

# V1.0 2024-07-10\*

©2024 by Pablo González†

CTAN: https://www.ctan.org/pkg/enumext

https://github.com/pablgonz/enumext

#### Abstract

This package provides "enumerated list" environments for creating "simple exercise sheets" along with "multiple choice questions", storing the \( \langle answers \rangle \) to these in memory using multicol and scontents packages and the laseq and laprop modules.

#### Contents 1.1 Description and usage . . . . . . . . . . . . . . . . 6.1 Keys for storage system . . . . . . . . . . . 11 1.2 The concept of left margin ..... 6.1.1 Keys for label and ref . . . . . . 11 6.1.2 Keys for wrap and display . . . . 12 1.3.1 Internal counters . . . . . . . . . . . . 6.1.3 Keys for debug and checking . . . . 12 1.3.2 Public dimension . . . . . . . . . . . . . 1.3.3 Support for multicol . . . . . . . . . 6.2 The command \anskey . . . . . . . . . 12 1.3.4 Support for minipage . . . . . . . . 6.2.1 Keys for \anskey . . . . . . . . . . 12 1.3.5 The \label and \ref system ... 1.3.6 Support for \footnote . . . . . . # Motivation and acknowledgments

Usually it is enough to use the classic enumerate environment to generate "simple exercise sheets" or "multiple choice questions", the basic idea behind enumext is to cover three points:

- 1. To have a simple interface to be able to write "lists of exercises" with "answers".
- 2. To have a simple interface for writing "multiple choice questions".
- 3. To have a simple interface for placing "columns" and "drawings" or "tables".

This package would not be possible without Phelype Oleinik who has collaborated and adapted a large part of the code and all Lateral team for their great work and to the different members of the TeX-SX community who have provided great answers and ideas. Here a note of the main ones:

- 1. Answer given by Alan Munn in \topsep, \itemsep, \partopsep, \parsep what do they each mean (and what about the bottom)?
- 2. Answer given by Enrico Gregorio in Understanding minipages aligning at top
- $_{\rm 3.}$  Answer given by Ulrich Diez in Different mechanics of hyperlink vs. hyperref
- ${\bf 4.} \ \ {\bf Answer \ given \ by \ Enrico \ Gregorio \ in \ Minipage \ and \ multicols, \ vertical \ alignment}$

<sup>\*</sup>This file describes a documentation for v1.0, last revised 2024-07-10.

§.1 Introduction enumext v1.0

# License and Requirements

Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License (lppl), version 1.3 or later (https://www.latex-project.org/lppl.txt). The software has the status "maintained".

The enumext package loads and requires multicol[3] and scontents[4] packages, need to have a modern TEX distribution such as TEX Live or MiKTEX. It has been tested with the standard classes provided by ETEX: book, report, article and letter on 10pt, 11pt and 12pt.

### Introduction

In the LTFX world world there are many useful packages and classes for creating "lists of exercises", "worksheets" or "multiple choice questions", classes like exam[1] and packages like xsim[2] do the job perfectly, but they don't always fit the basic day to day needs.

In my work (and in the work of many teachers) it is common to use "simple exercise sheets" also known as "informal lists of exercises", as an example:

- 1. Factor  $x^2 2x + 1$
- 2. Factor 3x + 3y + 3z
- 3. True False
  - (a)  $\alpha > \delta$
  - (b) LaTeX2e is cool?
- 4. Related to Linux

- (a) You use linux?
- (b) Usually uses the package manager?
- (c) Rate the following package and class
  - xsim-exam
  - ii. xsim
  - iii. exsheets

Sometimes we are also interested in showing the "answers" along with the questions:

- 1. Factor  $x^2 2x + 1$  $(x-1)^2$ 2. Factor 3x + 3y + 3z3(x+y+z)3. True False (a)  $\alpha > \delta$ \* False (b) LaTEX2e is cool? \* Very True! 4. Related to Linux
- (a) You use linux? Yes
- (b) Usually uses the package manager?
  - \* Yes, dnf
- (c) Rate the following package and class
  - xsim-exam \* doesn't exist for now :( xsim
  - very good exsheets
    - \* obsolete

Or we are interested in referring to a specific question and its "answer", for example:

The answer to 3.(b) is "Very True!" and the answer to 4.(c).ii is "very good".

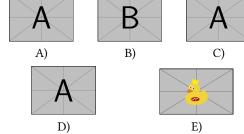

Or we are interested in printing all the "answers":

- 1.  $(x-1)^2$
- 2. 3(x+y+z)
- 3. (a) False
  - (b) Very True!
- 4. (a) Yes

- (b) Yes, dnf
- (c) i. doesn't exist for now :(
  - ii. very good
    - iii. obsolete
- Another very common thing to use in my work is "multiple choice questions", for example:
- 1. First type of questions
  - A) value
- C) value
- B) correct
- D) value
- 2. Second type of questions
  - I.  $2\alpha + 2\delta = 90^{\circ}$
  - $\alpha = \delta$
  - III.  $\angle EDF = 45^{\circ}$
  - A) I only
- D) I and III only
- B) II only
- C) I and II only
- E) I, II, and III
- ★ 3. Third type of questions
  - (1)  $2\alpha + 2\delta = 90^{\circ}$
  - (2)  $\angle EDF = 45^{\circ}$

  - A) value
  - B) value
- D) value E) value

4. Question with image and label below:

- 5. Question with image on left side:
  - A) value
  - B) value
  - C) value
  - D) correct
  - E) value

Where what we are interested in the  $\langle label \rangle$  and a "short note" that we leave as an explanation, and then print them:

```
      1. B), x = 5
      * 4. E), A duck

      2. D)
      * 5. D), "other note"

      3. C), some note
      *
```

These "simple worksheets" or "multiple choice questions" appear to be easy to obtain using a combination of the enumerate, minipage and multicols environments, but like many things, what "looks simple" is not so simple.

The enumext package was created and designed to meet these small requirements in the creation of "simple worksheets" and "multiple choice questions".

### 1.1 Description and usage

The enumext package defines enumerated environments using the list environment provided by LTEX, but "does not redefine" any internal commands associated with it such as \list, \endlist or \item outside of the "scope" in which they are defined.

This package is NOT intend to replace the enumerate environment nor replace the powerful enumitem[6], the approach is intended to work without hindering either of them.

This package can be used with xelatex, lualatex, pdflatex and the classical latex»dvips»ps2pdf and is present in TeX Live and MiKTeX, use the package manager to install. For manual installation, download enumext.zip and unzip it, run lualatex enumext.dtx and move all files to appropriate locations, then run mktexlsr. To produce the documentation run lualatex enumext.dtx two times.

The package is loaded in the usual way:

```
\usepackage{enumext}
```

## 1.2 The concept of left margin

There is a direct relationship between the parameters \leftmargin, \itemindent, \labelwidth and \labelsep plus an "extra space" that makes it difficult to obtain the desired horizontal spaces in a list environment.

Usually we don't want the list to go beyond the left margin of the page, but since these four values are related, that causes a problem. The enumitem[6] package adds the \labelindent parameter to solve some of these problems. A simplified representation of this in the figure 1.

Figure 1: Representation of horizontal lengths in enumitem.

The enumext package does NOT provide a user interface to set the values for \leftmargin and \itemindent, instead it provides the keys list-offset and list-indent which internally set the values for \leftmargin and \itemindent. The concepts of \leftmargin and \itemindent are different in enumext. The figure 2 shows the visual representation of idea.

Figure 2: Representation of horizontal lengths concept in enumext.

In this way we reduce a *little* the amount of parameters we have to pass. With the default values of keys list-offset, list-indent, labelwidth and labelsep the lists will have the (usually) expected output for "simple worksheets". The figure 3 shows the visual representation.

Figure 3: Default horizontal lengths list-offset=0pt, list-indent=\labelwidth+\labelsep in enumext.

enumext v1.0 §.1 Introduction

### 1.3 User interface

The user interface consists of two main list environments enumext (vertical) and enumext\* (horizontal), the environment anskey\* and the command \anskey to "store content" and the environments keyans, keyans\* and keyanspic for multiple choice. It also provides the commands \getkeyans to print individual stored content, \printkeyans to print all stored content, \miniright for minipage and \setenumext to config all  $[\langle key=val \rangle]$  options.

#### 1.3.1 Internal counters

The package enumext uses internally the enumXi, enumXii, enumXiii, enumXiv counters for the four nesting levels of the enumext environment, the enumXv counter for the keyans environment, the enumXvi counter for the keyanspic environment, the counter enumXviii for enumext\* environment and the counter enumXviii for keyans\* environment.

If any package defines these counters or they are user-defined in the document, the package will return a fatal error and abort the load.

### 1.3.2 Public dimension

The package enumext only provides a single public dimension \itemwidth and is intended for user convenience only and is not for internal use as such. The dimension \itemwidth is rigid length and contains the "width of the content" of each \item regardless of labelwidth and labelsep.

If any package defines \itemwidth or they are user-defined \itemwidth in the document, the package will overwrite it without warning.

#### 1.3.3 Support for multicol

The package provides direct support for using the multicol[3] package. This allows to obtain directly a two-column output as shown in the figure 4.

Figure 4: Representation of the two column output for a nested level in enumext environment.

The "non starred" version of the multicols environment is always used together with the \raggedcolumns command and is controlled by columns and columns-sep keys. It can be used in all nesting levels of the environment enumext and the environment keyans and can together with the mini-env key. If you need to force a start a new column \columnbreak must be used (see §5.5).

The \columnseprule command is not available as a key and is set to "zero" for the inner levels and the keyans environment. If the value of this is set inside the document, it will affect "all environments" that use the columns key.

#### 1.3.4 Support for minipage

The package provides direct support for minipage environment, this allows you to obtain an output like the one shown in figure 5.

Figure 5: Representation of the mini-env output for a nested level enumext environment.

The minipage environments on "left side" and "right side" is always used with "aligned on top" [t]. It can be used in all nesting levels of the environment enumext and the environment keyans and is controlled by mini-env and mini-sep keys. In order to switch from the "left" side minipage environment to the "right" side one must use the command \miniright (see §5.6).

#### 1.3.5 The \label and \ref system

This package provides a user interface like the enumitem[6] package to customize the references which is activated by the ref key (§5.1), the standard ETEX \label and \ref commands work as usual. It also provides an "internal reference" system for the "stored content" by means of the key save-ref (§6.1.1) when the key save-ans (§6.1) is active.

#### 1.3.6 Support for \footnote

This package provides an internal implementation for the \footnote command which is compatible with the hyperref package for the enumext\* and keyans\* environments, but will not produce the expected links, and if the mini-env key is used in enumext or keyans environments the output will look like the classic way they are displayed in the environment minipage.

The best way to solve this is to use Jean-François Burnol footnotehyper[9] package, it will support keeping the links if hyperref is loaded with the hyperfootnotes=true option (default) and will show the output numbered at the bottom of the page (as opposed to how it is displayed in the minipage environment). The way to load it is as follows:

```
\usepackage{footnotehyper}
\makesavenoteenv{enumext}
\makesavenoteenv{enumext*}
```

## The environments provided

The package enumext provides two main list environments, the *vertical* environment enumext and the *horizontal* environment enumext\*.

```
enumext
enumext*
```

```
\begin{enumext} [\langle keyval \ list \rangle]
                                                                                                                  \lceil (keyval \ list) \rceil
    \item \(\(\)item \(\)content\\)
                                                                                                                      \item \(\(\text{item content}\)\)
    \item [\langle custom \rangle] \langle item content \rangle
                                                                                                                      \item [\langle custom \rangle] \langle item content\rangle
    \left\langle item^* \left[ \left\langle symbol \right\rangle \right] \left[ \left\langle offset \right\rangle \right] \right\rangle  (item content)
                                                                                                                      \lceil \text{item*} [\langle symbol \rangle] [\langle offset \rangle] \langle item content \rangle
\end{enumext}
                                                                                                                   \end{enumext*}
```

#### The environment enumext

The enumext is an environment that works in the same way as the standard enumerate environment provided by LTFX, \item and \item  $\lceil \langle custom \rangle \rceil$  commands work in the usual way. The environment can be nested with at most "four levels" and the options can be configured globally using \setenumext command and locally using  $[\langle key = val \rangle]$  in the environment.

#### Example with columns=2

1. This text is in the first level.

A. This text is in the fourth level.

(a) This text is in the second level.

X This text is in the first level.

This text is in the third level.

 $\star$  2. This text is in the first level.

#### The environment enumext\*

The enumext\* is a horizontal list environment similar to the enumerate\* environment provided by the enumitem package or task environment provided by the task package, \item and \item[\langle custom \rangle] work as usual. The options can be configured globally using \setenumext command and locally using  $[\langle key = val \rangle]$ in the environment.

Some considerations to take into account for this environment:

- The environment cannot be nested within itself or in the environment keyans\*, but it can be nested within enumext and vice versa.
- Each "item" in the environment is placed within a minipage environment whose width is stored in the dimension \itemwidth that NOT includes labelwith, labelsep, only the width of the content.
- You cannot have floating environments like figure or table but \footnote with hyperref support is supported if the footnotehyper package is loaded.

#### Example with columns=2

1. This text is in the first level.

2. This text is in the first level.

X This text is in the first level.

 $\star$  3. This text is in the first level.

#### **The command \item\*** 2.3

```
\item* \item*
                       \times [\langle symbol \rangle]
                        \left\langle item^* \left[ \left\langle symbol \right\rangle \right] \left[ \left\langle offset \right\rangle \right] \right\rangle
```

The  $\forall tem^*, \forall tem^* [\langle symbol \rangle]$  and  $\forall tem^* [\langle symbol \rangle] [\langle offset \rangle]$  works like the numbered  $\forall tem$ , but placing a  $\langle symbol \rangle$  to the "left" of the  $\langle label \rangle$  separated from it by the  $\langle offset \rangle$  set by the the second optional argument. The default values for  $\langle symbol \rangle$  and  $\langle offset \rangle$  are  $\star \star$  and the value set by labelsep key.

The starred argument '\*' cannot be separated by spaces 'u' from the command, i.e. \item\* and the first optional argument does "not support" verbatim content. Can be configure with the keys item-sym\* and item-pos\* locally in the environment or globally using \setenumext command (§3).

```
©2024 by Pablo González L
```

 The behavior of \item<sup>⋆</sup> in the enumext and enumext<sup>⋆</sup> environments is NOT the same as in the keyans and keyans<sup>⋆</sup> environments.

#### 2.3.1 Keys for \item\*

```
item-sym* = \{\langle symbol \rangle\}
```

default: \$\star\$

Sets the symbol to be displayed in the "left" of the box containing the current  $\langle label \rangle$  set by labelwidth key for \item\* in enumext and enumext\*. The symbol can be in text or math mode, for example item-

```
item-pos* = {\langle rigid \ length \rangle}
```

default: by levels

Sets the *offset* between the box containing the current  $\langle label \rangle$  defined by labelwidth key and the  $\langle symbol \rangle$  set by item-sym\* key. The default values are set by labelsep key at each level. If positive values are passed it will offset to the left and if negative values are passed it will offset to the right.

### The command \item in enumext\*

The \item command for the enumext\* environment provides an optional "first argument" \item(\( columns \)) which "joins items" between columns. Let's consider the following examples adapted directly from the task package:

```
\begin{enumext*}[widest=10,columns=4]
  \item The first
  \item* The second
  \item The third
  \item The fourth
  \item(3)* The fifth item is way too long for this and needs three columns
  \item The sixth
  \item The seventh
  \item(2)[X] The eighth item is way too long for this and needs two columns
    (\the\itemwidth)
  \item The ninth
  \item[Z] The tenth (\the\itemwidth)
\end{enumext*}
```

- 1. The first
- $\star$  2. The second
- 3. The third
- 4. The fourth
- $\star$  5. The fifth item is way too long for this and needs three columns
- 6. The sixth
- 7. The seventh X The eighth item is way too long for this and needs 8. The ninth two columns (196.17749pt)
- The tenth (89.28171pt)

### **The command** \setenumext

```
\strut \langle keyans^* \rangle ] \{ \langle key = val \rangle \}
                                                                                                                                                                                                          \strut = \cline{1mm} \strut 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 \strut = \strut | \langle print, level \rangle | \{\langle key = val \rangle \}
                                                                                                                                                                                                          \startion{1}{\text{setenumext}[\langle enumext^* \rangle] \{\langle key = val \rangle\}}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              \strut = \
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 \verb|\setenumext[||\langle print^*\rangle|] \{|\langle key = val\rangle|\}
                                                                                                                                                                                                          \strut = \{ \langle keyans \rangle \} \{ \langle key = val \rangle \}
```

The command \setenumext sets the  $\langle keys \rangle$  on a global basis for environments enumext, enumext\*, keyans, keyans\* and the \printkeyans command. It can be used both in the preamble and in the body of the document as many times as desired.

The (keys) set in the optional arguments of environments and commands have the highest precedence, overriding both options passed by \setenumext. If the optional argument is not passed, the first level of the environment enumext will be taken by default.

🍼 The key save-ans that activate the *"storage system"* must NOT be passed through this command and must be passed directly in the optional argument of the "first level" of the environment in which they are executed.

## **The command** \setenumextmeta

```
\setenumextmeta \setenumextmeta \{\langle key \ name \rangle\} \{\langle key \ one = val, key \ two = val, ... \rangle\}
                              \stenumextmeta^* \{ \langle key \ name \rangle \} \{ \langle key \ one = val, \ key \ two = val, ... \rangle \}
                              \setenumextmeta [\langle enumext^* \rangle] \{\langle key \ name \rangle\} \{\langle key \ one = val, \ key \ two = val, \dots \rangle\}
                              \setenumextmeta [\langle enumext, level \rangle] \{\langle key name \rangle\} \{\langle key-one = val, key-two = val, ... \rangle\}
```

The command \setenumextmeta adds a new "meta-key" for the environments enumext and enumext\*, the {\langle key name \rangle} must be different from those defined by the package. If the optional argument is not passed, the new "meta-key" will be created for the first level of the environment enumext.

The starred version \* will create the new "meta-key" for the environment enumext\* and for all levels of the environment enumext.

### 5 The keyval system

The  $\langle key = val \rangle$  system used by the enumext package is implemented using l3keys so it must be taken into consideration that those keys marked as "value forbidden", that is  $\langle key \rangle$  is different from  $\langle key = \rangle$ .

All \(\lambda keys\rangle\) described in this section are available for the enumext, enumext\*, keyans and keyans\* environments with the exception of the keys series, resume, resume\* which are only available for the "first level" of the environments enumext and enumext\*; and the keys mini-right, mini-right\* which are only available for the enumext\* and keyans\* environments.

All  $\langle keys \rangle$  related to vertical or horizontal spacing accept a "skip" or "dim" expression if passed between braces, i.e. you do not need to use \dimeval or \dimexpr to perform calculations.

It should be kept in mind that using any  $\langle key \rangle$  that sets a *rubber lengths* or *rigid lengths* for vertical or horizontal space on a level will influence the vertical and horizontal space for *inners levels* and keyans, keyans\* and keyanspic environments.

### 5.1 Keys for label and ref

```
label = \{ \langle \text{\ensuremath{}} alph^* \mid \text{\ensuremath{}} arabic^* \mid \text{\ensuremath{}} roman^* \mid \text{\ensuremath{}} Roman^* \ensuremath{} \rangle \}
```

default: by levels

Sets the  $\langle label \rangle$  that will be printed at the *current level*. The default value for the first level of the environments enumext and enumext\* are \arabic\*., for second level are (\alph\*), for third level are \roman\*. and for fourth level are \Alph\*. For keyans and keyans\* environments the default value is \Alph\*).

This key is intended to give the basic structure with which the  $\langle label \rangle$  will be displayed, and the form in which it is used by standard "label and ref" and the "internal reference" system with the save-ref key. You cannot use commands with  $\langle label \rangle$  as an argument, for example  $\langle label \rangle$  will return an error. For full customization of how  $\langle label \rangle$  is displayed use the font or wrap-label keys.

```
ref = \{ \langle code \ \{ \alph^* | \arabic^* |
```

default: empty

Modifies the way *cross references* are displayed. The label key sets the default form of the *cross references*, by using this key you can define a different format, for example:  $ref=\ensuremath{\texttt{ref}}\xspace \ensuremath{\texttt{mph}}\xspace \ensuremath{\texttt{ref}}\xspace \ensuremath{\texttt{alph}}\xspace^*$  is valid.

Internally it renews the command associated with each counter when it is executed, i.e., in the environment enumext the command \theenumXi is modified when the key is executed at the first level, \theenumXii when it is executed at the second level and \theenumXiii together with \theenumXiv when it is executed at the third and fourth levels.

This must be kept in mind, since the values set by the label and ref keys are not cumulative by levels, so if you have used the ref key in the first level and then want to associate the counter with label or ref in the second level you must use the direct commands, i.e. \arabic{eunumXi} to indicate the count of the first level instead of using \theenumXi.

```
labelsep = \{ \langle rigid \ length \rangle \}
```

default: 0.3333em

Sets the *horizontal space* between the box containing the current  $\langle label \rangle$  defined by label key and the text of an item on the first line. Internally sets the value of \labelsep for the current level.

```
labelwidth = \{ \langle rigid \ length \rangle \}
```

default: by label

Sets the width of the box containing the current  $\langle label \rangle$  set by label key. Internally sets the value of \labelwidth for the current level. The default values are calculated by means of the width of a box by setting a value to the current counter using '0' for \arabic\*, 'M' for \Alph\*, 'm' for \alph\*, 'VIII' for \Roman\* and 'viii' for \roman\*.

```
widest = \{ \langle integer \mid string \rangle \}
```

default: emp

Sets the labelwidth key pass the  $\langle integer \rangle$  or converting the  $\langle string \rangle$  of the form \Alph, \alph, \Roman or \roman to a *value* for the current counter defined by label key, then calculating the *width* by means of a box. For example widest={XXIII} or widest={23} are equivalent. This key is useful when the default values of the labelwidth key are smaller than those actually used.

```
font = \{\langle font \ commands \rangle\}
```

default: empty

Sets the *font style* for the current  $\langle label \rangle$  defined by label key. For example font={\bfseries\small}.

```
align = \{ \langle left \mid right \mid center \rangle \}
```

default: left

Sets the *aligned* of  $\langle label \rangle$  defined by label key on the current level in the label box.

```
\texttt{wrap-label} = \{ \left\langle code \; \{ \texttt{\#1} \} \right. \; \textit{more code} \right\rangle \}
```

default: empty

Wraps the *current*  $\langle label \rangle$  defined by label key referenced by  $\{\#1\}$ . The  $\{\langle code \rangle\}$  must be passed between braces. This key does not modify the value set by the labelwidth key and is applied only on \item and \item\*. When using it in the \setenumext command it is necessary to use the *double hash* ' $\{\#1\}$ '. For example wrap-label= $\{\fbox\{\#1\}\}\$  or you can create a command:

```
\NewDocumentCommand \labelbx { s +m }
    {%
     \IfBooleanTF{#1}
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
}
```

©2024 by Pablo González L

and then pass it through the key wrap-label={\labelbx{#1}} or wrap-label={\labelbx\*{#1}}.

 $wrap-label* = \{\langle code \{ #1 \} \ more \ code \rangle\}$ 

default: empty

The same as the wrap-label key but also applies on  $\lceil \langle custom \rangle \rceil$ .

### 5.2 Keys for spaces

 $show-length = \{ \langle true \mid false \rangle \}$ 

default: false

Displays on the terminal the values for *all list parameters* at the current level. For *vertical spaces* show the values of \topsep, \itemsep, \parsep and \partopsep. For *horizontal spaces* show the values of \labelwidth, \labelsep, \itemindent, \listparindent and \leftmargin.

### 5.2.1 Vertical spaces

 $topsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}$ 

default: by levels

Set the *vertical space* added to both the top and bottom of the list. Internally sets the value of \topsep for the current level. The default value for the first level of the environments enumext and enumext\* are 8.0pt plus 2.0pt minus 4.0pt, for second level are 4.0pt plus 2.0pt minus 1.0pt, for third and fourth level are 2.0pt plus 1.0pt minus 1.0pt. For keyans and keyans\* environments the default value is 4.0pt plus 2.0pt minus 1.0pt.

 $parsep = \{ \langle rubber \ length \ | \ rigid \ length \rangle \}$ 

efault: by level

Set the *vertical space* between paragraphs within an item. Internally sets the value of \parsep for the current level. The default value for the first level of the environments enumext and enumext\* are 4.0pt plus 2.0pt minus 1.0pt, for second level are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 0pt. For keyans and keyans\* environments the default value is 2.0pt plus 1.0pt minus 1.0pt.

