                                                                                             502 \__enumext_tmp:nnn { level-2 } { ii } { (\alph*) }
                                                                                             503 \__enumext_tmp:nnn { level-3 } { iii } { \roman*. }
                                                                                             504 \__enumext_tmp:nnn { level-4 } { iv } { \Alph*. }
```

(End of definition for label and others.)

#### 10.11.2 Define and set label key for enumext\* and keyans\* environments

label Here we set the default  $\langle labels \rangle$  for enumext\* and keyans\* environments, along with the default value ref for labelwidth key.

```
505 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
      \keys_define:nn { enumext / #1 }
        {
          label .code:n
                                \__enumext_label_style:cvn { l__enumext_label_#2_tl }
                                  { l__enumext_counter_#2_tl } {##1}
                                \dim_set_eq:cN { l__enumext_labelwidth_#2_dim }
                                  \l__enumext_current_widest_dim
          label .initial:n = #3,
          label .value_required:n = true,
          ref
                 .code:n
                            = \__enumext_set_label_ref_h:n {##1},
          ref
                 .value_required:n = true,
518
        }
521 \__enumext_tmp:nnn { enumext* } { vii } { \arabic*.}
522 \__enumext_tmp:nnn { keyans* } { viii } { (\Alph*) }
```

(End of definition for label and others.)

# 10.11.3 Define and set label key for keyans and keyanspic environment

label Here we set the default  $\langle label \rangle$  for keyans and keyanspic environment, along with the default value for \l\_\_enumext\_label\_v\_tl labelwidth. The keyanspic environment use the same  $\langle label \rangle$  as the keyans environment. \l\_\_enumext\_label\_vi\_tl Define and set label key for keyans environment.

```
523 \keys_define:nn { enumext / keyans }
     {
524
                          = {
        label .code:n
525
                               \__enumext_label_style:cvn { l__enumext_label_v_tl }
                                 { l__enumext_counter_v_tl } {#1}
                               \dim_set_eq:cN { l__enumext_labelwidth_v_dim }
                                 \l__enumext_current_widest_dim
                               \__enumext_label_style:cvn { l__enumext_label_vi_tl }
                                  { l__enumext_counter_vi_tl } {#1}
                               \dim_set_eq:cN { l__enumext_labelwidth_v_dim }
                                   \l__enumext_current_widest_dim
534
        label .initial:n = (\Alph*),
535
        label .value_required:n = true,
(\textit{End of definition for label}, \verb|\l_enumext_label_v_tl|, and \verb|\l_enumext_label_vi_tl|)
```

### 10.12 Setting start and widest keys

```
\__enumext_start_from:NNn
\__enumext_start_from:ccn
```

The function \\_\_enumext\_start\_from: NNn used by the start key take three arguments:

```
#1: \l__enumext_label_X_tl
#2: \l__enumext_start_X_int
#3: \langle integer or string \rangle
```

The first argument of this function are the "counter style" set by label key, the second argument is returned by the function, the third argument can be an  $\langle integer \rangle$  or  $\langle string \rangle$  of the form \Alph, \alph, \Roman or \roman. This effectively allows start=A or start=1 to be used.

```
538 \cs_new_protected:Npn \__enumext_start_from:NNn #1 #2 #3
539
       \__enumext_if_is_int:nTF { #3 }
540
          {
541
             \int_set:Nn #2 {#3}
542
          }
543
           {
             \regex_match:nVT { \c{Alph} | \c{alph} } {#1}
               { \int_set:Nn #2 { \int_from_alph:n {#3} } }
             \label{lem:condition} $$\operatorname{c}_{nVT} { \c{Roman} | \c{roman} } { \t} { \t} $$
               { \int_set:Nn #2 { \int_from_roman:n {#3} } }
    }
'\cs_generate_variant:Nn \__enumext_start_from:NNn { ccn }
```

(End of definition for  $\_\_$ enumext $\_$ start $\_$ from:NNn.)

\\_\_enumext\_widest\_from:nNNn
\\_\_enumext\_widest\_from:nccn

The function \\_\_enumext\_widest\_from: nNNn used by the widest key take four arguments:

#1: The counter associated with the environment level

```
#2: \l_enumext_label_X_tl
#3: \l_enumext_labelwidth_X_dim
```

#4: \langle integer or string \rangle

The second and third arguments of this function are the values set by label and labelwidth keys, the four argument can be an  $\langle integer \rangle$  or  $\langle string \rangle$  of the form \Alph, \alph, \Roman or \roman. The value of the four argument is set temporarily for the identified counter in this point (level), then the value is expanded into a "box" and the "width" of the "box" is returned.

```
552 \cs_new_protected:Npn \__enumext_widest_from:nNNn #1 #2 #3 #4
    {
       \__enumext_if_is_int:nTF {#4}
554
555
            \setcounter{enumX#1} { #4 }
556
         }
         {
            \regex_match:nVT { \c{Alph} | \c{alph} } {#2}
              { \setcounter{enumX#1} { \int_from_alph:n {#4} } }
            \label{local_regex_match:nVT} $$ \operatorname{c{Roman}} | \operatorname{c{roman}} $$ $$ $$ $$ $$
              { \setcounter{enumX#1} { \int_from_roman:n {#4} } }
562
563
        \__enumext_label_width_by_box:cv
564
           { l__enumext_labelwidth_#1_dim } { l__enumext_label_#1_tl }
565
567 \cs_generate_variant:Nn \__enumext_widest_from:nNNn { nccn }
```

 $(End\ of\ definition\ for\ \verb|\_-enumext_widest_from:nNNn.|)$ 

Now define and set start and widest keys for enumext and keyans environments.

widest
\l\_\_enumext\_start\_X\_int

```
568 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
    {
569
      \keys_define:nn { enumext / #1 }
570
        {
          start .code:n
                                 \__enumext_start_from:ccn
                                   { l__enumext_label_#2_tl }
                                   { l__enumext_start_#2_int } {##1}
          start .initial:n = 1,
          widest .code:n
                                 \__enumext_widest_from:nccn {#2}
                                   { l__enumext_label_#2_tl }
                                   { l__enumext_labelwidth_#2_dim } {##1}
                               },
```

( $End\ of\ definition\ for\ start$ , widest,  $and\ \l_enumext\_start\_X\_int$ .)

### 10.13 Setting keys for vertical spaces

topsep Define and set topsep, partopsep, parsep, itemsep, noitemsep and nosep keys for enumext and keyans environments.

parsep noitemsep nosep

```
588 \cs_set_protected:Npn \__enumext_tmp:nnnnnn #1 #2 #3 #4 #5 #6
589
      \keys_define:nn { enumext / #1 }
        {
591
                    .skip_set:c = { l__enumext_topsep_#2_skip },
          topsep
          topsep
                    .initial:n = {#3},
593
          topsep
                    .value_required:n = true,
          partopsep .skip_set:c = { l__enumext_partopsep_#2_skip },
          partopsep .initial:n = {#4},
          partopsep .value_required:n = true,
                  .skip_set:c = { l__enumext_parsep_#2_skip },
          parsep
          parsep
                   .initial:n = \{\#5\},
          parsep
                   .value_required:n = true,
          itemsep .skip_set:c = { l__enumext_itemsep_#2_skip },
          itemsep .initial:n = {#6},
          itemsep .value_required:n = true,
          noitemsep .meta:n = { itemsep = Opt, parsep = Opt },
          noitemsep .value_forbidden:n = true,
                    .meta:n
          nosep
                                    itemsep = 0pt, parsep= 0pt,
                                    topsep = 0pt, partopsep = 0pt,
608
                                  1.
                    .value_forbidden:n = true,
          nosep
611
```

Now we set the values based on standard article class in 10pt.

```
_{613} \__enumext_tmp:nnnnnn { level-1 } { i } { 8.0pt plus 2.0pt minus 4.0pt }
614 { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
   { 4.0pt plus 2.0pt minus 1.0pt }

#### 10.14 Setting keys for horizontal spaces

rightmargin listparindent list-offset list-indent

itemindent Define and set itemindent, rightmargin, listparindent, list-offset and list-indent keys for enumext and keyans environments.

```
rightmargin
                        .value_required:n = true,
          listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
          listparindent .value_required:n = true,
                        .dim_set:c = { l__enumext_listoffset_#2_dim },
          list-offset
                        .value_required:n = true,
          list-offset
          list-indent
                        .code:n
                          \bool_set_true:c { l__enumext_leftmargin_tmp_#2_bool }
                          \dim_set:cn { l__enumext_leftmargin_tmp_#2_dim } {##1},
          list-indent
                        .value_required:n = true,
        }
650 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(End of definition for itemindent and others.)

For enumext\* and keyans\* environments the situation is a bit different, the list-indent key behaves like the list-offset key.

#### 10.14.1 Functions for setting the fake itemindent

The itemindent key does not set the value of \itemindent, it only sets the value of the *horizontal space* applied using \skip\_horizontal:N. We will store this value in the variable and only apply it when it is greater than <code>Opt</code>. Here I will need to place \mode\_leave\_vertical: and the plain TeX macro \ignorespaces to avoid unwanted extra space when using the itemindent key.

```
_{656} \cs_set_protected:Nn \__enumext_fake_item:
657
    {
       \dim compare:nNnT

   }
}
```

(End of definition for  $\label{lem:lem:enumext_fake_item:}$  and others.)

## 10.15 Setting show-length key

show-length

Define and set show-length key for enumext, enumext\*, keyans and keyans\* environments. The function sets the boolean variable \l\_\_enumext\_show\_length\_X\_bool used in the definition of all environments to "true" and calls the function \\_\_enumext\_show\_length:nnn which prints all the values of the "vertical" and "horizontal" parameters calculated and used.

```
708 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
709
      \keys_define:nn { enumext / #1 }
           show-length .bool_set:c = { l__enumext_show_length_#2_bool },
           show-length .initial:n = false,
714
715
716 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(End of definition for show-length.)

