

V1.0 2024-10-13*

©2024 by Pablo González[†]

CTAN: https://www.ctan.org/pkg/enumext
 https://github.com/pablgonz/enumext

Abstract

This package provides enumerated list environments compatible with LTEX tagging PDF for creating "simple exercise sheets" along with "multiple choice questions", storing the "answers" to these in memory using multicol and scontents packages.

Contents

Motivation and acknowledgments

Usually it is enough to use the classic enumerate environment to generate "simple exercise sheets" or "multiple choice questions", the basic idea behind enumext is to cover three points:

- 1. To have a simple interface to be able to write "lists of exercises" with "answers".
- 2. To have a simple interface for writing "multiple choice questions".
- 3. To have a simple interface for placing "columns" and "drawings" or "tables".

This package would not be possible without Phelype Oleinik who has collaborated and adapted a large part of the code and all Large TeX team for their great work and to the different members of the TeX-SX community who have provided great answers and ideas. Here a note of the main ones:

- 1. Answer given by Alan Munn in \topsep, \itemsep, \partopsep, \parsep what do they each mean (and what about the bottom)?
- 2. Answer given by Enrico Gregorio in Understanding minipages aligning at top
- 3. Answer given by Ulrich Diez in Different mechanics of hyperlink vs. hyperref
- 4. Answer given by Enrico Gregorio in Minipage and multicols, vertical alignment

License and Requirements

Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License (lppl), version 1.3 or later (https://www.latex-project.org/lppl.txt). The software has the status "maintained".

The enumext package loads and requires multicol[?] and scontents[?] packages, need to have a modern TEX distribution such as TEX Live or MiKTEX. It has been tested with the standard classes provided by LETEX: book, report, article and letter on 10pt, 11pt and 12pt.

The minimum requirement is ETFX release 2024-11-01.

1 Introduction

In the Large world world there are many useful packages and classes for creating "lists of exercises", "worksheets" or "multiple choice questions", classes like exam[?] and packages like xsim[?] do the job perfectly, but they don't always fit the basic day to day needs.

In my work (and in the work of many teachers) it is common to use "simple exercise sheets" also known as "informal lists of exercises", as an example:

- ı. Factor $x^2 2x + 1$
- 2. Factor 3x + 3y + 3z
- 3. True False
 - (a) $\alpha > \delta$
 - (b) LATEX2e is cool?
- 4. Related to Linux

- (a) You use linux?
- (b) Usually uses the package manager?
- (c) Rate the following package and class
 - i. xsim-exam
 - ii. xsim
 - iii. exsheets

Sometimes we are also interested in showing the "answers" along with the questions:

^{*}This file describes a documentation for v1.0, last revised 2024-10-13.

[†]E-mail: «pablgonz@educarchile.cl».

§.1 Introduction enumext v1.0

| 1. Factor $x^2 - 2x + 1$ | (a) You use linux? |
|--------------------------|----------------------|
| * $(x-1)^2$ | * Yes |
| 2. Factor $3x + 3y + 3z$ | (b) Usually uses the |
| * $3(x+y+z)$ | * Yes, dnf |
| 3. True False | (c) Rate the followi |
| (a) $\alpha > \delta$ | i. xsim-exam |

| * Very True! | * very good |
| | iii. exsheets |
| 4. Related to Linux | * obsolete |
| | |

ie package manager?

ring package and class

xist for now :(

Or we are interested in referring to a specific question and its "answer", for example:

The answer to ?? is "Very True!" and the answer to ?? is "very good".

Or we are interested in printing all the "answers":

```
1. (x-1)^2
                                                             (b) Yes, dnf
                                                        ×
2. 3(x+y+z)
                                                        ×
                                                             (c) i.
                                                                      doesn't exist for now :(
3. (a) False
                                                        ×
                                                                 ii.
                                                                      very good
  (b) Very True!
                                                        ×
                                                                 iii. obsolete
4. (a) Yes
```

Another very common thing to use in my work is "multiple choice questions", for example:

- 1. First type of questions
 - A) value
- C) value
- B) correct
- D) value
- 2. Second type of questions

I.
$$2\alpha + 2\delta = 90^{\circ}$$

II.
$$\alpha = \delta$$

III.
$$\angle EDF = 45^{\circ}$$

- A) I only
- D) I and III only
- B) II only
- E) I, II, and III
- C) I and II only
- * 3. Third type of questions

(1)
$$2\alpha + 2\delta = 90^{\circ}$$

(2)
$$\angle EDF = 45^{\circ}$$

- A) value
- D) value
- B) value
- E) value
- C) value

4. Question with image and label below:

В

B)

A)

- A) value B) value
- C) value
- D) correct
- E) value

E)

C)

Where what we are interested in the $\langle label \rangle$ and a "short note" that we leave as an explanation, and then print them:

```
1. B) x = 5
                                                         * 4. E) A duck
                                                                                                                     ×
2. D)
                                                         * 5. D) "other note"
3. C) some note
```

The enumext package was created and designed to meet these small requirements in the creation of "simple worksheets" and "multiple choice questions".

🍼 These "simple worksheets" or "multiple choice questions" appear to be easy to obtain using a combination of the enumerate, minipage and multicols environments, but like many things, what "looks simple" is not so simple.

Description and usage

The enumext package defines enumerated environments using the list environment provided by LTEX, but "does not redefine" any internal commands associated with it such as \list, \endlist or \item outside of the "scope" in which they are defined.

🍼 This package is NOT intend to replace the enumerate environment nor replace the powerful enumitem[?], the approach is intended to work without hindering either of them.

This package can be used with xelatex, lualatex, pdflatex and the classical latex. dvips. ps2pdf and is present in TEX Live and MiKTEX, use the package manager to install. For manual installation, download enumext.zip and unzip it, run lualatex enumext.dtx and move all files to appropriate locations, then run mktexlsr. To produce the documentation run lualatex enumext.dtx two times.

         » TDS:doc/latex/enumext/
```

enumext v1.0 §.1 Introduction

The package is loaded in the usual way:

\usepackage{enumext}

1.2 The concept of left margin

There is a direct relationship between the parameters \leftmargin, \itemindent, \labelwidth and \labelsep plus an "extra space" that makes it difficult to obtain the desired horizontal spaces in a list environment. Usually we don't want the list to go beyond the left margin of the page, but since these four values are related, that causes a problem.

The enumitem[?] package adds the \labelindent parameter to solve some of these problems. A simplified representation of this in the figure ??.

Figure 1: Representation of horizontal lengths in enumitem.

The enumext package does NOT provide a user interface to set the values for \leftmargin and \itemindent, instead it provides the keys list-offset and list-indent which internally set the values for \leftmargin and \itemindent. The concepts of \leftmargin and \itemindent are different in enumext. The figure ?? shows the visual representation of idea.

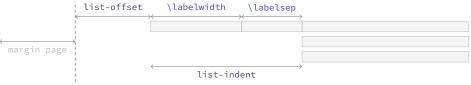

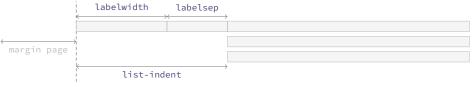

Figure 2: Representation of horizontal lengths concept in enumext.

In this way we reduce a *little* the amount of parameters we have to pass. With the default values of keys list-offset, list-indent, labelwidth and labelsep the lists will have the (usually) expected output for "simple worksheets". The figure ?? shows the visual representation.

 $Figure \ 3: Default\ horizontal\ lengths\ \verb|list-offset=0pt|, \verb|list-indent=|| labelwidth+|| labelsep\ in\ enumext.$

1.3 User interface

The user interface consists of two main list environments enumext (vertical) and enumext* (horizontal), the environment anskey* and the command \anskey to "store content" and the environments keyans, keyans* and keyanspic for multiple choice. It also provides the commands \getkeyans to print individual stored content, \printkeyans and \foreachkeyans to print all stored content, \miniright for minipage, \setenumext and \setenumextmeta to config $\lceil \langle key = val \rangle \rceil$ options.

1.3.1 Internal counters

The package enumext uses internally the enumXi, enumXii, enumXiii, enumXiv counters for the four nesting levels of the enumext environment, the enumXv counter for the keyans environment, the enumXvi counter for the keyanspic environment, the counter enumXviii for enumext* environment and the counter enumXviii for keyans* environment.

if any package defines these counters or they are user-defined in the document, the package will return a fatal error and abort the load.

1.3.2 Public dimension

The package enumext only provides a single public dimension \itemwidth and is intended for user convenience only and is not for internal use as such. The dimension \itemwidth is rigid length and contains the "width of the content" of each \item regardless of labelwidth and labelsep.

If any package defines \itemwidth or they are user-defined \itemwidth in the document, the package will overwrite it without warning.

1.3.3 Support for multicol

The package provides direct support for using the multicol[?] package. This allows to obtain directly a two-column output as shown in the figure ??.

enumext v1.0 §.1 Introduction

Figure 4: Representation of the two column output for a nested level in enumext environment.

The "non starred" version of the multicols environment is always used together with the \raggedcolumns command and is controlled by columns and columns-sep keys. It can be used in all nesting levels of the environment enumext and the environment keyans and can together with the mini-env key. If you need to force a start a new column \columnbreak must be used (see §??).

The \columnseprule command is not available as a key and is set to "zero" for the inner levels and the keyans environment. If the value of this is set inside the document, it will affect "all environments" that use the columns key.

1.3.4 Support for minipage

The package provides direct support for minipage environment, this allows you to obtain an output like the one shown in figure ??.

Figure 5: Representation of the mini-env output for a nested level enumext environment.

The minipage environments on "left side" and "right side" is always used with "aligned on top" [t]. It can be used in all nesting levels of the environment enumext and the environment keyans and is controlled by mini-env and mini-sep keys. In order to switch from the "left" side minipage environment to the "right" side one must use the command \miniright (see §??).

1.3.5 The \label and \ref system

This package provides a user interface like the <code>enumitem[?]</code> package to customize the references which is activated by the <code>ref</code> key (§??), the standard <code>ETeX \label</code> and <code>\ref</code> commands work as usual. It also provides an "internal reference" system for the "stored content" by means of the key <code>save-ref</code> (§??) when the key <code>save-ans</code> (§??) is active.

1.3.6 Support for \footnote

The enumext* and keyans* environments and the mini-env key use the minipage environment in their implementation but in a transparent way for the user, i.e. it is only used for typesetting and not directly. The enumext package provides an *internal implementation* for the command \footnote compatible with the hyperref package to work in the same way as if it were used anywhere in the document.

Unfortunately, if tagging PDF is not enabled, it will not produce the expected "links" because the internal implementation uses $\footnotetext[\langle number \rangle]$ and $\footnotemark[\langle number \rangle] \{\langle text \rangle\}$ and support for these is limited by the hyperref package.

The best way to solve this if tagged PDF is NOT active is to use Jean-François Burnol footnotehyper[?] package, it will support keeping the "links" if hyperref is loaded with the hyperfootnotes=true option (default). Load it is as follows:

```
\IfDocumentMetadataTF{ }
    \usepackage{footnotehyper}
    \makesavenoteenv{enumext}
    \makesavenoteenv{enumext*}
```

At the moment the footnotehyper package is not compatible with tagged PDF.

The environments provided

The package enumext provides two main list environments, the *vertical* environment enumext and the *horizontal* environment enumext*.

```
enumext*
```

```
enumext \begin{enumext}[\langle keyval \ list \rangle]
                                                                                                                            \begin{enumext*} [\langle keyval \ list \rangle]
                     \item \langle item content \rangle
                                                                                                                                \item \langle item content \rangle
                      \item [\langle custom \rangle] \langle item content \rangle
                                                                                                                                \item \lceil \langle custom \rangle \rceil \langle item content \rangle
                      \forall item^* [\langle symbol \rangle] [\langle offset \rangle] \langle item content \rangle
                                                                                                                                \forall item^*[\langle symbol \rangle][\langle offset \rangle] \langle item content \rangle
                  \end{enumext}
                                                                                                                             \end{enumext*}
```

The environment enumext

The enumext is an environment that works in the same way as the standard enumerate environment provided by LTX, \item and \item[\langle custom \rangle] commands work in the usual way. The environment can be nested with at most "four levels" and the options can be configured globally using \setenumext command and locally using $\lceil \langle key = val \rangle \rceil$ in the environment.

Example with columns=2

1. This text is in the first level.

A. This text is in the fourth level.

- (a) This text is in the second level.
- X This text is in the first level.
- This text is in the third level.
- * 2. This text is in the first level.

The environment enumext*

The enumext* is a horizontal list environment similar to the shortenumerate or tasks environments provided by the shortlst[?] and tasks[?] packages, \item and \item[$\langle custom \rangle$] work as usual. The options can be configured globally using \setenumext command and locally using $\lceil \langle key = val \rangle \rceil$ in the environment.

Some considerations to take into account for this environment:

- The environment cannot be nested within itself or in the environment keyans*, but it can be nested within enumext and vice versa.
- Each "item content" in the environment is placed within a minipage environment whose width is stored in the dimension \itemwidth that NOT includes labelwith, labelsep, only the width of the content.
- You cannot have floating environments like figure or table but \footnote with hyperref support is supported if the footnotehyper package is loaded (see §?? for full support).
- · You cannot have any standard list environments like itemize, enumerate, description, quote, quotation, verse, center, flushleft, flushright, verbatim, tabbing, trivlist, list and all environments created with \newtheorem.

Example with columns=2

1. This text is in the first level.

2. This text is in the first level.

X This text is in the first level.

* 4. This text is in the first level.

2.3 The command \item*

```
\forall item* \forall [\langle symbol \rangle] [\langle offset \rangle]
```

The \idetimes_{item*} , \idetimes_{symbol} and \idetimes_{symbol} $\[(symbol)_{item*}, \idetimes_{symbol})$ and \idetimes_{symbol} $\[(symbol)_{item*}, \idetimes_{symbol})$ a $\langle symbol \rangle$ to the "left" of the $\langle label \rangle$ separated from it by the $\langle offset \rangle$ set by the the second optional argument.

The starred argument '*' cannot be separated by spaces 'u' from the command, i.e. \item* and the first optional argument does "NOT" support verbatim content. Can be configure with the keys item-sym* and item-pos* locally in the environment or globally using \setenumext command (§??).

environments.

©2024 by Pablo González L

2.3.1 Keys for \item*

```
item-sym* = \{\langle symbol \rangle\}
```

default: \textasteriskcentered

Sets the *symbol* to be displayed in the "left" of the box containing the current $\langle label \rangle$ set by labelwidth key for \item* in enumext and enumext*. The symbol can be in text or math mode, for example item $sym*={\$\setminus star\$}.$

```
item-pos* = {\langle rigid \ length \rangle}
```

default: by levels

Sets the *offset* between the box containing the current $\langle label \rangle$ defined by labelwidth key and the $\langle symbol \rangle$ set by item-sym* key. The default values are set by labelsep key at each level. If positive values are passed it will offset to the left and if negative values are passed it will offset to the right.

The command \item in enumext*

The \item command for the enumext* environment provides an "first optional argument" \item (\langle columns \rangle) which "joins items" between columns. Let's consider the following examples adapted directly from the task package:

```
\begin{enumext*}[widest=10,columns=4]
  \item The first
  \item* The second
  \item The third
  \item The fourth
  \forall (3)* The fifth item is way too long for this and needs three columns
  \item The sixth
  \item The seventh
  \item(2)[X] The eighth item is way too long for this and needs two columns
    (\the\itemwidth)
 \item The ninth
 \item[Z] The tenth (\the\itemwidth)
\end{enumext*}
```

- 1. The first
- * 2. The second
- 3. The third
- 4. The fourth
- * 5. The fifth item is way too long for this and needs three columns
- 6. The sixth
- X The eighth item is way too long for this and needs 9. The ninth two columns (196.17749pt)
- The tenth (89.28171pt)

The command \setenumext

```
\setenumext \setenumext{\langle key = val \rangle}
                                                                                                                                        \star{keyans*} \{\langle keyans* \rangle \}
                         \strut = \sum \{\langle enumext, level \rangle \} \{\langle key = val \rangle \}
                                                                                                                                        \start \setenumext[\langle print, level \rangle] {\langle key = val \rangle}
                         \startion{1}{\text{setenumext}[\langle enumext^* \rangle] \{\langle key = val \rangle\}}
                                                                                                                                         \startion{1}{\text{setenumext}[\langle print, * \rangle] \{\langle key = val \rangle\}}
                         \strut_{keyans} \] \{ \langle key = val \rangle \}
                                                                                                                                         \startion{1}{\text{setenumext}}[\langle print^* \rangle] \{\langle key = val \rangle\}
```

The command \setenumext sets the $\langle keys \rangle$ on a global basis for environments enumext, enumext*, keyans, keyans* and the \printkeyans command. It can be used both in the preamble and in the body of the document as many times as desired.

The \(\lambda \text{keys} \rangle \) set in the optional argument of environments and commands have the highest precedence, overriding both options passed by \setenumext. If the optional argument is not passed, the first level of the environment enumext will be taken by default.

🍼 The key save-ans that activate the *"storage system"* must NOT be passed through this command and must be passed directly in the optional argument of the "first level" of the environment in which they are executed.

The command \setenumextmeta

```
\setenumextmeta \setenumextmeta \{\langle key \ name \rangle\} \{\langle key \ one = val, \ key \ two = val, \ldots \rangle\}
                     \setenumextmeta*{\langle key name \rangle}{\langle key-one = val, key-two = val, ... \rangle}
                     \setenumextmeta [\langle enumext^* \rangle] \{\langle key \ name \rangle\} \{\langle key \ one = val, \ key \ two = val, \dots \rangle\}
```

The command \setenumextmeta adds a new "meta-key" for the environments enumext and enumext*, the {\langle key name \rangle} must be different from those defined by the package. If the optional argument is not passed, the new "meta-key" will be created for the "first level" of the environment enumext.

The starred argument '*' will create the new "meta-key" for the environment enumext* and for all levels of the environment enumext. For example: \setenumextmeta*{midsep}{topsep=3pt, partopsep=0pt} will create a new key midsep available for all levels of the enumext environment and the enumext* environment and we can use it like any other key so \begin{enumext} [midsep] and \begin{enumext*} [midsep] will be valid.

©2024 by Pablo González L

5 The keyval system

The $\langle key = val \rangle$ system used by the enumext package is implemented using lakeys so it must be taken into consideration that those keys marked as "value forbidden", that is $\langle key \rangle$ is different from $\langle key = \rangle$.

All $\langle keys \rangle$ described in this section are available for the enumext, enumext*, keyans and keyans* environments with the exception of the keys series, resume, resume* which are only available for the "first level" of the environments enumext and enumext*; and the keys mini-right, mini-right* which are only available for the enumext* and keyans* environments.

All $\langle keys \rangle$ related to vertical or horizontal spacing accept a "skip" or "dim" expression if passed between braces, i.e. you do not need to use \dimeval or \dimexpr to perform calculations.

It should be kept in mind that using any $\langle key \rangle$ that sets a *rubber lengths* or *rigid lengths* for vertical or horizontal space on a level will influence the vertical and horizontal space for *inners levels* and keyans, keyans* and keyanspic environments.

5.1 Keys for label and ref

mode-box (value forbidden)

default: not used

This is a "switch-key" that does not receive an argument and is "only" available for the "first level" of the enumext environment and the enumext* environment. When this is set the label, font, wrap-label and wrap-label* keys are executed within \makebox for the enumext and keyans environments.

- This key is intended for compatibility with tagged PDF and is forcibly "enabled" when \DocumentMetadata is present. If you want to get the same document output whether \DocumentMetadata is active or not, you must enable this key.
- In the enumext* and keyans* environments \makelabel are redefined using \makebox by default. If enumext or keyans is used in the enumext* environment the key must be activated manually.

```
label = {\\alph* | \Alph* | \arabic* | \roman* | \Roman* \}
```

default: by levels

Sets the $\langle label \rangle$ that will be printed at the *current level*. The default value for the first level of the environments enumext and enumext* are $\langle arabic^*, for second level$ are $\langle alph^* \rangle$, for third level are $\langle alph^* \rangle$. For keyans and keyans* environments the default value is $\langle alph^* \rangle$.

This key is intended to give the basic structure with which the $\langle label \rangle$ will be displayed, and the form in which it is used by standard "label and ref" and the "internal label and ref" system with the save-ref key. You cannot use commands with $\langle label \rangle$ as an argument, for example $\{ \text{nd} \mid \text{$

```
labelsep = \{ \langle rigid \ length \rangle \}
```

default: 0.3333em

Sets the *horizontal space* between the box containing the current $\langle label \rangle$ defined by label key and the text of an item on the first line. Internally sets the value of \labelsep for the current level.

```
labelwidth = \{\langle rigid \ length \rangle\}
```

default: by labe

Sets the *width* of the box containing the current $\langle label \rangle$ set by label key. Internally sets the value of $\label width$ for the current level. The default values are calculated by means of the *width* of a box by setting a *value* to the current counter using '0' for \arabic^* , 'M' for \arabic^* , 'm' for \arabic^* , 'VIII' for \arabic^* , 'w' for \arabic^* , 'w' for \arabic^* , 'w' for \arabic^* , 'w' for \arabic^* , 'viii' for \arabic^* , 'w' for \arabic^*

```
widest = \{ \langle integer \mid string \rangle \}
```

default: empty

Sets the labelwidth key pass the $\langle integer \rangle$ or converting the $\langle string \rangle$ of the form \Alph, \alph, \Roman or \roman to a value for the current counter defined by label key, then calculating the width by means of a box. For example widest={XXIII} or widest={23} are equivalent. This key is useful when the default values of the labelwidth key are smaller than those actually used.

```
font = \{ \langle font \ commands \rangle \}
```

default: empty

Sets the *font style* for the current $\langle label \rangle$ defined by label key. For example font={\bfseries\small}.

```
align = \{ \langle left \mid right \mid center \rangle \}
```

default: left

Sets the *aligned* of $\langle label \rangle$ defined by label key on the current level in the label box.

```
wrap-label = \{\langle code \{ \#1 \} \mid more \ code \rangle \}
```

default: empty

Wraps the *current* $\langle label \rangle$ defined by label key referenced by $\{\#1\}$. The $\{\langle code \rangle\}$ must be passed between braces. This key does not modify the value set by the labelwidth key and is applied only on \item and \item*. When using it in the \setenumext command it is necessary to use the *double hash* ' $\{\#\#1\}$ '. For example wrap-label= $\{\fbox\{\#1\}\}\$ or you can create a command:

and then pass it through the key wrap-label={\labelbx{#1}} or wrap-label={\labelbx*{#1}}.

```
wrap-label* = \{\langle code \{\#1\} \mid more \ code \rangle\}
```

default: empty

The same as the wrap-label key but also applies on $\lceil \langle custom \rangle \rceil$.