 $partopsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}$ 

default: by level

Set the *vertical space* added, beyond topsep, to the "top" and "bottom" of the entire environment if the environment instance is preceded by a "blank line" or \par command. Internally sets the value of \partopsep for the current level. The default values for first and second level in environment enumext are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 1.0pt minus 1.0pt. For the keyans environment the default value is 2.0pt plus 1.0pt minus 1.0pt, and for the keyans\* and enumext\* environments it is available but *without* effect.

The value of this parameter also affects the *inner levels* and the environments keyans, keyanspic and keyans\*. Caution should be taken with "blank lines" or \par command "before" each environment or nested level when formatting the source code of document. TeX will enter \(\frac{vertical mode}{\text{and}}\) and apply this value to the "top" and "bottom" the environment or nested level.

 $itemsep = \{ \langle rubber\ length \mid rigid\ length \rangle \}$ 

default: by levels

Set the *vertical space* between items, beyond the parsep. Internally sets the value of \itemsep for the current level. The default value for the first level of the environments enumext and enumext\* are 4.0pt plus 2.0pt minus 1.0pt, for the rest of the levels are 2.0pt plus 1.0pt minus 1.0pt. For keyans and keyans\* environments the default value is 4.0pt plus 2.0pt minus 1.0pt.

noitemsep (value forbidden)

default: not used

This is a "meta-key" that does not receive an argument. Set itemsep and parsep equal to Opt the entire level of environment.

nosep \(\nabla value \) forbidden\(\nabla \)

default: not used

This is a "meta-key" that does not receive an argument. Sets all keys for vertical spacing equal to opt the entire level of environment.

base-fix \( \text{value forbidden} \)

default: not used

This is a "meta-key" that does not receive an argument available only for the first level of environment enumext and environment enumext\*. Fix the baseline when an environment enumext is nested in enumext\* or vice versa and there is no material between the \item and the start of the environment for example \item \begin{enumext\*} within the environment enumext. Internally sets the keys topsep, above and above\* at Opt.

The following  $\langle keys \rangle$  should be used with "caution", they are intended to be used at the "top" and "bottom" of the environment when the columns or mini-env keys do not provide adequate vertical spaces. The values passed can be rubber or rigid lengths, the way they are applied is the way you differ, using the star '\*'  $\langle keys \rangle$  applies \vspace\* so that LTEX does not discard this space at page break.

 $above = \{\langle rubber\ length \mid rigid\ length \rangle\}$ 

default: not used

Set the *extra vertical space* added, beyond topsep, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"above"* the environment without hindering the value of the topsep key. The space is added with \vspace so is *"discardable"*.

 $above* = \{ \langle rubber \ length \mid rigid \ length \rangle \}$ 

default: not used

Set the *extra vertical space* added, beyond topsep, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"above"* the environment without hindering the value of the topsep key. The space is added with \vspace\* so is *"not discardable"*.

 $below = \{\langle rubber\ length \mid rigid\ length \rangle\}$ 

default: not used

Set the *extra vertical space* space added, beyond topsep, to the bottom of the entire level of environment. This key is intended to give a "fine adjustment" of the vertical space on the "below" the environment without hindering the value of the topsep key. The space is added with \vspace so is "discardable".

```
below* = \{\langle rubber\ length \mid rigid\ length \rangle\}
```

default: not used

Set the *extra vertical space* space added, beyond topsep, to the bottom of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"below"* the environment without hindering the value of the topsep key. The space is added with \vspace\* so is *"not discardable"*.

#### 5.2.2 Horizontal spaces

 $itemindent = \{\langle rigid \ length \rangle\}$ 

default: Opt

Extra *horizontal indentation*, beyond labelsep, of the "first line" off each item. This value is applied internally using \hspace and does not modify the value of \itemindent.

 $rightmargin = \{ \langle rigid \ length \rangle \}$ 

default: Opt

Set the *horizontal space* between the right margin of the environment and the right margin of the enclosing environment, the value it takes must be greater than or equal to <code>Opt</code>. Internally sets the value of <code>\rightmargin</code> for the current level.

listparindent =  $\{\langle rigid\ length \rangle\}$ 

default: Opt

Sets the *horizontal space* indentation, beyond list-indent, for second and subsequent paragraphs within a list item. Internally sets the value of \listparindent for the current level.

list-offset =  $\{\langle rigid\ length\rangle\}$ 

default: Opt

Sets the *horizontal translation* of the entire environment level from the left edge of the box defined by the labelwidth key. Internally sets the values of \leftmargin and \itemindent for the current level.

list-indent =  $\{\langle rigid\ length\rangle\}$ 

default: *labelwidth* + *labelsep* 

Sets the *indentation* of the whole environment under the box defined by labelwidth and labelsep keys. Internally sets the value of \leftmargin and \itemindent for the current level.

If list-indent=0pt is set in the environment enumext the  $\langle label \rangle$  will be part of the text, separated by the value of the labelsep key and the *first word*, in simple terms it will look like a "common paragraph". This setting is equivalent (more or less) to the wide key provided by the enumitem package.

For the enumext\* and keyans\* environments the keys list-indent and list-offset have the same effect.

### 5.3 Keys for add code

The following  $\langle keys \rangle$  should be used with "caution", they are intended to inject  $\{\langle code \rangle\}$  into different parts of the defined environments. We must keep in mind that the defined environments are based on the list base environment provided by LTEX which is defined (simplified) as plain form \list{\arg one}\}{\arg two}\}. Using the before\* key does not allow access to the list parameters defined by  $[\langle key = val \rangle]$ .

before =  $\{\langle code \rangle\}$ 

default: not used

Execute  $\{\langle code \rangle\}$  "before" the environment starts. The  $\{\langle code \rangle\}$  must be passed between braces, is executed "after" performing all calculations related to the *list parameters* in the environment and the parameters sets by  $[\langle key = val \rangle]$  that is, in the second argument of the list after setting all the parameters \begin{list}{\langle argone \rangle}{\langle code \rangle}}.

before\* =  $\{\langle code \rangle\}$ 

default: not used

Execute  $\{\langle code \rangle\}$  "before" the environment starts. The  $\{\langle code \rangle\}$  must be passed between braces, is executed "before" performing all calculations related to the *list parameters* and  $[\langle key = val \rangle]$  sets in the environment that is, before the arguments defining the environment are executed:  $\{\langle code \rangle\}\setminus\{arg\ one \}\}\{\langle arg\ one \rangle\}\{\langle arg\ one \rangle\}$ .

 $first = \{\langle code \rangle\}$ 

default: not used

Executes  $\{\langle code \rangle\}$  when "starting" the environment. The  $\{\langle code \rangle\}$  must be passed between braces, is executed right "after" all list parameters are done, after the second argument of list, just before the first occurrence of \item: \begin{list}{\langle arg one \rangle}{\langle arg two \rangle}{\langle code \rangle}\\item.

Keep in mind that the code set in this key will affect the entire "body" of the environment and therefore the inner levels of the list and the keyans environment. It is recommended to set this key per level.

 $after = \{\langle code \rangle\}$ 

default: not used

Execute  $\{\langle code \rangle\}$  "after" finishing the environment. The  $\{\langle code \rangle\}$  must be passed between braces.

### 5.4 Keys for start, series and resume

 $start = \{ \langle integer \mid integer \ expression \rangle \}$ 

default: 1

 $start* = \{ \langle integer \mid string \rangle \}$ 

default: *not use* 

Sets the *start value* of the numbering on the current level. Internally  $\langle string \rangle$  is converted and passed as value to the counter defined by label key on the current level, i.e. it is equivalent to enter start=5, start=E or start= $\vee$ .

The following  $\langle keys \rangle$  are "only" available for the enumext\* environment and the "first level" of the enumext environment and are ignored if set when nested within each other.

 $series = {\langle series \ name \rangle}$  default: not used

Stores the *keys* of the optional argument of the "first level" of the environment in which it is executed in  $\{\langle series\ name \rangle\}$  which is used as an argument in the key resume. The  $\langle keys \rangle$  stored in  $\{\langle series\ name \rangle\}$  are not cumulative and are overwritten if the same  $\{\langle series\ name \rangle\}$  is used again.

 $resume = \{\langle series\ name \rangle\}$  default:  $not\ used$ 

Sets the *start value* and *options* for the "*first level*" continuing the numbering of the environment in which the  $series=\{\langle series\ name\rangle\}$  key was executed. If passed *without value* this will only set *start value* continue the numbering from the last environment in which  $series=\{\langle series\ name\rangle\}$  or  $resume=\{\langle series\ name\rangle\}$  is not present and if the save-ans key is active it will continue the numbering from the last environment in which it was executed. The *start value* can be overwritten using start or  $start^*$  keys.

resume\*  $\langle value\ forbidden \rangle$  default:  $not\ used$ 

Sets the *start value* and *options* for the *"first level"* continuing the numbering of the environment in which the  $series=\{\langle series\ name\rangle\}$  or  $resume=\{\langle series\ name\rangle\}$  keys are NOT present, if the save-ans key is active it will continue the numbering from the last environment in which it was executed. The *start value* can be overwritten using start or  $start^*$  keys.

For security reasons the series key will never save in  $\{\langle series \ name \rangle\}$  the keys series, resume, resume\*, save-ans, save-key, start\* and start. When using the key resume= $\{\langle series \ name \rangle\}$  it will have hierarchy in the  $\langle keys \rangle$  that are saved in  $\{\langle series \ name \rangle\}$ , in order to establish the value of a  $\langle key \rangle$  already saved in  $\{\langle series \ name \rangle\}$  it must be placed to the "right" of resume= $\{\langle series \ name \rangle\}$ , the same thing happens with the resume\* key, the exception is the save-ans key that must be placed on the "left" if you want to start the numbering with its value. The resume key passed "without value" must be exactly "without value", i.e. resume= cannot be used and if executed before resume\* it will affect the start value.

### 5.5 Keys for multicols

columns =  $\{\langle integer \rangle\}$  default: 1

Set the *number of columns* to be used by the multicols environment within the environment. The value must be a positive integer less than or equal to 10.

 $columns-sep = \{\langle \textit{rigid length} \rangle\}$  default: by level

Set the *space between* columns used by the multicols environment within the environment. Internally sets the value of \columnsep, by default its value is equal to the sum of the values set in the keys labelwidth and labelsep of the current level.

**©** The \footnote{ $\langle text \rangle$ } command in the nested levels of multicols will not work as expected, prefer the use of \footnotemark[ $\langle number \rangle$ ] inside the environment and \footnotetext[ $\langle number \rangle$ ] { $\langle text \rangle$ } outside the environment or via the after key.

### 5.6 Keys for minipage

 $mini-env = \{\langle rigid\ length \rangle\}$  default: not us

Sets the *width* of the minipage environment on the "right side". This value added to the value set by the mini-sep key to determines the *width* of the minipage environment on the "left side", taking \linewidth as the maximum reference value.

mini-sep =  $\{\langle rigid\ length \rangle\}$  default: 0.3333em

Sets the *space between* the minipage environment on the "*left side*" and the minipage environment on the "*right side*". This separation is applied together with \hfill.

#### 5.6.1 The command \miniright

```
\begin{enumext}[mini-env=\langle rigid\ length\rangle] & \langle item's\ before\rangle & (content) & (enumext) \\ & begin{enumext}[mini-env=\langle rigid\ length\rangle] & \langle item's\ before\rangle & (item\ miniright*\langle content\rangle) & (enumext) \\ & begin{enumext}[mini-env=\langle rigid\ length\rangle] & (item's\ before) & (item\ miniright*\langle content\rangle) & (end{enumext}) \\ & begin{enumext}[mini-env=\langle rigid\ length\rangle] & (item's\ before) & (item\ miniright*\langle content\rangle) & (item's\ before) & (item's\ before) \\ & begin{enumext}[mini-env=\langle rigid\ length\rangle] & (item's\ before) & (item's\ before) & (item's\ before) \\ & begin{enumext}[mini-env=\langle rigid\ length\rangle] & (item's\ before) & (item's\ before) \\ & begin{enumext}[mini-env=\langle rigid\ length\rangle] & (item's\ before) & (item's\ before) \\ & (item's\ before) & (item's\ before) & (item's\ before) \\ & (item's\ before) & (item's\
```

The \miniright command close the minipage environment on the "left side" and opens the minipage environment on the "right side" by starting it with the \centering command. It must be placed "after" the last \item of the current environment and "before" starting the material to be placed on the "right side". The starred argument '\*' inhibits the use of \centering command i.e. the usual \mathbb{ETEX} justification is maintained

in the minipage on the "right side".

The \footnote{ $\langle text \rangle$ } command in minipage environment will work as usual. If you prefer the footnotes to be numbered (not lowercase) and outside the environment, use \footnotemark[ $\langle number \rangle$ ] inside the environment and \footnotetext[ $\langle number \rangle$ ] { $\langle text \rangle$ } outside the environment or via the after key (see §1.3.6 for full support).

#### 5.6.2 The key mini-right

In the horizontal list environments enumext\* and keyans\* it is not possible to use the \miniright command and the miniright key must be used instead.

 $mini-right = \{\langle \textit{content} \rangle\}$  default: not used

Set the *content* for the drawing or tabular to be placed in the minipage environment on the "right side" by starting it with \centering. The  $\{\langle content \rangle\}$  must be passed between braces.

mini-right\* =  $\{\langle content \rangle\}$ 

Same as above, but *without* starting with \centering.

©2024 by Pablo González L

default: not used

## 6 The storage system

The entire mechanism for "storing content" it is activated according to save-ans key on the "first level" of enumext or enumext\* environments and it is ignored if they are established when they are nested inside each other. Only when this  $\langle key \rangle$  is "active" the \anskey command and the environments anskey\*, keyans, keyans\* and keyanspic are available.

By executing the key save-ans={ $\langle store\ name \rangle$ } the entire structure of the environment (excluding the first level) including the optional arguments passed to the inner levels or the environment nested in it, along with the content passed to \anskey, the current  $\langle labels \rangle$  for \item\* and \anspic\* in the environments keyans, keyans\* and keyanspic will be stored in a  $\langle sequence \rangle$  and at the same time will be stored (without the environment structure or optional arguments) in a  $\langle prop\ list \rangle$ .

The optional arguments of the inner levels or the nested environment are filtered by excluding all  $\langle keys \rangle$  related to the "stored system" along with the keys series, resume and resume\* when storing in  $\langle sequence \rangle$ .

### 6.1 Keys for storage system

The only  $\langle keys \rangle$  available for all levels of the enumext environment and the enumext\* environment are no-store and save-key, the rest of the  $\langle keys \rangle$  described in this section must be passed directly in the optional argument of the "first level" of the environment in which the key save-ans is executed. The key save-ans should NOT be passed with the command \setenumext.

```
save-ans = \{ \langle store \ name \rangle \}
```

default: not set

Sets the name of the  $\langle sequence \rangle$  and  $\langle prop \ list \rangle$  in which the contents will be "stored" by \anskey and anskey\* in enumext and enumext\* environments, \item\* in keyans and keyans\* environments and \anspic\* in keyanspic environment. If the  $\langle sequence \rangle$  or  $\langle prop \ list \rangle$  does not exist, it will be created globally and will not be overwritten if the key is used again.

```
save-key = \{\langle key \ list \rangle\}
```

default: not set

This key *overrides* the default "stored keys" of the optional arguments of the inner levels or nested environment that will be passed to the  $\langle sequence \rangle$ . The  $\langle key \ list \rangle$  passed to this key ignores any  $\langle keys \rangle$  in the "stored system" and must be passed between braces. For example, if we execute at a second level:

```
\begin{enumext}[save-ans={\store name\}]
\item Text \anskey{answer}
\item Text
\begin{enumext}[nosep, columns=2, save-key={columns=3}]
...
\end{enumext}
\end{enumext}
```

The  $\langle keys \rangle$  that will be stored by default in the  $\langle sequence \rangle$  would be nosep, columns=2, but using the key save-key={columns=3} will overwrite this and store it in the  $\langle sequence \rangle$  only the key columns=3 ignoring all the others.

```
\mathsf{save}\text{-}\mathsf{sep} = \{ \left\langle \mathit{text} \; \mathit{symbol} \right\rangle \}
```

default: {, }

Sets the *text symbol* that will separate the current  $\langle label \rangle$  to the *optional argument* passed to the \item\* and \anspic\* in the keyans, keyans\* and keyanspic environments and storing them in the  $\langle store \, name \rangle$  defined by the save-ans key. The  $\{\langle text \, symbol \rangle\}$  must always be passed between braces, whitespace ' $\Box$ ' is preserved within the braces and only affects the "*stored content*" and not what is displayed when using the show-ans or show-pos keys.

### 6.1.1 Keys for label and ref

```
save-ref = \{ \langle \mathit{true} \mid \mathit{false} \rangle \}
```

default: false

Activates the "internal label and ref" mechanism for referencing "stored content" in  $\langle store\ name \rangle$  set by saveans key. To reference the location of the "stored content" within the environment you must use  $\ref\{\langle store\ name: position \rangle\}$ , where  $\langle position \rangle$  corresponds to the position occupied by the "stored content" in the  $\langle store\ name \rangle$  returned by the show-pos key. For example  $\ref\{test:4\}$  will return 3. (b) which corresponds to the location of the "stored content" at position 4 within the environment in which the key save-ans=test was set.

```
mark-ref = \{\langle symbol \rangle\}
```

default: \textasteriskcentered

Sets the *symbol* that will be displayed by the \printkeyans command only if the hyperref package is detected and the save-ref key are active. This "*symbol*" is used as a "*link*" between the environment in which the save-ans key was used and the place where the command is executed.

#### 6.1.2 Keys for wrap and display

 $wrap-ans = \{\langle code \{ \#1 \} \ more \ code \rangle \}$ 

default: \fbox+\parbox{#1}

Wraps the argument passed to the \anskey and the body in anskey\* environment referenced by {#1} when using the show-ans or show-pos keys. The  $\{\langle code \rangle\}$  must be passed between braces and only affects the argument or body and NOT the "stored content" in the sequence and prop list {\store name\} set by save-ans key. If this key is passed using \setenumext it is necessary to use double '{##1}'.

 $wrap-opt = \{\langle code \{ #1 \} \ more \ code \rangle \}$ 

default: [{#1}]

Wraps the optional argument passed to the \item\* and \anspic\* referenced by {#1} in the keyans, keyans\* and keyanspic environments when using the show-ans or show-pos keys. The  $\{\langle code \rangle\}$  must be passed between braces and only affects the current optional argument and NOT the "stored content" in the sequence and prop list {\store name\} set by save-ans key. If this key is passed using \setenumext it is necessary to use double '{##1}'.

 $show-ans = \{ \langle true \mid false \rangle \}$ 

Displays the argument passed to the \anskey, the body for anskey\* environment, the  $\langle label \rangle$  for \item\* and \anspic\* at the place where it is executed. If the optional argument is present in \item\* or \anspic\* it will be shown using wrap-opt key.

 $mark-ans = \{\langle symbol \rangle\}$ 

default: \textasteriskcentered

Sets the *symbol* to be displayed in the left margin for \anskey, anskey\*, \item\* and \anspic\* in the place where they are executed when using the key show-ans.

 $mark-pos = \{\langle left \mid right \rangle\}$ 

Sets the aligned of the symbol defined by mark-ans key. The "symbol" is aligned in a box with the same dimensions of the label box defined by labelwidth key on the current level and separated by the value of the labelsep key.

#### 6.1.3 Keys for debug and checking

 $show-pos = \{ \langle true \mid false \rangle \}$ 

default: false

Displays the *position* occupied by the "stored content" by \anskey, anskey\*, \item\* and \anspic\* in the prop list {\store name\} set by save-ans key. This position is used by the \getkeyans command and by the \ref command if the save-ref key is active.

 $check-ans = \{\langle true \mid false \rangle\}$ 

default: false

Enables the *checking answer* mechanism displaying an appropriate message on the terminal. This key works under the logic that each \item or \item\* that does not open an inner level or nested environment contains "only one answer" or "only one execution" of the \anskey or anskey\*. It is intended to be used in conjunction with the no-store key.

no-store (value forbidden)

This is a meta-key that does not receive an argument and disables the structure stored in the sequence {\((store\)) name) set by save-ans key at the entire level or a nested environment in which it runs. This key is intended for use in internal levels or nested enumext or enumext\* environments in which you want to use enumext or enumext\* but "without" using the \anskey, "without" use anskey\*, "without" interfering with the check-ans key and "without" storing an unwanted structure in the sequence  $\{\langle store\ name \rangle\}$ .

### The command \anskey

\anskey \anskey [ $\langle keys \rangle$ ] { $\langle content \rangle$ }

The command \anskey takes a mandatory non empty argument  $\{\langle content \rangle\}$  and "stores" it in the sequence and *prop list* {\store name\struct\} set by save-ans key. By design the command cannot be nested or passed *verbatim* material in the argument and it is assumed that each numbered \item or \item\* within the environment in which it is active it has a "single execution" of \anskey unless \item or \item\* open a nested level or use the no-store key.

If save-ref key are active and the <a href="https://hyperlink.gov/hyperlink">hyperlink</a> and <a href="https://hyperlink.gov/hy be used, otherwise the usual "label and ref" system provided by LTEX will be used.

The \anskey command is available for all levels of the enumext environment and the enumext\* environment, but is disabled for the keyans, keyans\* and keyanspic environments.

#### 6.2.1 Keys for \anskey

By default the  $\{\langle content \rangle\}$  passed to \anskey when "storing" in the sequence  $\{\langle store\ name \rangle\}$  has the form \item  $\langle content \rangle$ , the following  $\langle keys \rangle$  allow modifying the way in which it is "stored" in the sequence.

break-col

default: not used

Stores  $\{\langle content \rangle\}$  in the sequence  $\{\langle store\ name \rangle\}$  of the form  $\langle columnbreak \rangle$  item  $\langle content \rangle$ .

 $item-join = \{\langle columns \rangle\}$ 

default: not set

Set the *number of columns* to be used for  $\langle columns \rangle$  and stores  $\langle content \rangle$  in the *sequence*  $\langle store \rangle$ name) of the form \item( $\langle columns \rangle$ )  $\langle content \rangle$ .

item-star (value forbidden)

default: not used

Stores  $\{\langle content \rangle\}\$  in the sequence  $\{\langle store\ name \rangle\}\$  of the form  $\backslash item^* \langle content \rangle$ .

©2024 by Pablo González L

```
\label{eq:content} \begin{tabular}{ll} $\operatorname{default: \$ \star\$}$ \\ &\operatorname{Sets the } symbol \ \text{for } \operatorname{item*} \ \text{when using the key item-star and stores } \{\langle content \rangle \} \ \text{in the } sequence \ \{\langle store \ name \rangle \} \ \text{of the form } \operatorname{item*} [\langle symbol \rangle] \ \langle content \rangle. \ \\ &\operatorname{item-sym*} = \{ \langle \operatorname{ast} \rangle \} \ \text{stores } \operatorname{item*} [ \rangle \operatorname{ast} ] \ \langle content \rangle. \ \\ &\operatorname{item-pos*} = \{\langle \operatorname{rigid } length \rangle \} \ \\ &\operatorname{Sets the } \ \operatorname{offset for } \operatorname{item*} \ \text{when using the keys item-star and item-sym*} \ \text{and stores } \{\langle \operatorname{content} \rangle \} \ \text{in the } sequence \ \{\langle \operatorname{store } name \rangle \} \ \text{of the form } \operatorname{item*} [\langle \operatorname{symbol} \rangle] \ | \langle \operatorname{offset} \rangle ] \ \langle \operatorname{content} \rangle. \ \\ \end{tabular}
```

#### Example

```
\begin{enumext}[save-ans=test, show-ans=true]
  \item* Text containing our instructions or questions. \anskey{\( first answer \) \}
  \item Text containing our instructions or questions.
  \begin{enumext}
    \item Question.\anskey{\( second answer \) \}
  \end{enumext}
  \item Text containing our instructions or questions. \anskey{\( \text{third answer }\) \}
  \item Text containing our instructions or questions. \anskey{\( \text{fourth answer }\) \}
  \end{enumext}
```

- ★ 1. Text containing our instructions or questions.
  - \* | first answer
  - 2. Text containing our instructions or questions.
    - (a) Question.
      - \* second answer

- 3. Text containing our instructions or questions.
- \* third answer
- 4. Text containing our instructions or questions.
- \* fourth answer

### 6.3 The environment anskey\*

The environment anskey\* takes a mandatory  $\{\langle body\ content \rangle\}$  and "stores" it in the sequence and prop list  $\{\langle store\ name \rangle\}$  set by save-ans key. If save-ref key are active and the hyperref[8] package is detected, hyperlink and hypertarget will be used, otherwise the usual "label and ref" system provided by LTEX will be used.