# 10.16 Setting before, after and first keys

Define and set before, before\*, after and first keys for enumext and keyans environments.

```
hefore
before*
         717 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
 after
         718
            {
  first
                \keys_define:nn { enumext / #1 }
         719
                  {
         720
                    before .tl_set:c = { l__enumext_before_no_starred_key_#2_tl },
         721
                    before .value_required:n = true,
                    before* .tl_set:c = { l__enumext_before_starred_key_#2_tl },
         723
                   before* .value_required:n = true,
                    after .tl_set:c = { l__enumext_after_stop_list_#2_tl },
                    after .value_required:n = true,
                    first .tl_set:c = { l__enumext_after_list_args_#2_tl },
                    first .value_required:n = true,
         728
                  }
         729
         731 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

(End of definition for before and others.)

## 10.16.1 Functions for before, after and first keys in enumext

\ enumext before args exec: \\_\_enumext\_before\_keys\_exec: \\_\_enumext\_after\_stop\_list: \\_\_enumext\_after\_args\_exec:

The function \\_\_enumext\_before\_args\_exec: executes the  $\{\langle code \rangle\}$  set by the before\* key "before" the enumext environment is started. The {\langle code \rangle} is executed "without" knowing any definition of the second argument of the list.

```
732 \cs_new_protected:Nn \__enumext_before_args_exec:
733 {
      \tl_use:c { l__enumext_before_starred_key_ \__enumext_level: _tl }

```

# 10.17 Setting keys for multicols and minipage

mini-env mini-sep columns-sep

The default value of the columns-sep key is handled by the state of the boolean variable  $\lower lambda$  columns\_sep\_X\_bool which is handled in the internal definition of the enumext and keyans environments.

columns Define and set mini-env, mini-sep, columns-sep and columns keys for enumext and keyans environments.

```
796 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
797
      \keys_define:nn { enumext / #1 }
798
799
          mini-env
                      .dim_set:c = { l__enumext_minipage_right_#2_dim },
          mini-env
                      .value_required:n = true,
          mini-sep
                      .dim_set:c = { l__enumext_minipage_hsep_#2_dim },
          mini-sep
                      .initial:n = 0.3333em,
803
          mini-sep
                      .value_required:n = true,
          columns-sep .dim_set:c = { l__enumext_columns_sep_#2_dim },
          columns-sep .value_required:n = true,
                      .int_set:c = { l__enumext_columns_#2_int },
          columns
                      .initial:n = 1,
         columns
808
          columns
                      .value_required:n = true,
809
810
    }
812 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

For enumext\* and keyans\* environments the situation is a bit different, the default value for columns key are 2 and the command \miniright is not available, so we will add the keys miniright and miniright\* to implement support for minipage.

```
813 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
814
      \keys_define:nn { enumext / #1 }
815
816
          columns
                     .initial:n = 2,
817
          miniright .tl_gset:c = { g__enumext_miniright_code_#2_tl },
818
          miniright .value_required:n = true,
          miniright* .code:n
                                     \bool_gset_true:c { g__enumext_minipage_center_#2_bool }
                                     \keys_set:nn { enumext / #1 } { miniright = {##1} }
                                   },
          miniright* .value_required:n = true,
        }
825
827 \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }
```

(End of definition for mini-env and others.)

# 10.18 Adjustment of vertical spaces for multicols

When nesting a "list environment" inside the multicols environment, the values of the "vertical spaces" are lost, basically the multicols environment takes control over them. Graphically it can be seen like in the figure 7.

Figure 7: Representation of the vertical space in multicols for a nested level.

To keep the desired spaces *above* and *below* in the "*list environment*" (\topsep + [\partopsep]) it is necessary to "*adjust*" the spaces added by the multicols environment. The most appropriate option in this case is to use a "*context sensitive*" vertical space with \addvspace.

I should make it clear that the implementation here is a "bit questionable". At first glance doing \multicolsep=\topsep seemed right, but the results were not always as expected. An almost imperceptible detail is that in some cases the \itemsep values of are "stretched", possibly due to the use of \raggedcolumns and this affects the lower space when closing the environment, which is "smaller" than expected. My attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

#### 10.18.1 Adjustment of vertical spaces for multicols in enumext

\_\_enumext\_multi\_set\_vskip:

The function \\_\_enumext\_multi\_set\_vskip: will take care of determining the "adjusted spaces" that we will apply "above" and "below" the multicols environment in enumext.

We will set the default values taking into account that  $T_EX$  is in  $\langle horizontal \ mode \rangle$ , then we will make the settings for the  $\langle vertical \ mode \rangle$  in which  $\langle partopsep \ comes$  into play.

Set the values of \l\_\_enumext\_multicols\_above\_X\_skip and \l\_\_enumext\_multicols\_below\_-X\_skip equal to the value of \topsep in the *current level*.

(End of definition for \\_\_enumext\_multi\_set\_vskip:.)

©2024 by Pablo González L

\_\_enumext\_add\_pre\_parsep:

The function  $\_$ \_enumext\_add\_pre\_parsep: "adjusted" the value of  $\_$ \_enumext\_multicols\_above\_X\_skip detecting the value of  $\_$ parsep from the previous level. This is necessary since  $\_$ parsep from the previous level affects the *vertical spaces*.

41/113

```
862      }
863      }
(End of definition for \__enumext_add_pre_parsep:.)
```

\\_\_enumext\_multi\_addvspace:

The function \\_\_enumext\_multi\_addvspace: will apply the spaces set using \addvspace "above" the multicols environment in enumext, taking into account whether TeX is in  $\langle horizontal\ mode \rangle$  or  $\langle vertical\ mode \rangle$ .

(End of definition for \\_\_enumext\_multi\_addvspace:.)

## 10.18.2 Adjustment of vertical spaces for multicols in keyans

\\_\_enumext\_keyans\_multi\_set\_vskip:
\\_\_enumext\_keyans\_multi\_addvspace:

The function \\_\_enumext\_keyans\_multi\_set\_vskip: will take care of determining the "adjusted spaces" that we will apply "above" and "below" the multicols environment in keyans. The implementation of this function is the same as the one used in enumext.

```

## 10.19 Adjustment of vertical spaces for minipage

When nesting a "*list environment*" within the minipage environment, the values of the "*vertical spaces*" are lost. Graphically it can be seen like in the figure 8.

Since we want to keep the "left" and "right" environments "aligned on top", preserving the \baselineskip and keep the desired "spaces" (\topsep + [\partopsep]) it is necessary to "adjust" the "vertical spaces" for minipage environments.

Figure 8: Representation of the minipage spacing adjustment for a nested level.

Here there are several complications that we must circumvent, the minipage environment eliminates the "top" spaces, the multicols environment can be nested in the minipage environment, the "top" and "bottom" spaces are affected when topsep=%pt and to this is added the \partopsep parameter that comes into action according to whether TeX is in \( \lambda \text{horizontal mode} \rangle \) or \( \text{vertical mode} \). Depending on these cases, small adjustments must be made using \vspace and \addvspace to obtain the "desired vertical spacing".

Jagain I must make clear that the implementation here is a "bit questionable", but hunting the spaces (glue) produced by the minipage environment is quite complicated, even more if multicols it is nested. The setting of the values was more "trial and error" (aprox to \strutbox), using the help of the lua-visual-debug[12] package, again my attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

\_\_enumext\_mini\_env\*

Creates a \_\_enumext\_mini\_env\* environment (*custom version* of minipage) setting the \if@minipage switch to "false" to allow spaces at the "above" of the environment, plus we will add \vspace{\opt} to maintain alignment on "top". This environment will be used internally by the mini-env key, it is not documented in the user interface and is for internal use only.

```
peclareDocumentEnvironment{__enumext_mini_env*}{ m }
property
```

(End of definition for \_\_enumext\_mini\_env\*.)

## 10.19.1 Adjustment of vertical spaces for minipage in enumext

\\_\_enumext\_mini\_set\_vskip:

The function \\_\_enumext\_mini\_set\_vskip: will take care of determining the "adjust" spaces that we will apply "above" and "below" the \_\_enumext\_mini\_env\* environment in enumext.

We will set the default values taking into account that TeX is in  $\langle horizontal \ mode \rangle$ , then we will make the settings for the  $\langle vertical \ mode \rangle$  in which  $\rangle \text{partopse}$  comes into play.

First determine if the multicols environment is active by comparing the value of the \l\_\_enumext\_-columns\_X\_int variable handled by the columns key, according to this comparison we set the adjusted values for \l\_\_enumext\_minipage\_left\_skip, \l\_\_enumext\_minipage\_right\_skip and \l\_\_enumext\_minipage\_after\_skip.

If multicols environment is nested in \_\_enumext\_mini\_env\* environment, we will apply a correction factor to the *vertical spaces* taking into account the value of \topsep of the current level and the value of \parsep of the previous level, if these are zero we will use \strutbox as the basis for the calculations.

If only enumext environment is nested in \_\_enumext\_mini\_env\* environment, we will apply a correction factor to the *vertical spaces* taking into account the value of \topsep, if this is zero we will use \strutbox as the basis for the calculations.