```
©2024 by Pablo González L
```

```
ref = \{ \langle code \ \{ \alph^* | \arabic^* |
```

default: empty

Modifies the way *cross references* are displayed. The label key sets the default form of the *cross references*, by using this key you can define a different format, for example: $ref=\ensuremath{\mathsf{ref}}$ is valid.

Internally it renews the command associated with each counter when it is executed, i.e., in the environment enumext the command \theenumXi is modified when the key is executed at the first level, \theenumXii when it is executed at the second level and \theenumXiii together with \theenumXiv when it is executed at the third and fourth levels.

This must be kept in mind, since the values set by the label and ref keys are not cumulative by levels, so if you have used the ref key in the first level and then want to associate the counter with label or ref in the second level you must use the direct commands, i.e. \arabic{eunumXi} to indicate the count of the first level instead of using \theenumXi.

5.2 Keys for spaces

 $show-length = \{ \langle true \mid false \rangle \}$

default: false

Displays on the terminal the values for *all list parameters* at the current level. For *vertical spaces* show the values of \topsep, \itemsep, \parsep and \partopsep. For *horizontal spaces* show the values of \labelwidth, \labelsep, \itemindent, \listparindent and \leftmargin.

5.2.1 Vertical spaces

```
topsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}
```

default: by levels

Set the *vertical space* added to both the top and bottom of the list. Internally sets the value of \topsep for the current level. The default value for the first level of the environments enumext and enumext* are 8.0pt plus 2.0pt minus 4.0pt, for second level are 4.0pt plus 2.0pt minus 1.0pt, for third and fourth level are 2.0pt plus 1.0pt minus 1.0pt. For keyans and keyans* environments the default value is 4.0pt plus 2.0pt minus 1.0pt.

```
parsep = \{ \langle rubber \ length \mid rigid \ length \rangle \}
```

default: by levels

Set the *vertical space* between paragraphs within an item. Internally sets the value of \parsep for the current level. The default value for the first level of the environments enumext and enumext* are 4.0pt plus 2.0pt minus 1.0pt, for second level are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 0pt. For keyans and keyans* environments the default value is 2.0pt plus 1.0pt minus 1.0pt.

In the enumext* and keyans* environments this value is passed to \parskip within the minipage environment where "item content" is placed.

```
partopsep = \{ \langle rubber length \mid rigid length \rangle \}
```

default: by levels

Set the *vertical space* added, beyond topsep, to the "top" and "bottom" of the entire environment if the environment instance is preceded by a "blank line" or \par command. Internally sets the value of \partopsep for the current level. The default values for first and second level in environment enumext are 2.0pt plus 1.0pt minus 1.0pt, for third and fourth level are 1.0pt minus 1.0pt. For the keyans environment the default value is 2.0pt plus 1.0pt minus 1.0pt, and for the keyans* and enumext* environments it is available but *without* effect.

The value of this parameter also affects the *inner levels* and the environments keyans, keyanspic and keyans*. Caution should be taken with "blank lines" or \par command "before" each environment or nested level when formatting the source code of document. Tex will enter (vertical mode) and apply this value to the "top" and "bottom" the environment or nested level.

```
itemsep = \{ \langle rubber \ length \ | \ rigid \ length \rangle \}
```

default: by levels

Set the *vertical space* between items, beyond the parsep. Internally sets the value of \itemsep for the current level. The default value for the first level of the environments enumext and enumext* are 4.0pt plus 2.0pt minus 1.0pt, for the rest of the levels are 2.0pt plus 1.0pt minus 1.0pt. For keyans and keyans* environments the default value is 4.0pt plus 2.0pt minus 1.0pt.

🍼 In the enumext* and keyans* environments this value corresponds to the separation between rows.

noitemsep \(\value forbidden \)

default: not used

This is a "meta-key" that does not receive an argument. Set itemsep and parsep equal to opt the entire level of environment.

nosep (value forbidden)

default: not used

This is a "meta-key" that does not receive an argument. Sets all keys for vertical spacing equal to opt the entire level of environment.

base-fix \langle value forbidden \rangle

default: not used

This is a "switch-key" that does not receive an argument available only for the "first level" of environment enumext. Fix the baseline when an environment enumext is nested in enumext* and there is no material between the \item and the start of the environment for example \item \begin{enumext} enumext} within the environment enumext*. Internally sets the keys topsep, above and above* at Opt.

The following \(\lambda keys\rangle\) should be used with "caution", they are intended to be used at the "top" and "bottom" of the environment when the columns or mini-env keys do not provide adequate vertical spaces. The values passed can be rubber or rigid lengths, the way they are applied is the way you differ, using the star '*' \(\lambda keys\rangle\) applies \(\nu\space*\) so that \(\text{ETFX}\) does not discard this space at page break.

```
above = \{\langle rubber\ length \mid rigid\ length \rangle\}
```

default: not used

Set the *extra vertical space* added, beyond topsep, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space *"above"* the environment without hindering the value of the topsep key. The space is added with \vspace so is *"discardable"*.

```
above* = {\langle rubber length | rigid length \rangle}
```

default: not used

Set the *extra vertical space* added, beyond topsep, to the top of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space *"above"* the environment without hindering the value of the topsep key. The space is added with \vspace* so is *"not discardable"*.

```
below = \{\langle rubber \ length \ | \ rigid \ length \rangle\}
```

efault: not used

Set the *extra vertical space* space added, beyond topsep, to the bottom of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"below"* the environment without hindering the value of the topsep key. The space is added with \vspace so is *"discardable"*.

```
below* = \{\langle rubber\ length \mid rigid\ length \rangle\}
```

default: not used

Set the *extra vertical space* space added, beyond topsep, to the bottom of the entire level of environment. This key is intended to give a *"fine adjustment"* of the vertical space on the *"below"* the environment without hindering the value of the topsep key. The space is added with \vspace* so is *"not discardable"*.

5.2.2 Horizontal spaces

 $list-offset = \{ \langle rigid \ length \rangle \}$

default: Opt

Sets the *horizontal translation* of the entire environment level from the left edge of the box defined by the labelwidth key. Internally sets the values of \leftmargin and \itemindent for the current level.

list-indent = $\{\langle rigid \ length \rangle\}$

default: labelwidth + labelsep

Sets the *indentation* of the whole environment under the box defined by labelwidth and labelsep keys. Internally sets the value of \leftmargin and \itemindent for the current level. If list-indent=0pt is set in the environments enumext and keyans the $\langle label \rangle$ will be part of the text, separated by the value of the labelsep key and the *first word*, in simple terms it will look like a "common paragraph".

The enumext* and kenyans* environments are implemented using \makebox and minipage which causes "list indent" to always be equal to the value passed to labewdith plus labelsep. Passing a value to this key is equivalent to setting the value for the list-offset key.

```
itemindent = \{ \langle \mathit{rigid} \; \mathit{length} \rangle \}
```

default: 0p

Sets the extra horizontal indentation, beyond labelsep, of the "first line" off each \item that is not followed by a "blank line" or the \par command. This value must be greater than or equal to opt and is applied internally using \hspace without modifying the value of \itemindent.

This key is intended for the enumext* and keyans* environments where, by their implementation, it is not possible to adjust labelwidth and list-indent without modifying the output. If you use enumext or keyans and want to get around the blank line limitation or the \par command followed by \item you can modify labelwidth and label-indent and get the same effect.

```
rightmargin = \{\langle rigid \ length \rangle\}
```

default: 0pt

Set the *horizontal space* between the right margin of the environment and the right margin of the enclosing environment, the value it takes must be greater than or equal to <code>Opt</code>. Internally sets the value of <code>\rightmargin</code> for the current level.

```
listparindent = \{\langle rigid\ length\rangle\}
```

default: Opt

Sets the *horizontal space* indentation, beyond list-indent, for second and subsequent paragraphs within a list item. Internally sets the value of \listparindent for the current level.

In the enumext* and keyans* environments this value is passed to \parindent within the minipage environment where "item content" is placed.

5.3 Keys for add code

The following $\langle keys \rangle$ should be used with "caution", they are intended to inject $\{\langle code \rangle\}$ into different parts of the defined environments. We must keep in mind that the defined environments are based on the list base environment provided by ETEX which is defined (simplified) as plain form $\{ arg\ one \} \} \{\langle arg\ two \rangle \}$. Using the before* key does not allow access to the list parameters defined by $[\langle key=val \rangle]$.

```
before = \{\langle code \rangle\}
```

default: not used

Execute $\{\langle code \rangle\}$ "before" the environment starts. The $\{\langle code \rangle\}$ must be passed between braces, is executed "after" performing all calculations related to the *list parameters* in the environment and the parameters sets by $[\langle key = val \rangle]$ that is, in the second argument of the list after setting all the parameters \begin{list}{\langle arg one \rangle}{\langle arg two \rangle}{\langle code \rangle}}.

before* = $\{\langle code \rangle\}$ default: not used

Execute $\{\langle code \rangle\}$ "before" the environment starts. The $\{\langle code \rangle\}$ must be passed between braces, is executed "before" performing all calculations related to the *list parameters* and $[\langle key = val \rangle]$ sets in the environment that is, before the arguments defining the environment are executed: $\{\langle code \rangle\}\setminus\{arg\ one \}\}\{\langle arg\ one \rangle\}\{\langle arg\ two \rangle\}$.

 $\mathsf{first} = \{\langle \mathit{code} \rangle\}$

Executes $\{\langle code \rangle\}$ when "starting" the environment. The $\{\langle code \rangle\}$ must be passed between braces, is executed right "after" all list parameters are done, after the second argument of list, just before the first occurrence of \item: \begin{list}{\langle} \arg one \rangle \{\langle} \code \rangle \\ \item.

- Keep in mind that the code set in this key will affect the entire "body" of the environment and therefore the inner levels of the list and the keyans environment. It is recommended to set this key per level.
- In the enumext* and keyans* environments this key is executed after the listparindent, parsep and itemindent keys within the minipage environment in which the "item content" is placed.

 $\mathsf{after} = \{\langle \mathit{code} \rangle\}$

Execute $\{\langle code \rangle\}$ "after" finishing the environment. The $\{\langle code \rangle\}$ must be passed between braces.

5.4 Keys for start, series and resume

$start = \{ \langle integer \mid integer \ expression \rangle \}$

default: 1

Sets the *start value* of the numbering on the current level. The $\{\langle integer\ expression \rangle\}$ must be passed between braces, internally is evaluated and pass to the counter defined by label key on the current level, i.e. it is equivalent to enter start= $\{\down{100} \ value{chapter}\}$ or $\down{100} \ value{chapter}$.

 $start^* = \{\langle integer \mid string \rangle\}$ default: not use

Sets the *start value* of the numbering on the current level. Internally $\langle string \rangle$ is converted and passed as value to the counter defined by label key on the current level, i.e. it is equivalent to enter start=5, start=E or start=v.

The following $\langle keys \rangle$ are "only" available for the enumext* environment and the "first level" of the enumext environment and are ignored if set when nested within each other.

 $series = \{\langle series \ name \rangle\}$ default: not used

Stores the *keys* of the *optional argument* of the "first level" of the environment in which it is executed in $\{\langle series\ name \rangle\}$ which is used as an argument in the key resume. The $\langle keys \rangle$ stored in $\{\langle series\ name \rangle\}$ are not cumulative and are overwritten if the same $\{\langle series\ name \rangle\}$ is used again.

 $resume = \{\langle series \ name \rangle\}$ default: not used

Sets the *start value* and *options* for the "*first level*" continuing the numbering of the environment in which the $series=\{\langle series\ name\rangle\}$ key was executed. If passed *without value* this will only set *start value* continue the numbering from the last environment in which $series=\{\langle series\ name\rangle\}$ or $resume=\{\langle series\ name\rangle\}$ is not present and if the save-ans key is active it will continue the numbering from the last environment in which it was executed. The *start value* can be overwritten using start or $start^*$ keys.

resume* \(\forall value forbidden \rangle\) default: not used

Sets the *start value* and *options* for the "first level" continuing the numbering of the environment in which the $series=\{\langle series\ name\rangle\}$ or $resume=\{\langle series\ name\rangle\}$ keys are NOT present, if the save-ans key is active it will continue the numbering from the last environment in which it was executed. The *start value* can be overwritten using start or $start^*$ keys.

For security reasons the series key will never save in {\series name\} the keys series, resume, resume, save-ans, save-key, start* and start. When using the key resume={\series name\} it will have hierarchy in the \same keys\ that are saved in {\series name\}, in order to establish the value of a \same key\ already saved in {\series name\} it must be placed to the "right" of resume={\series name\}, the same thing happens with the resume* key, the exception is the save-ans key that must be placed on the "left" if you want to start the numbering with its value. The resume key passed "without value" must be exactly "without value", i.e. resume= cannot be used and if executed before resume* it will affect the start value.

5.5 Keys for multicols

```
columns = \{\langle integer \rangle\} default: 1
```

Set the *number of columns* to be used by the multicols environment within the environment. The value must be a positive integer less than or equal to 10.

```
columns-sep = \{\langle rigid\ length \rangle\} default: by leve
```

Set the *space between* columns used by the multicols environment within the environment. Internally sets the value of \columnsep, by default its value is equal to the sum of the values set in the keys labelwidth and labelsep of the current level.

©2024 by Pablo González L

5.6 Keys for minipage

```
mini-env = \{\langle rigid \ length \rangle\}
```

default: not used

Sets the width of the minipage environment on the "right side". This value added to the value set by the mini-sep key to determines the width of the minipage environment on the "left side", taking \linewidth as the maximum reference value.

```
mini-sep = \{\langle rigid\ length \rangle\}
```

default: 0.3333em

Sets the space between the minipage environment on the "left side" and the minipage environment on the "right side". This separation is applied together with \hfill.

5.6.1 The command \miniright

```
\mbox{\content} \ \mbox{\con
```

The \miniright command close the minipage environment on the "left side" and opens the minipage environment on the "right side" by starting it with the \centering command. It must be placed "after" the last \item of the current environment and "before" starting the material to be placed on the "right side".

The starred argument '*' inhibits the use of \centering command i.e. the usual LTFX justification is maintained in the minipage on the "right side".

5.6.2 The key mini-right

In the horizontal list environments enumext* and keyans* it is not possible to use the \miniright command and the mini-right key must be used instead.

```
mini-right = \{\langle content \rangle\}
```

default: not used

Set the *content* for the drawing or tabular to be placed in the minipage environment on the "right side" by starting it with \centering. The $\{\langle content \rangle\}$ must be passed between braces.

```
mini-right* = \{\langle content \rangle\}
```

default: not used

Same as above, but without starting with \centering.

The storage system

The entire mechanism for "storing content" it is activated according to save-ans key on the "first level" of enumext or enumext* environments and it is ignored if they are established when they are nested inside each other. Only when this $\langle key \rangle$ is "active" the \anskey command and the environments anskey*, keyans, keyans* and keyanspic are available.

```
\lceil enumext \rceil [save-ans=\{\langle store\ name \rangle\}]
                                                                 \lceil enumext \rceil [save-ans=\{\langle store\ name \rangle\}]
  \item Text \anskey{answer}
                                                                   \item Text \anskey{answer}
  \item Text
                                                                    \item Text
     \begin{keyans}
                                                                      \begin{keyanspic}
    \end{keyans}
                                                                      \end{keyanspic}
\end{enumext}
                                                                 \end{enumext}
```

By executing the key save-ans= $\{\langle store\ name \rangle\}$ the entire "structure" of the environment (excluding the first level) including the optional argument passed to the inner levels or the environment nested in it, along with the $\langle content \rangle$ passed to \anskey or anskey*, the current $\langle labels \rangle$ for \item* and \anspic* in the environments keyans, keyans* and keyanspic will be "stored" in a sequence $\{\langle store\ name \rangle\}$ and at the same time will be "stored" (without the "structure" or optional argument) in a prop list $\{\langle store\ name \rangle\}$.

For security reasons the optional argument of the inner levels or the nested environment are filtered by excluding all (keys) related to the "storage system" (§??) along with the keys mini-env, mini-sep, mini-right, miniright*, series, resume and resume* when storing in sequence $\{\langle store\ name \rangle\}$ set by save-ans key.

Keys for storage system 6.1

The only $\langle keys \rangle$ available for all levels of the enumext environment and the enumext* environment are nostore and save-key, the rest of the $\langle keys \rangle$ described in this section must be passed directly in the *optional* argument of the "first level" of the environment in which the key save-ans is executed. The key save-ans should NOT be passed with the command \setenumext.

```
save-ans = \{ \langle store \ name \rangle \}
```

default: not set

Sets the *name* of the *sequence* and *prop list* in which the $\{\langle contents \rangle\}$ will be "stored" by \anskey and anskey* in enumext and enumext* environments and the current \langle labels \rangle for \item* and \anspic* in the environments keyans, keyans* and keyanspic. If the sequence or prop list {\store name\} does not exist, it will be created globally and will not be overwritten if the key is used again.

```
save-key = \{\langle key \ list \rangle\}
```

This key overrides the default "stored keys" of the optional argument of the inner levels or nested environment that will be passed to the sequence. The $\langle key | list \rangle$ passed to this key ignores any $\langle keys \rangle$ in the "stored structure" and must be passed between braces. For example, if we execute at a second level:

```
©2024 by Pablo González L
```

```
\begin{enumext}[save-ans={\store name\}]
\item Text \anskey{answer}
\item Text
\begin{enumext}[nosep, columns=2, save-key={columns=3}]
...
\end{enumext}
\end{enumext}
```

The "stored keys" by default in the sequence $\{\langle store\ name \rangle\}$ would be nosep, columns=2, but using the key save-key= $\{columns=3\}$ will overwrite and the "stored key" in the sequence $\{\langle store\ name \rangle\}$ are only columns=3 ignoring all the others.

```
save-sep = \{ \langle text \ symbol \rangle \}
```

default: {, }

Sets the *text symbol* that will separate the current $\langle label \rangle$ to the *optional argument* passed to the \item* and \anspic* in the environments keyans, keyans* and keyanspic and storing them in the *sequence* and *prop list* $\{\langle store\ name \rangle\}$ set by save-ans key. The $\{\langle text\ symbol \rangle\}$ must always be passed between braces, whitespace ' \sqcup ' is preserved within the braces and only affects the "stored content" and not what is displayed when using the show-ans or show-pos keys.

6.1.1 Keys for label and ref

```
save-ref = \{ \langle \mathit{true} \mid \mathit{false} \rangle \}
```

default: false

Activates the "internal label and ref" mechanism for referencing "stored content" in prop list $\{\langle store\ name \rangle\}$ set by save-ans key. To reference the location of the "stored content" within the environment you must use $\texttt{ref}\{\langle store\ name: position \rangle\}$, where $\langle position \rangle$ corresponds to the position occupied by the "stored content" in the prop list $\{\langle store\ name \rangle\}$ returned by the show-pos key. For example $\texttt{ref}\{\texttt{test:4}\}$ will return 3. (b) which corresponds to the location of the "stored content" at position 4 in prop list test within the environment in which the key save-ans=test was set.

```
mark-ref = \{\langle symbol \rangle\}
```

default: *

Sets the *symbol* that will be displayed by the \printkeyans command only if the hyperref package is detected and the save-ref key are active. This "*symbol*" is used as a "*link*" between the environment in which the save-ans key was used and the place where the command is executed.

6.1.2 Keys for wrap and display

```
wrap-ans = \{\langle code \{ \#1 \} \ more \ code \rangle \}
```

default: \fbox+\parbox{#1}

Wraps the *argument* passed to the \anskey and the *body* in anskey* environment referenced by $\{\#1\}$ when using the show-ans or show-pos keys. The $\{\langle code \rangle\}$ must be passed between braces and only affects the *argument* or *body* and NOT the "stored content" in the sequence and prop list $\{\langle store\ name \rangle\}$ set by save-ans key. If this key is passed using \setenumext it is necessary to use double ' $\{\#1\}$ '.

```
wrap-opt = \{ \langle code \{ #1 \} \ more \ code \rangle \}
```

default: [{#1}]

Wraps the *optional argument* passed to the \item* and \anspic* referenced by $\{\#1\}$ in the keyans, keyans* and keyanspic environments when using the show-ans or show-pos keys. The $\{\langle code \rangle\}$ must be passed between braces and only affects the current *optional argument* and NOT the "stored content" in the sequence and *prop list* $\{\langle store\ name \rangle\}$ set by save-ans key. If this key is passed using \setenumext it is necessary to use double ' $\{\#1\}$ '.

```
\mathsf{show-ans} = \{ \langle \mathit{true} \mid \mathit{false} \rangle \}
```

default: false

Displays the argument passed to the \anskey, the body for anskey* environment, the $\langle label \rangle$ for \item* and \anspic* at the place where it is executed. If the optional argument is present in \item* or \anspic* it will be shown using wrap-opt key.

```
mark-ans = \{\langle symbol \rangle\}
```

default: \textasteriskcentered

Sets the *symbol* to be displayed in the left margin for \anskey, anskey*, \item* and \anspic* in the place where they are executed when using the key show-ans.

```
mark-pos = \{ \langle left \mid right \rangle \}
```

default: left

Sets the *aligned* of the symbol defined by mark-ans key. The "symbol" is aligned in a box with the same dimensions of the label box defined by labelwidth key on the current level and separated by the value of the labelsep key.

6.1.3 Keys for debug and checking

```
\mathsf{show\text{-}pos} = \{ \langle \mathit{true} \mid \mathit{false} \rangle \}
```

default: false

Displays the *position* occupied by the "stored content" by \anskey, anskey*, \item* and \anspic* in the prop list $\{\langle store\ name \rangle\}$ set by save-anskey. This position is used by the \getkeyans command and by the \ref command if the save-ref key is active.

```
check-ans = \{ \langle \mathit{true} \mid \mathit{false} \rangle \}
```

default: false

Enables the *checking answer* mechanism displaying an appropriate message on the terminal. This key works under the logic that each \item or \item* that does not open an inner level or nested environment contains "only one answer" or "only one execution" of the \anskey or anskey*. It is intended to be used in conjunction with the no-store key.