By design the environment cannot be nested but full supports "verbatim material" in the body and it is assumed that each numbered\item or \item\* within the environment in which it is active it has a "single execution" unless \item or \item\* open a nested level or use the no-store key.

The anskey\* environment is implemented using the scontents package, for the correct operation \begin{anskey\*} and \end{anskey\*} must be in different lines, all  $\langle keys \rangle$  must be passed separated by commas and "without separation" of the start of the environment. Comments "%" or "any character" after \begin{anskey\*} or  $[\langle key = val \rangle]$  on the same line are NOT supported, the package scontents will return an "error" message if this happens. In a similar way comments "%" or "any character" after \end{anskey\*} on the same line the package scontents will return a "warning" message.

#### 6.3.1 Keys for anskey\*

The anskey\* environment uses the same  $\langle keys \rangle$  as the \anskey command next to the keys inherited from package scontents. The environment is available for all levels of the enumext environment and the enumext\* environment, but it is disabled for the keyans, keyans\* and keyanspic environments.

```
write-env = \{\langle file.ext \rangle\} default: not used
```

Sets the name of the  $\langle external\ file \rangle$  in which the  $\langle contents \rangle$  of the environment will be written. The  $\langle file.ext \rangle$  will be created in the working directory, relative or absolute paths are not supported. If  $\langle file.ext \rangle$  does not exist, it will be created or overwritten if the overwrite key is used.

```
overwrite = \{\langle true \mid false \rangle\} default: false Sets whether the \langle file.ext \rangle generated by write-env from the anskey* environment will be rewritten.
```

force-eol =  $\{\langle true \mid false \rangle\}$  default: false

Sets if the *end of line* for the  $\langle stored\ content \rangle$  is hidden or not. This key is necessary only if the last line is the closing of some environment defined by the <code>fancyvrb</code> package as  $\end{\verbatim}$  or another environment that does not support a comments "%" after closing  $\end{\verbatim}$ %.

For security reasons the keys store-env, print-env and write-out they have been left disabled. It is recommended that you review the scontents[4] documentation to understand how the keys described here work.

#### Example

```
\begin{enumext}[save-ans=test,show-pos=true,start=5]
\item* Text containing our instructions or questions.
\begin{anskey*}[item-star]
\langle first answer \rangle
\end{anskey*}
```

```
\item Text containing our instructions or questions.
    \begin{enumext}
      \item Ouestion.
        \begin{anskey*}
          (second answer)
        \end{anskey*}
    \end{enumext}
  \item Text containing our instructions or questions.
    \begin{anskey*}
      (third answer)
    \end{anskey*}
  \item Text containing our instructions or questions.
    \begin{anskev*}
      (fourth answer)
    \end{anskey*}
\end{enumext}
```

```
    * 5. Text containing our instructions or questions.
    [5] First answer with verbatim
    6. Text containing our instructions or questions.
    (a) Question.
    [6] second answer
    7. Text containing our instructions or questions.
    [7] third answer
    8. Text containing our instructions or questions.
    [8] fourth answer
```

## 6.4 The environments keyans and keyans\*

```
keyans \begin{keyans}[\langle key = val \rangle] \item \item[\langle custom \rangle] \item* \item*[\langle content \rangle] \langle end{keyans} \keyans* \begin{keyans*}[\langle key = val \rangle] \item \item[\langle custom \rangle] \item \item*[\langle content \rangle] \langle end{keyans*}
```

The keyans and keyans\* environments are "enumerated list" environments designed for "multiple choice" questions activated by the save-ans key. This environments can NOT be nested and must always be at the "first level" of the enumext environment, the command  $\identification \identification \identifi$ 

```
\begin{enumext}[save-ans=test]
                                                                                       \begin{enumext}[save-ans=test]
   \item \(\(\)item \(\)content\(\)
                                                                                          \item \(\(\text{item content}\)\)
      \begin{keyans} [\langle key = val \rangle]
                                                                                             \lceil \langle key = val \rangle \rceil
          \item \(\(\text{item content}\)
                                                                                                 \item \(\(\text{item content}\)
          \item [\langle custom \rangle] \langle item content \rangle
                                                                                                 \item [\langle custom \rangle] \langle item\ content \rangle
          \item* ⟨item content⟩
                                                                                                 \item* ⟨item content⟩
          \forall item^*[\langle content \rangle] \langle item content \rangle
                                                                                                 \forall item^*[\langle content \rangle] \langle item content \rangle
      \end{keyans}
                                                                                             \end{keyans*}
\end{enumext}
                                                                                       \end{enumext}
```

The  $\langle keys \rangle$  set in the optional argument of the environment are the same (almost) as those of the enumext and enumext\* environments and have higher precedence than those set by \setenumext[ $\langle keyans \rangle$ ] { $\langle key = val \rangle$ } or \setenumext[ $\langle keyans^* \rangle$ ] { $\langle key = val \rangle$ }. If the optional argument is not passed or the  $\langle keys \rangle$  are not set by \setenumext, the default values will be the same as the second level of the enumext environment with the difference in the  $\langle label \rangle$  which will be set to label=\Alph\*).

#### 6.4.1 The \item\* in keyans and keyans\*

```
\item* \item* \item*
```

The \item\* and \item\* [ $\langle content \rangle$ ] command "store" the current  $\langle label \rangle$  set by label key next to the  $\langle content \rangle$  (if it is present) in sequence and prop list { $\langle store\ name \rangle$ } set by save-ans key in the "first level" of the enumext or enumext\* environments.

The *starred argument* '\*' cannot be separated by spaces '\_' from the command, i.e. \item\* and the optional argument does "not support" verbatim content. By design it is assumed that the \item\* will only appear "once" within the environment.

The behavior of \item\* in keyans and keyans\* environments is NOT the same as in the enumext or enumext\* environments.

#### Example

```
\begin{enumext}[save-ans=test,columns=2,show-ans=true]
\item Text containing a question.
\begin{keyans*}[nosep,columns=2]
\item Choice
\item* Correct choice
\item Choice
\item Choice
\item Choice
```

```
\item Choice
    \end{kevans*}
  \item Text containing a question and image.
    \begin{keyans}[nosep,mini-env={0.4\linewidth}]
      \item Choice
      \item Choice
      \item Choice
      \item Choice
      \times [(note)] Correct choice
      \miniright
      \includegraphics[scale=0.25]{example-image-a}
      Some text
    \end{keyans}
\end{enumext}
```

- 1. Text containing a question.
  - A) Choice
- \* B) Correct choice

D) Choice

C) Choice E) Choice

- 2. Text containing a question and image. A) Choice
  - B) Choice
  - C) Choice
  - D) Choice
- \* E) [note] Correct choice

Some text

### The environment keyanspic

keyanspic \begin{keyanspic}  $(n^o above, n^o below)$  \anspic (drawing) \anspic\* (drawing) \anspic\*

The keyanspic is a "fake enumerated list" environment that which uses the \anspic command instead of \item. It is activated by the save-ans key and has the same settings as the keyans environment. It is intended for placing "drawings" or "tabular" with an in-line or above and below layout. A representation of the output can be seen in the figure 6.

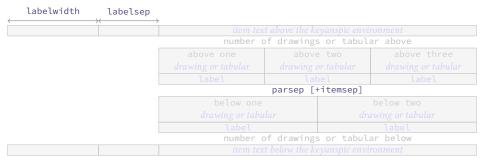

Figure 6: Representation of the keyanspic environment with optional argument [3,2] in enumext.

The optional argument determines the number drawings or tabular "above" and "below" within the environment. The vertical separation between "above" and "below" is controlled by the values set by parsep and itemsep keys passed to keyans environment. If the optional argument or the second part of it is omitted the drawings or tabular will be put on a single line.

#### 6.5.1 The command \anspic

```
\anspic \anspic{\langle drawing \ or \ tabular \rangle}
                 \arrowvert anspic*[\langle content \rangle] \{\langle drawing \ or \ tabular \rangle\}
```

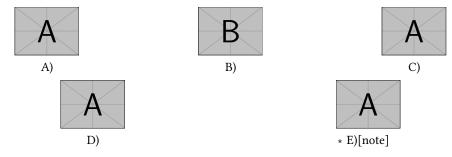

The \anspic command take three arguments, the *starred argument* '\*' store the current  $\langle label \rangle$  next to the  $\langle content \rangle$  (if it is present) in sequence and prop list  $\{\langle store\ name \rangle\}$  set by save-ans key.

The starred argument '\*' cannot be separated by spaces 'u' from the command, i.e. \anspic\* and the optional argument does "not support" verbatim content. By design it is assumed that the starred argument '\*' will only appear "once" within the environment.

### Example

```
\begin{enumext}[save-ans=test,show-ans,nosep]
  \item Question with images.
   \begin{keyanspic}[3,2]
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}
\end{enumext}
```

1. Question with images.

## Printing stored content

#### 6.6.1 The command \getkeyans

\getkeyans \getkeyans{\langle store name: position\rangle}

The command \getkeyans prints the "stored content" in prop list {\store name\}\ defined by save-ans key in the *\partial position \range \text{returned by the show-pos key. The "stored content"* can only be accessed *after* it is stored, if  $\{\langle store\ name \rangle\}\$  does not exist the command will return an error.

The form taken by the argument  $\{\langle store\ name: position \rangle\}$  is the same as that used to generate the "internal label and ref" system when save-ref key are active, so to refer to a "stored content". For example \getkeyans{test:4} will return the "stored content" at position 4 of the environment in which the key save-ans=test was set.

#### 6.6.2 The command \foreachkeyans

\foreachkeyans \foreachkeyans[ $\langle key = val \rangle$ ] { $\langle store \ name \rangle$ }

The command \foreachkeyans goes through and executes the command \getkeyans on the contents in prop *list* { $\langle store\ name \rangle$ }. If you pass without options run \getkeyans on all contents in *prop* list { $\langle store\ name \rangle$ }.

#### **Options for command**

 $sep = \{\langle code \rangle\}$ 

Establishes the separation between *each* content stored in *prop list* {\store name\}. For example, you can use  $sep={\{\setminus [10pt]\}}$  for vertical separation of stored contents.

 $step = \{\langle integer \rangle\}$ default: 1

Sets the increment ((step)) applied to the value set by key start for each element stored in prop list {\store name}. The value must be a  $\langle positive\ integer \rangle$ .

 $start = \{\langle integer \rangle\}$ 

Sets the  $\langle position \rangle$  of the prop list  $\{\langle store\ name \rangle\}$  from which execution will start. The value must be a  $\langle positive \rangle$ integer \cdot .

 $stop = \{\langle integer \rangle \}$ default: 0

Sets the \(\rangle position \rangle \) of the \(prop \) list \{\(\sigma to re name \rangle \)\} from which execution it will finish executing. The value must be a *(positive integer)*.

Sets the  $\{\langle code \rangle\}$  that will be executed  $\langle before \rangle$  each content stored in *prop list*  $\{\langle store\ name \rangle\}$ . The  $\{\langle code \rangle\}$ must be passed between braces.

 $after = \{\langle code \rangle\}$ default: empty

Sets the  $\{\langle code \rangle\}$  that will be executed  $\langle after \rangle$  each content stored in prop list  $\{\langle store\ name \rangle\}$ . The  $\{\langle code \rangle\}$ must be passed between braces.

 $wrapper = \{ \langle code \{ #1 \} \ more \ code \rangle \}$ default: empty

Wraps the content stored in *prop list* { $\langle store\ name \rangle$ } referenced by {#1}. The { $\langle code \rangle$ } must be passed between braces. For example  $\langle \text{foreachkeyans[wrapper={\mathbf{bakebox[1em][1]}}} | \langle \text{store name} \rangle$ .

#### **6.6.3** The command \printkeyans

```
\printkeyans \printkeyans [\langle keys \rangle] {\langle store\ name \rangle}
                        \printkeyans*[\langle keys \rangle] \{\langle store\ name \rangle\}
```

The command \printkeyans prints "all stored content" in sequence { \( \store name \) \} defined by save-ans key placing this inside the enumext environment or the enumext\* environment if the starred argument '\*' is used. The "stored content" can only be accessed after it is stored in the sequence, if  $\{\langle store\ name \rangle\}$  does not exist the command will return an error.

The optional argument allows managing the \( \lambda \text{keys} \rangle \) in the "first level" of the environment in which the "stored content" of the sequence { \( \store name \) \) will be printed, if the starred argument '\*' is used it will be enumext\* otherwise enumext.

The default values for the "first level" are the same as the default values for the enumext and enumext\* environments along with the keys nosep, first=\small, font=\small and columns=2. For the inner levels of the environment enumext saved in the sequence { \( \store name \) \} the default values are the same as those

default: empty

established for the second, third and fourth levels plus the keys nosep, first=\small, font=\small. If the environment enumext\* is saved within the sequence  $\{\langle store\ name \rangle\}$  it will have the same default values plus the keys nosep, first=\small, font=\small.

Since the command encapsulates by default the enumext environment or the enumext\* environment, we must take some considerations:

- If we execute \printkeyans\*{\store name\store name\st
- If we execute \printkeyans\*{\langle store name \rangle} and the sequence {\langle store name \rangle} contains any enumext environments, they will start with the \langle keys \rangle set for the first level unless they are set in the optional argument or save-key is used to modify it.
- If we execute \printkeyans{\langle store name \rangle} and the sequence {\langle store name \rangle} contains any environment enumext\*, they will start with the \langle keys \rangle set by default unless they are set in the optional argument or save-key is used to modify it.

The default values for the "first level" of \printkeyans commands and \printkeyans\* are established using \setenumext[ $\langle print, 1 \rangle$ ] { $\langle keys \rangle$ } and \setenumext[ $\langle print^* \rangle$ ] { $\langle keys \rangle$ }. If we need to set the  $\langle keys \rangle$  for the environment enumext "saved" in the sequence { $\langle store\ name \rangle$ } we will use \setenumext[ $\langle print, level \rangle$ ] { $\langle keys \rangle$ } and if we need to set the  $\langle keys \rangle$  for the environment enumext\* "saved" in the sequence { $\langle store\ name \rangle$ } we will use \setenumext[ $\langle print, * \rangle$ ] { $\langle keys \rangle$ }.

#### Example

```
\begin{enumext}[save-ans=sample,columns=2,show-pos=true,nosep,save-ref=true]
   \item Factor 3x+3y+3z. \anskey\{3(x+y+z)
   \item True False
     \begin{enumext}[nosep]
       \item \LaTeX2e\ is cool? \anskey{Very True!}
     \end{enumext}
   \item Related to Linux
     \begin{enumext}[nosep]
       \item You use linux? \anskey{Yes}
        \item Rate the following package and class
          \begin{enumext}[nosep]
            \item \texttt{xsim} \anskey{very good}
            \item \texttt{exsheets} \anskey{obsolete}
     \end{enumext}
 \ensuremath{\mbox{\mbox{end}\{\mbox{enumext}\}}}
 The answer to \ref{sample:4} is \getkeyans{sample:4} and the answers to
 all the worksheets are as follows:
 \printkeyans{sample}
1. Factor 3x + 3y + 3z.
                                                       [3] Yes
                                                      (b) Rate the following package and class
[1] | 3(x+y+z)|
                                                              xsim
2. True False
                                                           [4] very good
  (a) LaTeX2e is cool?
                                                          ii. exsheets
   [2] Very True!
                                                           [5] obsolete
3. Related to Linux
  (a) You use linux?
```

The answer to 3.(b).i is very good and the answers to all the worksheets are as follows:

```
1. 3(x+y+z)
2. (a) Very True!
3. (a) Yes
(b) i. very good
ii. obsolete
```

## 7 Full examples

Here I will leave as an example some adaptations questions taken from TeX-SX. The examples are attached to this documentation and can be extracted from your PDF viewer or from the command line by running:

```
$ pdfdetach -saveall enumext.pdf
```

©2024 by Pablo González L 17/144

and then you can use the excellent arara1 tool to compile them.

#### Example 1

Adapted from the response given by Enrico Gregorio in Squares for answer choice options and perfect alignment to mathematical answers

A 36 km/h.

B 360 km/h. C 27,8 km/h.

misura?

D  $3,60 \times 10^8 \,\text{km/h}$ .

A  $1 \text{ Å} = 1 \times 10^5 \text{ fm}.$ 

B  $1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.$ 

C 1 Å = 1 × 10<sup>-15</sup> fm.

D  $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$ 

- 1. La velocità di  $1,00 \times 10^2$  m/s espressa in km/h è: 3. La velocità di  $1,00 \times 10^2$  m/s espressa in km/h è:
  - A 36 km/h.
  - B 360 km/h.
  - c 27,8 km/h.
  - D  $|3,60 \times 10^8 \,\text{km/h}$ .
- 2. In fisica nucleare si usa l'angstrom (simbolo: 1 Å = 4. In fisica nucleare si usa l'angstrom (simbolo: 1 Å = 4).  $1 \times 10^{-10}\,\mathrm{m}$ ) e il fermi o femtometro (1 fm =  $1 \times$  $10^{-15}$  m). Qual è la relazione tra queste due unità di misura?
  - A  $1 \text{ Å} = 1 \times 10^5 \text{ fm}.$
  - $\overline{\text{B}} \, 1 \, \text{Å} = 1 \times 10^{-5} \, \text{fm}.$
  - $C 1 Å = 1 \times 10^{-15} \text{ fm}.$
  - D  $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$
- 3. B

4. A

# 1. B

## Example 2

Adapted from the response given by Florent Rougon in Multiple choice questions with proposed answers in random order — addition of automatic correction (cross mark)

1. La velocità di  $1{,}00 \times 10^2$  m/s espressa in km/h è:

2. A

- A 36 km/h.
- ✓ B 360 km/h.
  - C 27,8 km/h.
  - D  $3.60 \times 10^8 \,\text{km/h}$ .
- 2. In fisica nucleare si usa l'angstrom (simbolo:  $1 \text{ Å} = 1 \times 10^{-10} \text{ m}$ ) e il fermi o femtometro ( $1 \text{ fm} = 1 \times 10^{-15} \text{ m}$ ). Qual è la relazione tra queste due unità di misura?
- $\sqrt{A} \, 1 \, \text{Å} = 1 \times 10^5 \, \text{fm}.$ 
  - B  $1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.$
  - C  $1 \text{ Å} = 1 \times 10^{-15} \text{ fm}$
  - D  $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$
- 3. La velocità di  $1{,}00 \times 10^2 \,\mathrm{m/s}$  espressa in km/h è:
  - A 36 km/h.
- ✓ B 360 km/h.
- C 27,8 km/h.
- D  $3,60 \times 10^8 \,\text{km/h}$ .
- 4. In fisica nucleare si usa l'angstrom (simbolo:  $1 \text{ Å} = 1 \times 10^{-10} \text{ m}$ ) e il fermi o femtometro ( $1 \text{ fm} = 1 \times 10^{-15} \text{ m}$ ). Qual è la relazione tra queste due unità di misura?
- $\sqrt{A} 1 Å = 1 \times 10^5 \text{ fm}.$ 
  - B  $1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.$
  - C  $1 \text{ Å} = 1 \times 10^{-15} \text{ fm}.$
  - D  $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$
- 1. B
- 2. A
- 3. B
- 4. A

### Example 3

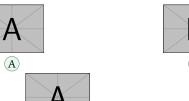

- A "simple multiple choice" test =
- 1. First type of questions
  - (A) value
  - (B) correct
  - (C) value
  - (D) value
- 2. Second type of questions
  - $2\alpha + 2\delta = 90^{\circ}$

<sup>&</sup>lt;sup>1</sup>The cool T<sub>E</sub>X automation tool: https://www.ctan.org/pkg/arara

- II.  $\alpha = \delta$
- III.  $\angle EDF = 45^{\circ}$
- (A) I only
- (B) II only
- © I and II only
- 3. Third type of questions
  - (1)  $2\alpha + 2\delta = 90^{\circ}$
  - (2)  $\angle EDF = 45^{\circ}$
  - (A) value
  - (B) value
  - (C) value
- 4. Question with image and label below:

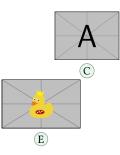

- (E) I, II, and III
- (D) value
- (E) value

(D)

- 5. Question with image on left side:
  - (A) value
  - (B) value
  - (C) value
  - (D) correct
  - (E) value

#### Test keys

- 1. B, x = 5
- 2. D
- 3. C, some note

- \* 4. E, A duck
- 5. D, other note

#### Example 4

A "simple worksheet" using ducks :)

Factor  $x^2 - 2x + 1$ 

Factor 3x + 3y + 3z

The following questions need to be cuaqtified:)

True False

- (a)  $\alpha > \delta$
- (b) LaTeX2e is cool?

Related to Linux

- (a) You use linux?
- (b) Usually uses the package manager?
- (c) Rate the following package and class
  - i. xsim-exam
  - ii. xsim
  - iii. exsheets

The answer to 1 is  $(x-1)^2$  and the answer to 3.(a) is False.

- 1.  $(x-1)^2$
- 2. 3(x+y+z)
- 3. (a) False
  - (b) Very True!

- (b) Yes, dnf
- (c) i. doesn't exist for now :(
  - very good
  - iii. obsolete
- 4. (a) Yes

#### Example 5

Adapted from the response given by Stephen in SAT like question format 🖹.

Which choice best describes what happens in the passage?

- A) One character argues with another character who intrudes on her home.
- B) One character receives a surprising request

from another character.

- C) One character reminisces about choices she has made over the years.
- D) One character criticizes another character for pursuing an unexpected course of action.

Which choice best describes what happens in the passage?

- A) One character argues with another character who intrudes on her home.
- B) One character receives a surprising request from another character.
- C) One character reminisces about choices she has made over the years.
- D) One character criticizes another character for pursuing an unexpected course of action.

3

2. C)

3. B)

4. D)

# 8 The way of non-enumerated lists

It is possible to use (or abuse) the enumext environment to mimic *non-enumerated* list environments such as itemize and description, clearly the  $\langle keys \rangle$  to "store answers", the keyans and keyanspic environments lose their sense and it is not the focus of the main of this package, but, why not to do it?.

Here I leave as an example other uses of the enumext environment that can be helpful for specific purposes. The "trick" to generate these fake environments is set label= $\{\}$  or label= $\{\langle some \rangle\}$  and play with the list-indent, list-offset, font and wrap-label keys.

#### Fake itemize environment

Here we set the label key using the default settings in ETeX for the four levels \textbullet, \textendash, \textasteriskcentered and \textperiodcentered together with the nosep key to reduce the vertical spaces in the left side example and set the label key in *mathematical mode* for the right side as \ast, \diamond, \circ and \star for the four levels together with the nosep key

- First level item
  - Second level item
    - \* Third level item
    - · Fourth level item
- First level item

- \* First level item
  - ♦ Second level item
    - Third level item
    - ★ Fourth level item
- \* First level item

### Fake description environment

Here we set label={} and list-indent=2.5em, font=\bfseries.

**SomeThing** A short one-line description.

This is an entry without a label.

**Something** A short *one-line* description text.

**Something long** A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

If we add list-indent=0pt you get widest style:

**SomeThing** A short one-line description.

This is an entry without a label.

**Something** A short *one-line* description text.

**Something long** A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

The small space at the beginning of the "unlabeled entry" corresponds to \labelsep and can be removed using \hspace{-\labelsep} at the beginning of the line.

### Description indented by label

Here we set label={} and we will give a convenient value to labelsep and labelwidth, for example we can take as reference our *longest label* and pass it as value using:

```
\newlength{\descitemwd}
\settowidth{\descitemwd}{\textbf{Something long}}}
```

and then use labelsep=4pt, labelwidth=\descitemwd, font=\bfseries.

**SomeThing** A short one-line description.

This is an entry without a label.

**Something** A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut

purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

The environment can be translated so that the  $\langle labels \rangle$  are on the left margin calculating the value passed to the list-offset key, in this case it will be equal to the sum of the values set by the labelwidth and labelsep keys finally resulting as list-offset={-\descitemwd - 4pt}.

**SomeThing** A short one-line description.

This is an entry without a label.

**Something** A short one-line description.

**Something long** A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

If we add align=right it will look like this:

**SomeThing** A short one-line description.

This is an entry without a label.