```
\skip_if_eq:nnTF
        { \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip } } { \c_zero_skip }
          \skip_set:Nn \l__enumext_minipage_left_skip
           {
              0.5\box_dp:N \strutbox
              - \skip_use:c { l__enumext_partopsep_ \__enumext_level: _skip }
          \skip_set:Nn \l__enumext_minipage_right_skip
              \skip_use:c { l__enumext_partopsep_ \__enumext_level: _skip }
            }
          \skip_set:Nn \l__enumext_minipage_after_skip
              1.6\box_dp:N \strutbox
            }
        }
          \skip set:Nn \l enumext minipage left skip
            {
              0.5875\box_dp:N \strutbox
              - \skip_use:c { l__enumext_partopsep_ \__enumext_level: _skip }
            }
          \skip_set:Nn \l__enumext_minipage_right_skip
              + \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
              + \skip_use:c { l__enumext_partopsep_ \__enumext_level: _skip }
          \skip_set:Nn \l__enumext_minipage_after_skip
           {
              0.325\box_dp:N \strutbox
               \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
        }
   }
}
```

(End of definition for \\_\_enumext\_mini\_set\_vskip:.)

\\_\_enumext\_zero\_parsep:

The function \\_\_enumext\_zero\_parsep: "adjusted" the value of \l\_\_enumext\_minipage\_after\_-skip detecting the value of \parsep from the previous level. This is necessary since \parsep from the previous level affects the vertical spaces and this is noticeable when using the nosep or noitemsep keys.

enumext mini addvspace:

The function \\_\_enumext\_mini\_addvspace: will apply the spaces set using \addvspace "above" the \_\_enumext\_mini\_env\* environment in enumext, taking into account whether TEX is in \langle horizontal mode \rangle or \langle vertical mode \rangle. For the latter we will make some adjustments since the \partopsep parameter comes into play and this affects the vertical spacing.

(End of definition for  $\_$ enumext\_mini\_addvspace:.)

(End of definition for  $\ensuremath{\setminus}$  enumext\_zero\_parsep:.)

#### 10.19.2 Adjustment of vertical spaces for minipage in keyans

\\_\_enumext\_keyans\_mini\_set\_vskip:

The function \\_\_enumext\_keyans\_mini\_set\_vskip: will take care of determining the "adjusted" spaces that we will apply "above" and "below" the \_\_enumext\_mini\_env\* environment in keyans. The implementation of this function is the same as the one used in enumext.

1177 \par\nopagebreak
1178 \addvspace { \l__enumext_minipage_left_skip }
1179 }
```

 $(\textit{End of definition for } \verb|\|\_enumext\_mini\_addvspace\_vii: and \verb|\|\_enumext\_mini\_addvspace\_viii:.)$ 

#### 10.19.4 The command \miniright

The command \miniright will close the \_\_enumext\_mini\_env\* environment on the "left side", open the \_\_enumext\_mini\_env\* environment on the "right side" adding the adjusted vertical space. By default we will add \centering when starting the "right side" environment. The started version '\*' inhibits the use of \centering command i.e. the usual ETEX justification is maintained in the \_\_enumext\_mini\_env\* on the "right side".

\miniright First we will perform some checks to prevent the command from being executed outside the enumext environment or from being executed inside the keyanspic environment, then we call the internal functions for the enumext and keyans environments.

```
1180 \NewDocumentCommand \miniright { s }
       \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
1182
1183
            \msg_error:nnn { enumext } { wrong-miniright-place }
1184
         }
1185
       \int_compare:nNnT { \l__enumext_level_int } = { 0 }
1186
         {
1187
            \msg_error:nnn { enumext } { wrong-miniright-place }
1188
1189
       \int_compare:nNnTF { \l__enumext_keyans_level_int } = { 1 }
1190
            \__enumext_keyans_mini_right_cmd:n {#1}
           \__enumext_mini_right_cmd:n {#1} }
1194
         {
1195
```

(End of definition for \miniright. This function is documented on page 9.)

\_\_enumext\_mini\_right\_cmd:n

The function \\_\_enumext\_mini\_right\_cmd:n takes as argument the *starred version* '\*' of the \miniright command in the enumext environment. We check if the mini-env key is active via the variable \l\_\_-enumext\_minipage\_right\_X\_dim, if so we close the multicols environment with the \_\_enumext\_mini\_env\* environment on the "left side", then we open the \_\_enumext\_mini\_env\* environment on the "right side", apply our adjusted "vertical spaces", followed by adding the \centering command when the starred argument '\*' is not present and set zero \g\_\_enumext\_minipage\_stat\_int, otherwise we return an error.

```

# 10.20 Setting above and below keys

While having controlled the *vertical spaces* within the enumext and keyans environments when using the columns or mini-env keys, sometimes the "*vertical spaces above*" or "*vertical spaces below*" the environments are not as expected and it is necessary to be able to apply a "*fine correction*" to these. As I have not been able to correct these *glitches*, the best option is to leave a couple of  $\langle keys \rangle$  dedicated to this purpose, in this case it is best to use \vspace or \vspace\* when convenient.

```

# 10.21 Setting save-ans and resume keys

The key save-ans is directly associated with the key resume, this will activate the entire "storage system" in the enumext package.

save-ans We define the keys save-ans and resume only for the "first level" of enumext and enumext\*.

```
resume
         1343 \keys_define:nn { enumext / level-1 }
resume*
              {
         1344
                 save-ans .code:n = \__enumext_storing_set:n {#1},
                 save-ans .value_required:n = true,
                         .code:n = \__enumext_resume_counter:,
                 resume
                         .value_forbidden:n = true,
                 resume
         1348
                 resume* .code:n = \__enumext_resume_counter_star:,
         1349
                 resume* .value_forbidden:n = true,
         1350
         1351
             \keys_define:nn { enumext / enumext* }
         1352
         1353
                 save-ans .code:n = \__enumext_storing_set:n {#1},
         1354
                 save-ans .value_required:n = true,
                         .code:n = \__enumext_resume_counter_vii:,
                 resume
                         .value_forbidden:n = true,
                 resume
              }
         1358
```

 $(\mathit{End}\ of\ definition\ for\ save-ans\ ,\ resume\ ,\ and\ resume\ ".)$ 

\_\_enumext\_storing\_set:n

The function \\_\_enumext\_storing\_set:n executed by the save-ans key sets the parameters for the operation of \anskey, keyans and keyanspic. The variable \l\_\_enumext\_store\_name\_tl will have the "store name" with which the  $\langle sequence \rangle$  and  $\langle prop \ list \rangle$  will be created, if it does not exist it will create it globally.

The boolean var \l\_\_enumext\_store\_active\_bool will be set to true activating the entire internal storage mechanism, then the integer variable for the resume key will be created (if not exist), finally the function \\_\_enumext\_check\_ans\_int:n will be called to activate the internal mechanism for checking the answers if the boolean variable \l\_\_enumext\_check\_ans\_bool set by check-ans key are active.

```
\cs_new_protected:Npn \__enumext_storing_set:n #1
1360
       \tl_set:Ne \l__enumext_store_name_tl {#1}
1361

1391
            \int_gset:Nn \g__enumext_resume_int
1392
1393
                \int_use:c { g__enumext_resume_ \l__enumext_store_name_tl _int }
1394
1395
       \bool_set_true:N \l__enumext_resume_vii_bool
     }
```

 $(\mathit{End}\ of\ definition\ for\ \verb|\_enumext_resume_counter:\ and\ \verb|\_enumext_resume_counter_vii:.|)$ 

## 10.22 The check answer mechanism

The mechanism for checking that all questions are answered follows this logic:

If the line begins with \item or \item\* and does NOT open a nested environment, each \item or \item\* must contain a single execution of the \anskey command, i.e. the counter of the executions of the \anskey command must be equal to the counter associated with the sum of executions of \item and \item\*.

If the line begins with \item or \item\* and opens a nested environment each \item or \item\* in the nested environment must have a single execution of the \anskey command and the counter associated to the sum of \item and \item\* executions must decrementing by "one" to maintain equality.

In order for the mechanism for the check-answer to work (not counting keyans, keyans\* and keyanspic) we need:

- 1. We must keep track of the total number of \item and \item\* (enumerated) that appear within the environment including the nested levels.
- We must keep track of the total number of \item and \item\* (enumerated) that appear per level of nesting.
- 3. Keeping track of the number of times the environment nests.

The integer variable associated to the sum of each \item and \item\* in the environment \g\_\_enumext\_-count\_item\_number\_int must match the integer variable \g\_\_enumext\_count\_item\_anskey\_int associated to the execution of the command \anskey. We analyze the cases:

- a) If the list only has one level the number of \item + \item\* = \anskey
- b) If the list has *nested levels*, for each level of nesting we need to decrementing by one (for the \item or \item\* that opens the nest) so that the account remains the same.

With keyans, keyans\* and keyanspic it is enough to increase in one the integer of \anskey. The integers created must be global if they are not lost in the interior levels of nesting and to execute the test we will use a "hook" function after closing the first level of the environment.

## 10.22.1 Setting check-ans key

check-ans no-store Now we define the keys check-ans and no-store for all levels of enumext and enumext\* environments.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
1400
     {
       \keys_define:nn { enumext / #1 }
1401
         {
1/102
           check-ans .bool_set:N = \l__enumext_check_ans_bool,
1403
           check-ans .initial:n = false,
1404
            no-store .code:n = {
1405
                                   \bool_set_false:N \l__enumext_store_ans_bool
                                   \bool_set_false:N \l__enumext_check_ans_bool
                                 },
           no-store .value_forbidden:n = true,
         }
1411
1412 \clist_map_inline:nn
     {
1413
       level-1, level-2, level-3, level-4, enumext*
1414
1415
     { \__enumext_tmp:n {#1} }
1416
```

(End of definition for check-ans and no-store.)

## 10.22.2 Set-up check answer mechanism

\\_\_enumext\_check\_ans\_set:

The function \\_\_enumext\_check\_ans\_set: will adjust the value of the variable \g\_\_enumext\_count\_-item\_number\_int by decrementing its value by one each time you open a nested level enumext environment.

```
1417 \cs_new_protected:Nn \__enumext_check_ans_set:
     {
       \int_case:nn { \l__enumext_level_int }
1419
         {
1420
           { 1 }{
1421
                   \bool_lazy_all:nT
1422
                     {
1423
                       { \bool_if_p:N \g__enumext_starred_bool }
                       { \int_compare_p:nNn { \l__enumext_level_h_int } = { \c_one_int } }
                     }
                       \int_gdecr:N \g__enumext_count_item_number_int
                       \typeout{ENUMEXT ~ STANDAR ~ NEEEEEEEEEESTED}
                 }
1431
           { 2 }{
1432
                   \int_gdecr:N \g__enumext_count_item_number_int
1433
                }
           { 3 }{
                   \int_gdecr:N \g__enumext_count_item_number_int
           { 4 }{
                   \int_gdecr:N \g__enumext_count_item_number_int
1441
       \int_case:nn { \l__enumext_level_h_int }
1442
         {
1443
           { 1 }{
1444
                   \bool_if:NT \g__enumext_standar_bool
1445
                       \int_gdecr:N \g__enumext_count_item_number_int
1447
                       \typeout{ENUMEXT ~ STARRED ~ NEEEEEEEEEESTED}
```

 $(End\ of\ definition\ for\ \_enumext\_check\_ans\_set:.)$ 

\_\_enumext\_check\_ans\_exec:

The function \\_\_enumext\_check\_ans\_exec: will count the number of times the \item and \item\* commands appears per level within the enumext environment. The boolean variable \l\_\_enumext\_-store\_ans\_bool controlled by the no-store key will increment the integer variable of the level counter by 1 to preserve the equality that we will use in the final comparison of the process.