```
no-store \( \value forbidden \)
```

default: not used

This is a "switch-key" that does not receive an argument and disables the "stored structure" in the sequence $\{\langle store\ name \rangle\}$ set by save-ans key at the entire level or a nested environment in which it runs. This key is intended for use in internal levels or nested enumext or enumext* environments in which you want to use enumext or enumext* but "without" using the \anskey, "without" use anskey*, "without" interfering with the check-ans key and "without" storing an unwanted structure in the sequence {\langle store name \rangle \rangle}.

The command \anskey

```
\anskey \anskey [\langle keys \rangle] {\langle content \rangle}
```

The command \anskey takes a mandatory non empty argument $\{\langle content \rangle\}$ and "stores" it in the sequence and prop list {\store name\} set by save-ans key. By design the command cannot be nested or passed verbatim material in the argument and it is assumed that each numbered \item or \item* within the environment in which it is active it has a "single execution" of \anskey unless \item or \item* open a nested level or use the no-store key.

If save-ref key are active and the hyperlink and hyperlink and hyperlink and <a href="https://hyperlink.gov/hyperlin be used, otherwise the usual "label and ref" system provided by LATEX will be used.

The \anskey command is available for all levels of the enumext environment and the enumext* environment, but is disabled for the keyans, keyans* and keyanspic environments.

6.2.1 Keys for \anskey

By default the $\{\langle content \rangle\}$ passed to \anskey when "storing" in the sequence $\{\langle store\ name \rangle\}$ has the form \item $\langle content \rangle$, the following $\langle keys \rangle$ allow modifying the way in which it is "stored" in the sequence.

break-col \langle value forbidden \rangle default: not used

Stores {\(\content \) \} in the sequence {\(\store name \) \} of the form \(\columnbreak \) item \(\content \).

 $item-join = \{\langle columns \rangle\}$

Set the *number of columns* to be used for $\forall tem(\langle columns \rangle)$ and stores $\{\langle content \rangle\}$ in the *sequence* $\{\langle store \rangle\}$ $name \rangle$ of the form $\backslash item(\langle columns \rangle) \langle content \rangle$.

item-star

default: not used

Stores $\{\langle content \rangle\}$ in the sequence $\{\langle store\ name \rangle\}$ of the form $\backslash item^* \langle content \rangle$.

 $item-sym* = \{\langle symbol \rangle\}$

default: not set

Sets the symbol for $\identermath{\texttt{item}^*}$ when using the key $\identermath{\texttt{item}^*}$ and stores $\{\langle content \rangle\}$ in the sequence $\{\langle store, delta, delta,$ |name| of the form $|item^*[\langle symbol \rangle] \langle content|$. The symbol can be in text or math mode, for example item-sym*= $\{\$\ast\$\}\ stores \item*[\$\ast\$] \ \langle content \rangle$.

 $item-pos* = {\langle rigid \ length \rangle}$

default: not set

Sets the *offset* for $\forall tem^*$ when using the keys item-star and item-sym* and stores $\{\langle content \rangle\}$ in the *sequence* $\{\langle store\ name \rangle\}$ of the form $\idesign [\langle symbol \rangle] [\langle offset \rangle] \langle content \rangle$.

Example

```
\begin{enumext}[save-ans=test, show-ans=true]
  \item* Text containing our instructions or questions. \anskey\{\langle first\ answer \rangle\}
  \item Text containing our instructions or questions.
    \begin{enumext}
       \item Question.\anskey{\langle second \ answer \rangle}
    \end{enumext}
  \item Text containing our instructions or questions. \{anskey \{ \langle third \ answer \} \}
  \item Text containing our instructions or questions. \langle fourth\ answer \rangle
\end{enumext}
```

- * 1. Text containing our instructions or questions.
- 3. Text containing our instructions or questions.

* | first answer

- third answer
- 2. Text containing our instructions or questions.
- 4. Text containing our instructions or questions.

(a) Question.

* | fourth answer

* second answer

The environment anskey*

```
anskey* \begin{anskey*} [\langle key = val \rangle] \langle body \ content \rangle \end{anskey*}
```

The environment anskey* takes a mandatory $\{\langle body\ content \rangle\}$ and "stores it" in the sequence and prop list {\(\store\) name\)} set by save-ans key. If save-ref key are active and the hyperref[?] package is detected \hyperlink and \hypertarget will be used, otherwise the usual "label and ref" system provided by LTFX will be used. By design the environment cannot be nested but full supports "verbatim material" in the body and it is assumed that each numbered\item or \item* within the environment in which it is active it has a "single execution" unless \item or \item* open a nested level or use the no-store key.

The anskey* environment is implemented using the scontents package, for the correct operation \begin{anskey*} and \end{anskey*} must be in different lines, all $\langle keys \rangle$ must be passed separated by commas and "without separation" of the start of the environment. Comments "%" or "any character" after \begin{anskey*} or $[\langle key = val \rangle]$ on the same line are NOT supported, the package scontents will return an "error" message if this happens. In a similar way comments "%" or "any character" after \end{anskey*} on the same line the package scontents will return a "warning" message.

6.3.1 Keys for anskey*

The anskey* environment uses the same $\langle keys \rangle$ as the \anskey command next to the keys inherited from package scontents. The environment is available for all levels of the enumext environment and the enumext* environment, but it is disabled for the keyans, keyans* and keyanspic environments.

```
write-env = \{ \langle file.ext \rangle \}
```

default: not used

Sets the name of the $\langle external\ file \rangle$ in which the $\langle contents \rangle$ of the environment will be written. The $\langle file.ext \rangle$ will be created in the working directory, relative or absolute paths are not supported. If $\langle file.ext \rangle$ does not exist, it will be created or overwritten if the overwrite key is used.

```
overwrite = \{\langle true \mid false \rangle\}
```

default: false

Sets whether the \(\file.ext \) generated by write-env from the anskey* environment will be rewritten.

```
force-eol = \{\langle true \mid false \rangle\}
```

default: false

Sets if the *end of line* for the \(\stored \content\) is hidden or not. This key is necessary only if the last line is the closing of some environment defined by the \(\frac{fancyvrb}{fancyvrb}\) package as \\end{\verbatim}\) or another environment that does not support a comments "%" after closing \\end{\verbatim}\%.

For security reasons the keys store-env, print-env and write-out they have been left disabled. It is recommended that you review the scontents[?] documentation to understand how the keys described here work.

Example

```
\begin{enumext}[save-ans=test, show-pos=true, start=5]
  \item* Text containing our instructions or questions.
    \begin{anskey*}[item-star]
      (first answer)
    \end{anskey*}
  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.
        \begin{anskey*}
          ⟨second answer⟩
        \end{anskey*}
    \end{enumext}
  \item Text containing our instructions or questions.
    \begin{anskey*}
      (third answer)
    \end{anskey*}
  \item Text containing our instructions or questions.
    \begin{anskey*}
      (fourth answer)
    \end{anskey*}
\end{enumext}
```

```
* 5. Text containing our instructions or questions.

[5] First answer with verbatim

[7] third answer

[8] fourth answer

[8] fourth answer
```

(a) Question.
[6] second answer

6.4 The environments keyans and keyans*

```
keyans \begin{keyans}[\langle key=val \rangle] \item \item[\langle custom \rangle] \item* \item*[\langle content \rangle] \end{keyans} keyans* \begin{keyans*}[\langle key=val \rangle] \item \item[\langle custom \rangle] \item* \item*[\langle content \rangle] \end{keyans*}
```

The keyans and keyans* environments are "enumerated list" environments designed for "multiple choice" questions activated by the save-ans key. This environments can NOT be nested and must always be at the "first level" of the enumext environment, the commands \item[$\langle custom \rangle$] work in the usual and the command \item($\langle columns \rangle$) is available for the keyans* environment.

The behavior of \item* in keyans and keyans* environments is NOT the same as in the enumext or enumext* environments.

```
©2024 by Pablo González L
```

```
\begin{enumext}[save-ans=test]
                                                                                               \begin{enumext}[save-ans=test]
   \item \(\(\text{item content}\)
                                                                                                  \item \(\(\text{item content}\)\)
       \lceil \langle key = val \rangle \rceil
                                                                                                     \lceil \langle keyans^* \rceil [\langle key = val \rangle]
          \item \(\(\text{item content}\)\)
                                                                                                         \item \(\(\text{item content}\)\)
          \item [\langle custom \rangle] \langle item content \rangle
                                                                                                         \item [\langle custom \rangle] \langle item content \rangle
          \langle item^* \langle item \ content \rangle
                                                                                                         \item* \langle item content \rangle
          \forall item^*[\langle content \rangle] \langle item content \rangle
                                                                                                         \forall item^* [\langle content \rangle] \langle item content \rangle
       \end{keyans}
                                                                                                     \end{keyans*}
\end{enumext}
                                                                                               \end{enumext}
```

The \(\lambda keys\rangle\) set in the optional argument of the environment are the same (almost) as those of the enumext and enumext* environments and have higher precedence than those set by $\ensuremath{\texttt{setenumext}}[\langle keyans \rangle] \{\langle key = val \rangle\}$ or \setenumext[$\langle keyans^* \rangle$] { $\langle key = val \rangle$ }. If the *optional argument* is not passed or the $\langle keys \rangle$ are not set by \setenumext, the default values will be the same as the "second level" of the enumext environment with the difference in the $\langle label \rangle$ which will be set to label= \Alph^*).

6.4.1 The \item* in keyans and keyans*

```
\item* \item*
```

```
\interpretation \time \time
```

The \backslash item* and \backslash item* [$\langle content \rangle$] command "store" the current $\langle label \rangle$ set by label key next to the optional argument (content) in sequence and prop list {(store name)} set by save-ans key in the "first level" of the enumext or enumext* environments.

The starred argument '*' cannot be separated by spaces 'u' from the command, i.e. \item* and the optional argument does "NOT" support verbatim content. By design it is assumed that the \item* will only appear "once" within the environment.

Example

```
\begin{enumext}[save-ans=test,columns=2,show-ans=true]
  \item Text containing a question.
    \begin{keyans*}[nosep,columns=2]
      \item Choice
      \item* Correct choice
      \item Choice
      \item Choice
      \item Choice
    \end{keyans*}
  \item Text containing a question and image.
    \begin{keyans}[nosep,mini-env={0.4\linewidth}]
      \item Choice
      \item Choice
      \item Choice
      \item Choice
      \times [\langle note \rangle] Correct choice
      \miniright
      \includegraphics[scale=0.25]{example-image-a}
      Some text
    \end{keyans}
\end{enumext}
```

- 1. Text containing a question.
 - A) Choice
- * B) Correct choice
- C) Choice E) Choice
- D) Choice
- A) Choice

2. Text containing a question and image.

- B) Choice
- C) Choice
- D) Choice * E) [note] Correct choice

Some text

The environment keyanspic

```
keyanspic \begin{keyanspic} [\langle key = val \rangle] \anspic* [\langle content \rangle] \{\drawing or tabular\}\ \end{keyanspic}
```

The keyanspic environment is an "enumerated list" environment activated by the save-ans key that has the same configuration for "spacing" and \(\lambda label\rangle\) as the keyans environment that uses the \anspic command instead of \item. It is intended for placing drawings or tabular with $\langle label \rangle$ centered above or below in a single line or upper and lower layout style.

When the keyanspic environment is used without keys the \langle labels \rangle are centered below the drawings or tabular in a single line layout style.

A representation of the output can be seen in the figure ??.

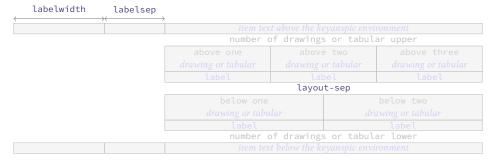

Figure 6: Representation of the keyanspic environment with layout-sty= $\{\langle 3, 2 \rangle\}$ in enumext.

This environment cannot be nested and must always be at the "first level" of the enumext environment, the \item command is disabled and keys cannot be set using \setenumext.

6.5.1 Keys for keyanspic

```
label-pos = \{\langle above \mid below \rangle\} default: below
```

Set the *position* of $\langle label \rangle$ to be centered "above" or "below" *drawings* or *tabular* when the \anspic command is executed.

```
label-sep = \{\langle rubber \ length \ | \ rigid \ length \rangle\}  default: internal adjustment
```

Set the *vertical spacing* between the $\langle label \rangle$ centered "above" or "below" and *drawings* or *tabular* when running the \anspic command.

```
layout-sty = \{\langle n^e upper, n^e lower \rangle\} default: not set
```

Set the *number* of *drawings* or *tabular* that will be distributed "upper" and "lower" within the environment when executing the \anspic command. The value must be passed in braces and if not set or the $\langle n^o \ lower \rangle$ is omitted the *drawings* or *tabular* will be put on a *single line*.

Set the *vertical separation* between the number of *drawings* or *tabular* placed at the "upper" and "lower" within the environment when executing the \anspic command. Internally adjusts the parsep value taken from the keyans environment.

Set the *vertical space* added to both the top and bottom of the environment. Internally adjust the value of topsep taken from keyans environment.

6.5.2 The command \anspic

```
\begin{tabular}{ll} $$ \anspic {\langle drawing\ or\ tabular \rangle} \\ \hline & \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} \\ \end{tabular} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \end{tabular} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \end{tabular} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \end{tabular} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle] {\langle drawing\ or\ tabular \rangle} $$ \anspic * [\langle content \rangle]
```

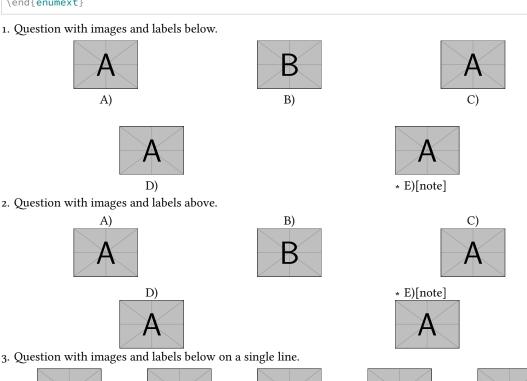

The \anspic command take three arguments, the *starred argument* '*' store the current $\langle label \rangle$ next to the *optional argument* $\langle content \rangle$ in *sequence* and *prop list* { $\langle store\ name \rangle$ } set by save-ans key.

The starred argument '*' cannot be separated by spaces ' \square ' from the command, i.e. \anspic* and the optional argument does "NOT" support verbatim content. By design it is assumed that the starred argument '*' will only appear "once" within the environment.

Example

```
\begin{enumext}[save-ans=test,show-ans,nosep]
  \item Question with images and labels below.
    \begin{keyanspic}[layout-sty={3,2}]
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}
  \item Question with images and labels above.
    \begin{keyanspic}[label-pos=above, layout-sty={3,2},layout-sep=0.25cm]
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}
```

```
\item Question with images and labels below on a single line.
    \begin{keyanspic}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-b}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic{\includegraphics[scale=0.15]{example-image-a}}
      \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
    \end{keyanspic}
\end{enumext}
```

🗬 Preferably use label-pos=above when creating a tagged PDF, this will preserve the reading order and navigation of the document.

6.6 **Printing stored content**

6.6.1 The command \getkeyans

 $\getkeyans \getkeyans \slashed store name : position \$

The command \getkeyans prints the "stored content" in prop list {\store name\}\ defined by save-ans key in the $\langle position \rangle$ returned by the show-pos key. The "stored content" can only be accessed after it is stored, if $\{\langle store\ name \rangle\}\$ does not exist the command will return an error.

The form taken by the argument {\store name : position\}} is the same as that used to generate the "internal label and ref" system when save-ref key are active, so to refer to a "stored content". For example \getkeyans{test:4} will return the "stored content" at position 4 of the environment in which the key save-ans=test was set.

6.6.2 The command \foreachkeyans

\foreachkeyans \foreachkeyans[$\langle key = val \rangle$] { $\langle store\ name \rangle$ }

The command \foreachkeyans goes through and executes the command \getkeyans on the contents in prop *list* { $\langle store\ name \rangle$ }. If you pass without options run \getkeyans on all contents in prop list { $\langle store\ name \rangle$ }.

Options for command

```
sep = \{\langle code \rangle\}
                                                                                                                                                                                           default: {; }
```

Establishes the *separation* between "each" $\{\langle content \rangle\}$ stored in *prop list* $\{\langle store\ name \rangle\}$. For example, you can use $sep=\{\{\{10pt]\}\}\$ for vertical separation of stored contents.

```
step = \{\langle integer \rangle\}
                                                                                                                                                                                      default: 1
```

name}. The value must be a $\langle positive integer \rangle$.

```
start = \{\langle integer \rangle\}
                                                                                                                                                                                   default: 1
```

Sets the position of the prop list {\store name}} from which execution will start. The value must be a \positive integer\.

```
stop = \{ \langle integer \rangle \}
```

Sets the position of the prop list {\store name\} from which execution will finish. The value must be a \square positive

```
before = \{\langle code \rangle\}
                                                                                                                                                                default: empty
```

Sets the $\{\langle code \rangle\}$ that will be executed $\langle before \rangle$ each $\{\langle content \rangle\}$ stored in *prop list* $\{\langle store\ name \rangle\}$. The $\{\langle code \rangle\}$ must be passed between braces.

```
after = \{\langle code \rangle\}
                                                                                                                                                                default: empty
```

Sets the $\{\langle code \rangle\}$ that will be executed $\langle after \rangle$ each $\{\langle content \rangle\}$ stored in *prop list* $\{\langle store\ name \rangle\}$. The $\{\langle code \rangle\}$ must be passed between braces.

```
wrapper = \{\langle code \{ \#1 \} \mid more \ code \rangle \}
```

Wraps the $\{\langle content \rangle\}$ stored in *prop list* $\{\langle store\ name \rangle\}$ referenced by $\{\#1\}$. The $\{\langle code \rangle\}$ must be passed between braces. For example $\foreachkeyans[wrapper={\mbox{$\mbox{[1em][1]}$}}]{\mbox{$\mbox{$\mbox{$\mbox{$}\mbox{$}\mbox{$}$}}}.$

6.6.3 The command \printkeyans

```
\printkeyans \printkeyans{\langle store name \rangle}
                        \printkeyans[\langle keys \rangle] \{\langle store\ name \rangle\}
                        \printkeyans*[\langle keys \rangle] \{\langle store\ name \rangle\}
```

The command \printkeyans prints "all stored content" in sequence {\sqrt{store name}\} defined by save-ans key placing this inside the enumext or enumext* environment if the starred argument '*' is used.

The "stored content" can only be accessed after it is stored in the sequence, if $\{\langle store\ name \rangle\}$ does not exist the command will return an error.

The optional argument allows managing the (keys) in the "first level" of the environment in which the "stored content" of the sequence { \(\store name \) \) will be printed, if the starred argument '*' is used it will be enumext* otherwise enumext.

The default values for the "first level" are the same as the default values for the enumext and enumext* environments along with the keys nosep, first=\small, font=\small and columns=2. For the inner levels of the environment enumext saved in the sequence $\{\langle store\ name \rangle\}$ the default values are the same as those established for the second, third and fourth levels plus the keys nosep, first=\small, font=\small. If the environment enumext* is saved within the sequence $\{\langle store\ name \rangle\}$ it will have the same default values plus the keys nosep, first=\small, font=\small.

Since the command encapsulates by default the enumext environment or the enumext* environment, we must take some considerations:

- If we execute \printkeyans*{\(\store name\)\)} and the sequence {\(\store name\)\)} already contains any enumext* environment an error will be returned as we cannot nest.
- If we execute \printkeyans*{\(\store name \)\)} and the sequence {\(\store name \)\)} contains any enumext environments, they will start with the $\langle keys \rangle$ set for the first level unless they are set in the *optional* argument or save-key is used to modify it.
- If we execute \printkeyans{\(\store\) name\\)} and the sequence {\(\store\) name\\)} contains any environment enumext*, they will start with the $\langle keys \rangle$ set by default unless they are set in the *optional argument* or save-key is used to modify it.

The default values for the "first level" of \printkeyans commands and \printkeyans* are established using \setenumext[$\langle print, 1 \rangle$]{ $\langle keys \rangle$ } and \setenumext[$\langle print^* \rangle$]{ $\langle keys \rangle$ }.

If we need to set the $\langle keys \rangle$ for the environment enumext "saved" in the sequence $\{\langle store\ name \rangle\}$ we will use \setenumext[$\langle print, level \rangle$] { $\langle keys \rangle$ } and if we need to set the $\langle keys \rangle$ for the environment enumext* "saved" in the sequence $\{\langle store\ name \rangle\}\$ we will use $\$ setenument $[\langle print\ , * \rangle]\$ $\{\langle keys \rangle\}$.

Example

```
\begin{enumext} [save-ans=sample,columns=1,show-pos=true,nosep,save-ref=true]
  \item Factor $3x+3y+3z$. \anskey{$3(x+y+z)}$
  \item True False
    \begin{enumext} [nosep]
      \item \LaTeX2e\ is cool? \anskey{Very True!}
    \end{enumext}
  \item Related to Linux
    \begin{enumext}[nosep]
      \item You use linux? \anskey{Yes}
```

```
\item Rate the following package and class
        \begin{enumext}[nosep]
          \item \texttt{xsim} \anskey{very good}
          \item \texttt{exsheets} \anskey{obsolete}
        \end{enumext}
    \end{enumext}
\end{enumext}
The answer to \ref{sample:4} is \getkeyans{sample:4} and the answers to
all the worksheets are as follows:
\printkeyans{sample}
```

1. Factor 3x + 3y + 3z.