**Something** A short one-line description.

**Something long** A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

At this point we have used list-offset={-\descitemwd - 4pt} instead of list-offset={-\labelwidth - \labelsep}, this is because the parameters \labelwidth and \labelsep take the default values, as if we had not set label.

### **Description with multi-line labels**

The label key does not accept *multiline material*, this is where the wrap-label\* key comes into play. Unlike the enumitem package, the align key only supports three options, so what we will do is create a command in the style \parleft of enumitem that allows us to place *multiline labels* using \parbox.

```
\NewDocumentCommand \labelbx { s +m }
    {%
     \IfBooleanTF{#1}
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
}
```

Now we just need to set  $wrap-label*={\labelbx{#1}}.$ 

**SomeThing** A short one-line description.

This is an entry without a label.

**Something** A short one-line description.

**Something** A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum **long** ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

**SoMeThInG** A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum **LoNg** ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

### Final notes

The original implementation (if you can call it that) of the ideas that led to the creation of enumext were some macros using the enumerate[5] package for personal use created in early 2003, the code was quite questionable, but functional for these simple requirements.

With the great answers given by Christian Hupfer in Create a fake label ref using list and the answer given by David Carlisle in Change the use of label ref by data save in an array (list) I managed to create a more solid code than the original version, now using the <code>l3prop[11]</code> and <code>l3seq[11]</code> modules together with the <code>hyperref[8]</code> and <code>enumitem[6]</code> packages, which did the job, but with some limitations.

As time went by I took these limitations as a personal challenge which I called "reinventing the wheel", since there were packages and classes that did more or less what I was looking for, but did not fit my simple requirements. This "reinventing the wheel" finally ended up becoming enumext.

### Why list environments?

The answer is simple, first I love the beauty of its syntax and many of what I had already written used the enumerate environment or lists created using the enumitem package. In my mind I thought: how complicated could it be to write a package that looked like enumitem? It seemed simple enough, of course I didn't have

in mind the mess I was getting into working with list environments, minipage and adding support for the multicol and hyperref packages.

Of course, seeing the final result of the experiment "reinventing the wheel" I am quite satisfied.

### Why not random questions and other utilities

The "random" type questions I love and hate them at the same time, although they simplify a lot the work when creating a multiple choice test, but you lose the beauty of typessetting a document with LaTeX, that is to say the output does not always look as nice as it should, even if they are only alternatives these must follow a certain order when presented either numerical or presentation, that said handling that using *nested lists* is quite complicated so I do not classify to be implemented.

## 12 Implementation

The most recent publicly released version of enumext is available at CTAN: https://www.ctan.org/pkg/enumext. While general feedback via email is welcomed, specific bugs or feature requests should be reported through the issue tracker: Ohttps://github.com/pablgonz/enumext/issues.

The documentation presented here is far from professional, it contains a lot of obvious information that to the eye of a TeXpert are superfluous, but, after so many years developing this project is the only way to remember what does what.

#### 12.1 General conventions

Variables containing i, ii, iii and iv are associated by level with the enumext environment, variables containing v are associated with the keyans environment, variables containing vi are associated with the keyanspic environment, variables containing vii are associated with the enumext\* environment and variables containing viii are associated with the keyans\* environment.

To simplify writing and documentation some variables and functions that are common to the different levels of the environments are described using a capital "X".

The temporary function \\_\_enumext\_tmp:n is used in different parts of the package code for variable creation or execution of other functions that are grouped into this one.

All variables and functions defined in this package are private and are NOT intended to work or be used by another package or module.

### 12.2 Initial set up

Start the DocStrip guards.

```
*package
```

Identify the internal prefix (LTEX3 DocStrip convention) for l3doc class.

```
2 (@@=enumext)
```

### 12.3 Declaration of the package

First we will make sure we have a minimum (super updated) version of ETeX to work correctly.

```
3 \NeedsTeXFormat{LaTeX2e}[2024-06-01]
```

Now declare the enumext package.

```
4 \ProvidesExplPackage
5 {enumext}
6 {2024-07-10}
7 {1.0}
8 {Enumerate exercise sheets}
```

Finally check if the multicol and scontents packages are loaded, if not we load it.

```
9 \hook_gput_code:nnn {begindocument} {enumext}
      \IfPackageLoadedTF { multicol }
        {
          \msg_info:nnn { enumext } { package-load } { multicol }
        }
14
        {
          \msg_info:nnn { enumext } { package-not-load } { multicol }
          \RequirePackage{multicol}[2024-05-23]
        }
      \IfPackageLoadedTF { scontents }
        {
          \msg_info:nnn { enumext } { package-load } { scontents }
21
        }
22
23
        {
          \msg_info:nnn { enumext } { package-not-load } { scontents }
24
          \RequirePackage{scontents}
25
26
```

### 12.4 Definition of variables

Variables that do not appear in this section are created by means of \keys\_define:nn or some function described below.

```
\l__enumext_level_int Integer variables will control the nesting levels of the environments and \anskey command.
     \l__enumext_level_h_int
                                28 \int_new:N \l__enumext_level_int
                                 _{^{29}} \int_new:N \l__enumext_level_h_int
\l__enumext_anskey_level_int
\l__enumext_keyans_level_int
                                30 \int_new:N \l__enumext_anskey_level_int
                                int_new:N \l__enumext_keyans_level_int
      \l__enumext_keyans_level_h_int
                                32 \int_new:N \l__enumext_keyans_level_h_int
     \l__enumext_keyans_pic_level_int
                                 33 \int_new:N \l__enumext_keyans_pic_level_int
                                (End of definition for \l_enumext_level_int and others.)
                                Internal variables used by functions \__enumext_is_not_nested:, \__enumext_is_on_first_level:
    \l__enumext_starred_bool
                                and \__enumext_keyans_name_and_start: (§12.5.1).
    \g__enumext_starred_bool
      \verb|\l_enumext_starred_first_bool|
                                 34 \bool_new:N \l__enumext_starred_bool
    \l__enumext_standar_bool
                                 35 \bool_new:N \g__enumext_starred_bool
    \g__enumext_standar_bool
                                 36 \bool_new:N \l__enumext_starred_first_bool
      \l__enumext_standar_first_bool
                                 37 \bool_new:N \l__enumext_standar_bool
                                38 \bool_new:N \g__enumext_standar_bool
 \l__enumext_anskey_env_bool
                                39 \bool_new:N \l__enumext_standar_first_bool
 \l__enumext_keyans_env_bool
                                40 \bool_new:N \l__enumext_anskey_env_bool
   \g__enumext_start_line_tl
                                \bool_new:N \l__enumext_keyans_env_bool
   \g__enumext_envir_name_tl
                                42 \tl_new:N \g__enumext_start_line_tl
   \l__enumext_envir_name_tl
                                 43 \tl_new:N \g__enumext_envir_name_tl
                                 44 \tl_new:N \l__enumext_envir_name_tl
                               (\mathit{End}\ of\ definition\ for\ \verb|\l_enumext_starred_bool|\ and\ others.)
                               Variables to store the "name of the counters" enumXi, enumXii, enumXiii and enumXiv for enumext en-
    \l__enumext_counter_i_tl
                               vironment, enumXv for keyans environment and enumXvi for the keyanspic environment. The counters
   \l__enumext_counter_ii_tl
  \l__enumext_counter_iii_tl
                                enumXvii and enumXviii are used by enumext* and keyans* environments.
   \l__enumext_counter_iv_tl
                               The initial values of these variables are set by the function \__enumext_define_counters: Nn (§12.10) and
    \l__enumext_counter_v_tl
                                then modified by the function \__enumext_label_style: Nnn used by label key (§12.13).
   \l__enumext_counter_vi_tl
                                 45 \cs_set_protected:Npn \__enumext_tmp:n #1

\l_enumext_store_current_label_tmp_tl
```

The variable \l\_\_enumext\_store\_active\_bool setting by save-ans key (§12.25.1) activates all the mechanism related to \anskey, anskey\*, keyans, keyans\* and keyanspic environments.

The variable \l\_\_enumext\_store\_name\_tl saves the  $\{\langle store\ name \rangle\}$  set by the save-ans key of the sequence and prop list in which we will store, the variable \g\_\_enumext\_store\_name\_tl it's just a global copy of  $\{\langle store\ name \rangle\}$  used by different functions.

The variable \l\_\_enumext\_store\_anskey\_arg\_tl save the *argument* of \anskey (§12.29) and the variables \l\_\_enumext\_store\_anskey\_env\_tl and \l\_\_enumext\_store\_anskey\_opt\_tl save the  $\langle body \rangle$  and the  $\langle keys \rangle$  of the environment anskey\* (§12.30).

The variables  $\l_enumext_store_current_label_tl$  and  $\l_enumext_store_current_opt_arg_tl$  save the *current label* and *optional argument* of  $\l_enumext_store_current_opt_arg_tl$  save the *current label* and *optional argument* of  $\l_enumext_store_current_opt_arg_tl$  for the keyans, keyans\* and keyanspic environments.

The variable \l\_\_enumext\_store\_current\_label\_tmp\_tl is a temporary variable used by keyans, keyans\* and keyanspic at various points.

```

(End of definition for \\_\_enumext\_level:.)

\\_\_enumext\_if\_is\_int:nT \\_\_enumext\_if\_is\_int:nF \\_\_enumext\_if\_is\_int:nTF

A conditional function to know if the variable we are passing is an integer used by start and widest keys. This function is taken directly from the answer given by Henri Menke in How to test if an expl3 function argument is an integer expression?.

```
_{209} \prg_new_protected_conditional:Npnn \__enumext_if_is_int:n #1 { T, F, TF }
      \regex_match:nnTF { ^[\+\-]?[\d]+$ } {#1} % $
        { \prg_return_true: }
        { \prg_return_false: }
    }
214
```

 $(\textit{End of definition for } \_\_enumext\_if\_is\_int:nT, \\ \_\_enumext\_if\_is\_int:nF.)$ 

\\_\_enumext\_regex\_counter\_style:

The internal function  $\label{lem:counter_style:}$  replace the '\*' with the actual counter of the running level and is used by the ref key. It loops through the defined counter styles in \c\_enumext\_counter\_style\_tl and replace '\*' by real command, for example, looking for \arabic\* and replacing that by  $\arabic{\langle counter \rangle}$  defined on the current level.

```
\cs_new_protected:Nn \__enumext_regex_counter_style:
216
       \tl_map_inline:Nn \c__enumext_counter_style_tl
217
           \regex_replace_once:nnN { \c{##1}\* }
             { \c{##1}\cB{\u{l_enumext_ref_the_count_tl}\cE} } \l_enumext_ref_key_arg_tl
    7
©2024 by Pablo González L
```

(End of definition for \\_\_enumext\_regex\_counter\_style:.)

\_\_enumext\_show\_length:nnn

Internal function used by show-length key to show "all lengths" calculated and use in enumext, enumext\*, keyans and keyans\* environments.

(End of definition for \\_\_enumext\_show\_length:nnn.)

#### 12.5.1 Utilities for environments and levels

\\_\_enumext\_is\_not\_nested:
 \\_enumext\_is\_on\_first\_level:

The function \\_\_enumext\_is\_not\_nested: set the variables \g\_\_enumext\_standar\_bool and \g\_\_-enumext\_starred\_bool to "true" only if the environments enumext and enumext\* are nested in each other and save the environment name in \l\_\_enumext\_envir\_name\_tl.

```
^cs_new_protected:Nn \__enumext_is_not_nested:
230
      \str_case:en { \@currenvir }
231
        {
232
           {enumext}
234
               \tl_set:Nn \l__enumext_envir_name_tl { enumext }
               \verb|\bool_lazy_and:nnT||
                 { \bool_not_p:n { \g__enumext_standar_bool } }
                 { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
                   \bool_gset_true:N \g__enumext_standar_bool
                 }
             }
           {enumext*}
               \tl_set:Nn \l__enumext_envir_name_tl { enumext* }
               \bool_lazy_and:nnT
                 { \bool_not_p:n { \g__enumext_starred_bool } }
                 { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
                 {
                   \bool_gset_true:N \g__enumext_starred_bool
                 }
251
252
        }
253
254
```

The function \\_\_enumext\_is\_on\_first\_level: will set the variables \l\_\_enumext\_standar\_first\_bool ( $\S12.25.1$ ), \l\_\_enumext\_starred\_first\_bool ( $\S12.25.1$ ) and \l\_\_enumext\_anskey\_env\_bool ( $\S12.30$ ) to "true" only if the environment is not nested and we are in the "first level" of it . We will also save the start line number of each environment in the variable \g\_\_enumext\_start\_line\_tl and the name of each environment in the variable \g\_\_enumext\_envir\_name\_tl to use in messages related to the checkans key and .log file.

```
 \cs_new_protected:Nn \__enumext_is_on_first_level:
    {
256
       \bool_lazy_all:nT
257
         {
258
           { \bool_if_p:N \g__enumext_standar_bool }
           { \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
           { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
         }
           \bool_set_true:N \l__enumext_standar_first_bool
           \bool_set_true:N \l__enumext_anskey_env_bool
           \tl_gset:Nn \g__enumext_envir_name_tl { enumext }
           \tl_gset:Ne \g__enumext_start_line_tl
               on ~ line ~ \exp_not:V \inputlineno
         }
       \bool_lazy_all:nT

        { \int_use:N \g__enumext_item_anskey_int }
354
        { \int_eval:n { \g__enumext_item_number_int - \g__enumext_item_anskey_int} }
355
356
```

(End of definition for \\_\_enumext\_log\_global\_vars: and \\_\_enumext\_log\_answer\_vars:.)

### 12.6 Copying list and minipage environments

The list environment provided by LATEX has the following plain form:

```
\left\langle arg\ one \right\rangle \left\langle arg\ two \right\rangle
     \forall item[\langle opt \rangle]
\endlist
```

As a precaution we copy them using \\_\_enumext\_at\_begin\_document:n in case any package redefines the list environment or a related command.

\_enumext\_start\_list:nn \\_\_enumext\_stop\_list: \ enumext item std:w

The functions \\_\_enumext\_start\_list:nn, \\_\_enumext\_stop\_list: and \\_\_enumext\_item\_std:w correspond to copies of \list, \endlist and \item from plain definition of list environment.

```
357 \__enumext_at_begin_document:n
358
    {
      \cs_new_eq:NN \__enumext_start_list:nn \list
359
      \cs_new_eq:NN \__enumext_stop_list: \endlist
      \cs_new_eq:NN \__enumext_item_std:w \item
    }
```

 $(End\ of\ definition\ for\ \_enumext\_start\_list:nn\ ,\ \_enumext\_stop\_list:\ ,\ and\ \setminus\_enumext\_item\_std:w.)$ The minipage environment provided by LaTeX has the following (simplified) plain form:

```
\mbox{minipage}[\langle pos \rangle][\langle height \rangle][\langle inner-pos \rangle]\{\langle width \rangle\}
    (internal implement)
\endminipage
```

As a precaution we copy them using \\_\_enumext\_at\_begin\_document:n in case any package redefines the minipage environment or a related command.

\\_\_enumext\_endminipage:

\_enumext\_minipage:w The functions \\_\_enumext\_minipage:w, \\_\_enumext\_endminipage: and correspond to copies of \minipage, \endminipage from plain definition of minipage environment.

```
363 \__enumext_at_begin_document:n
   {
      \cs_new_eq:NN \__enumext_minipage:w \minipage
      \cs_new_eq:NN \__enumext_endminipage: \endminipage
```

(End of definition for \\_\_enumext\_minipage:w and \\_\_enumext\_endminipage:.)

©2024 by Pablo González L

### 12.7 The internal minipage environment

\\_\_enumext\_internal\_mini\_page:
 \_\_enumext\_mini\_env\*

The function \\_\_enumext\_internal\_mini\_page: creates a internal \_\_enumext\_mini\_env\* environment (custom version of minipage) setting the \if@minipage switch to "false" to allow spaces at the "above" of the environment, plus we will add \skip\_vertical:N \c\_zero\_skip to maintain alignment on "top" in the first part and \skip\_vertical:N \c\_zero\_skip in the second part to allow spaces "below". This environment will be used internally by the mini-env key, it is not documented in the user interface and is for internal use only. This function is passed to the function \\_\_enumext\_safe\_exec: in the enumext environment definition (§12.38) and \\_\_enumext\_safe\_exec\_vii: in the enumext\* environment definition (§12.43)

```
368 \cs_new_protected:Nn \__enumext_internal_mini_page:
    {
369
      \int_compare:nNnT { \l__enumext_level_int } = { 0 }
370
371
           \DeclareDocumentEnvironment{__enumext_mini_env*}{ m }
             {
               \__enumext_minipage:w [ t ] { ##1 }
                 \legacy_if_gset_false:n { @minipage }
                 \skip_vertical:N \c_zero_skip
             }
             {
378
                 \skip_vertical:N \c_zero_skip
379
               \__enumext_endminipage:
        }
    }
```

(End of definition for \\_\_enumext\_internal\_mini\_page: and \_\_enumext\_mini\_env\*.)

### 12.8 Compatibility with hyperref and footnotehyper

First we define the necessary rules using "hooks" to determine if the hyperref package is loaded.

```
_{384} \rightarrow \\ code:nnn { begindocument } { enumext } { \_enumext\_after\_hyperref: } \\ _{385} \rightarrow \\ f { hyperref }
```

\\_\_enumext\_after\_hyperref:
\\_\_enumext\_hypertarget:nn
\\_\_enumext\_phantomsection:

The function \\_\_enumext\_after\_hyperref: sets the state of the boolean variable \l\_\_enumext\_hyperref\_bool to "true" if the package is loaded. At this point we will use the public macro \IfHyperBoolean to determine if the hyperfootnotes=true key is present, if so, we set the state of the boolean variable \\_\_enumext\_footnotes\_key\_bool to "true".

If the state of the variable \l\_\_enumext\_footnotes\_key\_bool is true we will check if the package footnotehyper is loaded, in case it is not present, we will set the value of \l\_\_enumext\_footnotes\_-key\_bool to false and we will redefine \footnote.

©2024 by Pablo González L 34/144

The functions \\_\_enumext\_hypertarget:nn and \\_\_enumext\_phantomsection: correspond to the internal copies of \hypertarget and \phantomsection. If the boolean variable \l\_\_enumext\_hyperref\_bool is false the functions \\_\_enumext\_hypertarget:nn and \\_\_enumext\_phantomsection: will be disabled.

 $(\textit{End of definition for } \verb|\_enumext_after_hyperref:|, \verb|\_enumext_hypertarget:|nn|, and \verb|\_enumext_phantomsection:|)|$ 

\\_\_enumext\_newlabel:nn

The function \\_\_enumext\_newlabel:nn write the information to the .aux file when using the save-ref key. The arguments taken by the function are:

```
#1: \l_enumext_newlabel_arg_one_tl
#2: \l_enumext_newlabel_arg_two_tl
```

The trick here is to manage the number of arguments passed to \newlabel{#1}{#2} according to the presence of the hyperref package.

```
\cs_new_protected:Npn \__enumext_newlabel:nn #1 #2
423
      \protected@write \@auxout { }
424
425
          \token_to_str:N \newlabel {#1}
             {
427
               {#2}
               \bool_if:NT \l__enumext_hyperref_bool
                 { { \thepage } {#1} }
               { }
             }
        }
         _enumext_hypertarget:nn {#1} { }
      \__enumext_phantomsection:
435
436
```

### 12.9 Definition of public dimension

The package enumext only provides a single public dimension \itemwidth and is intended for user convenience only and is not for internal use as such. This dimension is set in all environments and is only used by the wrap-ans key at its default value.

```
437 \dim_zero_new:N \itemwidth
```

#### 12.10 Definition of counters

\\_\_enumext\_define\_counters:Nn \\_\_enumext\_define\_counters:cn To create the necessary "counters" we must first make sure that they are not already defined by the user or a package such as enumitem, otherwise a error will be returned and the package loading will be aborted. The arguments taken by the function are:

#1: A token list \l\_\_enumext\_counter\_X\_tl for "store" the counter's name.

#2: The counter's name.

©2024 by Pablo González L 35/144

enumXii The counters created here are enumXi, enumXii, enumXiii and enumXiv for enumext environment, enumXv enumXii for keyans environment, enumXvii for keyanspic environment, enumXviii for the keyans\* environments.

(End of definition for enumXi and others.)

#### 12.11 Definition of labels

This part of the code is inspired by the enumitem package. The idea is to be able to access the counters using \arabic\*, \Alph\*, \alph\*, \Roman\* and \roman\* to use them in the label key.

 $\verb|\__enumext_register_counter_style:Nn|$ 

These  $\langle counters \rangle$  will be used as default  $\langle labels \rangle$  if the label key is not used for the different levels of the enumext environment and the keyans environment, so it is necessary to get a default value for labelwidth from these  $\langle labels \rangle$  at the same time.

(End of definition for \\_\_enumext\_register\_counter\_style:Nn.)

\\_\_enumext\_label\_width\_by\_box:Nn \\_\_enumext\_label\_width\_by\_box:cv

The function \\_\_enumext\_label\_width\_by\_box: Nn set the default \labelwidth using a box width if no labelwidth key is passed.

(End of definition for  $\ensuremath{\verb|}\_$  enumext\_label\_width\_by\_box:Nn.)

\\_\_enumext\_label\_style:Nnn
\\_\_enumext\_label\_style:cvn

The function \\_\_enumext\_label\_style: Nnn is used by the label key to creates the variables containing the  $\langle label\ style \rangle$  and will allow to use \arabic\*, \alph\*, \alph\*, \Roman\* and \roman\* as arguments. It loops through the defined counter styles in \g\_enumext\_counter\_styles\_tl (\arabic, \alph, \alph, \roman, and \Roman) for example, looking for \roman\* and replacing that by \roman{\cutecounter}, and doing the same for the \g\_enumext\_widest\_label\_tl to keep both in sync.

```
471 \cs_new_protected:Npn \__enumext_label_style:Nnn #1 #2 #3
472
      \tl_clear_new:N #1
473

12.13 Setting label and ref keys

(End of definition for align.)

label

ref

The implementation of the keys label and ref are part of the core of the package enumext, here the default values for  $\langle label \rangle$ , the value of the variables  $\l_enumext_label_X_tl$ , the default values for  $\l_enumext_label_X_tl$ , the default values for  $\l_enumext_label_X_tl$ , and the "label and ref" system.

## 12.13.1 Define and set label and ref keys for enumext environment

Here we set the default  $\langle labels \rangle$  of the four levels of enumext environment, along with the default value for labelwidth key and ref key.

```
\l__enumext_label_i_tl
                           \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
 \l__enumext_label_ii_tl
                           558
                                  \keys_define:nn { enumext / #1 }
\l__enumext_label_iii_tl
                           559
                                    {
\l__enumext_label_iv_tl
                                      label .code:n
                                                            \__enumext_label_style:cvn { l__enumext_label_#2_tl }
                                                              { l__enumext_counter_#2_tl } {##1}
                                                            \dim_set_eq:cN { l__enumext_labelwidth_#2_dim }
                                                              \l__enumext_current_widest_dim
                                                          1.
                           566
                                      label .initial:n = #3,
                           567
                                      label .value_required:n = true,
                           568
                                      ref
                                            .code:n
                                                       = \__enumext_standar_ref:n {##1},
                                      ref
                                            .value_required:n = true,
                           571
```

(End of definition for label and others.)

©2024 by Pablo González L

\\_\_enumext\_standar\_ref:n
\\_\_enumext\_standar\_ref:

The \\_\_enumext\_standar\_ref:n first we will pass the key argument to \l\_\_enumext\_ref\_key\_arg\_tl and we will analyze its state, if it is not empty we will make a copy of the current counter in \l\_\_enumext \_-ref\_the\_count\_tl and we will execute the function \\_\_enumext\_regex\_counter\_style: which will return the modified \l\_\_enumext\_ref\_key\_arg\_tl and we make the value of \l\_\_enumext\_ref\_the\_count\_tl the same as that \l\_\_enumext\_the\_counter\_X\_tl which contains \theenumX and finally we set \l\_\_enumext\_renew\_the\_count\_X\_tl with the renewed command.

```
577 \cs_new_protected:Npn \__enumext_standar_ref:n #1
578
      \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
579
      \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
580
        {
          \msg_error:nnn { enumext } { key-ref-empty } { enumext }
        }
          \tl set eq:Nc
            \l__enumext_ref_the_count_tl { l__enumext_counter_ \__enumext_level: _tl }
          \__enumext_regex_counter_style:
587
          \tl set ea:Nc
            \l__enumext_ref_the_count_tl { l__enumext_the_counter_ \__enumext_level: _tl }
          \tl_put_right:ce { l__enumext_renew_the_count_ \__enumext_level: _tl }
               \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl }
                 { \exp_not:V \l__enumext_ref_key_arg_tl }
        }
    7
```

38 / 144

Finally the function \\_\_enumext\_standar\_ref: will execute the modification for the reference system in the second argument of the environment definition enumext.