```
1433 \cs_new_protected:Nn \__enumext_check_ans_exec:
1454 {
1455 \bool_if:NT \l__enumext_check_ans_bool
1456 {
1457 \__enumext_check_ans_set:
1458 }
1459 }
```

(End of definition for \\_\_enumext\_check\_ans\_exec:.)

\\_\_enumext\_check\_ans\_show:

wrap-ans

wrap-opt

The function \\_\_enumext\_check\_ans\_show: compares all executions of \item and \item\* with the executions of \anskey. After the function is executed, we set the integer variables to zero.

(End of definition for \\_\_enumext\_check\_ans\_show:.)

# 10.23 Keys and functions associated with storage

We add the keys wrap-ans, wrap-opt, save-sep, mark-ans, mark-pos, show-ans, show-pos, mark-ref and save-ref related to the "storage system" and internal mechanism of "label and ref" only at the first level of enumerate and enumerate.

```
first level of enumext and enumext*.

## 10.23.1 Function for storing content in prop list

\\_\_enumext\_store\_addto\_prop:n
\\_\_enumext\_store\_addto\_prop:V

The function  $\ensuremath{\mbox{\mbox{$\setminus$}}}$  enumext\_store\_addto\_prop:n stores the content in  $\langle prop\ list \rangle$  defined by save-ans key. The "stored content" is retrieved by means of the  $\ensuremath{\mbox{$\setminus$}}$  getkeyans command.

The form in which the content is "stored" in the  $\langle prop \ list \rangle$  is  $\{\langle position \rangle\} \{\langle content \rangle\}$ . This function is used by \anskey in enumext and enumext\* environments, \item\* in keyans and keyans\* environments and \anspic in keyanspic environment.

 $(\mathit{End}\ of\ definition\ for\ \verb|\_-enumext\_store\_addto\_prop:n.)$ 

## 10.23.2 Function for storing content in sequence

with the same structure in which the command was executed.

\\_\_enumext\_store\_addto\_seq:n
\\_\_enumext\_store\_addto\_seq:v
\\_\_enumext\_store\_addto\_seq:V

The function  $\_$ \_enumext\_store\_addto\_seq:n stores the content in  $\langle sequence \rangle$  defined by save-ans key. This function is used by  $\$ anskey in enumext,  $\$ item\* in keyans and  $\$ anspic in keyanspic. The form in which the content is stored in  $\langle sequence \rangle$  is in a internal enumext or enumext\* environments

The "stored content" is retrieved by means of the \printkeyans command.

#### 10.23.3 Functions for storing the list structure in the sequence

\_enumext\_store\_level\_open: \\_\_enumext\_store\_level\_close: The memorization structure of the list is handled by the functions \\_\_enumext\_store\_level\_open: and \\_\_enumext\_store\_level\_close: which are executed per level within the enumext environment. As this structure will be stored in the sequence set by the save-ans key, we will not be able to modify it locally, so it is better to take only two copies of the values set by the columns and columns-sep keys if they are present when changing levels within the enumext environment when executing \anskey. We will store these values in the variable \l\_\_enumext\_store\_columns\_X\_tl if they are different from 0 and 0pt and pass them as an optional argument to the environment stored in the sequence enumext.

```

## 10.24 The command \anskey and internal label and ref

Since we will be "storing content" in a list environment within \( \sequences \) and can (more or less) manage the options passed to each level, it is necessary that we have a little more control over \item when storing. The \anskey command will cover this point and give it very similar behaviour to that of \item in the enumext and enumext\* environments.

\anskey We want the command to be executed as follows:  $\anskey(\langle number \rangle) * [\langle key = val \rangle] {\langle content \rangle}$  so first we'll add the keys item-sym\*, item-pos\* and store-brk.

```
1647 \keys_define:nn { enumext / anskey }
1648 {
1649    item-sym* .tl_set:N = \l__enumext_store_item_symbol_tl,
1650    item-sym* .value_required:n = true,
1651    item-pos* .dim_set:N = \l__enumext_store_item_symbol_sep_dim,
1652    item-pos* .value_required:n = true,
1653    store-brk .bool_set:N = \l__enumext_store_columns_break_bool,
1654    store-brk .default:n = true,
1655    store-brk .value_forbidden:n = true,
1656 }
```

This command \anskey will only be present when using the save-ans key in enumext and enumext\* environments, otherwise it will return an error. If the check-ans key is active, increment \g\_enumext\_-count\_item\_with\_ans\_int, then call internal function \\_enumext\_store\_anskey\_code:nnnn will "store content" in the \( sequence \) and in the \( \lambda prop \ list \rangle \).

```
1657 \NewDocumentCommand \anskey { d() s o +m }
       \bool_if:NF \l__enumext_store_active_bool
           \msg_error:nnnn { enumext } { anskey-wrong-place }{ anskey }{ enumext }
         }
1662
       \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
1662
1664
         {
           \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyans }
1665
       \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
           \msg_error:nnnn { enumext } { command-wrong-place }{ anskey }{ keyanspic }
         }
       \group_begin:
         \bool_if:NT \l__enumext_store_ans_bool
             \bool_if:NT \l__enumext_check_ans_bool
                 \int_gincr:N \g__enumext_count_item_anskey_int
1676
1677
                _enumext_store_anskey_code:nnnn {#1} {#2} {#3} {#4}
           }
       \group_end:
```

(End of definition for \anskey. This function is documented on page 10.)

\_\_enumext\_store\_anskey\_code:nnnn

The internal function \\_\_enumext\_store\_anskey\_code:nnnn first we pass the command  $\langle argument \rangle$  to the  $\langle prop\ list \rangle$ , then checks the state of the variable \l\_\_enumext\_store\_ref\_key\_bool handled by the save-ref key and will call the function \\_\_enumext\_store\_internal\_ref: for the internal "label and ref" system. Followed by this if the show-ans or show-pos keys are active we will show the "wrapped"  $\langle argument \rangle$  passed to the command.

```
1682 \cs_new_protected:Npn \__enumext_store_anskey_code:nnnn #1 #2 #3 #4
1683 {
1684 \__enumext_store_addto_prop:n {#4}
1685 \bool_if:NT \l__enumext_store_ref_key_bool
1686 {
1687 \__enumext_store_internal_ref:
1688 }
1689 \__enumext_store_anskey_show_left:n { #4 }
```

Now we start processing the optional arguments passed to the command to build our \item in the variable \l\_\_enumext\_store\_anskey\_arg\_tl which we will "store" in the  $\langle sequence \rangle$ . First we clear the variable \l\_\_enumext\_store\_anskey\_arg\_tl and process  $[\langle key=val \rangle]$ , if the store-brk key is present and the command is running under enumext (not in the starred version) we will add \columnbreak and then \item.

```
\tl_clear:N \l__enumext_store_anskey_arg_tl
       \tl_if_novalue:nF {#3}
1602
           \keys_set:nn { enumext / anskey } {#3}
1693
         }
1694
       \bool_lazy_and:nnT
1695
         { \bool_if_p:N \l__enumext_store_columns_break_bool }
1696
         { \bool_not_p:n { \l__enumext_starred_bool } }
           \tl_put_left:Nn \l__enumext_store_anskey_arg_tl { \columnbreak }
         }
       \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { \item }
```

Now we will check the  $(\langle number \rangle)$  argument and add it to \l\_\_enumext\_store\_anskey\_arg\_tl if the command is running under enumext\* (starred version).

```
\tl_if_novalue:nF {#1}
1703
           \int_set:Nn \l__enumext_store_columns_join_int {#1}
           \bool_if:NT \l__enumext_starred_bool
             {
1706
                \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
1708
                  {
                    ( \exp_not:V \l__enumext_store_columns_join_int )
1709
                  }
```

And now we will review the starred argument \* together with the keys item-sym\* and item-pos\* and pass them to  $\l_{enumext\_store\_anskey\_arg\_tl}$ .

```
\bool_if:nTF {#2}
         {
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { * }
           \tl_if_empty:NF \l__enumext_store_item_symbol_tl
             {
               \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
1718
                    [ \exp_not:V \l__enumext_store_item_symbol_tl ]
                 }
             }
           \dim_compare:nT
             {
1724
               \l__enumext_store_item_symbol_sep_dim != \c_zero_dim
1726
             {
               \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
1728
                 {
                    [ \exp_not:V \l__enumext_store_item_symbol_sep_dim ]
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#4}
         }
         {
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#4}
1736
```

Finally we check if the save-ref key is active along with the hyperref package load, if both conditions are met, it will create the \hyperlink and then store in \langle sequence \rangle.

```
\bool_lazy_and:nnT
         { \bool_if_p:N \l__enumext_store_ref_key_bool }
1739
         { \bool_if_p:N \l__enumext_hyperref_bool }
         {
           \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
                \hfill \exp_not:N \hyperlink { \exp_not:V \l__enumext_newlabel_arg_one_tl }
1744
                     { \exp_not:V \l__enumext_mark_ref_sym_tl }
1746
1747
         _enumext_store_addto_seq:V \l__enumext_store_anskey_arg_tl
1748
1749
```

#### 10.25.2 The save-ref key for keyans, keyans\* and keyanspic

The internal "label and ref" system for the keyans, keyans\* and keyanspic environments has slight differences with the one implemented for the \anskey command, basically because in this environments we are interested in the current  $\langle label \rangle$ . The mechanism defined here will allow to execute \ref{\store name: position}} and will return 1. (A).

\_\_enumext\_keyans\_store\_ref:
 \\_\_enumext\_keyans\_store\_ref\_aux\_i:
 \\_\_enumext\_keyans\_store\_ref\_aux\_ii:

The function \\_\_enumext\_keyans\_store\_ref: handles the internal "label and ref" system used by the save-ref key for \item\* and \anspic\* commands. First we will create copies of the current  $\langle labels \rangle$  and remove the dots "." from them, we do not want to get double dots in our references.

The auxiliary function \\_\_enumext\_keyans\_store\_ref\_aux\_i: set the variable \l\_\_enumext\_newlabel\_arg\_one\_tl which will contain  $\{\langle store\ name: position \rangle\}$  analyzing whether the environment in which they are executed is enumext\* or enumext.