```
[1] | 3(x+y+z)|
```

- 2. True False
 - (a) LaTeX2e is cool?
 - [2] | Very True!
- 3. Related to Linux
 - (a) You use linux?
 - [3] Yes
 - (b) Rate the following package and class

```
i.
    xsim
 [4] very good
ii.
    exsheets
 [5] obsolete
```

The answer to ?? is very good and the answers to all the worksheets are as follows:

```
1. 3(x+y+z)
2. (a) Very True!
3. (a) Yes
  (b) i.
          very good
                                                                                                         ×
          obsolete
                                                                                                         ×
```

Full examples

Here I will leave as an example some adaptations questions taken from TeX-SX. The examples are attached to this documentation and can be extracted from your PDF viewer or from the command line by running:

```
$ pdfdetach -saveall enumext.pdf
```

and then you can use the excellent arara1 tool to compile them.

Example 1

Adapted from the response given by Enrico Gregorio in Squares for answer choice options and perfect alignment to mathematical answers 🖹.

1. La velocità di $1{,}00 \times 10^2 \,\mathrm{m/s}$ espressa in km/h è: 3. La velocità di $1{,}00 \times 10^2$ m/s espressa in km/h è:

A 36 km/h. A 36 km/h. B 360 km/h. B 360 km/h. C 27,8 km/h. C 27,8 km/h. D $3,60 \times 10^{8} \, \text{km/h}$. D $3,60 \times 10^8 \, \text{km/h}$.

 1×10^{-10} m) e il fermi o femtometro (1 fm = $1 \times$ $10^{-15}\,\mathrm{m}$). Qual è la relazione tra queste due unità di

misura?

A $1 \text{ Å} = 1 \times 10^5 \text{ fm}.$ B $1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.$ $C 1 Å = 1 \times 10^{-15} \text{ fm}.$ D $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$

2. In fisica nucleare si usa l'angstrom (simbolo: 1 Å = 4. In fisica nucleare si usa l'angstrom (simbolo: 1 Å = 4) 1×10^{-10} m) e il fermi o femtometro (1 fm = $1 \times$ $10^{-15}\,\mathrm{m}$). Qual è la relazione tra queste due unità di misura?

A $1 \text{ Å} = 1 \times 10^5 \text{ fm}.$ B $1 \text{ Å} = 1 \times 10^{-5} \text{ fm}.$ $C 1 Å = 1 \times 10^{-15} \text{ fm}.$ D $1 \text{ Å} = 1 \times 10^3 \text{ fm}.$

1. B 2. A 3. B 4. A

(E) value

D) value

Example 3

- A "simple multiple choice" test 🖹.
- 1. First type of questions
 - A) value
 - C) value
- 2. Second type of questions
 - $2\alpha + 2\delta = 90^{\circ}$
 - II. $\alpha = \delta$

 - III. $\angle EDF = 45^{\circ}$
 - (A) I only
 - (B) II only
 - © I and II only
- 3. Third type of questions
 - (1) $2\alpha + 2\delta = 90^{\circ}$
 - (2) $\angle EDF = 45^{\circ}$
 - (A) value
 - (B) value
 - (C) value
- 4. Question with image and label below:

×.

:X:

×

- 5. Question with image on left side:
 - (A) value
 - (B) value
 - (C) value
 - (D) correct
 - (E) value

Test keys

- 1. B), x = 5
- 2. D
- 3. C, some note

- * 4. E, A duck
- * 5. D, other note

Example 4

A "simple worksheet" using ducks :)

Factor $x^2 - 2x + 1$

Factor 3x + 3y + 3z

The following questions need to be cuaqtified :)

True False

- (a) $\alpha > \delta$
- (b) LaTeX2e is cool?

- Related to Linux
- (a) You use linux?
- (b) Usually uses the package manager?

- (c) Rate the following package and class
 - i. xsim-exam
 - ii. xsim
 - iii. exsheets

The answer to ?? is $(x-1)^2$ and the answer to ?? is False.

Example 5

Adapted from the response given by Stephen in SAT like question format

Which choice best describes what happens in the passage?

- A) One character argues with another character who intrudes on her home.
- B) One character receives a surprising request from another character.
- C) One character reminisces about choices she has made over the years.
- D) One character criticizes another character for pursuing an unexpected course of action.

Which choice best describes what happens in the passage?

8 Tagged PDF examples

This section is just to show the compatibility of enumext with *tagged* PDF using lualatex. The attached files here are just for testing and are intended as examples and, in a way, to simplify the time of Matthew Bertucci (@mbertucci) when he sees this excellent package and adds it to The LaTeX Tagged PDF repository.

To compile the tests with lualatex-dev the packages multicol, scontents, unicode-math, geometry, graphicx and hyperref are required.

- The file <code>enumext-01.tex</code> contains the basic tests for the <code>enumext</code> and <code>enumet*</code> environments and the nesting between them plus the use of the <code>label</code>, <code>labelwidth</code>, <code>labelsep</code>, <code>ref</code>, <code>align</code> and <code>wrap-label</code> keys. .
- The file enumext-02.tex contains the tests for the enumext and enumet* environments and the support for minipage and multicols environments using the keys columns, columns-sep, mini-env, mini-right and \miniright command.
- The file <code>enumext-03.tex</code> contains the tests for the <code>enumext</code> and <code>keyanspic</code> environments activated by the <code>save-ans</code> key together with the <code>save-sep</code> and <code>save-ref</code> keys and the <code>\printkeyans</code> command. .
- The file <code>enumext-04.tex</code> contains the tests for the <code>\anskey</code> command and the <code>anskey*</code> environment activated by the <code>save-ans</code> key along with the <code>\getkeyans</code> and <code>\printkeyans</code> commands. .
- The file <code>enumext-05.tex</code> contains the tests for the environments keyans, keyans* and keyanspic activated by the key save-ans together with the keys no-store and show-ans and the commands <code>\setenumext</code>, <code>\setenumextmeta</code>, <code>\printkeyans</code> and <code>\foreachkeyans</code>.
- ◆ All examples have been checked using veraPDF together with ngpdf.

9 The way of non-enumerated lists

It is possible to use (or abuse) the enumext environment to mimic *non-enumerated* list environments such as itemize and description, clearly the $\langle keys \rangle$ to "store answers", the keyans and keyanspic environments lose their sense and it is not the focus of the main of this package, but, why not to do it?.

Here I leave as an example other uses of the enumext environment that can be helpful for specific purposes. The "trick" to generate these fake environments is set label= $\{\}$ or label= $\{\langle some \rangle\}$ and play with the list-indent, list-offset, font and wrap-label keys.

Fake itemize environment

Here we set the label key using the default settings in MTEX for the four levels \textbullet, \textendash, \textseriskcentered and \textperiodcentered together with the nosep key to reduce the vertical spaces in the left side example and set the label key in *mathematical mode* for the right side as \ast, \diamond, \circ and \star for the four levels together with the nosep key

• First level item

- Second level item

* Third level item

· Fourth level item

• First level item

- * First level item
 - ♦ Second level item
 - o Third level item
 - ★ Fourth level item
- * First level item

Fake description environment

Here we set label= $\{\}$ and list-indent=2.5em, font=\bfseries.

SomeThing A short one-line description.

This is an entry without a label.

Something A short *one-line* description text.

Something long A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

If we add list-indent=Opt you get widest style:

SomeThing A short one-line description.

This is an entry without a label.

Something A short *one-line* description text.

Something long A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

The small space at the beginning of the "unlabeled entry" corresponds to \labelsep and can be removed using \hspace{-\labelsep} at the beginning of the line.

Description indented by label

Here we set label={} and we will give a convenient value to labelsep and labelwidth, for example we can take as reference our *longest label* and pass it as value using:

```
\newlength{\descitemwd}
\settowidth{\descitemwd}{\textbf{Something long}}
```

and then use labelsep=4pt, labelwidth=\descitemwd, font=\bfseries.

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

The environment can be translated so that the $\langle labels \rangle$ are on the left margin calculating the value passed to the list-offset key, in this case it will be equal to the sum of the values set by the labelwidth and labelsep keys finally resulting as list-offset={-\descitemwd - 4pt}.

SomeThing A short one-line description.

Something

This is an entry without a label.

A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

If we add align=right it will look like this:

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something long A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

©2024 by Pablo González L

At this point we have used list-offset={-\descitemwd - 4pt} instead of list-offset={-\labelwidth - \labelsep}, this is because the parameters \labelwidth and \labelsep take the default values, as if we had not set label.

Description with multi-line labels

The label key does not accept *multiline material*, this is where the wrap-label and wrap-label* keys comes into play. Unlike the enumitem package, the align key only supports three options, so what we will do is create a command in the style \parleft of enumitem that allows us to place *multiline labels* using \parbox.

```
\NewDocumentCommand \labelbx { s +m }
    {%
    \IfBooleanTF{#1}
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
        {\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
}
```

Now we just need to set wrap-label*={\labelbx{#1}}.

SomeThing A short one-line description.

This is an entry without a label.

Something A short one-line description.

Something A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum **long** ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

SoMeThInG A much longer description. Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum **LoNg** ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

Final notes

The original implementation (if you can call it that) of the ideas that led to the creation of enumext were some macros using the enumerate[?] package for personal use created in early 2003, the code was quite questionable, but functional for these simple requirements.

With the great answers given by Christian Hupfer in Create a fake label ref using list and the answer given by David Carlisle in Change the use of label ref by data save in an array (list) I managed to create a more solid code than the original version, now using the <code>l3prop[?]</code> and <code>l3seq[?]</code> modules together with the <code>hyperref[?]</code> and <code>enumitem[?]</code> packages, which did the job, but with some limitations.

As time went by I took these limitations as a personal challenge which I called "reinventing the wheel", since there were packages and classes that did more or less what I was looking for, but did not fit my simple requirements. This "reinventing the wheel" finally ended up becoming enumext.

Why list environments?

The answer is simple, first I love the beauty of its syntax and many of what I had already written used the enumerate environment or lists created using the enumitem package. In my mind I thought: how complicated could it be to write a package that looked like enumitem? It seemed simple enough, of course I didn't have in mind the mess I was getting into working with list environments, minipage and adding support for the multicol and hyperref packages.

Of course, seeing the final result of the experiment "reinventing the wheel" I am quite satisfied.

Why not random questions and other utilities

The "random" type questions I love and hate them at the same time, although they simplify a lot the work when creating a multiple choice test, but you lose the beauty of typessetting a document with LETEX, that is to say the output does not always look as nice as it should, even if they are only alternatives these must follow a certain order when presented either numerical or presentation, that said handling that using nested lists is quite complicated so I do not classify to be implemented.

Why has it taken so long?

One of the setbacks, beyond my laziness, was including compatibility with *tagged PDF*. To be honest, it's something I never considered at any point, but I firmly believe that being able to create *accessible documents* provides a great opportunity in the world of mathematics education. From my perspective as a *high school* teacher, beyond theorems and deep mathematics, the use of exercise lists is one of the most common things. Being able to open the way to work in parallel with those who have different abilities is really important and I regret not having looked into this in the past. I hope that enumext serves this purpose and inspires more users and authors to follow this path.

13 Implementation

The most recent publicly released version of enumext is available at CTAN: https://www.ctan.org/pkg/enumext. While general feedback via email is welcomed, specific bugs or feature requests should be reported through the issue tracker: Ohttps://github.com/pablgonz/enumext/issues.

The documentation presented here is far from professional, it contains a lot of obvious information that to the eye of a TeXpert are superfluous, but, after so many years developing this project is the only way to remember what does what.

13.1 General conventions

Variables containing i, ii, iii and iv are associated by level with the enumext environment, variables containing v are associated with the keyans environment, variables containing vi are associated with the keyanspic environment, variables containing vii are associated with the enumext* environment and variables containing viii are associated with the keyans* environment.

To simplify writing and documentation some variables and functions that are common to the different levels of the environments are described using a capital "X".

The temporary function __enumext_tmp:n is used in different parts of the package code for variable creation or execution of other functions that are grouped into this one.

All variables and functions defined in this package are private and are NOT intended to work or be used by another package or module.

13.2 Initial set up

Start the DocStrip guards.

```
*package
```

Identify the internal prefix (LTFX3 DocStrip convention) for l3doc class.

```
2 (@@=enumext)
```

13.3 Declaration of the package

First we will make sure we have a minimum (super updated) version of ETFX to work correctly.

```
3 \NeedsTeXFormat{LaTeX2e}[2024-06-01]
```

Now declare the enumext package.

```
_{\text{4}} \ProvidesExplPackage {enumext} {2024-10-13} {1.0} {Enumerate exercise sheets}
```

Finally check if the multicol and scontents packages are loaded, if not we load it.

```
5 \hook_gput_code:nnn {begindocument} {enumext}
      \IfPackageLoadedTF { multicol }
        {
          \msg_info:nnn { enumext } { package-load } { multicol }
        }
        {
          \msg_info:nnn { enumext } { package-not-load } { multicol }
          \RequirePackage{multicol}[2024-05-23]
        }
      \IfPackageLoadedTF { scontents }
        {
          \msg_info:nnn { enumext } { package-load } { scontents }
        }
18
        {
          \msg_info:nnn { enumext } { package-not-load } { scontents }
          \RequirePackage{scontents}
        }
22
23
```

13.4 Definition of variables

Variables that do not appear in this section are created by means of \keys_define:nn or some function described below.

```
\l_enumext_level_int
\l_enumext_level_h_int
\l_enumext_anskey_level_int
\l_enumext_keyans_level_int
\l_enumext_keyans_level_h_int
\l_enumext_keyans_pic_level_int
```

```
Integer variables will control the nesting levels of the environments and \anskey command.

24 \int_new:N \l__enumext_level_int
```

```
25 \int_new:N \l__enumext_level_hint
26 \int_new:N \l__enumext_anskey_level_int
27 \int_new:N \l__enumext_keyans_level_int
28 \int_new:N \l__enumext_keyans_level_h_int
29 \int_new:N \l__enumext_keyans_pic_level_int
```

(End of definition for \l__enumext_level_int and others.)

©2024 by Pablo González L

```
\l__enumext_starred_bool Internal variables used by functions \__enumext_is_not_nested:, \__enumext_is_on_first_level:
    \g__enumext_starred_bool
                             and \_enumext_keyans_name_and_start: (§??).

31/??

```
(End of definition for \l_enumext_item_starred_X_bool and others.)
```

\c__enumext_all_envs_clist

An internal clist-var variable to run with __enumext_tmp:n.

```
194 \clist_const:Nn \c__enumext_all_envs_clist
      {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv},
      {keyans}{v}, {enumext*}{vii}, {keyans*}{viii}
    }
```

(End of definition for $\c_enumext_all_envs_clist$.)

13.5 Some utility functions

\seq_use:NV

\keys_precompile:neN Non-standard kernel variants used by the \printkeyans command (§??) and \foreachkeyans command

```
\cs_generate_variant:Nn \keys_precompile:nnN { neN }
200 \cs_generate_variant:Nn \seq_use:Nn { NV }
```

(End of definition for \keys_precompile:neN and \seq_use:NV.)

__enumext_at_begin_document:n

A internal "hook" function used for copying plain list and minipage environments definition and hyperref detection.

```
201 \cs_new_protected:Npn \__enumext_at_begin_document:n #1
  {
      \hook_gput_code:nnn {begindocument} {enumext} { #1 }
```

(End of definition for $_=$ enumext_at_begin_document:n.)

__enumext_after_env:nn \ enumext before env:nn

A internal "hook" functions for execute code mini-right and mini-right* keys outside the enumext* and keyans* environments and print check-ans outside the enumext and enumext* environments.

```
205 \cs_new_protected:Npn \__enumext_after_env:nn #1 #2
      \hook_gput_code:nnn {env/#1/after} {enumext} {#2}
208
   }
209 \cs_new_protected:Npn \__enumext_before_env:nn #1 #2

357
```

(End of definition for $_$ enumext_reset_global_vars: and others.)

__enumext_log_global_vars:
__enumext_log_answer_vars:

The function __enumext_log_global_vars: will be passed to the function __enumext_execute_-after_env: and write to the .log file the number of elements saved in the *prop list* and *sequence* created by the save-ans key along with the value of the integer variable created for the resume key.

The function __enumext_log_answer_vars: will be passed to the function __enumext_execute_-after_env: and write to the .log file the number of items and answers along with the difference between them

 $(\textit{End of definition for } \c enumext_log_global_vars: and \c enumext_log_answer_vars:.)$

13.6 Copying list and minipage environments

The list environment provided by LTFX has the following plain form:

```
\label{eq:continuous} $$ \left( arg \ one \right) \right. \left( arg \ two \right) \right. $$ \left( opt \right) \right] $$ \end{superseq} $$ \end{superseq} $$ \left( opt \right) \right] $$ \end{superseq} $$ \end{superseq} $$ \left( opt \right) \right] $$ \end{superseq} $$ \end{superseq} $$ \left( opt \right) \right] $$ \end{superseq} $$ \left( opt \right) \right] $$ \end{superseq} $$ \end{sup
```

And minipage environment provided by LATEX has the following (simplified) plain form:

```
\label{eq:continuous_pos_loss} $$\min[age[\langle pos\rangle][\langle height\rangle][\langle inner-pos\rangle]\{\langle width\rangle\} $$ \langle internal\ implement\rangle$$ $$\endminipage
```

As a precaution we copy them using __enumext_at_begin_document:n in case any package redefines the list environment or a related command.

◆ For compatibility with tagged PDF we should use \NewCommandCopy and not \cs_new_eq:NN for \item. When tagged PDF is active \item is redefined using ltcmd (see latex-lab-block[?]).

```
\__enumext_start_list:nn
\__enumext_stop_list:
\__enumext_item_std:w
\__enumext_minipage:w
\__enumext_endminipage:
```

The functions __enumext_start_list:nn and __enumext_stop_list: correspond to copies of \list and \endlist from plain definition of list environment, the function __enumext_item_std:w is a copy of the \item command.

```
373 \__enumext_at_begin_document:n
374 {
375 \cs_new_eq:NN \__enumext_start_list:nn \list
376 \cs_new_eq:NN \__enumext_stop_list: \endlist
©2024 by Pablo González L
```

The functions __enumext_minipage:wand __enumext_endminipage: correspond to copies of \minipage and \endminipage from plain definition of minipage environment.

```
379 \__enumext_at_begin_document:n
380 {
381    \cs_new_eq:NN \__enumext_minipage:w \minipage
382    \cs_new_eq:NN \__enumext_endminipage: \endminipage
383 }
```

(End of definition for __enumext_start_list:nn and others.)

13.7 Compatibility with hyperref and footnotehyper

__enumext_after_hyperref:
__enumext_hypertarget:nn
__enumext_phantomsection:

First we define the necessary rules using "hooks" to determine if the hyperref package is loaded.

```
3%4 \hook_gput_code:nnn { begindocument } { enumext } { \__enumext_after_hyperref: }
3%5 \hook_gset_rule:nnnn { begindocument } { enumext } { after } { hyperref }
```

The function __enumext_after_hyperref: sets the state of the boolean variable \l__enumext_-hyperref_bool to "true" if the package is loaded. At this point we will use the public macro \IfHyperBoolean to determine if the hyperfootnotes=true key is present, if so, we set the state of the boolean variable __enumext_footnotes_key_bool to "true".

```
386 \cs_new_protected:Nn \__enumext_after_hyperref:
387
    {
       \IfPackageLoadedTF { hyperref }
388
           \msg_info:nnn { enumext } { package-load } { hyperref }
           \bool_set_true:N \l__enumext_hyperref_bool
           \IfHyperBoolean{hyperfootnotes}
393
                \bool_set_true:N \l__enumext_footnotes_key_bool
394
             }
395
             {
396
         }
397
         {
            }
```

If the state of the variable \l__enumext_footnotes_key_bool is true we will check if the package footnotehyper is loaded, in case it is not present, we will set the value of \l__enumext_footnotes_-key_bool to false and we will redefine \footnote.

```
\bool_if:NT \l__enumext_footnotes_key_bool

\text{
IfPackageLoadedTF { footnotehyper }

\text{
}

\msg_info:nnn { enumext } { package-load } { footnotehyper }

\text{
}

\text{
}

\text{
}

\text{
}

\text{
bool_set_false:N \l__enumext_footnotes_key_bool}

}

\text{
}
```

The functions __enumext_hypertarget:nn and __enumext_phantomsection: correspond to the internal copies of \hypertarget and \phantomsection. If the boolean variable \l__enumext_hyperref_bool is false the functions __enumext_hypertarget:nn and __enumext_phantomsection: will be disabled.

 $(\textit{End of definition for } \verb|_=enumext_after_hyperref:|, \verb|_=enumext_hypertarget:|nn|, and \verb|_=enumext_phantomsection:|)|$

__enumext_newlabel:nn

The function __enumext_newlabel:nn write the information to the .aux file when using the save-ref key. The arguments taken by the function are:

```
#1: \l_enumext_newlabel_arg_one_tl
#2: \l_enumext_newlabel_arg_two_tl
```

©2024 by Pablo González L

The trick here is to manage the number of arguments passed to \newlabel{#1}{#2} according to the presence of the hyperref package.

```
\cs_new_protected:Npn \__enumext_newlabel:nn #1 #2
       \protected@write \@auxout { }
        {

13.8 Internal redefining \footnote command

To keep the correct numbering of \footnote and to make it work correctly in the enumext* and keyans* environments and mini-env key it is necessary to redefine the \footnote command. This implementation is adapted from the answer given by Clea F. Rees (@cfr) in footnotes in boxes compatible with hyperref.

Redefinition of the \footnote command using \footnotetext and \footnotemark for the mini-env key in the enumext and keyans environments.

```
_{434} \cs_new_protected:Nn \__enumext_footnotetext:nn
435
       \footnotetext[#1]{#2}
    }
438 \cs_new_protected:Nn \__enumext_renew_footnote:
       \RenewDocumentCommand \footnote { o +m }
440
441
           \tl_if_novalue:nTF {##1}
442
             {
443
               \stepcounter{footnote}
444
                \int_gset_eq:Nc \g__enumext_footnote_standar_int { c@footnote }
445

13.9 The internal minipage environment

__enumext_internal_mini_page:
 __enumext_mini_env*

The function __enumext_internal_mini_page: creates a internal __enumext_mini_page environment (custom version of minipage) setting the \if@minipage switch to "false" to allow spaces at the "above" of the environment, plus we will add \skip_vertical:N \c_zero_skip to maintain alignment on "top" in the first part and \skip_vertical:N \c_zero_skip in the second part to allow spaces "below". This environment will be used internally by the mini-env key, it is NOT documented in the user interface and is for internal use only. Within this environment we redefine \footnote to make them look the same as if they were elsewhere in the document. This function is passed to the function __enumext_safe_exec: in the enumext environment definition (§??) and __enumext_safe_exec_vii: in the enumext* environment definition (§??)

```

```

39/??

13.11 Definition of counters

__enumext_define_counters:Nn
enumXii
enumXiii
enumXivi
enumXvv
enumXvv
enumXvvi
enumXvviii

To create the necessary "counters" we must first make sure that they are not already defined by the user or a package such as enumitem, otherwise a error will be returned and the package loading will be aborted. The arguments taken by the function are:

#1: A token list \l__enumext_counter_X_tl for "store" the counter's name.

#2: The counter's name.

The counters created here are enumXi, enumXii, enumXiii and enumXiv for enumext environment, enumXv for keyans environment, enumXvi for keyanspic environment, enumXviii for enumext* and enumXviii for the keyans* environments.

```
592 \__enumext_define_counters:Nn \l__enumext_counter_i_tl { enumXi }
593 \__enumext_define_counters:Nn \l__enumext_counter_ii_tl { enumXii }
594 \__enumext_define_counters:Nn \l__enumext_counter_iii_tl { enumXiii }
595 \__enumext_define_counters:Nn \l__enumext_counter_iv_tl { enumXiv }
596 \__enumext_define_counters:Nn \l__enumext_counter_v_tl { enumXv }
597 \__enumext_define_counters:Nn \l__enumext_counter_vi_tl { enumXvi }
598 \__enumext_define_counters:Nn \l__enumext_counter_vii_tl { enumXvii }
599 \__enumext_define_counters:Nn \l__enumext_counter_viii_tl { enumXviii }
```

(End of definition for __enumext_define_counters: Nn and others.)

13.12 Definition of labels

This part of the code is inspired by the enumitem package. The idea is to be able to access the counters using \arabic*, \Alph*, \alph*, \Roman* and \roman* to use them in the label key.

__enumext_register_counter_style:Nn

These $\langle counters \rangle$ will be used as default $\langle labels \rangle$ if the label key is not used for the different levels of the enumext, enumext*, keyans and keyans* environments, so it is necessary to get a default value for labelwidth from these $\langle labels \rangle$ at the same time.