(End of definition for  $\ \ \$ enumext\_standar\_ref:n and  $\ \ \ \ \$ enumext\_standar\_ref:.)

### 12.13.2 Define and set label and ref keys for enumext\* and keyans\* environments

label Here we set the default  $\langle labels \rangle$  for enumext\* and keyans\* environments, along with the default value for ref labelwidth key and ref key.

ref
\l\_\_enumext\_label\_vii\_tl
\l\_\_enumext\_label\_viii\_tl

```
604 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
605
       \keys_define:nn { enumext / #1 }
606

                            \__enumext_label_style:cvn { l__enumext_label_vi_tl }
                               { l__enumext_counter_vi_tl } {#1}
                            \dim_set_eq:cN { l__enumext_labelwidth_v_dim }
                               \l__enumext_current_widest_dim
                          },
      label .initial:n = \Alph*),
      label .value_required:n = true,
                      = \__enumext_keyans_ref:n {#1},
      ref
             .code:n
      ref
             .value_required:n = true,
692
    }
693
```

(End of definition for label and others.)

\\_\_enumext\_keyans\_ref:n
\ enumext keyans ref:

The implementation of \\_\_enumext\_keyans\_ref:n is the same as that used for the environment enumext.

```
694 \cs_new_protected:Npn \__enumext_keyans_ref:n #1
695
      \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
      \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
        {
          \msg_error:nnn { enumext } { key-ref-empty } { keyans }
        }
        {
          \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_counter_v_tl
           \__enumext_regex_counter_style:
703
          \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_v_tl
704
          \tl_put_right:Ne \l__enumext_renew_the_count_v_tl
               \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl }
                 { \exp_not:V \l__enumext_ref_key_arg_tl }
        }
    }
```

Finally the function \\_\_enumext\_keyans\_ref: will execute the modification for the reference system in the second argument of the keyans\* environment definition.

(End of definition for \\_\_enumext\_keyans\_ref:n and \\_\_enumext\_keyans\_ref:.)

## 12.14 Setting start, start\* and widest keys

\\_\_enumext\_start\_from:NNn
\\_\_enumext\_start\_from:ccn
\\_\_enumext\_start\_from:cce

The function \\_\_enumext\_start\_from: NNn used by start and start\* keys take three arguments:

```
#1: \l__enumext_label_X_tl
#2: \l__enumext_start_X_int
#3: \langle integer or string \rangle
```

The first argument of this function are the "counter style" set by label key, the second argument is returned by the function, the third argument can be an  $\langle integer \rangle$  or  $\langle string \rangle$  of the form  $\Alph$ ,  $\alph$ ,  $\alph$ ,  $\alph$ ,  $\alph$ ,  $\alph$  or  $\alph$ . This effectively allows  $\alph$  allows  $\alph$  or  $\alph$  to be used.

```
719 \cs_new_protected:Npn \__enumext_start_from:NNn #1 #2 #3
720
         _enumext_if_is_int:nTF { #3 }
721
          {
722
            \int_set:Nn #2 {#3}
          }
          {
            \regex_match:nVT { \c{Alph} | \c{alph} } {#1}
              { \int_set:Nn #2 { \int_from_alph:n {#3} } }
727
            \regex_match:nVT { \c{Roman} | \c{roman} } {#1}
728
              { \int_set:Nn #2 { \int_from_roman:n {#3} } }
729
730
732 \cs_generate_variant:Nn \__enumext_start_from:NNn { ccn, cce }
```

(End of definition for  $\_$ enumext\_start\_from:NNn.)

\\_\_enumext\_widest\_from:nNNn
\\_\_enumext\_widest\_from:nccn

widest

The function \\_\_enumext\_widest\_from: nNNn used by the widest key take four arguments:

```
#1: The counter associated with the environment level
```

#2: \l\_\_enumext\_label\_X\_tl

#3: \l\_\_enumext\_labelwidth\_X\_dim

#4: \langle integer or string \rangle

The second and third arguments of this function are the values set by label and labelwidth keys, the four argument can be an  $\langle integer \rangle$  or  $\langle string \rangle$  of the form \Alph, \alph, \Roman or \roman. The value of the four argument is set temporarily for the identified counter in this point (level), then the value is expanded into a "box" and the "width" of the "box" is returned.

```

          widest .code:n
                            = {
                                 \__enumext_widest_from:nccn {#2}
767
                                   { l__enumext_label_#2_tl }
                                   { l__enumext_labelwidth_#2_dim } {##1}
                               },
          widest .value_required:n = true,
774 \clist_map_inline:Nn \c_enumext_all_envs_clist { \_enumext_tmp:nn #1 }
```

(End of definition for start, start\*, and widest.)

## 12.15 Setting keys for vertical spaces

```
Define and set topsep, partopsep, parsep, itemsep, noitemsep and nosep keys for enumext, enumext*,
   topsep
           keyans and keyans* environments.
partopsep
   parsep
           775 \cs_set_protected:Npn \__enumext_tmp:nnnnnn #1 #2 #3 #4 #5 #6
noitemsep
           776
    nosep
                  \keys_define:nn { enumext / #1 }
           778
                      topsep
                                .skip_set:c = { l__enumext_topsep_#2_skip },
                      topsep
                                .initial:n = \{#3\},
                      topsep
                                .value_required:n = true,
                      partopsep .skip_set:c = { l__enumext_partopsep_#2_skip },
                      partopsep .initial:n = {#4},
                      partopsep .value_required:n = true,
                              .skip_set:c = { l__enumext_parsep_#2_skip },
                      parsep
                               .initial:n = \{\#5\},
                      parsep
                                .value_required:n = true,
                      parsep
                      itemsep .skip_set:c = { l__enumext_itemsep_#2_skip },
                      itemsep .initial:n = {#6},
                               .value_required:n = true,
                      noitemsep .meta:n = { itemsep = Opt, parsep = Opt },
                      noitemsep .value_forbidden:n = true,
                      nosep
                                .meta:n
                                                itemsep = 0pt, parsep= 0pt,
                                                topsep = 0pt, partopsep = 0pt,
                                              1.
                                .value_forbidden:n = true,
                      nosep
           797
           798
```

Now we set the values based on standard article class in 10pt.

42 / 144

(End of definition for topsep and others.)

# 12.16 Setting base-fix key

When nesting starting right after \item (without material between them) there is a problem with the alignment of the baseline between the two environments. One way to get around this problem is to place \mode\_leave\_vertical: and then apply \vspace{-\baselineskip} and set topsep=0pt for the "first level" of the nested enumext or enumext\* environments.

\\_\_enumext\_nested\_base\_line\_fix:

We define the key base-fix only for the "first level" of enumext and enumext\*.

The function \\_\_enumext\_nested\_base\_line\_fix: will be in charge of applying the baseline correction and adjusting the  $\langle keys \rangle$ . This function is passed to the function \\_\_enumext\_parse\_keys:n in the enumext environment definition ( $\S12.38$ ) and to the function \\_\_enumext\_parse\_keys\_vii:n in the enumext\* environment definition ( $\S12.43$ )

```
829 \cs_new_protected:Nn \__enumext_nested_base_line_fix:
    {
830
      \bool_lazy_and:nnT
831
         { \bool_if_p:N \l__enumext_standar_first_bool }
832
         { \bool_if_p:N \l__enumext_base_line_fix_bool }
833
         {
834
           \mode_leave_vertical:
835
           \vspace { -\baselineskip }
           \keys_set:nn { enumext / level-1 }
             {
               topsep = Opt, above = Opt, above* = Opt,
             }
        }
841
      \bool_lazy_and:nnT
842
         { \bool_if_p:N \l__enumext_starred_first_bool }
843
         { \bool_if_p:N \l__enumext_base_line_fix_bool }
844
           \mode_leave_vertical:
           \vspace { -\baselineskip }
           \keys_set:nn { enumext / enumext* }
               topsep = Opt, above = Opt, above* = Opt,
851
852
       \bool_set_false:N \l__enumext_base_line_fix_bool
853
854
```

This key is enabled by default in the command \printkeyans (§12.46).

(End of definition for base-fix and \\_\_enumext\_nested\_base\_line\_fix:.)

## 12.17 Setting keys for horizontal spaces

itemindent Define and set itemindent, rightmargin, listparindent, list-offset and list-indent keys for enumext, enumext\*, keyans and keyans\* environments.

listparindent list-offset 855 \cs\_set\_protected:Npn \\_\_enumext\_tmp:nn #1 #2

list-indent 857 \keys\_define:nn { enumext / #1 }

```
rightmargin
                       .value_required:n = true,
          listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
          listparindent .value_required:n = true,
          list-offset .dim_set:c = { l__enumext_listoffset_#2_dim },
                        .value_required:n = true,
          list-offset
          list-indent
                        .code:n
                          \bool_set_true:c { l__enumext_leftmargin_tmp_#2_bool }
                          \dim_set:cn { l__enumext_leftmargin_tmp_#2_dim } {##1},
          list-indent
                        .value_required:n = true,
        }
872
873 \clist_map_inline:nn
874
   {
      {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {keyans}{v}
875
876
    { \__enumext_tmp:nn #1 }
877
```

(End of definition for itemindent and others.)

For enumext\* and keyans\* environments the situation is a bit different, the list-indent key behaves like the list-offset key.

```
878 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
879
      \keys_define:nn { enumext / #1 }
        {
          itemindent
                      .dim_set:c = { l__enumext_fake_item_indent_#2_dim },
          itemindent .value_required:n = true,
          rightmargin .dim_set:c = { l__enumext_rightmargin_#2_dim },
          rightmargin .value_required:n = true,
          listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
887
          listparindent .value_required:n = true,
          list-offset .dim_set:c = { l__enumext_listoffset_#2_dim },
888
          list-offset .value_required:n = true,
889
          list-indent
                        .meta:n
                                 = { list-offset = ##1 },
          list-indent .value_required:n = true,
892
893
894 \clist_map_inline:nn
    {
      {enumext*}{vii}, {keyans*}{viii}
    }
    { \__enumext_tmp:nn #1 }
```

## 12.17.1 Functions for setting the fake itemindent

{

The itemindent key does not set the value of \itemindent, it only sets the value of the *horizontal space* applied using \skip\_horizontal:N. We will store this value in the variable and only apply it when it is greater than <code>Opt</code>. Here I will need to place \mode\_leave\_vertical: and the plain TeX macro \ignorespaces to avoid unwanted extra space when using the itemindent key.

```
899 \cs_set_protected:Nn \__enumext_fake_item:
       \dim compare:nNnT
         { \dim_use:c { l__enumext_fake_item_indent_ \__enumext_level: _dim } }
         { \c_zero_dim }

        }
     }
```

(End of definition for  $\_\_enumext\_fake\_item$ : and others.)

## 12.18 Setting show-length key

how-lengtl

Define and set show-length key for enumext, enumext\*, keyans and keyans\* environments. The function sets the boolean variable \l\_\_enumext\_show\_length\_X\_bool used in the definition of all environments to "true" and calls the function \\_\_enumext\_show\_length:nnn which prints all the values of the "vertical" and "horizontal" parameters calculated and used.

(End of definition for show-length.)

## 12.19 Setting before, after and first keys

before Define and set before, before\*, after and first keys for enumext, enumext\*, keyans and keyans\* before\* environments.

(End of definition for before and others.)

#### 12.19.1 Functions for before, after and first keys in enumext

```
\__enumext_before_args_exec:
\__enumext_before_keys_exec:
\__enumext_after_stop_list:
\__enumext_after_args_exec:
```

The function \\_\_enumext\_before\_args\_exec: executes the  $\{\langle code \rangle\}$  set by the before\* key "before" the enumext environment is started. The  $\{\langle code \rangle\}$  is executed "without" knowing any definition of the  $\{\langle arg\ two \rangle\}$  of the list:  $\{\langle code \rangle\}$ \list $\{\langle arg\ one \rangle\}$  $\{\langle arg\ two \rangle\}$ .

```
975 \cs_new_protected:Nn \__enumext_before_args_exec:
976 {
977     \tl_use:c { l__enumext_before_starred_key_ \__enumext_level: _tl }
978 }
```

The function \\_\_enumext\_before\_keys\_exec: executes the  $\{\langle code \rangle\}$  set by the before key "before" the enumext environment is started in second argument of the list. The  $\{\langle code \rangle\}$  is executed "knowing" all definition and values provides by  $\langle keys \rangle$ : \list $\{\langle arg\ one \rangle\}$   $\{\langle arg\ two \rangle\}$ 

The function \\_\_enumext\_after\_stop\_list: executes the  $\{\langle code \rangle\}$  set by the after key "after" the enumext environment has finished: \endlist $\{\langle code \rangle\}$ .

```
983 \cs_new_protected:Nn \__enumext_after_stop_list:
984 {
985     \tl_use:c { l__enumext_after_stop_list_ \__enumext_level: _tl }
986 }
```

The function \\_\_enumext\_after\_args\_exec: executes the  $\{\langle code \rangle\}$  set by the first key after the end of the second argument of the list defining the enumext environment, just before the first occurrence of \item: \list{\langle arg one}\}{\langle arg two\}}{\langle code}\\\item.

```
987 \cs_new_protected:Nn \__enumext_after_args_exec:
988 {
989    \tl_use:c { l__enumext_after_list_args_ \__enumext_level: _tl }
990 }
```

(End of definition for  $\ensuremath{\verb|}\_$  enumext\_before\_args\_exec: and others.)

### 12.19.2 Functions for before, after and first keys in keyans

\\_\_enumext\_before\_args\_exec\_v:
\\_\_enumext\_before\_keys\_exec\_v:
\\_\_enumext\_after\_stop\_list\_v:
\\_\_enumext\_after\_args\_exec\_v:

Same implementation as the one used in the enumext environment.

(End of definition for  $\ \_$  enumext\_before\_args\_exec\_v: and others.)

### 12.19.3 Functions for before, after and first keys in enumext\* and keyans\*

\\_\_enumext\_before\_args\_exec\_vii:
\\_\_enumext\_before\_keys\_exec\_vii:
\\_\_enumext\_after\_stop\_list\_vii:
\\_\_enumext\_after\_args\_exec\_vii:

```
\tl_use:N \l__enumext_before_no_starred_key_viii_tl
    }
\cs_new_protected:Nn \__enumext_after_stop_list_vii:

1025
    }
1026
  \cs_new_protected:Nn \__enumext_after_stop_list_viii:
       \tl_use:N \l__enumext_after_stop_list_viii_tl
\cs_new_protected:Nn \__enumext_after_args_exec_vii:
       \tl_use:N \l__enumext_after_list_args_vii_tl
1035 \cs_new_protected:Nn \__enumext_after_args_exec_viii:
1036
       \tl_use:N \l__enumext_after_list_args_viii_tl
1037
1038
```

(End of definition for  $\ensuremath{\backslash}$ \_enumext\_before\_args\_exec\_vii: and others.)

# 12.20 Setting keys for multicols and minipage

mini-env mini-sep columns-sep columns The default value of the columns-sep key is handled by the state of the boolean variable \l\_\_enumext\_-columns\_sep\_X\_bool which is handled in the internal definition of the enumext and keyans environments. Define and set mini-env, mini-sep, columns-sep and columns keys for enumext, enumext\*, keyans and keyans\* environments.

```
1039 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1040
       \keys_define:nn { enumext / #1 }
1041
         {
1042
           mini-env
                      .dim_set:c = { l__enumext_minipage_right_#2_dim },
1043
           mini-env
                      .value_required:n = true,
          mini-sep
                     .dim_set:c = { l__enumext_minipage_hsep_#2_dim },
          mini-sep
                     .initial:n = 0.3333em,
          mini-sep
                      .value_required:n = true,
           columns-sep .dim_set:c = { l__enumext_columns_sep_#2_dim },
1048
           columns-sep .value_required:n = true,
1049
           columns
                      .int_set:c = { l__enumext_columns_#2_int },
           columns
                       .initial:n = 1,
1051
           columns
                       .value_required:n = true,
1052
1053
1054
\clist_map_inline:Nn \c_enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

For enumext\* and keyans\* environments the situation is a bit different, the command \miniright is not available, so we will add the keys mini-right and mini-right\* to implement support for minipage environment.

```
1056 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1057
       \keys_define:nn { enumext / #1 }
1058

           mini-right* .code:n
                                       \bool_gset_true:c { g__enumext_minipage_center_#2_bool }
                                       \keys_set:nn { enumext / #1 } { mini-right = {##1} }
                                    1.
           mini-right* .value_required:n = true,
1066
1067
1068
1069 \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }
```

(End of definition for mini-env and others.)

### 12.21 Adjustment of vertical spaces for multicols

When nesting a "list environment" inside the multicols environment, the values of the "vertical spaces" are lost, basically the multicols environment takes control over them. Graphically it can be seen like in the figure 7.

To keep the desired spaces *above* and *below* in the "list environment" (\topsep + [\partopsep]) it is necessary to "adjust" the spaces added by the multicols environment. The most appropriate option in this case is to use a "context sensitive" vertical space with \addvspace.

Figure 7: Representation of the vertical space in multicols for a nested level.

I should make it clear that the implementation here is a "bit questionable". At first glance doing \multicolsep=\topsep seemed right, but the results were not always as expected. An almost imperceptible detail is that in some cases the \itemsep values of are "stretched", possibly due to the use of \raggedcolumns and this affects the lower space when closing the environment, which is "smaller" than expected. My attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

## 12.21.1 Adjustment of vertical spaces for multicols in enumext

\\_\_enumext\_multi\_set\_vskip:

The function \\_\_enumext\_multi\_set\_vskip: will take care of determining the "adjusted spaces" that we will apply "above" and "below" the multicols environment in enumext.

We will set the default values taking into account that  $T_{E}X$  is in  $\langle horizontal\ mode \rangle$ , then we will make the settings for the  $\langle vertical\ mode \rangle$  in which  $\langle partopsep \rangle$  comes into play.

Set the values of \l\_\_enumext\_multicols\_above\_X\_skip and \l\_\_enumext\_multicols\_below\_X\_skip equal to the value of \topsep in the *current level*.

```
1070 \cs_new_protected:Npn \__enumext_unskip_unkern:
    {
      \int_case:nnT { \lastnodetype }

# 12.22 Adjustment of vertical spaces for minipage

When nesting a "list environment" within the minipage environment, the values of the "vertical spaces" are lost. Graphically it can be seen like in the figure 8.

Figure 8: Representation of the minipage spacing adjustment for a nested level.

Since we want to keep the "left" and "right" environments "aligned on top", preserving the \baselineskip and keep the desired "spaces" (\topsep + [\partopsep]) it is necessary to "adjust" the "vertical spaces" for minipage environments.

Here there are several complications that we must circumvent, the minipage environment eliminates the "top" spaces, the multicols environment can be nested in the minipage environment, the "top" and "bottom" spaces are affected when topsep=0pt and to this is added the \partopsep parameter that comes into action according to whether TEX is in \( \lambda \text{horizontal mode} \rangle \text{ overtical mode} \rangle.\) Depending on these cases, small adjustments must be made using \vspace and \addvspace to obtain the "desired vertical spacing".

Again I must make clear that the implementation here is a "bit questionable", but hunting the spaces (glue) produced by the minipage environment is quite complicated, even more if multicols it is nested. The setting of the values was more "trial and error" (aprox to \strutbox), using the help of the lua-visual-debug[14] package, again my attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

### 12.22.1 Adjustment of vertical spaces for minipage in enumext

\\_\_enumext\_minipage\_set\_skip:
\\_\_enumext\_minipage\_add\_space:

The function \\_\_enumext\_minipage\_set\_skip: will take care of determining the "adjust" spaces that we will apply "above" and "below" the \_\_enumext\_mini\_env\* environment in enumext.

First we will set the value of \l\_\_enumext\_minipage\_right\_skip equal to \topsep, then we will see if TEX is in \( \text{vertical mode} \) and we will add \( \text{partopsep}, followed by that we set the value of \l\_\_enumext\_minipage\_after\_skip.

```
\cs_new_protected:Nn \__enumext_minipage_set_skip:
       \skip_set:Nn \l__enumext_minipage_right_skip
           \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
         }
       \mode_if_vertical:T
1178
         {
           \skip_add:Nn \l__enumext_minipage_right_skip
             {
1180

```

# 12.22.4 The command \miniright

The command \miniright will close the \_\_enumext\_mini\_env\* environment on the "left side", open the \_\_enumext\_mini\_env\* environment on the "right side" adding the adjusted vertical space. By default we will add \centering when starting the "right side" environment. The starred argument '\*' inhibits the use of \centering command i.e. the usual ETEX justification is maintained in the \_\_enumext\_mini\_env\* on the "right side".

\miniright

First we will perform some checks to prevent the command from being executed outside the enumext environment or somewhere inappropriate then we will call the internal functions to execute it in the enumext and keyans environments.

```

\\_\_enumext\_mini\_right\_cmd:n

The function \\_\_enumext\_mini\_right\_cmd:n takes as argument the *starred* '\*' of the \miniright command in the enumext environment. We check if the mini-env key is active via the variable \l\_\_enumext\_-minipage\_right\_X\_dim, if so we close the multicols environment with the \_\_enumext\_mini\_env\* environment on the "left side", then we open the \_\_enumext\_mini\_env\* environment on the "right side", apply our adjusted "vertical spaces", followed by adding the \centering command when the starred argument '\*' is not present and set zero \g\_\_enumext\_minipage\_stat\_int, otherwise we return an error.

```

### 12.23 Setting above and below keys

While having controlled the *vertical spaces* within the enumext and keyans environments when using the columns or mini-env keys, sometimes the "*vertical spaces above*" or "*vertical spaces below*" the environments are not as expected and it is necessary to be able to apply a "*fine correction*" to these. As I have not been able to correct these *glitches*, the best option is to leave a couple of  $\langle keys \rangle$  dedicated to this purpose, in this case it is best to use \vspace or \vspace\* when convenient.

(End of definition for above and others.)

## 12.24 Setting series, resume and resume\* keys

The series key is responsible for the whole process of the resume and resume\* keys. The idea behind this is to be able to absorb the  $\langle keys \rangle$  passed to the optional argument of the "first level" of the environments enumext and enumext\*, but, discarding some specific  $\langle keys \rangle$ . This implementation is adapted directly from the code provided by Jonathan P. Spratte (@Skillmon) in chat-TeX-SX

series We define the keys series, resume and resume\* only for the "first level" of enumext and enumext\*.

```
resume
         1583 \cs_set_protected:Npn \__enumext_tmp:n #1
resume*
         1584
              {
                 \keys_define:nn { enumext / #1 }
         1585
                   {
         1586
                     series .str_set:N = \l__enumext_series_str,
                     series .value required:n = true,
                    resume .code:n = \__enumext_resume_series:n {##1},
         1589
                    resume* .code:n = \__enumext_resume_starred:,
                     resume* .value_forbidden:n = true,
         1591
         1592
         1593
         \clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }
```

(End of definition for series, resume, and resume\*.)

#### 12.24.1 Internal functions for series key

\\_\_enumext\_filter\_series:n
 \\_\_enumext\_filter\_series\_key:n
 \\_\_enumext\_filter\_series\_pair:nn

The function \\_\_enumext\_filter\_series:n will be in charge of filtering the  $\langle keys \rangle$  we want to store where  $\{\#1\}$  represents the optional value passed to the environment.

The function \\_\_enumext\_filter\_series\_key:n will be responsible for filtering the  $\langle keys \rangle$  that are passed "without value" by excluding the resume, resume\* and base-fix keys.

The function  $\_$ \_enumext\_filter\_series\_pair:nn will be responsible for filtering the  $\langle keys \rangle$  that are passed "with value" by excluding the series, resume, start, start\*, save-ans and save-key keys.

 $(End\ of\ definition\ for\ \_enumext\_filter\_series:n\ ,\ \_enumext\_filter\_series\_key:n\ ,\ and\ \setminus\_enumext\_filter\_series\_pair:nn.)$ 

\\_\_enumext\_parse\_series:n
\\_\_enumext\_resume\_last:n

The function \\_\_enumext\_parse\_series:n will be responsible for storing the filtered  $\langle keys \rangle$  in the global variable \g\_\_enumext\_series\_ $\langle series\ name \rangle$ \_tl along with the creation of the integer variable \g\_\_enumext\_series\_ $\langle series\ name \rangle$ \_int when the key is passed as an argument; otherwise, it will check the state of the boolean variable \l\_enumext\_resume\_active\_bool set by the keys resume and resume\* and will call the function \\_enumext\_resume\_last:n.