```
{ \l__enumext_label_copy_i_tl . \l__enumext_label_copy_vi_tl }
         }
       \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }

## 10.26 Setting item-sym\* and item-pos\* keys

In order to have a cleaner implementation of  $\identified$  it is best to define a couple of keys that allow us to control and set by default the  $\langle symbol \rangle$  and its  $\langle offset \rangle$ .

```
item-sym*
            Define and set item-sym* and item-pos* keys for enumext and enumext*.
item-pos*
             2055 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
             2056
                     \keys_define:nn { enumext / #1 }
             2057
                          item-sym* .tl_set:c = { l__enumext_item_symbol_#2_tl },
                          item-sym* .value_required:n = true,
                         item-sym* .initial:n = {$\star$},
             2061
                          item-pos* .dim_set:c = { l__enumext_item_symbol_sep_#2_dim },
             2062
                          item-pos* .value_required:n = true,
             2063
                       }
             2064
                  }
             2065
             2066 \clist_map_inline:nn
                  {
                     \{ | evel-1 \} \{ i \}, \ \{ | evel-2 \} \{ ii \}, \ \{ | evel-3 \} \{ iii \}, \ \{ | evel-4 \} \{ iv \}, \ \{ enumext* \} \{ vii \} \}

## 10.28 Redefining \item command

Redefining the \item command is not as simple as I thought. This command works in conjunction with the \makelabel command so I have to redefine both of them, in addition to this, we will have to use a couple of global variables to pass the values from one command to the other.

# 10.28.1 The \item command in enumext

\ enumext default item:n

The  $\idetic{item}$  and  $\idetic{custom}$  commands work in the usual way on enumext.

First we will see if the optional argument is present, if it is NOT present we will check the state of the variable \l\_\_enumext\_check\_ans\_bool set by the key check-ans, set the boolean variable \l\_\_enumext\_wrap\_label\_X\_bool to "true" and execute \\_\_enumext\_item\_std:w.

Otherwise we will check the state of the boolean variable \l\_enumext\_wrap\_label\_opt\_X\_bool set by the key wrap-label\* and execute \\_enumext\_item\_std:w with the optional argument.

The boolean variable \l\_\_enumext\_wrap\_label\_X\_bool is used by the function \\_\_enumext\_make\_-label: (§10.29).

```
{ l__enumext_wrap_label_opt_ \__enumext_level: _bool }
   \__enumext_item_std:w [#1] \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl
}

22120 }
```

(End of definition for  $\ensuremath{\backslash}$  enumext\_default\_item:n.)

\\_\_enumext\_starred\_item:nn

The  $\identified item^*, \iden^*[\langle symbol \rangle] \ and \iden^*[\langle symbol \rangle] \ [\langle offset \rangle] \ works like the numbered \identified item, but placing a <math>[\langle symbol \rangle]$  to the "left" of the  $\langle label \rangle$  separated from it by the value set by the labelsep key and can be offset using the second optional argument  $[\langle offset \rangle]$ .

```
#1: \l__enumext_item_symbol_X_tl
#2: \l__enumext_item_symbol_sep_X_dim
```

First we will make a copy of \l\_\_enumext\_item\_symbol\_X\_tl which is set by the key item-sym\* or passed as optional argument in the global variable \g\_\_enumext\_item\_symbol\_tl, followed by setting the variable \l\_\_enumext\_item\_symbol\_sep\_X\_dim set by the key item\*-sep or by the second optional argument.

Then we will see the state of the variable \l\_\_enumext\_check\_ans\_bool set by the key check-ans, set the boolean variable \l\_\_enumext\_wrap\_label\_X\_bool to "true" and execute \\_\_enumext\_item\_-std:w.

In this function the optional argument of \\_\_enumext\_item\_std:w is omitted, we only want it to be numbered.

```
\cs_new_protected:Npn \__enumext_starred_item:nn #1 #2
2123
       \tl_if_novalue:nF {#1}
           \tl_set:cn { l__enumext_item_symbol_ \__enumext_level: _tl } {#1}
       \tl_gset_eq:Nc \g__enumext_item_symbol_tl { l__enumext_item_symbol_ \__enumext_level: _tl }
       \tl_if_novalue:nTF {#2}
         {
           \dim_set_eq:cc
             { l__enumext_item_symbol_sep_ \__enumext_level: _dim }
             { l__enumext_labelsep_ \__enumext_level: _dim }
         }
2134
         {
           \dim_set:cn { l__enumext_item_symbol_sep_ \__enumext_level: _dim } {#2}
         }
       \bool_if:NT \l__enumext_check_ans_bool
         {

```

#### 10.28.2 The \item command in keyans

The  $\idesigned \mbox{"item*} \mbox{"item*} \mbox{"content"} \mbox{"content"} \mbox{"commands store} \mbox{ the current $\langle label \rangle$ next to the $[\langle content \rangle]$ if it is present in the $\langle sequence \rangle$ and $\langle prop \mbox{ list} \rangle$ defined by save-ans key.$ 

\\_\_enumext\_keyans\_default\_item:n

The function \\_\_enumext\_keyans\_default\_item:n executes the original behavior of the \item.

(End of definition for \\_\_enumext\_keyans\_default\_item:n.)

\\_\_enumext\_keyans\_starred\_item:n

The function \\_\_enumext\_keyans\_starred\_item:n which will make a temporary copy of the current  $\langle label \rangle$ , execute the show-ans or show-pos keys using the function \\_\_enumext\_keyans\_show\_left:n and will display the contents of that item using the internal copy \\_\_enumext\_item\_std:w, this is necessary to prevent incrementing the current "counter" of the original  $\langle label \rangle$ .

```
2168 \cs_new_protected:Npn \__enumext_keyans_starred_item:n #1
2169 {
2170  \tl_set_eq:NN \l__enumext_keyans_tmpa_tl \l__enumext_label_v_tl
2171  \__enumext_keyans_show_left:n { #1 }
2172  \bool_set_true:N \l__enumext_wrap_label_v_bool
2173  \__enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl \__enumext_keyans_show_item
```

Recover the original value of the current  $\langle label \rangle$  and *store* it first in the  $\langle prop \ list \rangle$  (including the optional argument), run the internal "label and ref" system if the save-ref key is active and finally *store* it in the  $\langle sequence \rangle$ .

```
2174 \tl_set_eq:NN \l__enumext_label_v_tl \l__enumext_keyans_tmpa_tl
2175 \__enumext_keyans_addto_prop:n { #1 }
2176 \__enumext_keyans_store_ref:
   \__enumext_keyans_addto_seq:n { #1 }
2177 \__enumext_keyans_addto_seq:n { #1 }
```

 $(\textit{End of definition for } \c\color{large} = \texttt{cnumext\_keyans\_starred\_item:n.})$ 

\\_\_enumext\_keyans\_redefine\_item:

The function \\_\_enumext\_keyans\_redefine\_item: is responsible for adding the *starred* and *optional* argument by the \\_\_enumext\_list\_arg\_two\_v: function in the definition of the keyans environment. Here we need to use \peek\_remove\_spaces:n to prevent an unwanted space when using \item\* in conjunction with the itemindent key.

This function is passed to \\_\_enumext\_list\_arg\_two\_v: which is used in the definition of the keyans environment (§10.31).

```

                   {
                       enumext keyans starred item:n {##2}
2187
                  }
2188
              }
2189
              {
                 \__enumext_keyans_default_item:n {##2}
         }
2193
```

 $(\textit{End of definition for } \texttt{\ lim*} \ \ \textit{and } \texttt{\ locallense} \ \texttt{\ locallense}$ 

## 10.29 Redefining \makelabel command

Redefine \makelabel for the keys align, font, wrap-label, wrap-label\* and \item\* for enumext and keyans environments.

# 10.29.1 Redefining \makelabel for enumext

\\_\_enumext\_item\_starred:

The function \\_\_enumext\_item\_starred: will be responsible for executing \item\* for the enumext environment.

```
crystal content c
```

(End of definition for \\_\_enumext\_item\_starred:.)

\\_\_enumext\_make\_label:

The function \\_\_enumext\_make\_label: redefine \makelabel for the enumext environment.

This function is passed to \\_\_enumext\_list\_arg\_two\_X: which is used in the definition of the enumext environment (§10.31).

 $(End\ of\ definition\ for\ \verb|\_-enumext_make_label:|)$ 

## 10.29.2 Redefining \makelabel for keyans

\\_\_enumext\_keyans\_make\_label:

The function \\_\_enumext\_keyans\_make\_label: redefine \makelabel for keyans environment.

This function is passed to \\_\_enumext\_list\_arg\_two\_v: which is used in the definition of the keyans environment (§10.31).

 $(\textit{End of definition for } \verb|\_-enumext_keyans_make_label:.)$ 

## 10.30 Calculation of \leftmargin and \itemindent

Consider the figure 9 where the default margins (on the left) of a list are represented.

The idea is to have control over these margins so that our list does not overlap the left margin of the page. The *key* relationship is that the right edge of the \labelsep equals the right edge of the \itemindent, so that the left edge of the *label box* is at \leftmargin+\itemindent minus \labelwidth+\labelsep. Thus, the handling of the margins by the package will be as shown in the figure 10.

Where the default values will look like in the figure 11.

\\_\_enumext\_calc\_hspace:NNNNNNN\ \\_enumext\_calc\_hspace:cccccc The function \\_\_enumext\_calc\_hspace: NNNNNNN takes seven arguments to be able to determine horizontal spaces for all list environment:

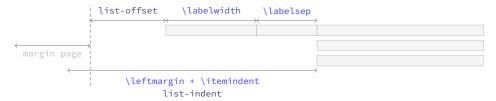

Figure 9: Representation of standard horizontal lengths in list environment.