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_register_counter_style:Nn.)$

__enumext_label_width_by_box:Nn
__enumext_label_width_by_box:cv

The function __enumext_label_width_by_box: Nn set the default \labelwidth using a box width if no labelwidth key is passed.

```
610 \cs_new_protected:Npn \__enumext_label_width_by_box:Nn #1 #2
611 {
612    \hbox_set:Nn \l__enumext_label_width_by_box {#2}
613    \dim_set:Nn #1 { \box_wd:N \l__enumext_label_width_by_box }
614 }
615 \cs_generate_variant:Nn \__enumext_label_width_by_box:Nn { cv }
```

 $(\textit{End of definition for } \verb|_-enumext_label_width_by_box:Nn.)$

__enumext_label_style:Nnn
\ enumext label style:cvn

The function __enumext_label_style: Nnn is used by the label key to creates the variables containing the $\langle label\ style \rangle$ and will allow to use \arabic*, \Alph*, \alph*, \Roman* and \roman* as arguments. It loops through the defined counter styles in \g__enumext_counter_styles_tl (\arabic, \alph, \Alph, \roman, and \Roman) for example, looking for \roman* and replacing that by \roman{\cunter}, and doing the same for the \g__enumext_widest_label_tl to keep both in sync.

```

13.14 Setting label and ref keys

The implementation of the keys label and ref are part of the core of the package enumext, here the default values for $\langle label \rangle$, the value of the variables $\l_enumext_label_X_tl$, the default values for $\l_enumext_label_X_tl$, the default values for $\l_enumext_label_X_tl$, and the "label and ref" system.

13.14.1 Define and set label and ref keys for enumext environment

label Here we set the default $\langle labels \rangle$ of the four levels of enumext environment, along with the default value for

```
labelwidth key and ref key.
  \l enumext label i tl
                          715 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
 \l__enumext_label_ii_tl
\l__enumext_label_iii_tl
                                 \keys_define:nn { enumext / #1 }
 \l__enumext_label_iv_tl
                                     label .code:n
                                                           \__enumext_label_style:cvn { l__enumext_label_#2_tl }
                                                             { l__enumext_counter_#2_tl } {##1}
                                                           \dim_set_eq:cN { l__enumext_labelwidth_#2_dim }
                                                             \l__enumext_current_widest_dim
                                                        },
                          724
                                     label .initial:n = #3,
                                     label .value_required:n = true,
                                     ref
                                                      = \__enumext_standar_ref:n {##1},
                                     ref
                                           .value_required:n = true,
                                   }
                          ©2024 by Pablo González L
```

(End of definition for label and others.)

__enumext_standar_ref:n
__enumext_standar_ref:

The __enumext_standar_ref:n first we will pass the key argument to \l__enumext_ref_key_arg_tl and we will analyze its state, if it is not *empty* we will make a copy of the current counter in \l__enumext _-ref_the_count_tl and we will execute the function __enumext_regex_counter_style: which will return the modified \l__enumext_ref_key_arg_tl and we make the value of \l__enumext_ref_the_count_tl the same as that \l__enumext_the_counter_X_tl which contains \theenumX and finally we set \l__enumext_renew_the_count_X_tl with the renewed command.

```
735 \cs_new_protected:Npn \__enumext_standar_ref:n #1
736
       \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
       \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
738
739
        {
           \msg_error:nnn { enumext } { key-ref-empty } { enumext }
740
        }
741
         {
742
           \tl_set_eq:Nc
743
             \l__enumext_ref_the_count_tl { l__enumext_counter_ \__enumext_level: _tl }
           \__enumext_regex_counter_style:
745
           \tl_set_eq:Nc
             \l__enumext_ref_the_count_tl { l__enumext_the_counter_ \__enumext_level: _tl }
           \tl_put_right:ce { l__enumext_renew_the_count_ \__enumext_level: _tl }
748
               \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V \l__
        }
752
753
```

Finally the function __enumext_standar_ref: will execute the modification for the reference system in the second argument of the environment definition enumext.

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_standar_ref:n\ and\ \verb|_-enumext_standar_ref:|)$

13.14.2 Define and set label and ref keys for enumext* and keyans* environments

label Here we set the default $\langle labels \rangle$ for enumext* and keyans* environments, along with the default value for ref labelwidth key and ref key.

```

 $(\textit{End of definition for $\setminus_$ enumext_keyans_ref:n and $\setminus_$ enumext_keyans_ref:.)}$

13.15 Setting start, start* and widest keys

__enumext_start_from:NNn
__enumext_start_from:ccn
__enumext_start_from:cce

The function __enumext_start_from: NNn used by start and start* keys take three arguments:

```
#1: \l__enumext_label_X_tl
#2: \l__enumext_start_X_int
#3: \langle integer or string \rangle
```

(End of definition for label and others.)

The first argument of this function are the "counter style" set by label key, the second argument is returned by the function, the third argument can be an $\langle integer \rangle$ or $\langle string \rangle$ of the form \Alph , \alph , \alph , \alph , \alph , \alph or \alph . This effectively allows \alph allows \alph or \alph to be used.

```

   { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
    { 2.0pt plus 1.0pt minus 1.0pt }
```

(End of definition for topsep and others.)

13.17 Setting base-fix key

When nesting starting right after \item (without material between them) there is a problem with the alignment of the *baseline* between the two environments. One way to get around this problem is to place \mode_leave_vertical: apply \vspace{-\baselineskip} and set \topsep=0pt for the "first level" of the nested enumext environment.

__enumext_nested_base_line_fix:

We define the key base-fix only for the "first level" of enumext environment.

The function __enumext_nested_base_line_fix: passed to the __enumext_parse_keys:n function in the definition of the enumext environment (§??) will be responsible for applying the baseline correction and adjusting the \langle keys \rangle for the enumext environment and the \printkeyans with starred argument '*' (§??). We will first implement the function code from the user side of the base-fix key, that is, only the user knows when it is necessary to apply it within the document in which case the variable \l__enumext_print_-keyans_star_bool set by the \printkeyans command is false and the variable \l_enumext_base_-line_fix_bool is true.

```
979 \cs_new_protected:Nn \__enumext_nested_base_line_fix:
080
       \bool_lazy_all:nT
081
982
         {
           { \bool_if_p:N \l__enumext_starred_first_bool }
983
           { \bool_if_p:N \l__enumext_base_line_fix_bool }
984
           { \bool_not_p:n { \l__enumext_print_keyans_star_bool } }
985
           \mode_leave_vertical:
           \vspace { -\dim_eval:n { \baselineskip + \parsep } }
        }
©2024 by Pablo González L
```

listparindent

When we are running the \printkeyans command with the *starred argument* '*' the variable \l_-enumext_print_keyans_star_bool is true and we can run a simplified version of \vspace using \skip_vertical:n.

Finally we set the values of the keys topsep, above and above* for the "first level" of enumext environment equal to Opt and set the variable \l_enumext_base_line_fix_bool to false.

(End of definition for base-fix and __enumext_nested_base_line_fix:.)

13.18 Setting keys for horizontal spaces

\cs_set_protected:Npn __enumext_tmp:nn #1 #2

itemindent Define and set itemindent, rightmargin, listparindent, list-offset and list-indent keys for rightmargin enumext, enumext*, keyans and keyans* environments.

```
list-offset
list-indent
                   \keys_define:nn { enumext / #1 }
            1007
                                     .dim_set:c = { l__enumext_fake_item_indent_#2_dim },

13.21 Setting keys for multicols and minipage

mini-env mini-sep The default value of the columns-sep key is handled by the state of the boolean variable \l__enumext_columns_sep_X_bool which is handled in the internal definition of the enumext and keyans environments.

Define and set mini-env, mini-sep, columns-sep and columns keys for enumext, enumext*, keyans and keyans* environments.

```
mini-sep
                        .initial:n = 0.3333em,
           mini-sep
                        .value_required:n = true,
           columns-sep .dim_set:c = { l__enumext_columns_sep_#2_dim },
           columns-sep .value_required:n = true,
1200
                        .int_set:c = { l__enumext_columns_#2_int },
           columns
           columns
                        .initial:n = 1,
                        .value_required:n = true,
           columns
1203
         }
1204
1205
  \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

For enumext* and keyans* environments the situation is a bit different, the command \miniright is not available, so we will add the keys mini-right and mini-right* to implement support for minipage environment.

```
\cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1208
     {
       \keys_define:nn { enumext / #1 }
1200
         {
1210
           mini-right .tl_gset:c = { g__enumext_miniright_code_#2_tl },
1211
           mini-right .value_required:n = true,
           mini-right* .code:n
                                       \bool_gset_true:c { g__enumext_minipage_center_#2_bool }
1214
                                       \keys_set:nn { enumext / #1 } { mini-right = {##1} }
                                     },
           mini-right* .value_required:n = true,
         }
1218
1210
1220 \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }
```

(End of definition for mini-env and others.)

13.22 Adjustment of vertical spaces for multicols

When nesting a "list environment" inside the multicols environment, the values of the "vertical spaces" are lost, basically the multicols environment takes control over them. Graphically it can be seen like in the figure ??.

Figure 7: Representation of the vertical space in multicols for a nested level.

To keep the desired spaces *above* and *below* in the "list environment" (\topsep + [\partopsep]) it is necessary to "adjust" the spaces added by the multicols environment. The most appropriate option in this case is to use a "context sensitive" vertical space with \addvspace.

I should make it clear that the implementation here is a "bit questionable". At first glance doing \multicolsep=\topsep seemed right, but the results were not always as expected. An almost imperceptible detail is that in some cases the \itemsep values of are "stretched", possibly due to the use of \raggedcolumns and this affects the lower space when closing the environment, which is "smaller" than expected. My attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

13.22.1 Adjustment of vertical spaces for multicols in enumext

__enumext_multi_set_vskip:

The function __enumext_multi_set_vskip: will take care of determining the "adjusted spaces" that we will apply "above" and "below" the multicols environment in enumext.

We will set the default values taking into account that $T_{E}X$ is in $\langle horizontal \ mode \rangle$, then we will make the settings for the $\langle vertical \ mode \rangle$ in which $\langle partopsep \ comes$ into play.

Set the values of \l__enumext_multicols_above_X_skip and \l__enumext_multicols_below_X_skip equal to the value of \topsep in the *current level*.

```
\__enumext_add_pre_parsep:
1232 }
(End of definition for \__enumext_multi_set_vskip:.)
```

__enumext_add_pre_parsep:

The function $_$ _enumext_add_pre_parsep: "adjusted" the value of $_$ _enumext_multicols_above_-X_skip detecting the value of $_$ parsep from the previous level. This is necessary since $_$ parsep from the previous level affects the vertical spaces.

```

13.23 Adjustment of vertical spaces for minipage

When nesting a "list environment" within the minipage environment, the values of the "vertical spaces" are lost. Graphically it can be seen like in the figure ??.

Figure 8: Representation of the minipage spacing adjustment for a nested level.

Since we want to keep the "left" and "right" environments "aligned on top", preserving the \baselineskip and keep the desired "spaces" (\topsep + [\partopsep]) it is necessary to "adjust" the "vertical spaces" for minipage environments.

Here there are several complications that we must circumvent, the minipage environment eliminates the "top" spaces, the multicols environment can be nested in the minipage environment, the "top" and "bottom" spaces are affected when topsep=%pt and to this is added the \partopsep parameter that comes into action according to whether TEX is in \(\lambda \text{horizontal mode} \rangle \text{ vertical mode} \rangle. \) Depending on these cases, small adjustments must be made using \vspace and \addvspace to obtain the "desired vertical spacing".

Again I must make clear that the implementation here is a "bit questionable", but hunting the spaces (glue) produced by the minipage environment is quite complicated, even more if multicols it is nested. The setting of the values was more "trial and error" (aprox to \strutbox), using the help of the lua-visual-debug[?] package, again my attempts to find the correct values using \showoutput and \showboxdepth absolutely failed.

13.23.1 Adjustment of vertical spaces for minipage in enumext

__enumext_minipage_set_skip:
\ enumext minipage add space:

The function __enumext_minipage_set_skip: will take care of determining the "adjust" spaces that we will apply "above" and "below" the __enumext_mini_page environment in enumext.

First we will set the value of \l__enumext_minipage_right_skip equal to \topsep, then we will see if TeX is in \(\frac{vertical mode} \) and we will add \(\partopsep \), followed by that we set the value of \\l__enumext_minipage_after_skip.

```
Sail \cs_new_protected:Nn \__enumext_minipage_set_skip:

\skip_set:Nn \l__enumext_minipage_right_skip

\scales 2024 by Pablo González L
```

We will adjust the values \l__enumext_multicols_above_X_skip and \l__enumext_multicols_below_X_skip and call the function __enumext_pre_itemsep_skip:.

```
\skip_set_eq:cN
\[ \lambda_enumext_multicols_above_ \__enumext_level: _skip \ \l__enumext_minipage_right_skip \ \skip_set_eq:cN
\[ \lambda_enumext_multicols_below_ \__enumext_level: _skip \ \lambda_enumext_minipage_right_skip \ \__enumext_pre_itemsep_skip:
```

If the environment multicols is active, we set \topskip=0pt and then we make \multicolsep have the same value as \l_enumext_multicols_above_X_skip.

```
\int_compare:nNnT
{ \int_use:c { l__enumext_columns_ \__enumext_level: _int } } > { 1 }

13.23.4 The command \miniright

The command \miniright will close the __enumext_mini_page environment on the "left side", open the __enumext_mini_page environment on the "right side" adding the adjusted vertical space. By default we will add \centering when starting the "right side" environment. The starred argument '*' inhibits the use of \centering command i.e. the usual ETEX justification is maintained in the __enumext_mini_page on the "right side".

\miniright First we will perform some checks to prevent the command from being executed outside the enumext environment or somewhere inappropriate then we will call the internal functions to execute it in the enumext and keyans environments.

```

__enumext_mini_right_cmd:n

The function __enumext_mini_right_cmd:n takes as argument the *starred* '*' of the \miniright command in the enumext environment. We check if the mini-env key is active via the variable \l__enumext_-minipage_right_X_dim, if so we close the multicols environment with the __enumext_mini_page environment on the "left side", then we open the __enumext_mini_page environment on the "right side", apply our adjusted "vertical spaces", followed by adding the \centering command when the starred argument '*' is not present and set zero \g__enumext_minipage_stat_int, otherwise we return an error.

```

13.24 Setting above and below keys

While having controlled the *vertical spaces* within the enumext and keyans environments when using the columns or mini-env keys, sometimes the "*vertical spaces above*" or "*vertical spaces below*" the environments are not as expected and it is necessary to be able to apply a "*fine correction*" to these. As I have not been able to correct these *glitches*, the best option is to leave a couple of $\langle keys \rangle$ dedicated to this purpose, in this case it is best to use \vspace or \vspace* when convenient.

Define above, above*, below and below* keys for enumext and keyans environments.

```
above*
       1714 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
 below
below*
               \keys_define:nn { enumext / #1 }
       1716
                   above .skip_set:c = { l__enumext_vspace_above_#2_skip },
                   above .value_required:n = true,
                   above* .code:n
                                      = \bool_set_true:c { l__enumext_vspace_a_star_#2_bool }
       1720
                                         \keys_set:nn { enumext / #1 } { above = {##1} },
                   above* .value_required:n = true,
       1722
                   below .skip_set:c = { l__enumext_vspace_below_#2_skip },
                   below .value_required:n = true,
       1724
                                       = \bool_set_true:c { l__enumext_vspace_b_star_#2_bool }
                                         \keys_set:nn { enumext / #1 } { below = {##1} },
       1726
                   below* .value_required:n = true,
                 }

13.25 Setting series, resume and resume* keys

©2024 by Pablo González L

The series key is responsible for the whole process of the resume and resume* keys. The idea behind this is to be able to absorb the $\langle keys \rangle$ passed to the *optional argument* of the "first level" of the environments enumext and enumext*, but, discarding some specific $\langle keys \rangle$. This implementation is adapted directly from the code provided by Jonathan P. Spratte (@Skillmon) in chat-TeX-SX

```
resume* .value_forbidden:n = true,
1834
         }
1835
1836 \clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }
```

(End of definition for series, resume, and resume*.)

13.25.1 Internal functions for series key

enumext filter series:n \ enumext filter series pair:nn

The function __enumext_filter_series:n will be in charge of filtering the $\langle keys \rangle$ we want to store where __enumext_filter_series_key:n {#1} represents the optional argument passed to the environment.

```
1837 \cs_new:Npn \__enumext_filter_series:n #1
1838
        \use:e
1839
1840
             \keyval_parse:NNn
1841
                \__enumext_filter_series_key:n
1842
                \__enumext_filter_series_pair:nn {#1}
1843
           }
1844
1845
```

The function $\ _$ enumext_filter_series_key:n will be responsible for filtering the $\langle keys \rangle$ that are passed "without value" by excluding the resume, resume* and base-fix keys.

```
\cs_new:Npn \__enumext_filter_series_key:n #1
     {
1847
        \str_case:nnF {#1}
1848
          {
1849
            { resume } {} { resume* } {} { base-fix } {}
1850
          }
          { , { \exp_not:n {#1} } }
1853
```

The function __enumext_filter_series_pair:nn will be responsible for filtering the $\langle keys \rangle$ that are passed "with value" by excluding the series, resume, start, start*, save-ans and save-key keys.

```
\cs_new:Npn \__enumext_filter_series_pair:nn #1#2
1855
       \str_case:nnF {#1}
1856
         {
1857
            { series } {} { resume } {} { start } {}
            { start* } {} { save-ans } {} { save-key } {}
           , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
1861
1862
```

 $(\mathit{End}\ of\ definition\ for\ \verb|_=numext_filter_series:n,\ \verb|_=numext_filter_series_+ | filter_series|,\ and\ \verb|_=numext_filter_series_+ | filter_series|.$ pair:nn.)

__enumext_parse_series:n __enumext_resume_last:n The function $\ensuremath{\mbox{\tt _enumext_parse_series:n}}$ will be responsible for storing the filtered $\langle keys \rangle$ in the global variable \g__enumext_series_\(\langle\) series name\(\rangle\)_tl along with the creation of the integer variable \g_enumext_series_\(\series name\)_int when the key is passed as an argument; otherwise, it will check the state of the boolean variable \l__enumext_resume_active_bool set by the keys resume and resume* and will call the function __enumext_resume_last:n.

🥑 The value of boolean variable \l__enumext_resume_active_bool is set to true by the function __enumext_resume_counter:n which is used by the keys resume and resume*, in this case we must Make sure it is set to false so that it does not overwrite the default filtered $\langle \textit{keys} \rangle$. This function is passed to the function __enumext_parse_keys:n in the enumext environment definition (§??) and to the function __enumext_parse_keys_vii:n in the enumext* environment definition (§??).

```

13.25.3 Internal functions for resume key

__enumext_resume_series:n

The function __enumext_resume_series:n will handle the argument passed to the resume key in enumext and enumext* environments. If the key is passed without value the function __enumext_resume_counter: is executed which will set the counter according to the numbering of the last enumext or enumext* environments in which $series=\{\langle series\ name\rangle\}$ key is not present, if the save-ans key is active it will set the counter according to the value of the integer variable created by that key, otherwise it will verify that the \g__enumext_series_ $\langle series\ name\rangle$ _tl variable set by the series key exists, if so it will pass these keys to the first level of the environment, otherwise it will return an error.

           \int_new:c { g__enumext_resume_ \l__enumext_store_name_tl _int }
2126
         }
2128
```

 $(\textit{End of definition for } \verb|_-enumext_storing_set:n and \verb|_-enumext_storing_exec:|)$

13.26.3 The check answer mechanism

The internal mechanism for "checking answers" follows this logic:

If the line begins with \item or \item* and does NOT open a nested environment, each \item or \item* must contain a single execution of the \anskey command, i.e. the counter of the executions of the \anskey command must be equal to the counter associated with the sum of executions of \item and \item*.

If the line begins with \item or \item* and opens a nested environment each \item or \item* in the nested environment must have a *single* execution of the \anskey command and the counter associated to the sum of \item and \item* executions must decrementing by "one" to maintain equality.

In order for the mechanism for the check-answer to work (not counting keyans, keyans* and keyanspic) we need:

- 1. We must keep track of the total number of \item and \item* (enumerated) that appear within the environment including the nested levels.
- 2. We must keep track of the total number of \item and \item* (enumerated) that appear per level of nesting.
- 3. Keeping track of the number of times the environment nests.

The integer variable associated to the sum of each $\idesign* in the environment <math>g_{enumext} = item_{number} = item_{number}$

- a) If the list only has one level the number of $\identification = \addition{A constraint of the list only has one level the number of <math>\identification = \addition{A constraint of the list only has one level the number of <math>\addition = \addition{A constraint of the list only has one level the number of <math>\addition = \addition{A constraint of the list only has one level the number of <math>\addition = \addition{A constraint of the list only has one level the number of <math>\addition = \addition{A constraint of the list only has one level the number of <math>\addition = \addition{A constraint of the list only has one level the number of <math>\addition = \addition{A constraint of the list only has one level the number of <math>\addition = \addition{A constraint of the list only has one level the number of <math>\addition = \addition{A constraint of the list only has one level the number of <math>\addition = \addition{A constraint of the list only has one level the number of <math>\addition = \addition{A constraint of the list only has one level the number of <math>\addition = \addition{A constraint of the list of the list of the list of the list only has one level the number of <math>\addition = \addition{A constraint of the list only has one level the list of the list only has one level the l$
- b) If the list has *nested levels*, for each level of nesting we need to decrementing by one (for the \item or \item* that opens the nest) so that the account remains the same.

With keyans, keyans* and keyanspic it is enough to increase in one the integer of \anskey. The integers created must be global if they are not lost in the interior levels of nesting and to execute the test we will use a "hook" function after closing the *first level* of the environment.

13.26.4 Setting check-ans and no-store keys

ans Now we define the keys check-ans and no-store for all levels of enumext and enumext* environments.

no-store 2

```
2129 \cs_set_protected:Npn \__enumext_tmp:n #1
2130
     {
       \keys_define:nn { enumext / #1 }
         {
            check-ans .bool_set:N = \l__enumext_check_ans_key_bool,
            check-ans .initial:n = false,
           check-ans .value_required:n = true,
           no-store .code:n = {
2136
                                   \bool_set_false:N \l__enumext_check_answers_bool
                                   \bool_set_false:N \l__enumext_check_ans_key_bool
2138
                                 },
2139
            no-store .value_forbidden:n = true,
2140
         }
2141
2143 \clist_map_inline:nn
       level-1, level-2, level-3, level-4, enumext*
2145
     }
2146
     { \__enumext_tmp:n {#1} }
```

 $(\mathit{End}\ of\ definition\ for\ check-ans\ \ and\ no\text{-store.})$

13.26.5 Set-up check answer mechanism

__enumext_check_ans_active:
__enumext_check_ans_level:

The function __enumext_check_ans_active: will first check the state of the variable \l__enumext_store_name_tl, that is, the save-ans key is active, if so it will check the state of the variable \l__enumext_check_answers_bool handled by the key no-store and will execute the function __enumext_check_ans_level: only if "true", i.e. the key no-store is not active.

The function __enumext_check_ans_level: will decrement by "one" the value of the variable \g__-enumext_item_number_int which keeps track of the executions of \item and \item* for each level of nesting of the environment enumext, taking into account whether it is nested within enumext* or the opposite and set \l__enumext_item_number_bool to "false".

```
2158 \cs_new_protected:Nn \__enumext_check_ans_level:
     {
2159
        \int_case:nn { \l__enumext_level_int }
2160
2161
            { 1 }{
                     \bool_lazy_all:nT
                         { \bool_if_p:N \g__enumext_starred_bool }
                         { \left\{ \begin{array}{c} { \cdot int_compare_p:nNn \ { \cdot l_enumext_level_h_int \ } = \ { 1 \ } \ } \end{array} \right.}
                       }
                          \int_gdecr:N \g__enumext_item_number_int
                         \bool_set_false:N \l__enumext_item_number_bool
2171
            { 2 }{
2173
                     \int_gdecr:N \g__enumext_item_number_int
                     \bool_set_false:N \l__enumext_item_number_bool
            { 3 }{
                     \int_gdecr:N \g_enumext_item_number_int
                     \bool_set_false:N \l__enumext_item_number_bool
            { 4 }{
2181
                     \int_gdecr:N \g__enumext_item_number_int
2182
                     \bool_set_false:N \l__enumext_item_number_bool
2184
2185
```

We should only execute this if enumext* is nested in the "first level" of enumext, for the rest of the cases the value of \g_enumext_item_number_int is already decreased.