The value of boolean variable \l\_\_enumext\_resume\_active\_bool is set to true by the function \\_\_enumext\_resume\_counter:n which is used by the keys resume and resume\*, in this case we must Make sure it is set to false so that it does not overwrite the default filtered \( \lambda eys \rangle \). This function is passed to the function \\_\_enumext\_parse\_keys:n in the enumext environment definition (\( \subseteq 12.38 \)) and to the function \\_\_enumext\_parse\_keys\_vii:n in the enumext\* environment definition (\( \subseteq 12.43 \)).

```
\cs_new_protected:Npn \__enumext_parse_series:n #1
1622
       \str_if_empty:NTF \l__enumext_series_str
1622
1624
           \bool_if:NF \l__enumext_resume_active_bool
1625
1626
                \__enumext_resume_last:n {#1}
         }
           \tl_gclear_new:c { g__enumext_series_ \l__enumext_series_str _tl }
           \tl_gset:ce { g__enumext_series_ \l__enumext_series_str _tl }
             { \__enumext_filter_series:n {#1} }
1633
           \int_if_exist:cF { g__enumext_series_ \l__enumext_series_str _int }
1635
               \int_new:c { g__enumext_series_ \l__enumext_series_str _int }
1637
         }
```

The function \\_\_enumext\_resume\_last:n will be in charge of saving the filtering  $\langle keys \rangle$  when the series key is *not used* and will save them in the variable \g\_\_enumext\_standar\_series\_tl for the enumext environment and in the variable \g\_\_enumext\_starred\_series\_tl for the enumext\* environment. Here we must use \bool\_lazy\_all:nT to make sure that the default values are not overwritten when the environment is nested and the series key is not being used.

```
1640 \cs_new_protected:Npn \__enumext_resume_last:n #1
     {
1641
       \bool_if:NT \l__enumext_standar_first_bool
1642
1643
           \tl_gclear:N \g__enumext_standar_series_tl
           \tl_gset:Ne \g__enumext_standar_series_tl { \__enumext_filter_series:n {#1} }
         }
       \bool_if:NT \l__enumext_starred_first_bool
         {
1648
           \tl_gclear:N \g__enumext_starred_series_tl
           \tl_gset:Ne \g__enumext_starred_series_tl { \__enumext_filter_series:n {#1} }
1650
1651
1652
```

(End of definition for  $\ensuremath{\backslash}$ \_enumext\_parse\_series:n and  $\ensuremath{\backslash}$ \_enumext\_resume\_last:n.)

## 12.24.2 Internal function to save counter value

\\_\_enumext\_resume\_save\_counter:

The \\_\_enumext\_resume\_save\_counter: function will save the last counter value to \g\_\_enumext\_series\_ $\langle series\ name \rangle$ \_int if the series= $\{\langle series\ name \rangle\}$  key has been passed, to \g\_\_enumext\_resume\_int if it has passed the key resume without value and the key series is not active, in \g\_\_enumext\_series\_ $\langle series\ name \rangle$ \_int if the key resume= $\{\langle series\ name \rangle\}$  has been passed and in \g\_\_enumext\_series\_ $\langle store\ name \rangle$ \_int if the key has been passed save-ans= $\{\langle store\ name \rangle\}$ .

The variables \l\_\_enumext\_series\_str and \l\_\_enumext\_\_resume\_name\_tl contain the same {\series name\} but are executed at different moments, the integer variable with \l\_\_enumext\_series\_str sets the value when execute series={\series name\} and the integer variable with \l\_\_enumext\_\_resume\_name\_tl sets the subsequent values when use resume={\series name\}. This function is passed to the enumext environment definition (\§12.38) and the enumext\* environment definition (\§12.43).

```

#### 12.24.3 Internal functions for resume key

\\_\_enumext\_resume\_series:n

The function \\_\_enumext\_resume\_series:n will handle the argument passed to the resume key in enumext and enumext\* environments. If the key is passed without value the function \\_\_enumext\_resume\_counter: is executed which will set the counter according to the numbering of the last enumext or enumext\* environments in which  $series=\{\langle series\ name\rangle\}$  key is not present, if the save-ans key is active it will set the counter according to the value of the integer variable created by that key, otherwise it will verify that the \g\_\_enumext\_series\_ $\langle series\ name\rangle$ \_tl variable set by the series key exists, if so it will pass these keys to the first level of the environment, otherwise it will return an error.

(End of definition for  $\ \_$ enumext\_storing\_set:n and  $\ \_$ enumext\_storing\_exec:.)

### 12.25.3 The check answer mechanism

The mechanism for checking that all questions are answered follows this logic:

If the line begins with \item or \item\* and does NOT open a nested environment, each \item or \item\* must contain a single execution of the \anskey command, i.e. the counter of the executions of the \anskey command must be equal to the counter associated with the sum of executions of \item and \item\*.

If the line begins with \item or \item\* and opens a nested environment each \item or \item\* in the nested environment must have a *single* execution of the \anskey command and the counter associated to the sum of \item\* and \item\* executions must decrementing by "one" to maintain equality.

In order for the mechanism for the check-answer to work (not counting keyans, keyans\* and keyanspic) we need:

- 1. We must keep track of the total number of \item and \item\* (enumerated) that appear within the environment including the nested levels.
- 2. We must keep track of the total number of  $\idesign$ item and  $\idesign$ item\* (enumerated) that appear per level of nesting.
- 3. Keeping track of the number of times the environment nests.

The integer variable associated to the sum of each \item and \item\* in the environment \g\_\_enumext\_-item\_number\_int must match the integer variable \g\_\_enumext\_item\_anskey\_int associated to the execution of the command \anskey. We analyze the cases:

- a) If the list only has one level the number of \item + \item\* = \anskey
- b) If the list has *nested levels*, for each level of nesting we need to decrementing by one (for the \item or \item\* that opens the nest) so that the account remains the same.

With keyans, keyans\* and keyanspic it is enough to increase in one the integer of \anskey. The integers created must be global if they are not lost in the interior levels of nesting and to execute the test we will use a "hook" function after closing the first level of the environment.

# 12.25.4 Setting check-ans and no-store keys

check-ans no-store

Now we define the keys check-ans and no-store for all levels of enumext and enumext\* environments.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
     {
1888
       \keys_define:nn { enumext / #1 }
1889
         {
1890
           check-ans .bool_set:N = \l__enumext_check_ans_key_bool,
           check-ans .initial:n = false,
           check-ans .value_required:n = true,
           no-store .code:n = {
                                  \bool_set_false:N \l__enumext_check_answers_bool
                                  \bool_set_false:N \l__enumext_check_ans_key_bool
1896
                                1.
1897
           no-store .value_forbidden:n = true,
1898
         }
1899
     }
   \clist_map_inline:nn
     {
       level-1, level-2, level-3, level-4, enumext*
     }
     { \__enumext_tmp:n {#1} }
```

(End of definition for check-ans and no-store.)

#### 12.25.5 Set-up check answer mechanism

\\_\_enumext\_check\_ans\_active:
\\_\_enumext\_check\_ans\_level:

The function \\_\_enumext\_check\_ans\_active: will first check the state of the variable \l\_\_enumext\_store\_name\_tl, that is, the save-ans key is active, if so it will check the state of the variable \l\_\_enumext\_check\_answers\_bool handled by the key no-store and will execute the function \\_\_enumext\_check\_ans\_level: only if "true", i.e. the key no-store is not active.

```
1906 \cs_new_protected:Nn \__enumext_check_ans_active:
1907 {
©2024 by Pablo González L
```

The function \\_\_enumext\_check\_ans\_level: will decrement by "one" the value of the variable \g\_\_-enumext\_item\_number\_int which keeps track of the executions of \item and \item\* for each level of nesting of the environment enumext, taking into account whether it is nested within enumext\* or the opposite and set \l\_\_enumext\_item\_number\_bool to "false".

```
1916 \cs_new_protected:Nn \__enumext_check_ans_level:
    {
1917
       \int_case:nn { \l__enumext_level_int }
1918
1919
           { 1 }{
                  \bool_lazy_all:nT
                    {
                      { \bool_if_p:N \g__enumext_starred_bool }
                       { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
                       \int_gdecr:N \g__enumext_item_number_int
                       \bool_set_false:N \l__enumext_item_number_bool
                }
           { 2 }{
                  \int_gdecr:N \g__enumext_item_number_int
                  \bool_set_false:N \l__enumext_item_number_bool
           { 3 }{
                  \int_gdecr:N \g__enumext_item_number_int
                  \bool_set_false:N \l__enumext_item_number_bool
1937
           { 4 }{
                  \int_gdecr:N \g__enumext_item_number_int
                  \bool_set_false:N \l__enumext_item_number_bool
```

We should only execute this if enumext\* is nested in the first level of enumext, for the rest of the cases the value of \g\_enumext\_item\_number\_int is already decreased.

```
\int_case:nn { \l__enumext_level_h_int }
1944
         {
1945
            { 1 }{
1946
                   \bool_lazy_all:nT
                     {
                        { \bool_if_p:N \g__enumext_standar_bool }
                         \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
                     }
                     {
1952
                        \int_gdecr:N \g__enumext_item_number_int
1953
                        \bool_set_false:N \l__enumext_item_number_bool
1954
1955
                 }
         }
     }
```

(End of definition for mark-pos, show-ans, and show-pos.)

### 12.26.1 Store optional arguments of the environments

The idea behind "storing" in the \( \sequence \) is to have a copy of the structure of the environment in which the key save-ans is being executed so we must capture the optional arguments passed to the levels of the environment in which it is executed and "storing" them.

\\_\_enumext\_store\_active\_keys:n
\_\_enumext\_store\_active\_keys\_vii:n

The functions \\_\_enumext\_store\_active\_keys:n and \\_\_enumext\_store\_active\_keys\_vii:n will be responsible for "storing" the  $\langle keys \rangle$  filtered from the optional arguments of the environment in which the key save-ans is executed and the levels within this for the enumext and enumext\* environments. We will execute this function only if the variable \l\_\_enumext\_store\_save\_key\_X\_bool is false, that is, the key store-key is not active, establishing the variable \l\_\_enumext\_store\_save\_key\_X\_tl with the filtered  $\langle kevs \rangle$ .

```
2106 \cs_new_protected:Npn \__enumext_store_active_keys:n #1
2107
       \bool_if:cF { l__enumext_store_save_key_ \__enumext_level: _bool }
2108
           \tl_clear:c { l__enumext_save_key_ \__enumext_level: _tl }
           \tl set:ce
             { l__enumext_store_save_key_ \__enumext_level: _tl }
              { \__enumext_filter_save_key:n {#1} }
2113
2115
2116 \cs_new_protected:Npn \__enumext_store_active_keys_vii:n #1
       \bool_if:NF \l__enumext_store_save_key_vii_bool
2118
            \tl_clear:N \l__enumext_store_save_key_vii_tl
            \tl_set:Ne \l__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
©2024 by Pablo González L
                                                                                                  68 / 144
```

 $(End\ of\ definition\ for\ \_enumext\_store\_active\_keys:n\ and\ \_\_enumext\_store\_active\_keys\_vii:n.)$ 

#### 12.26.2 Setting save-key key

Since this list structure will be stored in the  $\langle sequence \rangle$  established by the save-ans key when executing \anskey, we will not be able to modify it. The best thing here is to have a key that allows you to modify the optional argument of the list stored in the  $\langle sequence \rangle$ .

save-key

The values set by this key passed in the optional arguments of the enumext and enumext\* environments will override the values of the \l\_enumext\_store\_save\_key\_X\_tl variable set by the functions \\_enumext\_store\_active\_keys:n and \\_enumext\_store\_active\_keys\_vii:n.

Define the key save-key for all levels of enumext and enumext\* environments.

```
\cs_set_protected:Npn \__enumext_tmp:n #1
     {
2125
       \keys_define:nn { enumext / enumext* }
2126
         {
           save-key .code:n = \__enumext_parse_save_key_vii:n {##1},
2128
           save-key .value_required:n = true,
       \keys_define:nn { enumext / #1 }
         {
           save-key .code:n = \__enumext_parse_save_key:n {##1},
           save-key .value_required:n = true,
2134
2136
2137 \clist_map_inline:nn { level-1, level-2, level-3, level-4 } { \__enumext_tmp:n {#1} }
```

(End of definition for save-key.)

\\_\_enumext\_parse\_save\_key:n
\\_enumext\_parse\_save\_key\_vii:n

The functions \\_\_enumext\_parse\_save\_key:n and \\_\_enumext\_parse\_save\_key\_vii:n will be responsible for storing the filtered  $\langle keys \rangle$  in the variable \l\_\_enumext\_store\_save\_key\_X\_tl for enumext and enumext\*.

 $(\textit{End of definition for } \c enumert\_parse\_save\_key:n \ \textit{and } \c enumert\_parse\_save\_key\_vii:n.)$ 

# 12.26.3 Internal functions to store optional arguments

\\_\_enumext\_filter\_save\_key:n
\\_\_enumext\_filter\_save\_key\_pair:nn

The function  $\_$ \_enumext\_filter\_save\_key:n will be in charge of filtering the  $\langle keys \rangle$  we want to *store* in  $\langle sequence \rangle$  where  $\{\#1\}$  represents the optional value passed to the environment.

The function  $\_$ enumext\_filter\_save\_key\_key:n will be responsible for filtering the  $\langle keys \rangle$  that are passed "without value" by excluding the resume, resume\*, no-store and base-fix keys.

The function  $\_$ enumext\_filter\_save\_key\_pair:nn will be responsible for filtering the  $\langle keys \rangle$  that are passed "with value" by excluding the series, resume, save-ans, save-ref, check-ans, show-ans, save-pos, wrap-ans, mark-ans, wrap-opt, save-sep, mark-ref, mini-env, mini-sep, mini-right and mini-right\* keys.

(End of definition for \\_enumext\_filter\_save\_key:n, \\_enumext\_filter\_save\_key\_key:n, and \\_enumext\_filter\_save\_key\_pair:nn.)

#### 12.26.4 Function for storing content in prop list

\\_\_enumext\_store\_addto\_prop:\
\\_\_enumext\_store\_addto\_prop:\/

The function  $\ensuremath{\mbox{\tt \_enumext\_store\_addto\_prop:n}}$  stores the content in  $\ensuremath{\mbox{\tt \mbox{\tt /}prop\ list}}$  defined by save-ans key. The "stored content" is retrieved by means of the  $\ensuremath{\mbox{\tt \mbox{\tt /}getkeyans}}$  command.

The form in which the content is "stored" in the  $\langle prop \ list \rangle$  is  $\{\langle position \rangle\} \{\langle content \rangle\}$ . This function is used by \anskey in enumext and enumext\* environments, \item\* in keyans and keyans\* environments and \anspic\* in keyanspic environment.

(End of definition for  $\_$ enumext\_store\_addto\_prop:n.)

## 12.26.5 Function for storing content in sequence

\\_\_enumext\_store\_addto\_seq:n
\\_\_enumext\_store\_addto\_seq:v
\\_\_enumext\_store\_addto\_seq:V

The function  $\ensuremath{\setminus}$  enumext\_store\_addto\_seq:n stores the content in  $\langle sequence \rangle$  defined by save-ans key. This function is used by  $\ensuremath{\setminus}$  anskey in enumext,  $\ensuremath{\setminus}$  item\* in keyans and  $\ensuremath{\setminus}$  anspic in keyanspic.

The form in which the content is stored in  $\langle sequence \rangle$  is in a internal enumext or enumext\* environments with the *same structure* in which the command was executed.

The "stored content" is retrieved by means of the \printkeyans command.

```
2190 \cs_new_protected:Npn \__enumext_store_addto_seq:n #1
2191 {
2192    \seq_gput_right:cn { g__enumext_ \l__enumext_store_name_tl _seq } { #1 }
2193    }
2194 \cs_generate_variant:Nn \__enumext_store_addto_seq:n { v, V, e }
```

 $(End\ of\ definition\ for\ \verb|\__enumext\_store\_addto\_seq:n.)$ 

#### 12.26.6 Functions for storing the list structure in the sequence

\\_\_enumext\_store\_level\_open:
\ enumext store level close;

The memorization structure of the list is handled by the functions \\_\_enumext\_store\_level\_open: and \\_\_enumext\_store\_level\_close: which are executed per level within the enumext environment.

```
\item \begin{enumext} [
                \tl_put_right:cn { l__enumext_store_save_key_ \__enumext_level: _tl }
                  }
                \__enumext_store_addto_seq:v { l__enumext_store_save_key_ \__enumext_level: _tl }
         }
   \cs_new_protected:Nn \__enumext_store_level_close:
        \bool_if:NT \l__enumext_check_answers_bool
          {
              _enumext_store_addto_seq:n { \end{enumext} }
(End of definition for \__enumext_store_level_open: and \__enumext_store_level_close:.)
The memorization structure of the list is handled by the functions \__enumext_store_level_open_vii:
and \__enumext_store_level_close_vii: which are executed in the enumext* environment.
   \cs_new_protected:Nn \__enumext_store_level_open_vii:

           { \bool_if_p:N \g__enumext_standar_bool }
           { \bool_if_p:N \l__enumext_starred_bool }
           { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
         }
         {
           \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
               \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
               \tl_use:N \l__enumext_label_copy_vii_tl
         }
Now we set the variable \l__enumext_newlabel_arg_one_tl which will contain {\store name: position\}.
       \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
           \l__enumext_store_name_tl \c_colon_str
           \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
Now execute the function \__enumext_newlabel:nn and save the result in the variable \l__enumext_-
```

write\_aux\_file\_tl and finally we write in the .aux file.

```
\tl_put_right:Ne \l__enumext_write_aux_file_tl
    \__enumext_newlabel:nn
      { \exp_not:V \l__enumext_newlabel_arg_one_tl }
      { \l__enumext_newlabel_arg_two_tl }
\l__enumext_write_aux_file_tl
```

(End of definition for \\_\_enumext\_store\_internal\_ref:.)

# Common functions for \anskey and anskey\* environment

\\_\_enumext\_store\_anskey\_code:n

The internal function \\_\_enumext\_store\_anskey\_code:n first we pass the \( argument \) to the \( prop \list \), then checks the state of the variable \l\_\_enumext\_store\_ref\_key\_bool handled by the save-ref key and will call the function \\_\_enumext\_store\_internal\_ref: for the internal "label and ref" system. Followed by this if the show-ans or show-pos keys are active we will show the "wrapped"  $\langle argument \rangle$ .

```
2346 \cs_new_protected:Npn \__enumext_store_anskey_code:n #1
2347
       \int_gincr:N \g__enumext_item_anskey_int
         _enumext_store_addto_prop:n {#1}
       \bool_if:NT \l__enumext_store_ref_key_bool
             _enumext_store_internal_ref:
         }
       \__enumext_anskey_show_wrap_left:n { #1 }
```

Now we start processing the  $[\langle key = val \rangle]$  passed to the command to build our \item in the variable  $\label{localization} $$ \lim_{n\to\infty} store_anskey_arg_tl which we will "store" in the $$ \langle sequence \rangle. $$ First we clear the variable $$ (a) $$ is the $$ (a) $$ of the sequence $$ (b) $$ is the $$ (a) $$ of the sequence $$ (b) $$ of the sequence $$ (b) $$ of the sequence $$ (c) $$$ \l\_enumext\_store\_anskey\_arg\_tl and process the  $\langle keys \rangle$ , if the break-col key is present and the command is running under enumext (not in enumext\*) we will add \columnbreak and then \item.

```
\tl_clear:N \l__enumext_store_anskey_arg_tl
       \bool_lazy_and:nnT
         { \bool_if_p:N \l__enumext_store_columns_break_bool }
           \bool_not_p:n { \l__enumext_starred_bool } }
2358
         {
           \tl_put_left:Nn \l__enumext_store_anskey_arg_tl { \columnbreak }
       \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { \item }
```

If the item-join key is present and the command is running under enumext\* we will add ( $\langle number \rangle$ ) to \l\_\_enumext\_store\_anskey\_arg\_tl.

```
\bool_lazy_and:nnT
2363
         { \bool_not_p:n { \l__enumext_starred_bool } }
2364
         { \int_compare_p:nNn { \l__enumext_store_item_join_int } > { 1 } }
           \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
               ( \exp_not:V \l__enumext_store_item_join_int )
          }
```

And now we will review the keys item-star, item-sym\* and item-pos\* and pass them to \l\_enumext\_-store\_anskey\_arg\_tl along with the  $\langle argument \rangle$  for \anskey or  $\langle body \rangle$  for anskey\*.

```
\bool_if:NTF \l__enumext_store_item_star_bool
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { * }
           \tl_if_empty:NF \l__enumext_store_item_symbol_tl
             {
               \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
                 {
2378
                   [ \exp_not:V \l__enumext_store_item_symbol_tl ]
2380
             }
2381
           \dim_compare:nT
               \l__enumext_store_item_symbol_sep_dim != \c_zero_dim
               \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
                   [ \exp_not:V \l__enumext_store_item_symbol_sep_dim ]
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
         }
         {
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
```

Finally we check if the save-ref key are active along with the hyperref package load, if both conditions are met, it will create the \hyperlink with symbol set by mark-ref key and then store in \( \sequence \).

(End of definition for  $\_$ enumext\_store\_anskey\_code:n.)

\\_\_enumext\_anskey\_show\_wrap\_arg:n

The function \\_\_enumext\_anskey\_show\_wrap\_arg:n "wraps" the  $\langle argument \rangle$  passed to \anskey and the  $\langle body \rangle$  for anskey\* when using the wrap-ans key.

```
2409 \cs_new_protected:Npn \__enumext_anskey_show_wrap_arg:n #1

 $(End\ of\ definition\ for\ \_enumext\_anskey\_show\_wrap\_left:n.)$ 

# 12.29 The command \anskey

Since we will be "storing content" in a list environment within  $\langle sequences \rangle$  and can (more or less) manage the options passed to each level, it is necessary that we have a little more control over \item when storing.

The \anskey command will cover this point and give it similar behaviour to that of \item in the enumext and enumext\* environments executed as follows \anskey[ $\langle key = val \rangle$ ] { $\langle content \rangle$ }.

\\_\_enumext\_anskey\_unknown:n
\\_\_enumext\_anskey\_unknown:nn

First we'll add the keys break-col, item-join, item-star, item-sym\* and item-pos\*.

```
2445 \keys_define:nn { enumext / anskey }
       break-col .bool_set:N = \l__enumext_store_columns_break_bool,
2447
       break-col .default:n = true,
2448
       break-col .value_forbidden:n = true,
       item-join .int_set:N = \l__enumext_store_item_join_int,
       item-join .value_required:n = true,
2451
       item-star .bool_set:N = \l__enumext_store_item_star_bool,
2452
       item-star .default:n = true,
2453
       item-star .value_forbidden:n = true,
       item-sym* .tl_set:N = \l__enumext_store_item_symbol_tl,
       item-sym* .value_required:n = true,
       item-pos* .dim_set:N = \l__enumext_store_item_symbol_sep_dim,
       item-pos* .value_required:n = true,
2458
       unknown
                 .code:n
                              = { \__enumext_anskey_unknown:n {#1} },
2459
2460
```

The  $\langle keys \rangle$  are stored in \l\_keys\_key\_str and the value (if any) is passed as an argument to the function \\_\_enumext\_anskey\_unknown:n.

```
2461 \cs_new_protected:Npn \__enumext_anskey_unknown:n #1
     {
       \exp_args:NV \__enumext_anskey_unknown:nn \l_keys_key_str {#1}
2463
     }
2464
2465 \cs_new_protected:Npn \__enumext_anskey_unknown:nn #1 #2
2466
       \tl_if_blank:nTF {#2}
2467
         {
            \msg_error:nnn { enumext } { anskey-cmd-key-unknown } {#1}
         }
         {
            \msg_error:nnnn { enumext } { anskey-cmd-key-value-unknown } {#1} {#2}
         }
     }
2474
```

 $(\textit{End of definition for } \verb|\|\_enumext\_anskey\_unknown:n | and \verb|\|\_enumext\_anskey\_unknown:nn.|)$ 

The \anskey command will only be present when using the save-ans key in enumext and enumext\* environments, otherwise it will return an error.

\anskey

We will first call the function \\_\_enumext\_anskey\_safe\_outer: to be sure where we execute the command, then we will check the state of the variable \l\_\_enumext\_check\_answers\_bool set by the key no-store, if is true we will increment \g\_\_enumext\_item\_anskey\_int for the internal "check answer" system and execute the function \\_\_enumext\_anskey\_safe\_inner: n to ensure that the command is not nested and

that the argument is not empty, finally search the  $\lceil \langle key = val \rangle \rceil$  and call the function \\_\_enumext\_store\_-anskey\_code:n.