```
list-offset \labelwidth \labelsep

wargin page \labelwidth \labelsep
\labelwidth \labelsep
\labelwidth \labelsep
\labelwidth \labelsep
```

Figure 10: Representation of horizontal lengths concept in list in enumext.

```
#1: \l__enumext_labelwidth_X_dim #2: \l__enumext_labelsep_X_dim
#3: \l__enumext_listoffset_X_dim #4: \l__enumext_leftmargin_tmp_X_dim
#5: \l__enumext_leftmargin_X_dim #6: \l__enumext_itemindent_X_dim
#7: \l__enumext_leftmargin_tmp_X_bool
```

And returns the "adjusted" values of \leftmargin and \itemindent.

This function is passed to \\_\_enumext\_list\_arg\_two\_X: which is used in the definition of the enumext and keyans environments (§10.31).

If no value has been passed to the labelwidth and labelsep keys we set the default values for  $\l_-$ enumext\_leftmargin\_tmp\_X\_dim.

```
\bool_if:nF #7 { \dim_set:Nn #4 { #1 + #2} }
```

We now analyze the cases and set the values for \leftmargin and \itemindent.

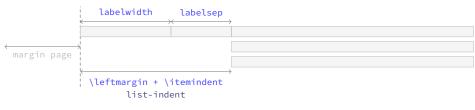

Figure 11: Default horizontal lengths in enumext.

# 10.31 Setting second argument of the lists

(End of definition for  $\c enumext\_calc\_hspace:NNNNNNN.$ )

At this point of the code we have already programmed the necessary tools to create a custom list environment, remember that the function \\_\_enumext\_start\_list:nn takes two arguments, the first one we have ready, the second one we will define for all the levels of the environment enumext and the environment keyans.

\\_\_enumext\_list\_arg\_two\_i:
\\_\_enumext\_list\_arg\_two\_ii:
\\_\_enumext\_list\_arg\_two\_iv:
\\_\_enumext\_list\_arg\_two\_v:

In this function for the second list argument we will implement the keys start, resume and show-length together with the redefinition of \item for enumext and keyans environments.

We will "not set" \leftmargini, \leftmarginii, \leftmarginiii or \leftmarginiv, in this case, we will directly set the parameters for vertical and horizontal list spacing per level.

For the horizontal environments enumext\* and keyans\* the implementation is similar, but, the value of \partopsep is always Opt. At this point we will modify the parsep key to make it take the value of the itemsep key and later, in the environment definition, we will modify parindent to make it set the value of lisparindent and parsep to set the value of \parskip locally.

## 10.32 The environment enumext

enumext We create the enumext environment based on list environment by levels.

```
NewDocumentEnvironment{enumext}{ O{}} }
       \__enumext_current_env:
2354
       \__enumext_safe_exec:
       \__enumext_parse_keys:n {#1}
       \__enumext_before_list:
       \__enumext_start_store_level:
       \__enumext_start_list:nn
         { \tl_use:c { l__enumext_label_ \__enumext_level: _tl } }
2360
2361
           \use:c { __enumext_list_arg_two_ \__enumext_level: : }
2362
            \__enumext_before_keys_exec:
2363
       \__enumext_after_args_exec:
2365
2366
         _enumext_stop_list:
       \__enumext_stop_store_level:
2369
       \__enumext_after_list:
2370
     }
```

(End of definition for enumext. This function is documented on page 4.)

\\_\_enumext\_safe\_exec:

First check the maximum nesting level for the enumext environment and set the state of the booleans vars  $\lower_{\text{environment}}$  and  $\lower_{\text{environment}}$  to "true", the latter only if the environment is NOT nested in the enumext\* environment.

```
<sup>2372</sup> \cs_new_protected:Nn \__enumext_safe_exec:
©2024 by Pablo González L
```

\\_\_enumext\_parse\_keys:n

Parse  $\lceil \langle key = val \rangle \rceil$  by levels in enumext. If the variable \l\_enumext\_store\_active\_bool is true it will call the function \\_\_enumext\_parse\_store\_keys:n and reprocess the  $\langle keys \rangle$  to pass them to the storage sequence.

(End of definition for  $\_\_$ enumext $\_$ parse $\_$ keys:n.)

(End of definition for \\_\_enumext\_safe\_exec:.)

\\_\_enumext\_parse\_store\_keys:n

The function \\_\_enumext\_parse\_store\_keys:n searches for the values of the columns and columns-sep keys in the optional arguments per-level in enumext environment as long as the starred versions of the columns\* and columns-sep\* keys are not active. The captured values are stored in the variable \l\_\_enumext\_store\_opt\_X\_tl which is used by the function \\_\_enumext\_store\_level\_open:.

2470 \nointerlineskip\noindent
2471 \begin{__enumext_mini_env*}
©2024 by Pablo González L
```

enumext multicols start:

The function \\_\_enumext\_multicols\_start: will start the multicols environment according to the value passed by the columns key, then set the default value for \columnsep when columns-sep=0pt and set the value of \multicolsep equal to zero and leave \columnseprule equal to zero for inner levels.

```
2476 \cs_new_protected:Nn \__enumext_multicols_start:
2477
    {
      \int_compare:nNnT
        \dim_compare:nNnT
2481
            { \dim_use:c { l__enumext_columns_sep_ \__enumext_level: _dim } } = { \c_zero_dim }
2482
2483
              \dim_set:cn { l__enumext_columns_sep_ \__enumext_level: _dim }
2484
               {
                 ( \dim_use:c { l__enumext_labelwidth_ \__enumext_level: _dim }
                   + \dim_use:c { l__enumext_labelsep_ \__enumext_level: _dim }
                 ) / \int_use:c { l__enumext_columns_ \__enumext_level: _int }
                  - \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim }
               }
           }
          \dim_set_eq:Nc \columnsep { l__enumext_columns_sep_ \__enumext_level: _dim }
          \skip_zero:N \multicolsep
          \int_compare:nNnT { \l__enumext_level_int } > { 1 }
              \dim_zero:N \columnseprule
```

We will calculate the *vertical spacing* settings for the multicols environment using the function \\_\_enumext\_multi\_addvspace:, apply our "*vertical adjust spacing*", then start the multicols environment.

 $(\mathit{End}\ of\ definition\ for\ \verb|\_-enumext_multicols_start:.)$ 

(End of definition for \\_\_enumext\_before\_list:.)

\\_\_enumext\_multicols\_stop:

The function \\_\_enumext\_multicols\_stop: will stop the multicols environment. If the boolean variable \l\_\_enumext\_minipage\_active\_X\_bool is false (not nested in \_\_enumext\_mini\_env\*) we will apply our "vertical adjust" spacing.

If the check-ans key is active, we set the boolean variable  $g_{enumext\_check\_ans\_show\_bool}$  to true and copy the stored name to the variable  $g_{enumext\_store\_name\_tl}$ . These variables will be used by the function  $q_{enumext\_after\_env}$ : n to display the result of the internal check answer mechanism in the terminal.

```
2517 \bool_lazy_and:nnT
2518 { \bool_if_p:N \l__enumext_check_ans_bool }
2519 { \bool_not_p:n { \g__enumext_starred_bool } }
2520 {
©2024 by Pablo González L
```

\\_\_enumext\_after\_list:

The function \\_\_enumext\_after\_list: will will check the state of the boolean variable \l\_\_enumext\_minipage\_active\_X\_bool, if it is "true" a small test will be executed to check if we have omitted the use of \miniright (the \_\_enumext\_mini\_env\* environment has not been closed), then close \_\_enumext\_mini\_env\* and add the adjusted vertical space \l\_\_enumext\_minipage\_after\_skip, otherwise we will close the multicols environment.

```
csc_new_protected:Nn \__enumext_after_list:
csc_feromapset_stat_int {
csc_feromapset_inNnT { \g_enumext_minipage_active_ \_enumext_level: _bool }
csc_feromapset_inNnT { \g_enumext_minipage_stat_int } = { 1 }
csc_feromapset_inNnT { \g_enumext_minipage_stat_int } = { 1 }
csc_feromapset_inNnT { \g_enumext_minipage_stat_int }
csc_feromapset_stat_int }
csc_feromapset_stat_int \quad \qq\quad \quad \quad \quad \quad \quad \quad \quad \q
```

Now apply the  $\{\langle code \rangle\}$  handled by the after key together with the *vertical space* handled by the below key if they are present.

```
\__enumext_after_stop_list:
\_enumext_vspace_below:
```

(End of definition for  $\_$ enumext\_multicols\_stop:.)

Finally save the *current value* of the counter in \g\_\_enumext\_resume\_int for the resume key. If the save-ans key is active, it will create the integer variable for the resume key, we only have to assign it the value of the current counter.

(End of definition for  $\_$ enumext\_after\_list:.)

As we don't want our check to be executed check-ans by levels but on the complete list, we will take it out of the enumext environment using the "hook" function \\_\_enumext\_after\_env:nn.

## 10.33 The environment keyans

The environment keyans also based on lists. The main differences with the enumext environment are the *nesting* and the way the *answers* (choice) will be stored and checked, this environment is intended exclusively for "*multiple choice questions*".

keyans Now we define the environment keyans also based on lists.

```
2563 \NewDocumentEnvironment{keyans}{ 0{} }
2564 {
@2024 by Pablo González L
```

```
\__enumext_keyans_safe_exec:
       \__enumext_keyans_parse_keys:n {#1}

       \__enumext_vspace_below_v:
2674
2675
```

(End of definition for  $\_=$ enumext\_after\_list\_v:.)

## 10.34 The environment keyanspic and \anspic

The keyanspic environment is a list-based environment that uses the same configuration for "spacing" and  $\langle label \rangle$  as the keyans environment, but it does not use \item.