```
\int_case:nn { \l__enumext_level_h_int }
2186
          {
2187
            { 1 }{
2188
                    \bool_lazy_all:nT
2189
                        { \bool_if_p:N \g__enumext_standar_bool }
                          \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
                      }
                        \int_gdecr:N \g__enumext_item_number_int
                        \bool_set_false:N \l__enumext_item_number_bool
2196
                      }
2197
                 }
2198
          }
2199
2200
```

 $(\textit{End of definition for } \verb|_enumext_check_ans_active: and \verb|_enumext_check_ans_level:|)$

__enumext_check_ans_key_hook:

The function __enumext_check_ans_key_hook: will export the status of the local variable \l__enumext_check_ans_key_bool to the global variable \g__enumext_check_ans_key_bool only if the key check-ans is active.

```
\cs_new_protected:Nn \__enumext_check_ans_key_hook:

13.27.1 Storing structure of the environments

The idea behind "storing structure" in the sequence is to have a copy of the structure of the environment in which the key save-ans is being executed so we must capture the optional argument passed to the levels of the environment in which it is executed and "storing" this in the sequence.

__enumext_store_active_keys:n __enumext_store_active_keys_vii:n The functions __enumext_store_active_keys:n and __enumext_store_active_keys_vii:n will be responsible for the "storing keys" filtered from the optional argument of the environment in which the key save-ans is executed and the levels within this for the enumext and enumext* environments. We will execute this function only if the variable \l__enumext_store_save_key_X_bool is false, that is, the key store-key is not active, establishing the variable \l__enumext_store_save_key_X_tl with the filtered $\langle keys \rangle$.

```
\cs_new_protected:Npn \__enumext_store_active_keys:n #1
       \bool_if:cF { l__enumext_store_save_key_ \__enumext_level: _bool }
           \tl_clear:c { l__enumext_save_key_ \__enumext_level: _tl }
2352
           \tl set:ce
2353
              { l__enumext_store_save_key_ \__enumext_level: _tl }
2354
              { \__enumext_filter_save_key:n {#1} }
   \cs_new_protected:Npn \__enumext_store_active_keys_vii:n #1
2358
       \bool_if:NF \l__enumext_store_save_key_vii_bool
2360
         {
2361
           \tl_clear:N \l__enumext_store_save_key_vii_tl
2362
           \tl_set:Ne \l__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
2363
         }
2364
2365
```

13.27.2 Setting save-key key

Since this "storing structure" in the sequence established by the save-ans key when executing \anskey or anskey*, we will not be able to modify it. The best thing here is to have a key that allows you to modify the optional argument of the "storing structure" in the sequence.

save-key

The values set by this key passed in the *optional argument* of the enumext and enumext* environments will override the values of the \l_enumext_store_save_key_X_tl variable set by the functions _enumext_store_active_keys:n and _enumext_store_active_keys_vii:n. Now define the key save-key for all levels of enumext and enumext* environments.

(End of definition for save-key.)

__enumext_parse_save_key:n
__enumext_parse_save_key_vii:n

The functions __enumext_parse_save_key:n and __enumext_parse_save_key_vii:n will be responsible for "storing keys" in the variable \l__enumext_store_save_key_X_tl for enumext and enumext*.

```
2380 \cs_new_protected:Npn \__enumext_parse_save_key:n #1
2381
       \bool_set_true:c { l__enumext_store_save_key_ \__enumext_level: _bool }
2382
       \tl_clear:c { l__enumext_save_key_ \__enumext_level: _tl }
2383
2384
       \tl_set:ce
         { l__enumext_store_save_key_ \__enumext_level: _tl }
         { \__enumext_filter_save_key:n {#1} }
2387
2388 \cs_new_protected:Npn \__enumext_parse_save_key_vii:n #1
2389
       \bool_set_true:N \l__enumext_store_save_key_vii_bool
2390
       \tl_clear:N \l__enumext_store_save_key_vii_tl
2391
       \tl_set:Ne \l__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
2392
```

 $(\textit{End of definition for } \verb|_=enumext_parse_save_key:n and \verb|_=enumext_parse_save_key_vii:n.)$

13.27.3 Internal functions to store optional arguments

__enumext_filter_save_key:n
 __enumext_filter_save_key_key:n
 __enumext_filter_save_key_pair:nn

The function __enumext_filter_save_key:n will be in charge of "filtering keys" we want to stored in sequence where {#1} represents the optional argument passed to the environment.

The function __enumext_filter_save_key_key:n will be responsible for "filtering keys" that are passed "without value" by excluding the resume, resume*, no-store and base-fix keys.

```
2403 \cs_new:Npn \__enumext_filter_save_key_key:n #1
2404 {
2405 \str_case:nnF {#1}
2406 {
2407 { resume } {} { resume* } {} { ho-store } {} { base-fix } {}
2408 }
2409 { , { \exp_not:n {#1} } }
2410 }
```

The function __enumext_filter_save_key_pair:nn will be responsible for "filtering keys" that are passed "with value" by excluding the series, resume, save-ans, save-ref, check-ans, show-ans, save-pos, wrap-ans, mark-ans, wrap-opt, save-sep, mark-ref, mini-env, mini-sep, mini-right and mini-right* keys.

```
\cs_new:Npn \__enumext_filter_save_key_pair:nn #1#2
     {
2412
       \str_case:nnF {#1}
2413
         {
2414
           { series } {} { resume
                                        } {} { save-ans } {} { save-ref
2415
           { save-key } {} { check-ans } {} { show-ans } {} { show-pos
           { wrap-ans } {} { mark-ans } {} { wrap-opt } {} { save-sep
           { mark-ref } {} { mini-env } {} { mini-sep } {} { mini-right } {}
           { mini-right* } {}
         }
         { , { \exp_not:n {\#1}} } = { \exp_not:n {\#2} } }
2421
2422
```

(End of definition for _enumext_filter_save_key:n, _enumext_filter_save_key_key:n, and _enumext_filter_save_key_pair:nn.)

13.27.4 Function for storing content in prop list

__enumext_store_addto_prop:n
__enumext_store_addto_prop:V

The function __enumext_store_addto_prop:n stores the $\{\langle content \rangle\}$ in *prop list* defined by save-ans key. The "stored content" is retrieved by means of the \getkeyans command.

The form in which the $\{\langle content \rangle\}$ is "stored" in the prop list is $\{\langle position \rangle\} \{\langle content \rangle\}$. This function is used by \anskey in enumext and enumext* environments, \item* in keyans and keyans* environments and \anspic* in keyanspic environment.

```
2423 \cs_new_protected:Npn \__enumext_store_addto_prop:n #1
2424 {
2425 \prop_gput_if_not_in:cen { g__enumext_ \l__enumext_store_name_tl _prop }
2426 {
2427 \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } + 1 }
2428 }
2429 { #1 }
2430 }
2431 \cs_generate_variant:Nn \__enumext_store_addto_prop:n { V }
```

(End of definition for $_$ enumext_store_addto_prop:n.)

13.27.5 Function for storing content in sequence

__enumext_store_addto_seq:n
__enumext_store_addto_seq:v
__enumext_store_addto_seq:V

The function $_$ enumext_store_addto_seq:n stores the { $\langle content \rangle$ } in sequence defined by save-ans key. This function is used by $\$ anskey in enumext, $\$ item* in keyans and $\$ anspic in keyanspic.

The form in which the $\{\langle content \rangle\}$ is stored in *sequence* is in a internal enumext or enumext* environments with the "same structure" in which the command was executed.

The "stored content" is retrieved by means of the \printkeyans command.

 $(\mathit{End}\ of\ definition\ for\ \verb|_enumext_store_addto_seq:n.)$

13.27.6 Functions for storing structure in the sequence

__enumext_store_level_open:
\ enumext store level close:

The "storing structure" is handled by the functions __enumext_store_level_open: and __enumext_store_level_close: which are executed per level within the enumext environment.

```
\item \begin{enumext} [

13.28 The internal label and ref

The function __enumext_store_internal_ref: handles the "internal label and ref" system used by the save-ref and mark-ref keys for \anskey will allow to execute \ref{\store name: position}} and will return 1. (a).i.A.

__enumext_store_internal_ref:

First we will remove the dots "." from the current $\langle labels \rangle$, we do not want to get double dots in our references, then we will place this in the variable \l_enumext_newlabel_arg_two_tl.

```
\cs_new_protected:Nn \__enumext_store_internal_ref:
2514
       \cs_set_protected:Npn \__enumext_tmp:n ##1
         {
           \tl_set_eq:cc { l__enumext_label_copy_##1_tl } { l__enumext_label_##1_tl }
2517
           \tl_reverse:c { l__enumext_label_copy_##1_tl }
           \tl_remove_once:cn { l__enumext_label_copy_##1_tl } { . }
2519
           \tl_reverse:c { l__enumext_label_copy_##1_tl }
2520
         }
2521
       \clist_map_inline:nn { i, ii, iii, iv, vii } { \__enumext_tmp:n {##1} }
       \cs_set:Npn \__enumext_tmp:n ##1
2523
         { . \tl_use:c { l__enumext_label_copy_ \int_to_roman:n {##1} _tl } }
2524
```

Here we need to analyse the cases where the environment is started with enumext* and if \anskey or anskey* is running alone in it or if it is running in a nested enumext environment within the starting environment.

```
\bool_lazy_all:nT
         {
2526
           { \bool_if_p:N \g__enumext_starred_bool }
2527
            { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
2528
         }
2529
         {
2530
            \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
              { \tl_use:N \l__enumext_label_copy_vii_tl }
         }
       \bool_lazy_all:nT
         {
           { \bool_not_p:n { \g_enumext_standar_bool } }
           { \bool_if_p:N \l__enumext_standar_bool }
2537
           { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2538
         }
2539
         {
2540
           \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2541
                \tl_use:N \l__enumext_label_copy_vii_tl
                \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
         }
2546
```

If started with enumext and if \anskey or anskey* is running alone in it or if it is running in a nested enumext* environment within the starting environment.

```
\bool_lazy_all:nT
2547
2548
         {
           { \bool_if_p:N \g__enumext_standar_bool }
2549
           { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
           { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
2552
         }
         {
           \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
                \tl_use:N \l__enumext_label_copy_i_tl
                \int_step_function:nnN { 2 } { \l__enumext_level_int } \__enumext_tmp:n
2558
2559
       \cs_set:Npn \__enumext_tmp:n ##1
2560
         { \tl_use:c { l__enumext_label_copy_ \int_to_roman:n {##1} _tl } . }
       \bool_lazy_all:nT
```

```
{
           { \bool_if_p:N \g__enumext_standar_bool }
           { \bool_if_p:N \l__enumext_starred_bool }
           { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2566
         }
2567
         {
2568
            \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2569
                \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
2571
               \tl_use:N \l__enumext_label_copy_vii_tl
         }
2574
Now we set the variable \l__enumext_newlabel_arg_one_tl which will contain {\store name: position\}.
       \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
         {
           \l__enumext_store_name_tl \c_colon_str
           \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
         }
Now execute the function \__enumext_newlabel:nn and save the result in the variable \l__enumext_-
write_aux_file_tl and finally we write in the .aux file.
       \tl_put_right:Ne \l__enumext_write_aux_file_tl
              _enumext_newlabel:nn
              { \exp_not:V \l__enumext_newlabel_arg_one_tl }
```

(End of definition for __enumext_store_internal_ref:.)

13.29 Common functions for \anskey and anskey* environment

__enumext_store_anskey_code:n

The internal function __enumext_store_anskey_code:n first we pass the $\{\langle argument \rangle\}$ to the prop list, then checks the state of the variable \l__enumext_store_ref_key_bool handled by the save-ref key and will call the function __enumext_store_internal_ref: for the "internal label and ref" system. Followed by this if the show-ans or show-pos keys are active we will show the "wrapped" $\{\langle argument \rangle\}$.

```
2588 \cs_new_protected:Npn \__enumext_store_anskey_code:n #1
2589 {
2590    \int_gincr:N \g__enumext_item_anskey_int
2591    \__enumext_store_addto_prop:n {#1}
2592    \bool_if:NT \l__enumext_store_ref_key_bool
2593    {
2594     \__enumext_store_internal_ref:
2595    }
2596    \__enumext_anskey_show_wrap_left:n { #1 }
```

Now we start processing the $\lceil \langle key = val \rangle \rceil$ passed to the command to build our \item in the variable \l_enumext_store_anskey_arg_tl which we will "store" in the sequence. First we clear the variable \l_enumext_store_anskey_arg_tl and process the $\langle keys \rangle$, if the break-col key is present and the command is running under enumext (not in enumext*) we will add \columnbreak and then \item.

```
2597 \tl_clear:N \l__enumext_store_anskey_arg_tl
2598 \bool_lazy_and:nnT
2599 { \bool_if_p:N \l__enumext_store_columns_break_bool }
2600 { \bool_not_p:n { \l__enumext_starred_bool } }
2601 {
2602 \tl_put_left:Nn \l__enumext_store_anskey_arg_tl { \columnbreak }
2603 }
2604 \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { \item }
```

If the item-join key is present and the command is running under enumext* we will add $(\langle number \rangle)$ to \l_enumext_store_anskey_arg_tl.

And now we will review the keys item-star, item-sym* and item-pos* and pass them to \l_enumext_-store_anskey_arg_tl along with the $\{\langle argument \rangle\}$ for \anskey or $\langle body \rangle$ for anskey*.

```
\bool_if:NTF \l__enumext_store_item_star_bool
2615
         {
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { * }
           \tl_if_empty:NF \l__enumext_store_item_symbol_tl
2617
              {
                \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2619
                  {
2620
                    [ \exp_not:V \l__enumext_store_item_symbol_tl ]
2621
2622
2623
            \dim_compare:nT
                \l__enumext_store_item_symbol_sep_dim != \c_zero_dim
                \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
                      \exp_not:V \l__enumext_store_item_symbol_sep_dim ]
2631
2632
2633
           \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
2634
         }
2635
         {
            \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
         }
```

Finally we check if the save-ref key are active along with the hyperref package load, if both conditions are met, it will create the \hyperlink with "symbol" set by mark-ref key and then store in sequence.

(End of definition for $\ensuremath{\setminus}$ enumext_store_anskey_code:n.)

__enumext_anskey_show_wrap_arg:n "wraps" the $\{\langle argument \rangle\}$ passed to \anskey and the $\langle body \rangle$ for anskey* when using the wrap-ans key.

```
\cs_new_protected:Npn \__enumext_anskey_show_wrap_arg:n #1

2685
```

 $(\textit{End of definition for } \verb|_-enumext_anskey_show_wrap_left:n.)$

13.30 The command \anskey

Since we will be "storing content" in a list environment within sequences and can (more or less) manage the options passed to each level, it is necessary that we have a little more control over \item when storing.

The \anskey command will cover this point and give it similar behaviour to that of \item in the enumext and enumext* environments executed as follows \anskey [$\langle key = val \rangle$] { $\langle content \rangle$ }.

__enumext_anskey_unknown:n
__enumext_anskey_unknown:nn

First we'll add the keys break-col, item-join, item-star, item-sym* and item-pos*.

```
2688 \keys_define:nn { enumext / anskey }
       break-col .bool_set:N = \l__enumext_store_columns_break_bool,
       break-col .default:n = true,
      break-col .value_forbidden:n = true,
2692
       item-join .int_set:N = \l__enumext_store_item_join_int,
       item-join .value_required:n = true,
2694
       item-star .bool_set:N = \l__enumext_store_item_star_bool,
2695
       item-star .default:n = true,
       item-star .value_forbidden:n = true,
       item-sym* .tl_set:N = \l__enumext_store_item_symbol_tl,
       item-sym* .value_required:n = true,
       item-pos* .dim_set:N = \l__enumext_store_item_symbol_sep_dim,
       item-pos* .value_required:n = true,
                            = { \__enumext_anskey_unknown:n {#1} },
       unknown .code:n
2703
```

The $\langle keys \rangle$ are stored in \l_keys_key_str and the value (if any) is passed as an argument to the function __enumext_anskey_unknown:n.

 $(\textit{End of definition for } \verb|\|_enumext_anskey_unknown:n | and \verb|\|_enumext_anskey_unknown:nn.)$

The \anskey command will only be present when using the save-ans key in enumext and enumext* environments, otherwise it will return an error.

\anskey We will first call the function __enumext_anskey_safe_outer: to be sure where we execute the command, then we will check the state of the variable \l__enumext_check_answers_bool set by the key no-store, if is true we will increment \g__enumext_item_anskey_int for the internal "check answer" system and

execute the function __enumext_anskey_safe_inner:n to ensure that the command is not nested and that the argument is not empty, finally search the $[\langle key = val \rangle]$ and call the function __enumext_store_-anskey_code:n.

```
2718 \NewDocumentCommand \anskey { o +m }
2719
       \__enumext_anskey_safe_outer:
       \group_begin:
         \bool_if:NT \l__enumext_check_answers_bool
              \tl_if_novalue:nF {#1}
                  \keys_set:nn { enumext / anskey } {#1}
              \tl_if_blank:nTF {#2}
2728
                {
2729
                  \msg_error:nn { enumext } { anskey-empty-arg }
2730
2731
                  \__enumext_anskey_safe_inner:
                  \__enumext_store_anskey_code:n {#2}
2736
            }
       \group_end:
2738
```

(End of definition for \anskey. This function is documented on page ??.)

13.30.1 Internal functions for the command

__enumext_anskey_safe_outer:
__enumext_anskey_safe_inner:

The __enumext_store_anskey_safe_outer: function will return the appropriate messages when the command is executed outside the environment in which the save-ans key was activated.

```
\cs_new_protected:Nn \__enumext_anskey_safe_outer:
2740

13.31 The environment anskey*

Managing *verbatim content* in an environment is quite complicated, I learned that when creating the **scontents** package, so to be able to have support at this point it is best to play a little with the internal code of **scontents** and *hooks*. Some considerations I should have here before implementing this:

- If some package, class or user has defined the environment with the same name somewhere in the document it would be a problem, you would not know what argument has been passed to store-env, if you are using the key print-env or the write-out key, sure, I can detect and modify it within the enumext and enumext* environments, but it would look strange not to have some keys available when running within these environments.
- A better (perhaps a bit paranoid) option is to define it within the environment in which the save-ans key is executed. and have it available only when that key is executed, here I would have absolute control of the \(\lambda keys \rangle \) and I make sure that write-out is not used, then using hooks after I undefine it and using hook before I check if it has been created by any package, class or user and I return a error, then the user will have to see how to solve the problem.

__enumext_undefine_anskey_env:

The function __enumext_undefine_anskey_env: will undefine the environment anskey* and will be passed to the function __enumext_execute_after_env: (§??) which is executed after the environment in which the key save-ans is active.

```
2774 \cs_new_protected:Nn \__enumext_undefine_anskey_env:
2775 {
2776    \cs_undefine:c { anskey* }
2777    \cs_undefine:c { endanskey* }
2778    \cs_undefine:c { __scontents_anskey*_env_begin: }
2779    \cs_undefine:c { __scontents_anskey*_env_end: }
2780  }
```

Detection of the anskey* environment outside the enumext and enumext* environments.

```
_enumext_before_env:nn { enumext }

```

(End of definition for __enumext_undefine_anskey_env:.)

anskev*

 The function __enumext_anskey_env_make:n creates the environment anskey* (custom version of scontents environment) by setting the initial keys store-env= $\{\langle store\ name \rangle\}$ and print-env=false. To maintain the scope of the environment and that it is only active when the key save-ans is active we will pass this function to the function __enumext_storing_exec: (§??) and we will execute it only if the variable \l__enumext_anskey_env_bool is true, with this we prevent it from being executed again when the environment is nested and the key save-ans is active, which returns an error for part of the package scontents.

The function __enumext_anskey_env_define_keys: will add the keys break-col, item-join, item-join, item-star, item-sym* and item-pos* and will leave the keys print-env, store-env and write-out undefined. We will apply this function using the *hook* function __enumext_before_env:nn.

```
\cs_new_protected:Nn \__enumext_anskey_env_define_keys:
2838
       \keys_define:nn { scontents / scontents }
2839
2840
         {
           break-col .bool_gset:N = \g__enumext_store_columns_break_bool,

2870
          }
2871
2872
```

©2024 by Pablo González L 84/??

The function __enumext_anskey_env_reset_keys: will leave the keys break-col, item-join, item-join, item-star, item-sym* and item-pos* undefined. We will apply this function using the *hook* function __enumext_after_env:nn.

```
2873 \cs_new_protected:Nn \__enumext_anskey_env_reset_keys:
2874
       \keys_define:nn { scontents / scontents }
2875
           break-col .undefine:,
           item-join .undefine:,
           item-star .undefine:,
           item-sym* .undefine:,
2880
           item-pos* .undefine:,
2881
           write-out .code:n
2882
                                      \bool_set_false:N \l__scontents_storing_bool
2883
                                     \bool_set_true:N \l__scontents_writing_bool
2884
                                     \tl_set:Nn \l__scontents_fname_out_tl {##1}
           write-out .value_required:n = true,
           print-env .meta:nn = { scontents } { print-env = ##1 },
           print-env .default:n = true,
           store-env .meta:nn = { scontents } { store-env = ##1 },
           unknown .code:n
                                 = { \__scontents_parse_environment_keys:n {##1} },
         }
2892
     }
2893
```

The function __enumext_rescan_anskey_env:n will be responsible for bringing the $\langle body \rangle$ of the environment saved in the sequence \g__scontents_name_ $\langle store\ name \rangle$ _seq to pass it to our sequence and prop list

```
2894 \cs_new_protected:Npn \__enumext_rescan_anskey_env:n #1
2895 {
2896     \group_begin:
2897     \int_set:Nn \tex_newlinechar:D { `\^^J }
2898     \__scontents_rescan_tokens:x
2899     {
2900          \endgroup % This assumes \catcode`\\=0... Things might go off otherwise.
2901          #1
2902      }
2903    }
```

(End of definition for anskey * and others. This function is documented on page $\ref{eq:condition}$.)

__enumext_anskey_env_exec:

The function $_$ enumext_anskey_env_exec: will be responsible for processing all the code necessary for the execution of the environment. The first thing will be to add our $\langle keys \rangle$.

```
2904 \cs_new_protected:Nn \__enumext_anskey_env_exec:
2905 {
2906 \__enumext_before_env:nn { anskey* }
2907 {
2908 \__enumext_anskey_env_define_keys:
2909 }
```

Now we will execute our actions after the anskey* environment is closed. We'll fetch the contents of the *environment body* that is now saved in $g_scontents_name_\langle store\ name \rangle_seq$ and store it in the variable $l_enumext_store_anskey_env_tl$ then we execute the rest of the functions.

```
\hook_if_empty:nF {env/anskey*/after}
           \hook_gremove_code:nn {env/anskey*/after} { * }
         }
       \__enumext_after_env:nn { anskey* }
           \__enumext_anskey_env_save_keys:
           \tl_clear:N \l__enumext_store_anskey_env_tl
2917
           \tl_clear:N \l__enumext_store_anskey_opt_tl
2918
           \bool_if:NT \l__enumext_check_answers_bool
               \tl_gset:Ne \l__enumext_store_anskey_env_tl
                    \seq_item:ce { g__scontents_name_ \l__enumext_store_name_tl _seq } { -1 }
                 }
               \regex_match:nVTF
                 { ^s \ z \ ^s \ u\{c\_scontents\_hidden\_space\_str} \ z \ }
2926
                 \l__enumext_store_anskey_env_tl
```

The use of \hook_gremove_code:nn is necessary here, otherwise the $\{\langle code \rangle\}$ passed to __enumext_after_env:nn{anskey*} will be accumulated for each execution. The last function __enumext_anskey_env_reset_keys: is necessary so as not to hinder any scontents environment running within enumext or enumext*.