```
2475 \NewDocumentCommand \anskey { o +m }
2476
       \__enumext_anskey_safe_outer:
       \group_begin:
2478
         \bool_if:NT \l__enumext_check_answers_bool
              \tl_if_novalue:nF {#1}
2481
                {
2482
                  \keys_set:nn { enumext / anskey } {#1}
2483
              \tl_if_blank:nTF {#2}
                {
                  \msg_error:nn { enumext } { anskey-empty-arg }
                {
                     _enumext_anskey_safe_inner:
                  \__enumext_store_anskey_code:n {#2}
           }
2493
       \group_end:
2494
2495
```

(End of definition for \anskey. This function is documented on page 12.)

#### 12.29.1 Internal functions for the command

\\_\_enumext\_anskey\_safe\_outer:
\ enumext anskey safe inner:

The \\_\_enumext\_store\_anskey\_safe\_outer: function will return the appropriate messages when the command is executed outside the environment in which the save-ans key was activated.

The \\_\_enumext\_anskey\_safe\_inner: function will first check if the command is nested, if preceded by a not numbered \item or if it is in *math mode* returning the appropriate messages.

```
2515 \cs_new_protected:Nn \__enumext_anskey_safe_inner:
       \int_incr:N \l__enumext_anskey_level_int
2517
       \int_compare:nNnT { \l__enumext_anskey_level_int } > { 1 }
2518
           \msg_error:nn { enumext } { anskey-nested }
         }
       \bool_if:NF \l__enumext_item_number_bool
           \msg_error:nn { enumext } { anskey-unnumber-item }
2524
         }
       \mode_if_math:T
2527
2528
           \msg_error:nne { enumext } { anskey-math-mode } { \c_backslash_str anskey }
         }
     }
```

 $(\mathit{End}\ of\ definition\ for\ \verb|\_-enumext_anskey_safe_outer:\ and\ \verb|\_-enumext_anskey_safe_inner:|)$ 

## 12.30 The environment anskey\*

Managing *verbatim content* in an environment is quite complicated, I learned that when creating the **scontents** package, so to be able to have support at this point it is best to play a little with the internal code of **scontents** and *hooks*. Some considerations I should have here before implementing this:

- If some package, class or user has defined the environment with the same name somewhere in the document it would be a problem, you would not know what argument has been passed to store-env, if you are using the key print-env or the write-out key, sure, I can detect and modify it within the enumext and enumext\* environments, but it would look strange not to have some keys available when running within these environments.
- A better (perhaps a bit paranoid) option is to define it within the environment in which the save-ans key is executed. and have it available only when that key is executed, here I would have absolute control of the \( \lambda keys \rangle \) and I make sure that write-out is not used, then using hooks after I undefine it and using hook before I check if it has been created by any package, class or user and I return a error, then the user will have to see how to solve the problem.

\\_\_enumext\_undefine\_anskey\_env:

The function \\_\_enumext\_undefine\_anskey\_env: will undefine the environment anskey\* and will be passed to the function \\_\_enumext\_execute\_after\_env: (§12.31) which is executed after the environment in which the key save-ans is active.

Detection of the anskey\* environment outside the enumext and enumext\* environments.

```
\__enumext_before_env:nn { enumext }
2538
       \bool_lazy_and:nnT
         { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
         { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
         {
           \cs_if_free:cF { __scontents_anskey*_env_begin: }
             {
2545
               \msg_error:nnn { enumext } { anskey-env-error } { anskey* }
2546
         }
     }
   \__enumext_before_env:nn { enumext* }
    {
       \bool_lazy_and:nnT
         { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
         { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
2554
         {
           \cs_if_free:cF { __scontents_anskey*_env_begin: }
             {
               \msg_error:nnn { enumext } { anskey-env-error } { anskey* }
     }
2561
```

Detection of the anskey\* environment inside the keyans, keyans\* and keyanspic environments, if preceded by a not numbered \item or if it is in *math mode* returning the appropriate messages.

(End of definition for \\_\_enumext\_undefine\_anskey\_env:.)

#### anskey\*

 The function \\_\_enumext\_anskey\_env\_make:n creates the environment anskey\* (custom version of scontents environment) by setting the initial keys store-env= $\{\langle store\ name \rangle\}$  and print-env=false. To maintain the scope of the environment and that it is only active when the key save-ans is active we will

pass this function to the function \\_\_enumext\_storing\_exec: (§12.25.1) and we will execute it only if the variable \l\_\_enumext\_anskey\_env\_bool is true, with this we prevent it from being executed again when the environment is nested and the key save-ans is active, which returns an error for part of the package scontents.

```
2585 \cs_new_protected:Npn \__enumext_anskey_env_make:n #1
2586 {
2587 \bool_if:NT \l__enumext_anskey_env_bool
2588 {
2589 \newenvsc{anskey*}[store-env=#1,print-env=false]
2590 \__enumext_anskey_env_exec:
2591 }
2592 }
2593 \cs_generate_variant:Nn \__enumext_anskey_env_make:n { V }
```

The function \\_\_enumext\_anskey\_env\_define\_keys: will add the keys break-col, item-join, item-join, item-sym\* and item-pos\* and will leave the keys print-env, store-env and write-out undefined. We will apply this function using the *hook* function \\_\_enumext\_before\_env:nn.

```
2594 \cs_new_protected:Nn \__enumext_anskey_env_define_keys:

    }
```

The function \\_\_enumext\_anskey\_env\_reset\_keys: will leave the keys break-col, item-join, item-join, item-star, item-sym\* and item-pos\* undefined. We will apply this function using the *hook* function \\_\_enumext\_after\_env:nn.

```
2630 \cs_new_protected:Nn \__enumext_anskey_env_reset_keys:
2631
       \keys_define:nn { scontents / scontents }
2632
2633
           break-col .undefine:,
2634
           item-join .undefine:,
           item-star .undefine:,
           item-sym* .undefine:,
2637
           item-pos* .undefine:,
2638
           write-out .code:n
2639
                                     \bool_set_false:N \l__scontents_storing_bool
                                     \bool_set_true:N \l__scontents_writing_bool
2641
                                     \tl_set:Nn \l__scontents_fname_out_tl {##1}
2643
           write-out .value_required:n = true,
           print-env .meta:nn = { scontents } { print-env = ##1 },
           print-env .default:n = true,
           store-env .meta:nn = { scontents } { store-env = ##1 },
           unknown .code:n
                               = { \__scontents_parse_environment_keys:n {##1} },
2649
     }
2650
```

The function \\_\_enumext\_rescan\_anskey\_env:n will be responsible for bringing the  $\langle body \rangle$  of the environment saved in the sequence \g\_\_scontents\_name\_ $\langle store\ name \rangle$ \_seq to pass it to our sequence and prop list

```
2651 \cs_new_protected:Npn \__enumext_rescan_anskey_env:n #1
2652 {
2653    \group_begin:
2654    \int_set:Nn \tex_newlinechar:D { `\^^J }

```

(End of definition for \ enumext keyans addto prop:n.)

#### 12.32.2 The save-ref key for keyans, keyans\* and keyanspic

The "internal label and ref" system for the keyans, keyans\* and keyanspic environments has slight differences with the one implemented for the \anskey command, basically because in this environments we are interested in the current  $\langle label \rangle$ . The mechanism defined here will allow to execute \ref{\store name: position}} and will return 1.(A).

\_\_enumext\_keyans\_store\_ref:
 \\_\_enumext\_keyans\_store\_ref\_aux\_i:
 \\_\_enumext\_keyans\_store\_ref\_aux\_ii:

The function \\_\_enumext\_keyans\_store\_ref: handles the internal "label and ref" system used by the save-ref key for \item\* and \anspic\* commands. First we will create copies of the current \( \label{labels} \) and remove the dots "." from them, we do not want to get double dots in our references.

```
2808 \cs_new_protected:Nn \__enumext_keyans_store_ref:
     {
2809
       \bool_if:NT \l__enumext_store_ref_key_bool
2810
           \cs_set_protected:Npn \__enumext_tmp:n ##1
             {
               \tl_set_eq:cc { l__enumext_label_copy_##1_tl } { l__enumext_label_##1_tl }
               \tl_reverse:c { l__enumext_label_copy_##1_tl }
               \tl_remove_once:cn { l__enumext_label_copy_##1_tl } { . }
2816
               \tl_reverse:c { l__enumext_label_copy_##1_tl }

# 12.33 Redefining \item and \makelabel in enumext

Redefining the \item command is not as simple as I thought. This command works in conjunction with the \makelabel command so I have to redefine both of them, in addition to this, we will have to use a couple of global variables to pass the values from one command to the other.

The \item and \item[ $\langle custom \rangle$ ] commands work in the usual way on enumext and we will add \item\*, \item\*[ $\langle symbol \rangle$ ] and \item\*[ $\langle symbol \rangle$ ][ $\langle offset \rangle$ ].

\_\_enumext\_default\_item:n

First we will see if the optional argument is present, if it is NOT present we will check the state of the variable \l\_\_enumext\_check\_answers\_bool set by the key no-store, set the boolean variable \l\_\_enumext\_-wrap\_label\_X\_bool to "true" for the key wrap-label and execute \\_\_enumext\_item\_std:w and the key itemindent, otherwise we will check the state of the boolean variable \l\_\_enumext\_wrap\_label\_opt\_-X\_bool set by the key wrap-label\* and execute \\_\_enumext\_item\_std:w with the optional argument and the key itemindent.

```
2985 \cs_new_protected:Npn \__enumext_default_item:n #1
    {
       \tl_if_novalue:nTF {#1}
2987
         {
2988
           \bool_if:NT \l__enumext_check_answers_bool

#### 12.35 Handling unknown keys

At this point in the code I already know that I will not add more  $\langle keys \rangle$  and since I have already been quite *paranoid and restrictive* with the definitions of environments and commands, the only thing left to do is do it with the  $\langle keys \rangle$  (you have to be consistent in life).

         }
3184
3185
```

The function \\_\_enumext\_keyans\_make\_label: redefine \makelabel for the keys align, font, wrap-label, wrap-label\* and \item\* for keyans environment.

```
3186 \cs_new_protected:Nn \__enumext_keyans_make_label:
3187 {
3188 \RenewDocumentCommand \makelabel { m }
```

(End of definition for  $\t$  enumert\_keyans\_redefine\_item:, and  $\t$  enumert\_keyans\_make\_label:. This function is documented on page 14.)

This functions are passed to \\_\_enumext\_list\_arg\_two\_v: used in the definition of the keyans environment (§12.37.2).

# 12.37 Second argument of the lists

At this point of the code we have already programmed most the necessary tools to create a custom list environment, remember that the function \\_\_enumext\_start\_list:nn takes two arguments, the first one we have ready, the second one we will define for all the levels of the environment enumext and the environment keyans.

# 12.37.1 Calculation of \leftmargin and \itemindent

Consider the figure 9 where the default margins (on the left) of a list are represented.

Figure 9: Representation of standard horizontal lengths in list environment.

The idea is to have control over these margins so that our list does not overlap the left margin of the page. The *key* relationship is that the right edge of the \labelsep equals the right edge of the \itemindent, so that the left edge of the *label box* is at \leftmargin+\itemindent minus \labelwidth+\labelsep. Thus, the handling of the margins by the package will be as shown in the figure 10.

Figure 10: Representation of horizontal lengths concept in list in enumext.

Where the default values will look like in the figure 11.

Figure 11: Default horizontal lengths in enumext.

\\_\_enumext\_calc\_hspace:NNNNNNN\ \\_\_enumext\_calc\_hspace:cccccc The function \\_\_enumext\_calc\_hspace: NNNNNNN takes seven arguments to be able to determine horizontal spaces for all list environment:

```
#1: \l__enumext_labelwidth_X_dim #2: \l__enumext_labelsep_X_dim
#3: \l__enumext_listoffset_X_dim #4: \l__enumext_leftmargin_tmp_X_dim
#5: \l__enumext_leftmargin_X_dim #6: \l__enumext_itemindent_X_dim
#7: \l__enumext_leftmargin_tmp_X_bool
```

And returns the "adjusted" values of \leftmargin and \itemindent.

This function is passed to \\_\_enumext\_list\_arg\_two\_X: which is used in the definition of the enumext and keyans environments (§12.37.2).

```
3200 \cs_new_protected:Npn \__enumext_calc_hspace:NNNNNNN #1 #2 #3 #4 #5 #6 #7
3201 {
©2024 by Pablo González L
```

\\_\_enumext\_list\_arg\_two\_i:

If no value has been passed to the labelwidth and labelsep keys we set the default values for \l\_-enumext\_leftmargin\_tmp\_X\_dim.

```
bool_if:nF #7 { \dim_set:Nn #4 { #1 + #2} }
```

We now analyze the cases and set the values for \leftmargin and \itemindent.

```
\dim_compare:nNnTF { #4 } < { \c_zero_dim }</pre>
         {
           \dim_set:Nn #6 { #1 + #2 - #4}
           \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
         }
         {
3218
           \dim_compare:nNnT { #4 } = { #1 + #2 }
              { \dim_set:Nn #6 { \c_zero_dim } }
           \dim_compare:nNnT { #4 } < { #1 + #2 }
3221
              { \dim_set:Nn #6 { #1 + #2 - #4} }
           \dim_compare:nNnT { #4 } > { #1 + #2 }
             {
                \dim_set:Nn #6 { -#1 - #2 + #4}
                \dim_set:Nn #6 { #6*-1}
           \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
3228
         }
3229
3230
3231 \cs_generate_variant:Nn \__enumext_calc_hspace:NNNNNNN { ccccccc }
```

(End of definition for \\_\_enumext\_calc\_hspace:NNNNNNN.)

#### 12.37.2 Setting second argument of the lists

We will "not set" \leftmargini, \leftmarginii, \leftmarginiii or \leftmarginiv, in this case, we will directly set the parameters for vertical and horizontal list spacing per level.

```
\__enumext_list_arg_two_ii:
\__enumext_list_arg_two_iii:

                     + \dim_use:c { l__enumext_labelsep_ \__enumext_level: _dim }
                   ) / \int_use:c { l__enumext_columns_ \__enumext_level: _int }
                   - \dim_use:c { l__enumext_listoffset_ \__enumext_level: _dim }
                 }
             }
           \dim_set_eq:Nc \columnsep { l__enumext_columns_sep_ \__enumext_level: _dim }
           \int_compare:nNnT { \l__enumext_level_int } > { 1 }
             {
               \dim_zero:N \columnseprule
3450
3451
```

We will calculate the *vertical spacing* settings for the multicols environment using the function \\_\_enumext\_-multi\_addvspace:, apply our "*vertical adjust spacing*", then start the multicols environment.

```
\text{bool_if:cF { l__enumext_minipage_active_ \__enumext_level: _bool }

{

\text{skip_zero:N \multicolsep}
\\__enumext_multi_addvspace:

}

\text{raggedcolumns}

\text{begin{multicols}{ \int_use:c { l__enumext_columns_ \__enumext_level: _int } }

}

3459

}

}

\text{bool_if:cF { l__enumext_minipage_active_ \__enumext_level: _bool }

{ \text{skip_zero:N \multicolsep}
\\_enumext_multi_addvspace:

}

\text{1_enumext_columns_ \__enumext_level: _int } }

}

3459

}

3460
}
```

 $(\mathit{End}\ of\ definition\ for\ \verb|\_-enumext_multicols_start:.)$ 

\\_\_enumext\_multicols\_stop:

The function \\_\_enumext\_multicols\_stop: will stop the multicols environment. If the boolean variable \l\_\_enumext\_minipage\_active\_X\_bool is false (not nested in \_\_enumext\_mini\_env\*) we will apply our "vertical adjust" spacing.

(End of definition for \\_\_enumext\_multicols\_stop:.)

\\_\_enumext\_after\_list:

The function \\_\_enumext\_after\_list: first check the state of the boolean variable \l\_\_enumext\_minipage\_active\_X\_bool, if it is "true" a small test will be executed to check if we have omitted the use of \miniright (the \_\_enumext\_mini\_env\* environment has not been closed), then close \_\_enumext\_mini\_env\* and add the adjusted vertical space \l\_\_enumext\_minipage\_after\_skip, otherwise we will close the multicols environment.

Now we will execute the functions \\_\_enumext\_after\_stop\_list: used by the key after, \\_\_enumext\_-check\_ans\_key\_hook: used by the key check-ans, \\_\_enumext\_vspace\_below: used by the keys below and below\*. Finally set \l\_\_enumext\_standar\_bool to false and call the function \\_\_enumext\_resume\_-save\_counter: used by the series, resume and resume\* keys.

```
3495 \__enumext_after_stop_list:
3496 \__enumext_check_ans_key_hook:
3497 \__enumext_vspace_below:
3498 \bool_set_false:N \l__enumext_standar_bool
3499 \__enumext_resume_save_counter:
3500 }
```

As we don't want our check to be executed check-ans by levels but on the complete list, we will take it out of the enumext environment using the "hook" function \\_\_enumext\_after\_env:nn.

```
3501 \__enumext_after_env: nn {enumext} { \__enumext_execute_after_env: }
(End of definition for \__enumext_after_list:.)
```

# 12.39 The environment keyans

The environment keyans also based on lists. The main differences with the enumext environment are the *nesting* and the way the *answers* (choice) will be stored and checked, this environment is intended exclusively for "*multiple choice questions*".

keyans Now we define the environment keyans also based on lists.

```
\__enumext_after_args_exec_v:
     }
3516
          _enumext_check_starred_cmd:n { item }
3517
        \ enumext stop list:
3518
        \__enumext_after_list_v:
3519
3520
```

(End of definition for keyans. This function is documented on page 14.)

\ enumext kevans set item width:

The function \\_\_enumext\_keyans\_set\_item\_width: will set the value of \itemwidth taking into account the value established by the list-offset key.

```
\cs_new_protected:Nn \__enumext_keyans_set_item_width:
       \dim_set:Nn \itemwidth
         {
           \linewidth
3525
         }
3526
       \dim_compare:nT
            \l__enumext_listoffset_v_dim != \c_zero_dim
         }
         {
           \dim_sub:Nn \itemwidth
                \l__enumext_listoffset_v_dim
         }
3536
```

(End of definition for \\_\_enumext\_keyans\_set\_item\_width:.)

\\_\_enumext\_keyans\_safe\_exec:

The keyans environment will only be available if the save-ans key is active and can only be used at the "first level" within the enumext environment. We do not want the environment to be nested, so we will set a maximum at this point. If the conditions are not met, an error message will be returned.

```
\cs_new_protected:Nn \__enumext_keyans_safe_exec:
                             {
                                \bool_if:NF \l__enumext_store_active_bool

# The environment keyanspic and \anspic

The keyanspic environment is a list-based environment that uses the same configuration for "spacing" and  $\langle label \rangle$  as the keyans environment, but it does not use  $\backslash$ item.

The contents are passed to the environment by means of the \anspic command and are placed inside minipage environments, with the  $\langle label \rangle$  underneath, adjusting widths according to the options passed to the environment.

Again it is necessary to "adjust" the spacing, both vertical and horizontal, to obtain an output like the one shown in the figure 12.

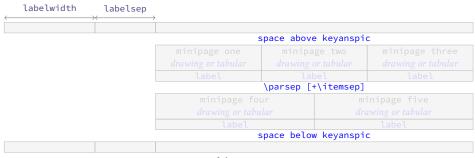

Figure 12: Representation of the keyanspic spacing in enumext.

This implementation is adapted from the answer given by Enrico Gregorio in How to process the body of an environment and divide it by a \macro?.

## 12.40.1 The command \anspic

The \anspic command take three arguments, the starred (\*) versions \anspic\* and \anspic\* [\(\lambda\content\rangle\)] store the current  $\langle label \rangle$  next to the  $[\langle content \rangle]$  if it is present in the  $\langle sequence \rangle$  and  $\langle prop \ list \rangle$  defined by save-ans key. This command is used as a replacement for \item in the keyanspic environment.

```
3636 \NewDocumentCommand \anspic { s o +m }
```

We check that the command is active in the keyanspic environment only if the save-ans key is present, otherwise we return an error.

```
\bool_if:NF \l__enumext_store_active_bool
3638
3639
         {
            \msg_error:nnnn { enumext } { wrong-place }{ keyanspic }{ save-ans }
3640
3641
       \int_compare:nNnT { \l__enumext_level_int } > { 1 }
3642
3643
            \msg_error:nn { enumext } { keyanspic-wrong-level }
         }
       \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
3646
         {
3647
            \msg_error:nnnn { enumext } { command-wrong-place }{ anspic }{ keyans }
3648
```

The three arguments are handled by the function \\_\_enumext\_keyans\_anspic\_code:nnn and stored in the sequence \l\_\_enumext\_keyans\_pic\_body\_seq which is processed by the keyanspic environment.

```
\seq_put_right:Nn \l__enumext_keyans_pic_body_seq
              _enumext_keyans_anspic_code:nnn { #1 } { #2 } { #3 }
3652
         }
     }
3654
```

(End of definition for \anspic. This function is documented on page 15.)

enumext keyans anspic code:nnn

The function \\_\_enumext\_keyans\_anspic\_code: nnn will be in charge of handling the "counter" and  $\langle label \rangle$ , which will have the same configuration as the keyans environment.

```
\cs_new_protected:Nn \__enumext_keyans_anspic_code:nnn
     {
3656
       \stepcounter { enumXvi }
3657
       #3 \\
3658

3659
         {
3660
            \__enumext_keyans_addto_prop:n { #2 }
3661
            \__enumext_keyans_store_ref:
3662
            \__enumext_keyans_addto_seq:n { #2 }
            \int_gincr:N \g__enumext_check_starred_cmd_int
            \bool_lazy_or:nnT
              { \bool_if_p:N \l__enumext_show_answer_bool }
              { \bool_if_p:N \l__enumext_show_position_bool }
©2024 by Pablo González L
```

# $(\mathit{End of definition for } \verb|\_enumext_keyans_anspic_code:nnn.)$

# 12.40.2 The environment keyanspic

Now we define the environment keyanspic based on list. The optional argument [\( \number above, number \\ below \)] will determine the number of minipage environments that will be above and below separated by \\parsep+\itemsep within it.

We apply the "adjusted" vertical spacing above the environment

```
3685     \vspace { \l__enumext_keyans_pic_above_skip }
3686  }
```

If the optional argument is not present, the number of times the \anspic command appears will be counted from \l\_\_enumext\_keyans\_pic\_body\_seq and placed in minipage environments on a single line. Finally we check if \anspic\* has been used, set the counter to zero and apply our "adjusted" vertical space below the environment.

(End of definition for keyanspic. This function is documented on page 15.)

 $\verb|\__enumext_keyans_pic_safe_exec:|$ 

The function \\_\_enumext\_keyans\_pic\_safe\_exec: check nested and level position inside the enumext environment.

(End of definition for \\_\_enumext\_keyans\_pic\_safe\_exec:.)

\\_\_enumext\_keyans\_pic\_skip\_abs:N

The function \\_\_enumext\_keyans\_pic\_skip\_abs:N will return a positive value \parsep.

 $(\textit{End of definition for } \c\ensuremath{\texttt{\_enumext\_keyans\_pic\_skip\_abs:N.}})$ 

\\_\_enumext\_keyans\_pic\_arg\_two:

The function \\_\_enumext\_keyans\_pic\_arg\_two: will be used in the second argument of the \\_\_enumext\_start\_list:nn function that defines the keyanspic environment, it will handle the setting of spaces.

```
3713 \cs_new_protected:Nn \__enumext_keyans_pic_arg_two:
```

The first thing to do is to set the boolean variable \l\_\_enumext\_leftmargin\_tmp\_v\_bool handled by the list-indent key to false, then we copy the definition of the second list argument from the keyans environment.

```
\bool_set_false:N \l__enumext_leftmargin_tmp_v_bool \__enumext_list_arg_two_v:
```

We will add the value of \itemsep to \parsep which we will use as vertical spacing between the above and below minipage environments. and adjust the value of \leftmargin, the label and counter are handled directly by the \anspic command. Then we make equal to zero \labelwidth, \labelsep, \partopsep and \itemsep so that the horizontal and vertical spacing is not affected.