The contents are passed to the environment by means of the \anspic command and are placed inside minipage environments, with the \(\lambda label\rangle\) underneath, adjusting widths according to the options passed to the environment.

Again it is necessary to "adjust" the spacing, both vertical and horizontal, to obtain an output like the one shown in the figure 12.

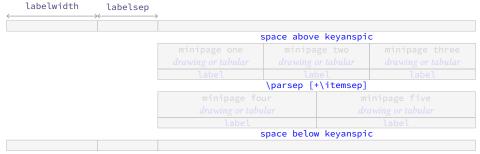

Figure 12: Representation of the keyanspic spacing in enumext.

This implementation is adapted from the answer given by Enrico Gregorio in How to process the body of an environment and divide it by a \macro?.

## 10.34.1 The command \anspic

\anspic The \anspic command take three arguments, the starred (\*) versions \anspic\* and \anspic\* [\content $\rangle$ ] store the current  $\langle label \rangle$  next to the  $[\langle content \rangle]$  if it is present in the  $\langle sequence \rangle$  and  $\langle prop \ list \rangle$ defined by save-ans key. This command is used as a replacement for \item in the keyanspic environment.

```
2676 \NewDocumentCommand \anspic { s o +m }
2677
```

We check that the command is active in the keyanspic environment only if the save-ans key is present, otherwise we return an error.

```
\bool_if:NF \l__enumext_store_active_bool
2679
           \msg_error:nnnn { enumext } { wrong-place }{ keyanspic }{ save-ans }
         }
       \int_compare:nNnT { \l__enumext_level_int } > { 1 }
         {
```

```
\[ \msg_error:nn { enumext } { keyanspic-wrong-level }
\[ \frac{2685}{3} \]
\[ \int_compare:nNnT { \l_enumext_keyans_level_int } = { 1 }
\[ \frac{2687}{4} \]
\[ \msg_error:nnnn { enumext } { command-wrong-place } { anspic } { keyans }
\[ \frac{2688}{3} \]
\[ \frac{1}{4} \]
\[
```

The three arguments are handled by the function \\_\_enumext\_keyans\_anspic\_code:nnn and stored in the sequence \l\_\_enumext\_keyans\_pic\_body\_seq which is processed by the keyanspic environment.

(End of definition for \anspic. This function is documented on page 12.)

 $\verb|\|\_enumext_keyans_anspic_code:nnn|$ 

The function  $\ensuremath{\mbox{\mbox{$\setminus$}}}$  enumext\_keyans\_anspic\_code:nnn will be in charge of handling the "counter" and  $\langle label \rangle$ , which will have the same configuration as the keyans environment.

```
2695 \cs_new_protected:Nn \__enumext_keyans_anspic_code:nnn

#### 10.34.2 The environment keyanspic

keyanspic

Now we define the environment keyanspic based on list. The optional argument  $\lceil \langle number\ above, number\ below \rangle \rceil$  will determine the number of minipage environments that will be above and below separated by  $\parsep+\timespic$  within it.

We apply the "adjusted" vertical spacing above the environment

```
\rvspace { \l__enumext_keyans_pic_above_skip }
```

If the optional argument is not present, the number of times the \anspic command appears will be counted from \l\_\_enumext\_keyans\_pic\_body\_seq and placed in minipage environments on a single line. Finally we check if \anspic\* has been used, set the counter to zero and apply our "adjusted" vertical space below the environment.

80/113

```
\setcounter { enumXvi } { 0 }
\vspace { \l__enumext_topsep_v_skip }

\%\bool_set_false:N \l__enumext_store_active_bool

\rac{2737}
}
```

(End of definition for keyanspic. This function is documented on page 11.)

\\_\_enumext\_keyans\_pic\_safe\_exec:

The function \\_\_enumext\_keyans\_pic\_safe\_exec: check nested and level position inside the enumext environment.

(End of definition for  $\_$ enumext\_keyans\_pic\_safe\_exec:.)

\\_\_enumext\_keyans\_pic\_skip\_abs:N

The function \\_\_enumext\_keyans\_pic\_skip\_abs:N will return a positive value \parsep.

(End of definition for  $\_$ enumext\_keyans\_pic\_skip\_abs:N.)

\\_\_enumext\_keyans\_pic\_arg\_two:

The function \\_\_enumext\_keyans\_pic\_arg\_two: will be used in the second argument of the \\_\_enumext\_start\_list:nn function that defines the keyanspic environment, it will handle the setting of spaces.

```
2751 \cs_new_protected:Nn \__enumext_keyans_pic_arg_two:
```

The first thing to do is to set the boolean variable \l\_enumext\_leftmargin\_tmp\_v\_bool handled by the list-indent key to false, then we copy the definition of the second list argument from the keyans environment.

```
\bool_set_false:N \l__enumext_leftmargin_tmp_v_bool \__enumext_list_arg_two_v:
```

We will add the value of \itemsep to \parsep which we will use as vertical spacing between the above and below minipage environments. and adjust the value of \leftmargin, the label and counter are handled directly by the \anspic command. Then we make equal to zero \labelwidth, \labelsep, \partopsep and \itemsep so that the horizontal and vertical spacing is not affected.

```
\skip_add:Nn \parsep { \itemsep }
\dim_add:Nn \leftmargin { -\labelwidth - \labelsep }
\dim_zero:N \labelwidth
\dim_zero:N \listparindent
\dim_zero:N \labelsep
\skip_zero:N \partopsep
\skip_zero:N \itemsep
```

We set the value of \l\_\_enumext\_keyans\_pic\_above\_skip which we will use to apply our "adjust" space above keyanspic, finally we call \\_\_enumext\_item\_std:w followed by \scan\_stop: to prevent the error message returned by LTFX when not using the \item command.

```
\__enumext_keyans_pic_skip_abs:N \parsep
\skip_set:Nn \l__enumext_keyans_pic_above_skip
\text{2764} \tag{
\text{box_dp:N \strutbox} \\
\text{+ \l__enumext_topsep_v_skip} \\
\text{- \parsep}
\text{2765} \tag{
}
\text{-_enumext_item_std:w \scan_stop:}
\text{2769} \\
\text{-_enumext_item_std:w \scan_stop:}
\text{2770} \tag{
}
```

(End of definition for \\_\_enumext\_keyans\_pic\_arg\_two:.)

```
\__enumext_keyans_pic_do:e
```

\_enumext\_keyans\_pic\_do:n The optional argument is split by comma and is handled directly by the function \\_\_enumext\_keyans\_pic\_do:n and passed to the function \\_\_enumext\_keyans\_pic\_row:n.

```
2771 \cs_new_protected:Nn \__enumext_keyans_pic_do:n
         \clist_map_function:nN { #1 } \__enumext_keyans_pic_row:n
      }
2774
_{\mbox{\tiny 2775}} \cs_generate_variant:Nn \__enumext_keyans_pic_do:n { e }
(End of definition for \ensuremath{\backslash} enumext_keyans_pic_do:n.)
```

\\_\_enumext\_keyans\_pic\_row:n

The function \\_\_enumext\_keyans\_pic\_row:n will set the widths for the minipage environments and place the content  $\langle stored \rangle$  by \anspic\* in the \l\_\_enumext\_keyans\_pic\_body\_seq sequence inside

```
2776 \cs_new_protected:Nn \__enumext_keyans_pic_row:n
2777
       \dim_set:Nn \l__enumext_keyans_pic_width_dim { \linewidth / #1 }
2778
       \int_set:Nn \l__enumext_keyans_pic_above_int { \l__enumext_keyans_pic_below_int }
       \int_set:Nn \l__enumext_keyans_pic_below_int { \l__enumext_keyans_pic_above_int + #1 }
       \int_step_inline:nnn

2785
               \centering
2786
               \seq_item:Nn \l__enumext_keyans_pic_body_seq { ##1 }
2787
             \__enumext_endminipage:
         }
2789
       \par
     }
```

(End of definition for  $\_$ enumext\_keyans\_pic\_row:n.)

## The enumext\* environment

Generating horizontal list environments is NOT as simple as standard LTEX list environments. The fundamental part of the code is adapted from the shortlst package to a more modern version using expl3. It is not possible to redefine \item and \makelabel as in the non starred versions (at least I have not achieved it) and as we will make it behave differently, we have no other option than to define a cascade of functions.

To achieve the horizontal list environment we will capture the \item command and the content of this in an plain lrbox box using \makebox for the label and a minipage environment for the content passed to \item, we will also add the optional argument  $(\langle number \rangle)$  to \item to be able to join columns horizontally, in simple terms, we want \item to behave in the same way as in the enumext environment but adding an optional first argument ( $\langle number \rangle$ ).

#### 10.35.1 Functions for item box width

\\_\_enumext\_starred\_columns\_set\_vii:

We set the default value for the width of the box containing the content of the items and create \itemwidth in a public form.

```
\cs_new_protected:Nn \__enumext_starred_columns_set_vii:
    {
2793
       \dim_compare:nNnT { \l__enumext_columns_sep_vii_dim } = { \c_zero_dim }
2794
2795
           \dim_set:Nn \l__enumext_columns_sep_vii_dim
2796
               ( \l__enumext_labelwidth_vii_dim + \l__enumext_labelsep_vii_dim )
2798
               / \l__enumext_columns_vii_int
       \int_set:Nn \l__enumext_tmpa_vii_int { \l__enumext_columns_vii_int - \c_one_int }
       \dim_set:Nn \l__enumext_item_width_vii_dim
2803
           ( \linewidth - \l__enumext_columns_sep_vii_dim * \l__enumext_tmpa_vii_int )
           / \l__enumext_columns_vii_int - \l__enumext_labelwidth_vii_dim
            \l__enumext_labelsep_vii_dim
         }
       \dim_zero_new:N \itemwidth
```

(End of definition for \\_\_enumext\_starred\_columns\_set\_vii:.)

\_enumext\_starred\_joined\_item\_vii:n

The function \\_\_enumext\_starred\_joined\_item\_vii:n will set the width of the box in which the content passed to  $\forall i tem(\langle number \rangle)$  will be stored together with the value of  $\forall i temwidth$ .

#### 10.35.2 The command \item in enumext\*

\\_\_enumext\_start\_item\_tmp\_vii:

First we will call the function \\_\_enumext\_stop\_item\_tmp\_vii: that we will redefine later, we will increment the value of \l\_\_enumext\_item\_column\_pos\_vii\_int that will count the item's by rows and the value of \g\_\_enumext\_item\_count\_all\_vii\_int that will count the total of item's in the environment. After that we will call the function \\_\_enumext\_item\_peek\_args\_vii: that will handle the arguments passed to \item.