(End of definition for __enumext_anskey_env_exec:.)

__enumext_anskey_env_save_keys:
__enumext_anskey_env_store:
__enumext_anskey_env_clean_vars:

The function __enumext_anskey_env_save_keys: processing the $[\langle key = val \rangle]$ passed to the environment and save this in the variable \l__enumext_store_anskey_opt_tl. If the break-col key is present and the environment is running under enumext (not in enumext*) we will add the key break-col.

If the item-join key is present and the command is running under enumext* we will add to \l_enumext_store_anskey_opt_tl.

And now we will review the keys item-star, item-sym* and item-pos* and pass them to \l_enumext_-store_anskey_opt_tl.

```
\bool_if:NT \g__enumext_store_item_star_bool

```

(End of definition for $\label{lem:lem:enumext_execute_after_env:}$.)

This function is passed to the function __enumext_after_env:nn for the environments enumext (§??) and enumext* (§??) and it is executed only when the environments are not nested or at some level of these..

13.33 Common functions for keyans, keyans* and keyanspic

13.33.1 Storing content in prop list

__enumext_keyans_addto_prop:n

The function __enumext_keyans_addto_prop:n will pass the the current $\langle label \rangle$ for \item* in keyans environment and the current $\langle label \rangle$ for \anspic* in keyanspic environment followed by the $\langle contents \rangle$ of the optional argument of both commands to the \l__enumext_store_current_label_tl variable, which will be stored to the prop list defined by the save-ans key using the function __enumext_store_addto_prop: V.

```
3030 \cs_new_protected:Npn \__enumext_keyans_addto_prop:n #1
3031 {
3032    \tl_clear:N \l__enumext_store_current_label_tl
3033    \int_compare:nNnTF { \l__enumext_keyans_pic_level_int } = { 1 }
3044    {
3055     \tl_put_right:Ne \l__enumext_store_current_label_tl { \l__enumext_label_vi_tl }
306    }
307    {
308     \tl_put_right:Ne \l__enumext_store_current_label_tl { \l__enumext_label_v_tl }
309    }
309 }
```

If the *optional argument* is present and the save-sep key is not empty, we save it.

 $(\mathit{End}\ of\ definition\ for\ \verb|_enumext_keyans_addto_prop:n.)$

13.33.2 The save-ref key for keyans, keyans* and keyanspic

The "internal label and ref" system for the keyans, keyans* and keyanspic environments has slight differences with the one implemented for \anskey basically because in this environments the interest is in the current $\langle label \rangle$ for \item* and \anspic* with the $\langle contents \rangle$ of the optional argument. The mechanism defined here will allow to execute \ref{\langle store name: position}} and will return 1. (A).

__enumext_keyans_store_ref:
 __enumext_keyans_store_ref_aux_i:
 _enumext_keyans_store_ref_aux_ii:

The function __enumext_keyans_store_ref: handles the "internal label and ref" system used by the save-ref key for \item* and \anspic* commands. First we will create copies of the current $\langle labels \rangle$ and remove the dots "." from them, we do not want to get double dots in references.

The auxiliary function __enumext_keyans_store_ref_aux_i: set the variable \l__enumext_newlabel_-arg_one_tl which will contain $\{\langle store\ name: position \rangle\}$ analyzing whether the environment in which they are executed is enumext* or enumext.

88 / ??

```
{
           \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
              { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_vi_tl }
3078
         }
       \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
         {
3080
           \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
3081
              { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_v_tl }
       \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
         {
           \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
              { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_viii_tl }
3087
         }
3088
       \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
3089
         {
3090
            \l__enumext_store_name_tl \c_colon_str
3091
            \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
3092
       \__enumext_keyans_store_ref_aux_ii:
3094
```

Now auxiliary function $_$ enumext_keyans_store_ref_aux_ii: save the result in the variable $_$ enumext_write_aux_file_tl and finally we write in the .aux file.

(End of definition for __enumext_keyans_store_ref: , __enumext_keyans_store_ref_aux_i: , and __enumext_keyans_store_ref_aux_ii:.)

13.33.3 Storing content in sequence

__enumext_keyans_addto_seq:n
__enumext_keyans_addto_seq_link:

The function __enumext_keyans_addto_seq:n will pass the contents of the current $\langle label \rangle$ \l__enumext_label_v_tl for the keyans environment and the \l__enumext_label_vi_tl for the keyanspic environment when using \item* and \anspic*, followed by the $\langle contents \rangle$ of the optional argument of both commands to the \l__enumext_store_current_label_tl variable to the sequence defined by the saveans key.

```
\cs_new_protected:Npn \__enumext_keyans_addto_seq:n #1
       \tl_clear:N \l__enumext_store_current_label_tl
3108
       \int_compare:nNnTF { \l__enumext_keyans_pic_level_int } = { 1 }
         {
            \tl_put_right:Ne \l__enumext_store_current_label_tl {    \item \l__enumext_label_vi_tl }
3111
         }
3112
         {
3113
            \tl_put_right:Ne \l__enumext_store_current_label_tl {    \item \l__enumext_label_v_tl }
3114
         }
       \tl_if_novalue:nF { #1 }
3116
         {
           \tl_if_empty:NF \l__enumext_store_keyans_item_opt_sep_tl

13.34 Redefining \item and \makelabel in enumext

Redefining the \item command is not as simple as I thought. This command works in conjunction with the \makelabel command so I have to redefine both of them, in addition to this, we will have to use a couple of global variables to pass the values from one command to the other.

When *labeling* PDF is active \makelabel is redefined as \hss #1 and the only way to get the align key to work correctly is to redefine \makelabel using \makebox. The best way to implement this is to use the conditional command \IfDocumentMetadataTF to force this redefinition and the dedicated mode-box key to manually activate it by the user.

The \item and \item[$\langle custom \rangle$] commands work in the usual way on enumext and we will add \item*, \item*[$\langle symbol \rangle$] and \item*[$\langle symbol \rangle$][$\langle offset \rangle$].

__enumext_default_item:n

First we will see if the *optional argument* is present, if it is NOT present we will check the state of the variable \l__enumext_check_answers_bool set by the key no-store, set the boolean variable \l__enumext_-wrap_label_X_bool to "true" for the key wrap-label and execute __enumext_item_std:w and the key itemindent, otherwise we will check the state of the boolean variable \l__enumext_wrap_label_opt_-X_bool set by the key wrap-label* and execute __enumext_item_std:w with the *optional argument* and the key itemindent.

```
}

bool_set_true:c { l__enumext_wrap_label_ \__enumext_level: _bool }

\_enumext_item_std:w \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl }

}

bool_set_eq:cc
{ l__enumext_wrap_label_ \__enumext_level: _bool }

{ l__enumext_wrap_label_opt_ \__enumext_level: _bool }

\_enumext_item_std:w [#1] \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl

}

}

aud

}

bool_set_eq:cc
{ l__enumext_wrap_label_opt_ \__enumext_level: _bool }

\_enumext_item_std:w [#1] \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl

}

3246
}
```

__enumext_starred_item:nn
__enumext_item_star_exec:

The $\idesign* (symbol) and <math>\idesign* (symbol) [(offset)] works like the numbered <math>\idesign* (symbol) to the "left" of the (label) separated from it by the value the second optional argument (offset).$

```
#1: \l__enumext_item_symbol_X_tl
#2: \l__enumext_item_symbol_sep_X_dim
```

(End of definition for __enumext_default_item:n.)

First we will make a copy of \l__enumext_item_symbol_X_tl which is set by the key item-sym* or passed as "first" optional argument in the global variable \g__enumext_item_symbol_aux_tl, followed by setting the variable \l__enumext_item_symbol_sep_X_dim set by the key item-pos* or by the "second" optional argument, then we will see the state of the variable \l__enumext_check_answers_bool set by the key no-store, set the boolean variable \l__enumext_wrap_label_X_bool to "true" for the key wrap-label and execute __enumext_item_std:w and the key itemindent.

```
\cs_new_protected:Npn \__enumext_starred_item:nn #1 #2
       \tl_if_novalue:nTF {#1}

13.35 Setting item-sym* and item-pos* keys

In order to have a cleaner implementation of $\forall tem^*$ for the enumext and enumext* environments it is best to define a couple of keys that allow us to control and set by default the $\langle symbol \rangle$ and its $\langle offset \rangle$.

```
Define and set item-sym* and item-pos* keys for enumext and enumext*.
item-svm*
item-pos*
          3348 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
                  \keys_define:nn { enumext / #1 }
          3351
                      item-sym* .tl_set:c = { l__enumext_item_symbol_#2_tl },
                      item-sym* .value_required:n = true,
                      item-sym* .initial:n = {\textasteriskcentered},
                      item-pos* .dim_set:c = { l__enumext_item_symbol_sep_#2_dim },
                      item-pos* .value_required:n = true,
                   }
          _{
m 3359} \clist_map_inline:nn
                  {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {enumext*}{vii}
          3361
          3362
               { \__enumext_tmp:nn #1 }
```

(End of definition for item-sym* and item-pos*.) 13.36 Handling unknown keys

At this point in the code I already know that I will not add more $\langle keys \rangle$ and since I have already been quite *paranoid and restrictive* with the definitions of environments and commands, the only thing left to do is do it with the $\langle keys \rangle$ (you have to be consistent in life).

13.36.1 Handling unknown keys for keyans, keyans* and keyanspic

Define and set unknown key for keyans, keyans* and keyanspic environments.

```
\label{eq:continuous} $$ \_{\rm as}$ in $$_{\rm as}$ in $$_{
```

unknown

13.37 Redefining \item and \makelabel in keyans

The \item and \item[$\langle custom \rangle$] commands work in the usual way in keyans, but the \item* and \item*[$\langle content \rangle$] commands store the current $\langle label \rangle$ next to the $\langle content \rangle$ if it is present in the sequence and prop list defined by save-ans key.

__enumext_keyans_default_item:n

The function __enumext_keyans_default_item:n executes the original behavior of the \item along with the keys wrap-label, wrap-label* and itemindent.

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_keyans_default_item:n.)$

©2024 by Pablo González L 95/??

__enumext_keyans_starred_item:n

The function __enumext_keyans_starred_item:n which will make a temporary copy of the current $\langle label \rangle$, execute the show-ans or show-pos keys using the function __enumext_keyans_show_left:n and will display the $\langle contents \rangle$ of that item using the internal copy __enumext_item_std:w, this is necessary to prevent incrementing the current "counter" of the original $\langle label \rangle$, followed by this it will execute function __enumext_keyans_show_item_opt: handled by wrap-opt key.

```
3438 \cs_new_protected:Npn \__enumext_keyans_starred_item:n #1
3439 {
3440    \tl_set_eq:NN \l__enumext_store_current_label_tmp_tl \l__enumext_label_v_tl
3441    \__enumext_keyans_show_left:n { #1 }
342    \bool_set_true:N \l__enumext_wrap_label_v_bool
343    \__enumext_item_std:w \tl_use:N \l__enumext_fake_item_indent_v_tl
3444    \__enumext_keyans_show_item_opt:
```

Recover the original value of the current $\langle label \rangle$ and *store* it first in the *prop list* (including the *optional argument*), run the internal "label and ref" system if the save-ref key is active, *store* it in the *sequence* and finally increments \g__enumext_check_starred_cmd_int for internal check system.

```
3445 \tl_set_eq:NN \l__enumext_label_v_tl \l__enumext_store_current_label_tmp_tl
3446 \__enumext_keyans_addto_prop:n { #1 }

13.38 Second argument of the lists

At this point of the code we have already programmed most the necessary tools to create a custom list environment, remember that the function __enumext_start_list:nn takes two arguments, the first one we have ready, the second one we will define for all the levels of the environment enumext and the environment keyans.

13.38.1 Calculation of \leftmargin and \itemindent

Consider the figure ?? where the default margins (on the left) of a list are represented.

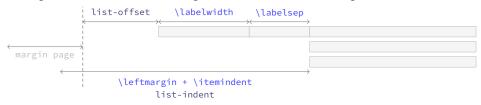

Figure 9: Representation of standard horizontal lengths in list environment.

The idea is to have control over these margins so that our list does not overlap the left margin of the page. The *key* relationship is that the right edge of the \labelsep equals the right edge of the \itemindent, so that the left edge of the *label box* is at \leftmargin+\itemindent minus \labelwidth+\labelsep. Thus, the handling of the margins by the package will be as shown in the figure ??.

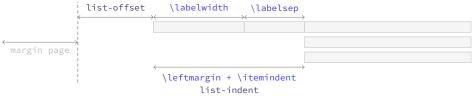

Figure 10: Representation of horizontal lengths concept in list in enumext.

Where the default values will look like in the figure ??.

__enumext_calc_hspace:NNNNNNN\ _enumext_calc_hspace:cccccc The function __enumext_calc_hspace: NNNNNNN takes seven arguments to be able to determine horizontal spaces for all list environment:

©2024 by Pablo González L 97/??

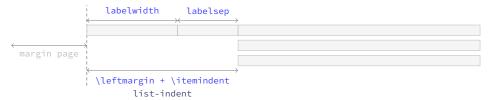

Figure 11: Default horizontal lengths in enumext.

```
#1: \l__enumext_labelwidth_X_dim #2: \l__enumext_labelsep_X_dim
#3: \l__enumext_listoffset_X_dim #4: \l__enumext_leftmargin_tmp_X_dim
#5: \l__enumext_leftmargin_X_dim #6: \l__enumext_itemindent_X_dim
#7: \l__enumext_leftmargin_tmp_X_bool
```

And returns the "adjusted" values of \leftmargin and \itemindent.

This function is passed to __enumext_list_arg_two_X: which is used in the definition of the enumext and keyans environments (§??).

If no value has been passed to the labelwidth and labelsep keys we set the default values for $\l_--enumext_leftmargin_tmp_X_dim$.

```
\bool_if:nF #7 { \dim_set:Nn #4 { #1 + #2} }
```

We now analyze the cases and set the values for \leftmargin and \itemindent.

```
\dim_compare:nNnTF { #4 } < { \c_zero_dim }</pre>
          {
3526
            \dim_set:Nn #6 { #1 + #2 - #4}
3527
            \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
3528
         }
3529
          {
3530
            \dim_{compare:nNnT} \{ \#4 \} = \{ \#1 + \#2 \}
3531
              { \dim_set:Nn #6 { \c_zero_dim } }
            \dim_{n} = nNnT { #4 } < { #1 + #2 }
              { \dim_set:Nn #6 { #1 + #2 - #4} }
            \dim_{n} = nNnT { #4 } > { #1 + #2 }
              {
                \dim_set:Nn #6 { -#1 - #2 + #4}
3537
                \dim_set:Nn #6 { #6*-1}
3538
3539
            \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
3540
          }

13.41 Tagging PDF support for non-standart list environments

The LTEX release 2022-06-01 brings automatic support for tagged PDF in several aspects, including the standard list environments and the list environment. Unfortunately non-standard list environments like keyanspic or the horizontal list environments enumext* and keyans* are not structured in a nice way, i.e. the expected result in the PDF file is the expected one, but the underlying structure is not correct. In simple terms, for tagged PDF a list environment is a list environment, no matter what it looks like in the PDF file.

To maintain a correct list structure when \DocumentMetadata is active, it is necessary to do some things manually using tagpdf[?] and ltsockets[?]. This implementation is an adaptation of my answer thanks to Ulrike Fischer's comments in How can I modify my \item redefinition to be compatible with tagging-pdf.

13.41.1 Socket for tagging support in enumext* and keyans*

We will first define the necessary sockets and their behavior for enumext* and keyans*.

```
stop-start-tags
                             3942 \socket_new:nn {tagsupport/enumext/starred}{ 1 }
             stop-list-tags 3943 \socket_new_plug:nnn {tagsupport/enumext/starred} {start-list-tags}
\__enumext_start_list_tag:n 3944
                                     \tag_resume:n {#1}
    \__enumext_stop_start_list_tag: 3945
                                     \tag_mc_end_push:
  _enumext_stop_list_tag:n 3946
                                     \tag_struct_begin:n {tag=LI}
                             3948
                                    \tag_struct_begin:n {tag=Lbl}
                                     \tag_mc_begin:n {tag=Lbl}
                             3949
                                 }
                             3950
                             3951 \socket_new_plug:nnn {tagsupport/enumext/starred} {stop-start-tags}
                                  {
                             3952
                                     \tag_mc_end:
                             3953
                                    \tag_struct_end:n {tag=Lbl}
                             3954
                                    \tag_struct_begin:n {tag=LBody}
                             3955

13.42 The environment keyanspic and \anspic

The keyanspic environment is a list based environment that uses the same configuration for "spacing" and $\langle label \rangle$ as the keyans environment, but it does not use \item. The $\langle contents \rangle$ are passed to the environment by means of the \anspic command as replacement for \item command and placed inside minipage environments, with the $\langle label \rangle$ centered "above" or "below", adjusting widths and position according to the options passed to the environment.

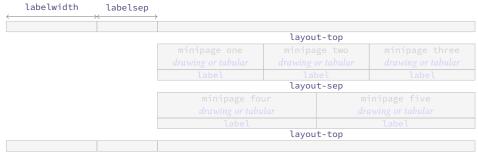

Figure 12: Representation of the keyanspic spacing in enumext.

In order for the keyanspic environment and the \anspic command to work correctly, we need to set and export some variables in the first part of the environment definition and pass them to \anspic which is executed in the second part of the environment. This implementation is adapted from the answer given by Enrico Gregorio (@egreg) in How to process the body of an environment and divide it by a \macro?.

13.42.1 The environment keyanspic

label-pos First we define the key that allows us to process the position of the $\langle label \rangle$ centered "above" or "below" which will be label-pos, the vertical separation of these from drawing or tabular will be handled with the key layout-sty will take two values separated by comma $\{\langle n^\circ upper, n^\circ lower \rangle\}$ and will determine the number of minipage environments in which all arguments of \anspic will be printed at the "upper" and "lower" within the environment will be handled with the key layout-top.

```
\keys_define:nn { enumext / keyanspic }
       label-pos .choice:.
       label-pos / above
                            .code:n =

4068
       unknown
                   .code:n
                                     = { \__enumext_keyans_unknown_keys:n {#1} }
```

(End of definition for label-pos and others.)

```
\__enumext_keyans_pic_safe_exec:
\__enumext_keyans_pic_parse_keys:n
\__enumext_keyans_pic_skip_abs:N
\__enumext_keyans_pic_arg_two:
```

The function __enumext_keyans_pic_safe_exec: check the nested level position inside the enumext environment.

```
4070 \cs_new_protected:Nn \__enumext_keyans_pic_safe_exec:
```

The function __enumext_keyans_pic_skip_abs:N will return a positive value \parsep from keyans environment.

The __enumext_keyans_pic_arg_two: function will be used in the *second argument* of the list environment that defines the keyanspic environment, with this we will take the configuration of the "spaces" and the keys label, wrap-label, parsep and topsep from the keyans environment. The first thing we need to do is set the boolean variable \l__enumext_leftmargin_tmp_v_bool handled by the list-indent key to "false", then copy the definition of the second list argument from the keyans environment definition and make sure that \parsep does not have a negative value.

```
4093 \cs_new_protected:Npn \__enumext_keyans_pic_arg_two:
4094 {
4095 \bool_set_false:N \l__enumext_leftmargin_tmp_v_bool
4096 \__enumext_list_arg_two_v:
4097 \__enumext_keyans_pic_skip_abs:N \parsep
```

Now we increment the counter enumXv of the keyans environment and save the *total height* of the $\langle label \rangle$ in $\l_enumext_anspic_label_htdp_dim$ used by $\l_enumext_anspic_label_htdp_dim$ used b

Finally we *adjust* the value of \leftmargin and \topsep then set \listparindent, \partopsep and \itemsep to zero so that the *horizontal* and *vertical* space is not affected.

```
dim_add:Nn \leftmargin { -\labelwidth - \labelsep }
   \skip_add:Nn \topsep { 0.5\box_dp:N \strutbox }
   \dim_zero:N \listparindent
   \skip_zero:N \partopsep
   \skip_zero:N \itemsep
}
```

(End of definition for __enumext_keyans_pic_safe_exec: and others.)

keyanspic Now we define the environment keyanspic. For compatibility with *tagged* PDF we must use the \begin{list} form and a lot of conditional code using \IfDocumentMetadataTF.

```
\NewDocumentEnvironment{keyanspic}{ o }
4120
        \__enumext_keyans_pic_safe_exec:
4121
        \__enumext_keyans_pic_parse_keys:n {#1}
4122
        \begin{list} { } { \__enumext_keyans_pic_arg_two: }
4123
        \IfDocumentMetadataTF
4124
4125
            \tag_suspend:n {list}
4126
          }{}
4127
        \item[] \scan_stop:
4128
        % paranoia
        \RenewDocumentCommand \item {}
4131
            \msg_error:nn { enumext } { keyanspic-item-cmd }
4132
          }
4133
        \IfDocumentMetadataTF
4134
          {
4135
            \tag_resume:n {keyanspic}
4136
            \tag_tool:n {para/tagging=false}
4137
            \tag_suspend:n {keyanspic}
4138
          } { }
4139
4140
        \IfDocumentMetadataTF
4143
            \tag_resume:n {keyanspic}
4144
            \tag_mc_end_push:
4145
            \tag_struct_begin:n {tag=L,attribute=enumerate}
4146
4147
```

Now we process the command \anspic, if the key layout-sty is not present, the number of times the \anspic command appears will be counted from \l_enumext_anspic_args_seq and placed a *single line*.

```
\__enumext_anspic_exec:
       \IfDocumentMetadataTF
          {
            \tag_suspend:n {keyanspic}
4151
         } { }
4152
       \end{list}
4153
       \IfDocumentMetadataTF
4154
4155
            \tag_struct_end:n {tag=L}
            \tag_mc_begin_pop:n {}
            \tag_struct_end:n {tag=L}
            \tag_mc_begin_pop:n {}
          } { }
```

Finally we check if \anspic* has been used, set the counter enumXvi to zero and apply our "adjusted" vertical space bottom.