```
3717 \skip_add:Nn \parsep { \itemsep }
3718 \dim_add:Nn \leftmargin { -\labelwidth - \labelsep }
3719 \dim_zero:N \labelwidth
3720 \dim_zero:N \listparindent
3721 \dim_zero:N \labelsep
3722 \skip_zero:N \partopsep
3723 \skip_zero:N \itemsep
```

We set the value of \l\_\_enumext\_keyans\_pic\_above\_skip which we will use to apply our "adjust" space above keyanspic, finally we call \\_\_enumext\_item\_std:w followed by \scan\_stop: to prevent the error message returned by FTFX when not using the \item command.

```
\__enumext_keyans_pic_skip_abs:N \parsep
\skip_set:Nn \l__enumext_keyans_pic_above_skip

\{
\text{box_dp:N \strutbox}
\text{+ \l__enumext_topsep_v_skip}
\text{-\parsep}
\}

\text{-\parsep}

\text{}
\text{\gamma}
\text{\ga
```

 $(\textit{End of definition for } \verb|\_-enumext_keyans_pic_arg_two:.)$ 

 $(\mathit{End}\ of\ definition\ for\ \verb|\__enumext_keyans_pic_do:n.)$ 

\\_\_enumext\_keyans\_pic\_do:n
\\_\_enumext\_keyans\_pic\_do:e

The optional argument is split by comma and is handled directly by the function  $\_$ enumext\_keyans\_pic\_row:n.

```
3738 \cs_new_protected:Nn \__enumext_keyans_pic_do:n
3739 {
3740 \clist_map_function:nN { #1 } \__enumext_keyans_pic_row:n
3741 }
3742 \cs_generate_variant:Nn \__enumext_keyans_pic_do:n { e }
```

\_\_enumext\_keyans\_pic\_row:n

The function \\_\_enumext\_keyans\_pic\_row:n will set the widths for the minipage environments and place the content  $\langle stored \rangle$  by \anspic\* in the \l\_enumext\_keyans\_pic\_body\_seq sequence inside them.

## 12.41 The horizontal environments

Generating horizontal list environments is NOT as simple as standard Lagart Standard Lagart of the code is adapted from the shortlst package to a more modern version using expl3. It is not possible to redefine \item and \makelabel as in the non starred versions (at least I have not achieved it) and as we will make it behave differently, we have no other option than to define a cascade of functions.

# 12.42 Redefining \footnote command

\\_\_enumext\_footnotetext:nn
\\_\_enumext\_renew\_footnote:
\\_\_enumext\_print\_footnote:

To keep the correct numbering of \footnote and to make it work correctly in the enumext\* and keyans\* environments, it is necessary to redefine the command. This implementation is adapted from the answer given by Clea F. Rees (@cfr) in footnotes in boxes compatible with hyperref.

```
3759 \cs_new_protected:Nn \__enumext_footnotetext:nn
3760
       \footnotetext[#1]{#2}

## 12.42.1 Functions for item box width

To achieve the horizontal list environment we will capture the \item command and the content of this in an plain \lambdarbox box using \makebox for the label and a minipage environment for the content passed to \item, we will also add the optional argument ( $\langle number \rangle$ ) to \item to be able to join columns horizontally, in simple terms, we want \item to behave in the same way as in the enumext environment but adding an optional first argument ( $\langle number \rangle$ ).

\\_\_enumext\_starred\_columns\_set\_vii:
\ enumext starred columns set viii:

We set the default value for the *width of the box* containing the content of the items for enumext\* environment.

102 / 144

```
\l__enumext_labelsep_vii_dim
         }
When the key rightmargin is active we must adjust the values.

(End of definition for \\_\_enumext\_starred\_joined\_item\_vii:n and \\_\_enumext\_starred\_joined\_item\_viii:n.)

#### 12.42.3 Functions for mini-env, mini-right and mini-right\* keys

\\_\_enumext\_start\_mini\_vii:
\\_\_enumext\_stop\_mini\_vii:

The implementation of the mini-env key support is almost identical to the one used in the enumext and keyans environments, the difference is that the \_\_enumext\_mini\_env\* environment on the "right side" is executed "after" closing the environment, so it is necessary to make a global copy of the variable \l\_-enumext\_minipage\_right\_vii\_dim in the variable \g\_\_enumext\_minipage\_right\_vii\_dim.

```
\cs_new_protected:Nn \__enumext_start_mini_vii:
3953
       \dim_compare:nNnT { \l__enumext_minipage_right_vii_dim } > { \c_zero_dim }
3954
           \dim_set:Nn \l__enumext_minipage_left_vii_dim
             {
               \linewidth
               - \l__enumext_minipage_right_vii_dim
               - \l__enumext_minipage_hsep_vii_dim
           \bool_set_true:N \l__enumext_minipage_active_vii_bool
           \dim_gset_eq:NN
             \g__enumext_minipage_right_vii_dim
             \l__enumext_minipage_right_vii_dim
           \__enumext_mini_addvspace_vii:
           \nointerlineskip\noindent
           \begin{__enumext_mini_env*}{ \l__enumext_minipage_left_vii_dim }
         }
     }
3970
```

The function \\_\_enumext\_stop\_mini\_vii: closes the \_\_enumext\_mini\_env\* environment on the left side, applies \hfill and sets the value of the variable \g\_\_enumext\_minipage\_active\_vii\_bool to true which will be used in the function \\_\_enumext\_after\_env:nn to execute the \_\_enumext\_mini\_env\* on the "right side".

Finally we execute the  $\{\langle code \rangle\}$  passed to the mini-right or mini-right\* keys stored in the variable  $\g_e$  enumext\_miniright\_code\_vii\_tl in the \_\_enumext\_mini\_env\* environment on the "right side". For compatibility with the caption package and possibly other  $\{\langle code \rangle\}$  passed to this key, we will pass it to a box and then print it.

# 12.43.2 Real definition of \item in enumext\*

\_\_enumext\_start\_item\_vii:w

The functions \\_\_enumext\_start\_item\_vii:w and \\_\_enumext\_stop\_item\_vii: executing the true definition of \item inside the enumext\* environment. The first thing we will do is set the value of \\_\_enumext\_stop\_item\_tmp\_vii: equal to \\_\_enumext\_stop\_item\_vii: which we will define later and add the hyperref compatible enumXvii counter, after that we will start capturing the item content in a box. Here need setting the \ifemightarrow{if@hyper@item} switch to "true" for hyperref compatible. The explanation for this is given by the master Heiko Oberdiek on \refstepcounter{enumi} twice (or more) creates destination with the same identifier.

```
4215 \cs_new_protected_nopar:Npn \__enumext_start_item_vii:w [#1]
       \cs_set_eq:NN \__enumext_stop_item_tmp_vii: \__enumext_stop_item_vii:
4217
       \legacy_if:nT { @noitemarg }
4218
         {
           \legacy_if_set_false:n { @noitemarg }
           \legacy_if:nT { @nmbrlist }
4221
             {
               \bool_if:NT \l__enumext_hyperref_bool
                   \legacy_if_set_true:n { @hyper@item }
                 }
               \refstepcounter{enumXvii}
               \bool_if:NT \l__enumext_check_answers_bool
                   \int_gincr:N \g__enumext_item_number_int
                    \bool_set_true:N \l__enumext_item_number_bool
4231
                 }
             }
4233
```

Here we start capturing \item and its contents into a group using the plain form of the \lambda rbox environment. If the state of the variable \\l\_enumext\_footnotes\_key\_bool is false, we will redefine the command \\footnote, followed by printing the  $\langle symbol \rangle$  defined for \item\* if it is present and open a new group inside which we execute font key next to \item and the keys wrap-label, wrap-label\*, align, close the group and execute the key labelsep and then the key first. Finally we open the minipage environment and

execute the listparindent key which will be equal to \parindent, the parsep key which will be equal to \parskip and the itemindent key.

```

```

112 / 144

\\_\_enumext\_before\_list\_viii:

The function \\_\_enumext\_before\_list\_viii: will add the vertical spacing on the environment if the above key is active next to the  $\{\langle code \rangle\}$  defined by the before\* key if it is active, the call the function \\_\_enumext\_start\_mini\_viii: handle by mini-env.

(End of definition for \\_\_enumext\_before\_list\_viii:.)

\\_\_enumext\_after\_list\_viii:

The function \\_\_enumext\_after\_list: first call the function \\_\_enumext\_stop\_mini\_viii:, then apply the  $\{\langle code \rangle\}$  handled by the after key together with the *vertical space* handled by the below key if they are present.

```
4366 \cs_new_protected:Nn \__enumext_after_list_viii:
4367 {
4368 \__enumext_stop_mini_viii:
4369 \__enumext_after_stop_list_viii:
4370 \__enumext_vspace_below_viii:
4371 }
```

(End of definition for \\_\_enumext\_after\_list\_viii:.)

#### 12.44.1 The command \item in keyans\*

The idea here is to make the \item command behave in the same way as in the keyans environment with the difference of the optional argument  $(\langle number \rangle)$  which works in the same way as in the enumext\* environment. In simple terms we want to store the  $\langle label \rangle$  next to the  $\lceil \langle content \rangle \rceil$  if it is present in the  $\langle sequence \rangle$  and  $\langle prop \ list \rangle$  defined by save-ans key for  $\langle tem^*, tem^* \ (\langle content \rangle) \rangle$ ,  $\langle tem(\langle number \rangle) \rangle$  and  $\langle tem(\langle number \rangle) \rangle$  commands.

\\_\_enumext\_start\_item\_tmp\_viii:

First we will call the function \\_\_enumext\_stop\_item\_tmp\_viii: that we will redefine later, we will increment the value of \l\_\_enumext\_item\_column\_pos\_viii\_int that will count the item's by rows and the value of \g\_\_enumext\_item\_count\_all\_viii\_int that will count the total of item's in the environment. After that we will call the function \\_\_enumext\_item\_peek\_args\_viii: that will handle the arguments passed to \item.

```
4372 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_viii:
4373 {
4374 \__enumext_stop_item_tmp_viii:
4375 \int_incr:N \l__enumext_item_column_pos_viii_int
4376 \int_gincr:N \g__enumext_item_count_all_viii_int
4377 \__enumext_item_peek_args_viii:
4378 }
```

 $(\mathit{End}\ of\ definition\ for\ \verb|\__enumext\_start\_item\_tmp\_viii:.)$ 

 $\verb|\__enumext_item_peek_args_viii:|$ 

The function \\_\_enumext\_item\_peek\_args\_viii: will handle the \item( $\langle number \rangle$ ). Look for the argument "(", if it is present we will call the function \\_\_enumext\_joined\_item\_viii:w ( $\langle number \rangle$ ), which is in charge of joining the item's in the same row, in case they are not present we will set the default value (1).

(End of definition for \\_\_enumext\_item\_peek\_args\_viii:.)

\\_\_enumext\_joined\_item\_viii:w

The function \\_\_enumext\_joined\_item\_viii:w will first call the function \\_\_enumext\_starred\_-joined\_item\_viii:n in charge of setting the *width* of the box that will store the content passed to \item. Then we will look for the argument "\*", if it is present we will call the function \\_\_enumext\_starred\_-item\_viii:w otherwise we will call the function \\_\_enumext\_standar\_item\_viii:w.

```
4385 \cs_new_protected:Npn \__enumext_joined_item_viii:w (#1)

\\_\_enumext\_remove\_extra\_parsep\_viii:

Finally we will remove the vertical space equal to \parsep when the total number of items is divisible by the number of items in the last row of the environment.

(End of definition for \\_\_enumext\_remove\_extra\_parsep\_viii:.)

#### 12.45 The command \getkeyans

\getkeyans

The \getkeyans command takes a mandatory argument of the form  $\{\langle store\ name: position \rangle\}$ . Retrieve a "single" content stored by \anskey, \anspic\* and \item\* from  $\langle prop\ list \rangle$  defined by save-ans key.

(End of definition for \getkeyans. This function is documented on page 16.)

\\_\_enumext\_getkeyans\_aux:n

The internal function  $\ensuremath{\verb|}\_$  enumext\_getkeyans\_aux:n is in charge of *splitting* the  $\ensuremath{\langle}$  argument $\ensuremath{\rangle}$  using ":". If ":" is omitted it will return an error.

(End of definition for  $\_$ enumext\_getkeyans\_aux:n.)

\\_\_enumext\_getkeyans:nn

The internal function \\_\_enumext\_getkeyans:nn will check for the existence of the  $\langle prop \; list \rangle$ , if it does not exist it will return an error message, then it will fetch the content specified by the second  $\langle argument \rangle$  from  $\langle prop \; list \rangle$ .

```
4573 \cs_new_protected:Npn \__enumext_getkeyans:nn #1 #2
4574 {
4575 \prop_if_exist:cTF { g__enumext_#1_prop }

4578 }
4579 {
4580 \msg_error:nnn { enumext } { undefined-storage-anskey } {#1}
4581 }
4582 }
```

(End of definition for  $\_$ enumext\_getkeyans:nn.)

#### 12.46 The command \printkeyans

The \printkeyans command prints "all stored content" in the  $\langle sequence \rangle$  defined by the save-ans key. The first thing we will do is define a set of  $\langle filtered\ keys \rangle$  with which we will control the options of the different nesting levels for the environment enumext and enumext\* by storing their values in the list of tokens \l\_enumext\_print\_keyans\_X\_tl.

The variable \l\_\_enumext\_print\_keyans\_starred\_tl will have the default  $\langle keys \rangle$  for \printkeyans\* and will be set by \setenumext[ $\langle print^* \rangle$ ] and the variable \l\_\_enumext\_print\_keyans\_vii\_tl will have the default keys for the environment enumext\* nested within the  $\langle sequence \rangle$  and will be set by \setenumext[ $\langle print, * \rangle$ ], the rest of the variables will be for the environment enumext and will be set by \setenumext[ $\langle print, * \rangle$ ].

```
4583 \keys_define:nn { enumext / print }
4584 {
©2024 by Pablo González L
```

```
print*
               .code:n
                           = \keys_precompile:neN { enumext / enumext* }
                               { \__enumext_filter_save_key:n {#1} }
                               \l__enumext_print_keyans_starred_tl, % starred cmd
4587
      print*
               .initial:n = { nosep, label=\arabic*., columns=2, first=\small, font=\small },
4588
                           = \keys_precompile:neN { enumext / level-1 }
      print-1 .code:n
4589
                               { \__enumext_filter_save_key:n {#1} }
                               \l__enumext_print_keyans_i_tl,
4591
       print-1 .initial:n = { nosep, label=\arabic*., columns=2, first=\small, font=\small },
       print-2 .code:n
                           = \keys_precompile:neN { enumext / level-2 }
                               { \__enumext_filter_save_key:n {#1} }
                               \l__enumext_print_keyans_ii_tl,
      print-2 .initial:n = { nosep, label=(\alph*), first=\small, font=\small },
      print-3 .code:n
                           = \keys_precompile:neN { enumext / level-3 }
                               { \__enumext_filter_save_key:n {#1} }
                               \l__enumext_print_keyans_iii_tl,
      print-3 .initial:n = { nosep, label=\roman*., first=\small, font=\small },
      print-4 .code:n
                           = \keys_precompile:neN { enumext / level-4 }
                               { \__enumext_filter_save_key:n {#1} }
                               \l__enumext_print_keyans_iv_tl,
4603
      print-4 .initial:n = { nosep, label=\Alph*., first=\small, font=\small },
                           = \keys_precompile:neN { enumext / enumext* }
      print-* .code:n
                               { \__enumext_filter_save_key:n {#1} }
                               \l__enumext_print_keyans_vii_tl, % starred nested
      print-* .initial:n = { nosep, label=\arabic*., first=\small, font=\small },
4608
```

The reason for storing \( \lambda eys \rangle \) in token lists using \( \lambda eys\_precompile: neN \) is because the keys are set via \( \setenumext \) but are later executed by running the command \( \printkeyans \) and they are not handled directly by its optional argument, except those related to the first opening level.

\printkeyans

Create a user command to print "all stored content" in  $\langle sequence \rangle$  for \anskey, anskey\*, \item\* and \anspic\*. Within a group we will run our "precompiled keys" and then call the internal function \\_\_enumext\_printkeyans:nnn.

```
4610 \NewDocumentCommand \printkeyans { s O{} m }
       \group_begin:
         \tl_use:N \l__enumext_print_keyans_i_tl
4613
         \tl_use:N \l__enumext_print_keyans_ii_tl
4614
         \tl_use:N \l__enumext_print_keyans_iii_tl
4615
         \tl_use:N \l__enumext_print_keyans_iv_tl
4616
         \tl_use:N \l__enumext_print_keyans_vii_tl
4617
         \__enumext_printkeyans:nnn { #1 } { #2 } { #3 }
4618
       \group_end:
4619
     }
```

(End of definition for  $\print{eyans}$ . This function is documented on page 16.)

\\_\_enumext\_printkeyans:nnn

The internal function  $\ \_$ enumext\_printkeyans:nnn will check for the existence of the  $\langle sequence \rangle$ , if it does not exist it will return an error message, then it will check if not empty.

If the starred argument is present we will check that the environment <code>enumext\*</code> is not saved in the  $\langle sequence \rangle$ , then execute the variable \l\_enumext\_print\_keyans\_starred\_tl that contains the default  $\langle keys \rangle$  for the environment <code>enumext\*</code>, it will open the environment <code>enumext\*</code> passing the optional argument to the "first level", set the key <code>base-fix</code> and then will map the  $\langle sequence \rangle$ .

```
4638 \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
4639 \end{enumext*}
4640 }
```

Otherwise it will open the environment enumext passing the optional argument to the "first level", set the key base-fix and then map the  $\langle sequence \rangle$ .

```
\begin{enumext}[#2]
                       \keys_set:nn { enumext / enumext* }{ base-fix }
                       \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
                    \end{enumext}
                  }
              }
4648
         }
4649
         {
4650
            \msg_error:nnn { enumext } { undefined-storage-anskey } {#3}
4651
         }
4652
4653
```

(End of definition for  $\ensuremath{\backslash}$  enumext\_printkeyans:nnn.)

### 12.47 The command \setenumext

The command \setenumext will be in charge of managing the  $\langle keys \rangle$  passed to all environments and to the \printkeyans command. We must take precautions with the enumext\* environment and "first level" of the enumext environment so as not to capture  $\langle keys \rangle$  that complicate us.

\\_\_enumext\_filter\_first\_level:n \\_\_enumext\_filter\_first\_level\_key:n \\_\_enumext\_filter\_first\_level\_pair:nn The function  $\_$ \_enumext\_filter\_first\_level:n will be in charge of filtering the  $\langle keys \rangle$  passed to the environment enumext\* and "first level" of the environment enumext.

The function \\_\_enumext\_filter\_first\_level\_key:n will be responsible for filtering the  $\langle keys \rangle$  that are passed "without value" by excluding the keys resume and resume\*.

```
4663 \cs_new:Npn \__enumext_filter_first_level_key:n #1
4664 {
4665 \str_case:nnF {#1}
4666 {
4667 { resume } {}
4668 { resume* } {}
4669 }
4670 { , { \exp_not:n {#1} } }
```

The function  $\ensuremath{\mbox{\mbox{$\setminus$}}}$  enumext\_filter\_first\_level\_pair:nn will be responsible for filtering the  $\langle keys \rangle$  that are passed "with value" by excluding the series, resume and save-ans keys.

Now define a "meta families" of  $\langle keys \rangle$  to access from \setenumext.

```
4682 \keys_define:nn { enumext / meta-families }
4683 {
4684 enumext-1 .code:n =
4685 {
4686 \keys_set:ne { enumext / level-1 }
©2024 by Pablo González L
```

```
_enumext_filter_first_level:n {#1}
                                             } ,
                                 enumext-2 .code:n = { \keys_set:nn { enumext / level-2 } {#1} } ,
                                 enumext-3 .code:n = { \keys_set:nn { enumext / level-3 } {#1} } ,
                                 enumext-4 .code:n = { \keys_set:nn { enumext / level-4 } {#1} } ,
                                            .code:n = { \keys_set:nn { enumext / keyans } {#1} } ,
                                 keyans
                                 enumext*
                                           .code:n =
                                                \keys_set:ne { enumext / enumext* }
                                                      _enumext_filter_first_level:n {#1}
                                             } ,
                                           .code:n = { \keys_set:nn { enumext / keyans* } {#1} } ,
                                 keyans*

```

(End of definition for  $\_$ enumext\_set\_parse:n and  $\_$ enumext\_set\_error:nn.)

#### 12.48 The command \setenumextmeta

The command \setenumextmeta will be responsible for adding new "meta-keys" for the enumext and enumext\* environments. The implementation code was given by Jonathan P. Spratte (@Skillmon) answer in Add .meta key to existing keys (l3keys).

\setenumextmeta

First we will create a prop list \c\_\_enumext\_meta\_paths\_prop to handle the optional argument.

\c\_enumext\_meta\_paths\_prop
\\_enumext\_add\_meta\_key:nnn
\\_enumext\_def\_meta\_key:Nnn
\\_enumext\_def\_meta\_key:Vnn

Now we create the user command taking care that unknown cannot be passed as an argument.

The internal functions \\_\_enumext\_add\_meta\_key:nnn and \\_\_enumext\_def\_meta\_key:nnn will check the optional argument and create the "meta-key".

```
4779 \cs_new_protected:Npn \__enumext_add_meta_key:nnn #1
4780
     {
       \tl_set:Nn \l__enumext_meta_path_tl {#1}
4781
       \tl_replace_all:Nnn \l__enumext_meta_path_tl { ~ } {}
4782
       \prop_get:NVNTF
4783
         \c__enumext_meta_paths_prop \l__enumext_meta_path_tl \l__enumext_meta_path_tl
4784
          { \__enumext_def_meta_key:Vnn \l__enumext_meta_path_tl }
4785
           \msg_error:nnn { enumext } { unknown-set } {#1}
           \use none:nn
4789
4790
   \cs_new_protected:Npn \__enumext_def_meta_key:nnn #1#2#3
4791
4792
       \bool_lazy_or:nnTF

         { \keys_if_exist_p:nn { enumext / #1 } {#2} }
4794
         { \keys_if_exist_p:nn { enumext / enumext* } {#2} }
         { \msg_error:nnn { enumext } { already-defined } {#2} }
4796
           \keys_define:nn { enumext / #1 }
                #2 .meta:n = {#3},
                #2 .value_forbidden:n = true
4801
4802
         }
4803
4804
4805 \cs_generate_variant:Nn \__enumext_def_meta_key:nnn { V }
```

 $(\textit{End of definition for} \setminus \textit{setenumextmeta} \ \ \textit{and others. This function is documented on page 6.})$ 

### 12.49 The command \foreachkeyans

The command \foreachkeyans will execute a *loop* over the  $\langle prop \ list \rangle$  and return its contents. The implementation code is adapted from the answer provided by Enrico Gregorio (@egreg) in Expand a .cs defined by key inside the function.

#### \foreachkeyans

\\_\_enumext\_parse\_foreach\_keys:nn \\_\_enumext\_parse\_foreach\_keys:n \_enumext\_foreach\_keyans:nn \\_\_enumext\_foreach\_add\_body:n We define a set of  $\langle keys \rangle$  for command and we will save the default values of these in  $\g_{enumext_-}$  for each\_default\_keys\_tl to avoid the use of group.

```
4806 \keys_define:nn { enumext / foreach }
     {
       before .tl_set:N = \l__enumext_foreach_before_tl,
       before .value_required:n = true,
4809
       after
               .tl_set:N = \l__enumext_foreach_after_tl,
4810
       after
                .value_required:n = true,
4811
                .int_set:N = \l__enumext_foreach_start_int,
       start
4812
                .value_required:n = true,
       start
4813
                .int_set:N = \l__enumext_foreach_stop_int,
       stop
       stop
                .value_required:n = true,
                .int_set:N = \l__enumext_foreach_step_int,
       step
               .value_required:n = true,
       step
       wrapper .cs_set_protected:Np = \__enumext_foreach_wrapper:n #1,
4818
       wrapper .value_required:n = true,
4819
                .tl_set:N = \l__enumext_foreach_sep_tl,
4820
                .value_required:n = true,
       sep
4821
       unknown .code:n
                           = { \__enumext_parse_foreach_keys:n {#1} }
4822
4823
4824 \keys_precompile:nnN { enumext / foreach }