```
3020 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_vii:
3030 {
3031 \__enumext_stop_item_tmp_vii:
3032 \int_incr:N \l__enumext_item_column_pos_vii_int
3033 \int_gincr:N \g__enumext_item_count_all_vii_int
3034 \__enumext_item_peek_args_vii:
3035 }
```

 $(End\ of\ definition\ for\ \verb|\_enumext_start_item_tmp_vii:.)$ 

 $\verb|\__enumext_item_peek_args_vii:|$ 

The function \\_\_enumext\_item\_peek\_args\_vii: will handle the \item( $\langle number \rangle$ ). Look for the argument "(", if it is present we will call the function \\_\_enumext\_joined\_item\_vii:w ( $\langle number \rangle$ ), which is in charge of joining the item's in the same row, in case they are not present we will set the default value (1).

(End of definition for  $\_\_enumext\_item\_peek\_args\_vii:$ .)

\_enumext\_joined\_item\_vii:w

The function \\_\_enumext\_joined\_item\_vii:w will first call the function \\_\_enumext\_starred\_-joined\_item\_vii:n in charge of setting the *width* of the box that will store the content passed to \item. Then we will look for the argument "\*", if it is present we will call the function \\_\_enumext\_starred\_-item\_vii:w otherwise we will call the function \\_\_enumext\_standard\_item\_vii:w.

(End of definition for \\_\_enumext\_joined\_item\_vii:w.)

\\_\_enumext\_standard\_item\_vii:w

The function \\_\_enumext\_standard\_item\_vii:w will first look for the argument "[", if present it will set the state of the variable \l\_\_enumext\_wrap\_label\_opt\_vii\_bool equal to the state of the variable \l\_\_enumext\_wrap\_label\_opt\_vii\_bool handled by the key wrap-label\* and finally execute the non-enumerated version \item[\langle custom \rangle] by means of the function \\_\_enumext\_start\_item\_vii:w, otherwise we will set the value of the variable \l\_\_enumext\_wrap\_label\_vii\_bool handled by the wrap-label key to true and set the switch \if@noitemarg to true to execute the enumerated version of \item by means of the function \\_\_enumext\_start\_item\_vii:w [\l\_\_enumext\_label\_vii\_tl].

# 10.35.3 Real definition of \item in enumext\*

\\_\_enumext\_start\_item\_vii:w

The functions \\_\_enumext\_start\_item\_vii:w and \\_\_enumext\_stop\_item\_vii: executing the true definition of \item inside the enumext\* environment.

The first thing we will do is set the value of \\_\_enumext\_stop\_item\_tmp\_vii: equal to the value of \\_\_enumext\_stop\_item\_vii: which we will define later and add the hyperref compatible enumXvii counter, after that we will start capturing the item content in a box. Here need setting the \if@hyper@item switch to "true" for hyperref compatible. The explanation for this is given by the master Heiko Oberdiek on \refstepcounter{enumi} twice (or more) creates destination with the same identifier.

```
3096 \cs_new_protected_nopar:Npn \__enumext_start_item_vii:w [#1]
3097
       \cs_set_eq:NN \__enumext_stop_item_tmp_vii: \__enumext_stop_item_vii:
3098

                  }
             }
         }
```

Here we start capturing \item and its contents into a group using the plain form of the lrbox environment. If the state of the variable \l\_enumext\_footnotes\_key\_bool is false, we will redefine the command \footnote, followed by printing the \( symbol \) defined for \item\* if it is present and open a new group inside which we execute font key next to \item and the keys wrap-label, wrap-label\*, align, close the group and execute the key labelsep and then the key first. Finally we open the minipage environment and execute the listparindent key which will be equal to \parindent, the parsep key which will be equal to \parskip and the itemindent key.

## 10.36.2 The command \item in keyans\*

The idea here is to make the \item command behave in the same way as in the keyans environment with the difference of the optional argument ( $\langle number \rangle$ ) which works in the same way as in the enumext\* environment. In simple terms we want to store the  $\langle label \rangle$  next to the  $\lceil \langle content \rangle \rceil$  if it is present in the  $\langle sequence \rangle$  and  $\langle prop | list \rangle$  defined by save-ans key for  $\langle tem^*, tem^* | \langle content \rangle \rangle$ ,  $\langle tem | \langle tem^* \rangle \rangle$ and  $\idetime(\langle number \rangle) * [\langle content \rangle]$  commands.

\ enumext start item tmp viii:

First we will call the function \\_\_enumext\_stop\_item\_tmp\_viii: that we will redefine later, we will increment the value of \l\_\_enumext\_item\_column\_pos\_viii\_int that will count the item's by rows and the value of \g\_\_enumext\_item\_count\_all\_viii\_int that will count the total of item's in the environment. After that we will call the function \\_\_enumext\_item\_peek\_args\_viii: that will handle the arguments passed to \item.

```
3373 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_viii:
3374
        \__enumext_stop_item_tmp_viii:
        \int_incr:N \l__enumext_item_column_pos_viii_int
        \int_gincr:N \g__enumext_item_count_all_viii_int
        \__enumext_item_peek_args_viii:
3378
(End of definition for \__enumext_start_item_tmp_viii:.)
```

\\_\_enumext\_item\_peek\_args\_viii:

The function \\_\_enumext\_item\_peek\_args\_viii: will handle the \item( $\langle number \rangle$ ). Look for the argument "(", if it is present we will call the function \\_\_enumext\_joined\_item\_viii:w ( $\langle number \rangle$ ), which is in charge of joining the item's in the same row, in case they are not present we will set the default value (1).

 $(\mathit{End}\ of\ definition\ for\ \verb|\_-enumext_item_peek_args_viii:.)$ 

\\_\_enumext\_joined\_item\_viii:w

The function \\_\_enumext\_joined\_item\_viii:w will first call the function \\_\_enumext\_starred\_-joined\_item\_viii:n in charge of setting the *width* of the box that will store the content passed to \item. Then we will look for the argument "\*", if it is present we will call the function \\_\_enumext\_starred\_-item\_viii:w otherwise we will call the function \\_\_enumext\_standard\_item\_viii:w.

```
3386 \cs_new_protected:Npn \__enumext_joined_item_viii:w (#1)
3387 {
3388 \__enumext_starred_joined_item_viii:n {#1}
3389 \peek_meaning_remove:NTF *
3390 { \__enumext_starred_item_viii:w }
3391 { \__enumext_standard_item_viii:w }
3392 }
```

(End of definition for \\_\_enumext\_joined\_item\_viii:w.)

\\_\_enumext\_standard\_item\_viii:w

The function \\_\_enumext\_standard\_item\_viii:w will first look for the argument "[", if present it will set the state of the variable \l\_\_enumext\_wrap\_label\_opt\_viii\_bool equal to the state of the variable \l\_\_enumext\_wrap\_label\_opt\_viii\_bool handled by the key wrap-label\* and finally execute the non-enumerated version \item[\langle custom \rangle] by means of the function \\_\_enumext\_start\_item\_viii:w, otherwise we will set the value of the variable \l\_\_enumext\_wrap\_label\_viii\_bool handled by the wrap-label key to true and set the switch \if@noitemarg to true to execute the enumerated version of \item by means of the function \\_\_enumext\_start\_item\_viii:w [\l\_\_enumext\_label\_viii\_tl

```
].

           \vspace{ -\l__enumext_itemsep_viii_skip }
           \int_gzero:N \g__enumext_item_count_all_viii_int
         }
     }
```

(End of definition for \\_\_enumext\_remove\_extra\_parsep\_viii:.)

## 10.37 The command \getkeyans

\getkeyans

The \getkeyans command takes a mandatory argument of the form  $\{\langle store\ name: position \rangle\}$ . Retrieve a "single" content stored by \anskey, \anspic\* and \item\* from  $\langle prop\ list \rangle$  defined by save-ans key.

(End of definition for  $\general{\general}$  getkeyans. This function is documented on page 12.)

\_\_enumext\_getkeyans\_aux:n

The internal function  $\ensuremath{\mbox{\tt \_enumext\_getkeyans\_aux:n}}$  is in charge of *splitting* the  $\langle argument \rangle$  using ":". If ":" is omitted it will return an error.

```
3556 \cs_new_protected:Npn \__enumext_getkeyans_aux:n #1
       \str_if_in:nnTF {#1} { : }
         {
           \use:e
3560
             {
3561
                \cs_set:Npn \exp_not:N \__enumext_tmp:w ##1 \c_colon_str ##2 \scan_stop:
3562
                  { {##1} {##2} }
3563
           \exp_after:wN \__enumext_getkeyans:nn \__enumext_tmp:w #1 \scan_stop:
         { \msg_error:nnn { enumext } { missing-colon } {#1} }
3567
     }
3568
```

(End of definition for  $\_$ enumext\_getkeyans\_aux:n.)

\\_\_enumext\_getkeyans:nn

The internal function \\_\_enumext\_getkeyans:nn will check for the existence of the  $\langle prop \ list \rangle$ , if it does not exist it will return an error message, then it will fetch the content specified by the second  $\langle argument \rangle$  from  $\langle prop \ list \rangle$ .

(End of definition for  $\_$ enumext\_getkeyans:nn.)

## 10.38 The command \printkeyans

The \printkeyans command prints "all stored content" in the  $\langle sequence \rangle$  defined by the save-ans key. The first thing we will do is to define a set of  $\langle keys \rangle$  with which we will control the options of the different nesting levels for the enumext and enumext\* environment by storing the values of these in the token list variables \l\_enumext\_print\_keyans\_X\_tl.

```
\keys_define:nn { keyanskey / print }
     {