```
\__enumext_check_starred_cmd:n { anspic }
       \setcounter { enumXvi } { 0 }
4162
       \bool_if:NTF \l__enumext_anspic_label_above_bool
            \par\addvspace{ 0.5\box_dp:N \strutbox }
          }
4166
          {
4167
            \par
4168
            \addvspace
4169
              {
4170
                 \dim_eval:n
4171
4172
                     \l__enumext_anspic_label_htdp_dim + \box_ht_plus_dp:N \strutbox
4173
                     + \l__enumext_anspic_label_sep_skip + \l__enumext_topsep_v_skip
              }
          }
4177
4178
```

(End of definition for keyanspic. This function is documented on page ??.)

13.42.2 The command \anspic

The \anspic command take three arguments, the *starred versions* \anspic*[$\langle content \rangle$] *store* the current $\langle label \rangle$ next to the *optional argument* [$\langle content \rangle$] in the *sequence* and *prop list* defined by save-ans key. The

third mandatory argument $\{\langle drawing\ or\ tabular \rangle\}$ is NOT stored in the sequence or prop list.

◆ One of the complications here to make the keyanspic environment compatible with tagged PDF is the position of ⟨label⟩, the \anspic command processes the arguments in order, where #1 and #2 correspond to ⟨label⟩ and #3 to the mandatory argument and puts all this inside a minipage environment. If #1 and #2, that is ⟨label⟩, is above #3 there are no problems with tagged PDF, but if #3 comes first the list created with tagged PDF will not be correct.

\anspic

__enumext_anspic_body_dim:n er
__enumext_anspic_label:nn ar
__enumext_anspic_label_pos:nnn m
__enumext_anspic_args:nnn 4:79
__enumext_anspic_print:n 4:80
__enumext_anspic_print:V 4:82
__enumext_anspic_print:V 4:82
__enumext_anspic_print:V 4:83
__enumext_anspic_row:n 4:83
__enumext_anspic_exec: 4:84

We check that the command is active in the keyanspic environment only if the save-ans key is present, otherwise we return an error. The three arguments are handled by the function __enumext_anspic_args:nnn and stored in the sequence \l__enumext_anspic_args_seq which is processed by the keyanspic environment.

```
4179 \NewDocumentCommand \anspic { s o +m }
       \bool_if:NF \l__enumext_store_active_bool
         {
            \msg_error:nnnn { enumext } { wrong-place }{ keyanspic }{ save-ans }
         }
       \int_compare:nNnT { \l__enumext_level_int } > { 1 }
4185
          {
4186
            \msg_error:nn { enumext } { keyanspic-wrong-level }
4187
4188
         }
       \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
4189
         {
4190
            \msg_error:nnnn { enumext } { command-wrong-place }{ anspic }{ keyans }
         }
       \seq_put_right:Nn \l__enumext_anspic_args_seq
         {
4194
               _enumext_anspic_args:nnn { #1 } { #2 } { #3 }
4195
         }
4196
4197
```

The __enumext_anspic_body_dim:n function will set the value of \l__enumext_anspic_body_htdp_-dim equal to the "height plus depth" of the *mandatory argument* if the key label-pos is set "below".

```
\cs_new_protected:Npn \__enumext_anspic_body_dim:n #1
     {
       \bool_if:NF \l__enumext_anspic_label_above_bool
4201
            \IfDocumentMetadataTF
4202
4203
                \tag_suspend:n {keyanspic}
4204
              } { }
4205
            \vbox_set:Nn \l__enumext_anspic_body_box { #1 }
            \dim_set:Nn \l__enumext_anspic_body_htdp_dim
4207
                \box_ht_plus_dp:N \l__enumext_anspic_body_box
            \IfDocumentMetadataTF
                \tag_resume:n {keyanspic}
              } { }
4214
         }
4215
4216
```

The __enumext_anspic_label:nn function will process inside \makebox the starred argument '*' and optional argument passed to the command. Here we will store the $\langle label \rangle$ and optional argument in prop list and sequence and execute the show-ans, show-pos, font, wrap-label and wrap-opt keys.

```
\cs_new_protected:Npn \__enumext_anspic_label:nn #1 #2
       \makebox[ \l__enumext_anspic_mini_width_dim ][ c ]
           \bool_if:nT { #1 }
             {
               \__enumext_keyans_addto_prop:n { #2 }
               \__enumext_keyans_store_ref:
4224
               \__enumext_keyans_addto_seq:n { #2 }
4225
               \int_gincr:N \g__enumext_check_starred_cmd_int
               \bool_lazy_or:nnT
                 { \bool_if_p:N \l__enumext_show_answer_bool }
                 {
                   \bool_if_p:N \l__enumext_show_position_bool }
                 {
                   \tl_set_eq:NN \l__enumext_label_v_tl \l__enumext_label_vi_tl
                   \__enumext_keyans_show_left:n { #2 }
```

The function __enumext_anspic_label_pos:nnn will be in charge of handling the "counter" and the position of the $\langle label \rangle$, set by label-pos key which will have the same configuration as the keyans environment.

```
\cs_new_protected:Npn \__enumext_anspic_label_pos:nnn #1 #2 #3
4242
       \stepcounter { enumXvi }
4243
       \__enumext_anspic_body_dim:n { #3 }

4306
4307
       \par
4308
4309
```

The __enumext_anspic_exec: function will execute all the code in the \anspic command in the second argument of the keyanspic environment definition. If the key layout-sty is not set, everything will be printed on a *single line*.

(End of definition for \anspic and others. This function is documented on page ??.)

13.43 The horizontal environments

Generating horizontal list environments is NOT as simple as standard LTEX list environments. The fundamental part of the code is adapted from the shortlst package to a more modern version using expl3. It is not possible to redefine \item and \makelabel using \RenewDocumentCommand as in the vertical non starred versions.

To achieve the *horizontal list environments* we will capture the \item command and the $\langle content \rangle$ of this in *horizontal box* using \makebox for the label and a minipage environment for the $\langle content \rangle$ passed to \item, we will also add the *optional argument* ($\langle number \rangle$) to \item to be able to *join columns* horizontally, in simple terms, we want \item to behave in the same way as in the enumext environment but adding an *first optional argument* ($\langle number \rangle$).

A side effect is the limitation of using \item in this way without using \RenewDocumentCommand, which loses the original definition and affects the standard list environments provided by ETEX and any environment defined using base list environment, including: itemize, enumerate, description, quote, quotation, verse, center, flushleft, flushright, verbatim, tabbing, trivlist, list and all environments created with \newtheorem.

One way to get around this is to use something like:

\AddToHook{env/enumerate/before}{recover original \item definition}

inside minipage, but in my partial tests this does not have the desired effect and the vertical and horizontal spacing is distorted. For now this will remain as a limitation and I will see if it is feasible to implement it in the future.

💎 For compatibility with the tagged PDF we close the environments according to the presence or not of the mini-env key.

13.43.1 Functions for item box width

_enumext_starred_columns_set_vii: We set the default value for the width of the box containing the $\langle content \rangle$ of the items for enumext* environment.

```
\int_set:Nn \l__enumext_tmpa_vii_int { \l__enumext_columns_vii_int - 1 }
       \dim_set:Nn \l__enumext_item_width_vii_dim
            ( \linewidth - \l__enumext_columns_sep_vii_dim * \l__enumext_tmpa_vii_int )
4333
            / \l__enumext_columns_vii_int
            - \l__enumext_labelwidth_vii_dim
4335
            - \l__enumext_labelsep_vii_dim
4336
         }
4337
When the key rightmargin is active we must adjust the values.
       \dim_compare:nNnT { \l__enumext_rightmargin_vii_dim } > { \c_zero_dim }
         {
4339
            \dim_sub:Nn \l__enumext_item_width_vii_dim
4340
4341
                ( \l__enumext_rightmargin_vii_dim * \l__enumext_tmpa_vii_int )
                  \l__enumext_columns_vii_int
4343
            \dim_add:Nn \l__enumext_columns_sep_vii_dim
              {
                \l__enumext_rightmargin_vii_dim
              }
4348
         }
4349
4350

 $(\textit{End of definition for $$_=enumext_starred_joined_item_vii:n.})$

13.43.3 Functions for mini-env, mini-right and mini-right* keys

__enumext_start_mini_vii:
__enumext_stop_mini_vii:

The implementation of the mini-env key support is almost identical to the one used in the enumext and keyans environments, the difference is that the __enumext_mini_page environment on the "right side" is executed "after" closing the environment, so it is necessary to make a global copy of the variable \l__-enumext_minipage_right_vii_dim in the variable \g__enumext_minipage_right_vii_dim.

```
\cs_new_protected:Nn \__enumext_start_mini_vii:
       \dim_compare:nNnT { \l__enumext_minipage_right_vii_dim } > { \c_zero_dim }
4482
4483
           \dim_set:Nn \l__enumext_minipage_left_vii_dim
4484
             {
4485
                \linewidth
4486
                 \l__enumext_minipage_right_vii_dim
4487
                  \l__enumext_minipage_hsep_vii_dim
           \bool_set_true:N \l__enumext_minipage_active_vii_bool
           \dim_gset_eq:NN
              \g__enumext_minipage_right_vii_dim
              \l__enumext_minipage_right_vii_dim
           \__enumext_mini_addvspace_vii:
           \nointerlineskip\noindent
           \__enumext_mini_page{ \l__enumext_minipage_left_vii_dim }
         }
4497
4498
```

The function __enumext_stop_mini_vii: closes the __enumext_mini_page environment on the "left side", applies \hfill and set the variable \g__enumext_minipage_active_vii_bool to "true" which will be used in the function __enumext_after_env:nn to execute the minipage on the "right side". At this point we will execute the __enumext_stop_list: and __enumext_stop_store_level_vii: functions stopping the list environment and the level saving mechanism for storage in sequence of the \anskey command and anskey* environment. This function is passed to the __enumext_after_list_vii: function in the second part of the enumext* environment definition (§??).

```
\cs_new_protected:Nn \__enumext_stop_mini_vii:
       \bool_if:NTF \l__enumext_minipage_active_vii_bool
         {
           \__enumext_stop_list:
           \__enumext_stop_store_level_vii:

(End of definition for __enumext_start_mini_viii: and __enumext_stop_mini_viii:.)

13.44 The environment enumext*

enumext* First we will generate the environment and we will give a temporary definition to __enumext_stop_-item_tmp_vii: equal to __enumext_first_item_tmp_vii: and next to \item equal to __enumext_-start_item_tmp_vii: which we will redefine later. Unlike the implementation used by the shortlst package, we will not set the values of \rightskip and \@rightskip equal to \@flushglue whose value is

0.0pt plus 1.0 fil, in the tests I have performed this fails in some circumstances and different results are obtained when using pdf TeX and LuaTeX.

__enumext_fake_make_label_vii:n

The __enumext_fake_make_label_vii:n function will be in charge of handling our definition of \item. First we increment the counter enumXvii for the enumerated items and activate support for the *check answers* mechanism, followed by support for \item*[$\langle symbol \rangle$][$\langle offset \rangle$] if present, then the wrap-label and wrap-label* keys which we execute using \makebox whose width will be given by the labelwidth key and position by the align key, inside the argument of this we will execute the font key together with the function defined by the wrap-label or wrap-label* keys. Finally we execute the labelsep key applying a \skip_horizontal:N and \ignorespaces.

◆ For compatibility with tagged PDF and hyperref when an environment enumext is nested in enumext* and the key save-ans is not active need setting the \if@hyper@item switch to "true". The explanation for this is given by the master ©2024 by Pablo González L

Heiko Oberdiek on \refstepcounter{enumi} twice (or more) creates destination with the same identifier. This patch is only needed if you are running pdflatex and not if you are running lualatex

13.44.2 Real definition of \item in enumext*

The functions __enumext_start_item_vii:w and __enumext_stop_item_vii: executing the true definition of \item inside the enumext* environment, unlike the implementation in shortlst we will NOT use an extra group and the plain form of the lrbox environment.

__enumext_start_item_vii:w
__enumext_stop_item_vii:

The first thing we will do is set the value of __enumext_stop_item_tmp_vii: equal to __enumext_-stop_item_vii: which we will define later, after that we will start capturing \item and "item content" in a horizontal box where the width will be \itemwidth plus \labelsep.

Redefine the \footnote command.

```
\__enumext_renew_footnote_starred:

©2024 by Pablo González L
```

Now we insert our sockets for tagging PDF support and run \item.

```
4818 \__enumext_start_list_tag:n {enumext*}
4819 \__enumext_fake_make_label_vii:n {#1}
4820 \__enumext_stop_start_list_tag:
```

Finally we open the minipage environment, capture the "item content", make \parindent take the value of the key listparindent and \parskip take the value of the key parsep, then execute the keys itemindent and first.

• Here the use of \unskip and \skip_horizontal:n with the value of listparindent is necessary, otherwise an unwanted space is created when using \item[\langle opt \rangle] and the value passed to the key itemindent is incremented.

```
\tag{821} \__enumext_minipage:w [ t ] { \l__enumext_joined_width_vii_dim }
\dim_set_eq:NN \parrindent \l__enumext_listparrindent_vii_dim
\skip_set_eq:NN \parskip \l__enumext_parsep_vii_skip
\\__enumext_unskip_unkern:
\\__enumext_unskip_unkern:
\\skip_horizontal:n \{ -\l__enumext_listparrindent_vii_dim } \ignorespaces
\\disp_horizontal:n \{ -\l__enumext_listparrindent_vii_dim } \ignorespaces
\\disp_horizontal:n \{ -\l__enumext_listparrindent_vii_tl
\\disp_horizontal:n \{ \disp_horizontal:n \disp_horizon
```

The __enumext_stop_item_vii: function will finish the fetching \item and "item content" by closing the minipage environment, the sockets for tagging PDF and the horizontal box.

```
4830 \cs_new_protected_nopar:Nn \__enumext_stop_item_vii:
4831 {
4832 \__enumext_endminipage:
4833 \__enumext_stop_list_tag:n {enumext*}
4834 \hbox set end:
```

Here we will reduce the *warnings* a bit by setting the value of \hbadness to 10000, print \item and "item content" from the horizontal box.

```
4835  \int_set:Nn \hbadness { 10000 }
4836  \box_use_drop:N \l__enumext_item_text_vii_box
```

Finally apply the *vertical space* between rows set by itemsep key passed to \parsep using \par\noindent and *horizontal space* between columns set by columns-sep key using \skip_horizontal:N.

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_start_item_vii:w\ and\ \verb|_-enumext_stop_item_vii:.|)$

__enumext_remove_extra_parsep_vii:

Remove the extra *vertical space* equal to \parsep=\itemsep when the total number of \item is divisible by the number of \item in the last row of the environment. Here the use of \unskip or \removelastskip fails and does not obtain the expected result, using \vspace is the option and in this case, we can use a simplified version since we are always in \(\frac{vertical mode}{\infty} \).

```

__enumext_before_list_viii:

The function __enumext_before_list_viii: will add the vertical spacing on the environment if the above key is active next to the {\langle code \rangle} defined by the before* key if it is active, the call the function __enumext_start_mini_viii: handle by mini-env.

__enumext_after_list_viii:

The function __enumext_after_list_viii: first call the function __enumext_stop_mini_viii:, then apply the $\{\langle code \rangle\}$ handled by the after key together with the *vertical space* handled by the below key if they are present.

```
4928 \cs_new_protected:Nn \__enumext_after_list_viii:
4929 {
4930 \__enumext_stop_mini_viii:
4931 \__enumext_after_stop_list_viii:
4932 \__enumext_vspace_below_viii:
4933 }
```

 $(\mathit{End}\ of\ definition\ for\ \verb|_-enumext_after_list_viii:.)$

 $(End\ of\ definition\ for\ \ensuremath{\verb|_enumext_before_list_viii:.})$

13.45.1 The command \item in keyans*

The idea here is to make the \item command behave in the same way as in the keyans environment with the difference of the *optional argument* ($\langle number \rangle$) which works in the same way as in the enumext* environment. In simple terms we want to store the $\langle label \rangle$ next to the $\lceil \langle content \rangle \rceil$ if it is present in the *sequence* and *prop list* defined by save-ans key for \item*, \item* $\lceil \langle content \rangle \rceil$, \item($\langle number \rangle$)* and \item($\langle number \rangle$)* and \item($\langle number \rangle$)* $\lceil \langle content \rangle \rceil$ commands.

__enumext_first_item_tmp_viii:

The __enumext_first_item_tmp_viii: function will remove horizontal space equal to \labelwidth plus \labelsep to the left of the "first" \item in the environment at the point of execution of this function, where it is equal to the __enumext_stop_item_tmp_viii: function inside the environment body definition.

 $(End\ of\ definition\ for\ _enumext_first_item_tmp_viii:.)$

__enumext_start_item_tmp_viii:
__enumext_item_peek_args_viii:
__enumext_joined_item_viii:w
__enumext_standar_item_viii:w

First we will call the function __enumext_stop_item_tmp_viii: that we will redefine later, we will increment the value of \l__enumext_item_column_pos_viii_int that will count the item's by rows and the value of \g__enumext_item_count_all_viii_int that will count the total of item's in the environment. After that we will call the function __enumext_item_peek_args_viii: that will handle the arguments passed to \item.

```
4942 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_viii:
4943 {
4944    \__enumext_stop_item_tmp_viii:
4945    \int_incr:N \l__enumext_item_column_pos_viii_int
4946    \int_gincr:N \g__enumext_item_count_all_viii_int
4947    \__enumext_item_peek_args_viii:
4948 }
```

The function $\ensuremath{ \ \ \ } = numext_item_peek_args_viii: will handle the <math>\ensuremath{ \ \ \ } (number)$). Look for the argument "(", if it is present we will call the function __enumext_joined_item_viii:w ($\langle number \rangle$), which is in charge of joining the item's in the same row, in case they are not present we will set the default value (1).

```
\cs_new_protected:Nn \__enumext_item_peek_args_viii:
     {
4950
       \peek_meaning:NTF (
4951
         { \__enumext_joined_item_viii:w }
4952
          { \__enumext_joined_item_viii:w (1) }
4953
```

The function __enumext_joined_item_viii:w will first call the function __enumext_starred_joined_item_viii:n in charge of setting the width of the box that will store the content passed to \item. Then we will look for the argument "*", if it is present we will call the function __enumext_starred_item_viii:w otherwise we will call the function __enumext_standar_item_viii:w.

```
\cs_new_protected:Npn \__enumext_joined_item_viii:w (#1)
         _enumext_starred_joined_item_viii:n {#1}
       \peek_meaning_remove:NTF *
4958
         { \__enumext_starred_item_viii:w }
4959
         { \__enumext_standar_item_viii:w }
4961
```

The function __enumext_standar_item_viii:w will first look for the argument "[", if present it will set the state of the variable \l_enumext_wrap_label_opt_viii_bool equal to the state of the variable \l__enumext_wrap_label_opt_viii_bool handled by the key wrap-label* and finally execute the *non-enumerated* version \item[\(\lambda\) by means of the function __enumext_start_item_\viii:w, otherwise we will set the value of the variable \l__enumext_wrap_label_viii_bool handled by the wraplabel key to true and set the switch \if@noitemarg to true to execute the enumerated version of \item by means of the function __enumext_start_item_viii:w [\l__enumext_label_viii_tl].

```
\cs_new_protected:Npn \__enumext_standar_item_viii:w

5166
                                \l__enumext_print_keyans_iv_tl,
5167
       print-4 .initial:n = { nosep, label=\Alph*., first=\small, font=\small },
5168
                            = \keys_precompile:neN { enumext / enumext* }
       print-* .code:n
5169
                                { \__enumext_filter_save_key:n {#1} }
                                \l__enumext_print_keyans_vii_tl, % starred nested
5171
       print-* .initial:n = { nosep, label=\arabic*., first=\small, font=\small },
```

The reason for storing \(\lambda eys \rangle \) in token lists using \(\lambda eys_precompile: neN \) is because the keys are set via \(\setenumext \) but are later executed by running the command \(\printkeyans \) and they are not handled directly by its optional argument, except those related to the \(first \) opening level.

\printkeyans

__enumext_printkeyans:nnn

Create a user command to print "all stored content" in sequence for \anskey, anskey*, \item* and \anspic*. Within a group we will run our "precompiled keys" and then call the internal function __enumext_-printkeyans:nnn.

```
\NewDocumentCommand \printkeyans { s O{} m }
5174
     {
       \group_begin:
5176
         \tl_use:N \l__enumext_print_keyans_i_tl
         \tl_use:N \l__enumext_print_keyans_ii_tl
         \tl_use:N \l__enumext_print_keyans_iii_tl
         \tl_use:N \l__enumext_print_keyans_iv_tl

         \tl_use:N \l__enumext_print_keyans_vii_tl
5181
         \__enumext_printkeyans:nnn { #1 } { #2 } { #3 }
5182
       \group end:
5183
5184
```

The internal function __enumext_printkeyans:nnn will check for the existence of the *sequence*, if it does not exist it will return an error message, then it will check if not empty.

```
5185 \cs_new_protected:Npn \__enumext_printkeyans:nnn #1 #2 #3
5186 {
5187 \seq_if_exist:cTF { g__enumext_#3_seq }
5188 {
5189 \seq_if_empty:cF { g__enumext_#3_seq }
5180 }
```

If the starred argument '*' is present we will check that the environment enumext* is not saved in the sequence, then execute the variable \l__enumext_print_keyans_starred_tl that contains the default $\langle keys \rangle$ for the environment enumext*, we set \l__enumext_base_line_fix_bool and \l__enumext_print_keyans_star_bool to true for baseline correction, open the enumext* environment passing the optional argument and map the sequence, then set \l__enumext_base_line_fix_bool and \l__enumext_print_keyans_star_bool to false.

```
\bool_if:nTF {#1}
                   {
                     \seq_if_in:cnTF { g__enumext_#3_seq } { \end{enumext*} }
                          \msg_error:nnnn { enumext } { print-starred } {#3} { enumext* }
                       }
5196
                          \tl_use:N \l__enumext_print_keyans_starred_tl
5198
                          \bool_set_true:N \l__enumext_base_line_fix_bool
5199
                          \bool_set_true:N \l__enumext_print_keyans_star_bool
                          \begin{enumext*}[#2]
                            \ensuremath{\mbox{seq\_map\_inline:cn}} \{ g\_enumext\_\#3\_seq \} \ \{ \ \#\#1 \ \}
                          \end{enumext*}
                          \bool_set_false:N \l__enumext_base_line_fix_bool
                          \bool_set_false:N \l__enumext_print_keyans_star_bool
```

Otherwise it will open the environment enumext passing the *optional argument* to the "first level" then map the *sequence*.

 $(\textit{End of definition for } \texttt{\printkeyans} \ \ \textit{and } \texttt{\printkeyans:nnn. This function is documented on page \ref{eq:printkeyans:nnn.}}.$

13.48 The command \setenumext

The command \setenumext will be in charge of managing the $\langle keys \rangle$ passed to all environments and to the \printkeyans command. We must take precautions with the enumext* environment and "first level" of the enumext environment so as not to capture $\langle keys \rangle$ that complicate us.

__enumext_filter_first_level:n
__enumext_filter_first_level_key:n
__enumext_filter_first_level_pair:nn

The function __enumext_filter_first_level:n will be in charge of filtering the $\langle keys \rangle$ passed to the environment enumext* and "first level" of the environment enumext.

The function __enumext_filter_first_level_key:n will be responsible for filtering the $\langle keys \rangle$ that are passed "without value" by excluding the keys resume and resume*.

The function $\ensuremath{\backslash}$ enumext_filter_first_level_pair:nn will be responsible for filtering the $\langle keys \rangle$ that are passed "with value" by excluding the series, resume and save-ans keys.

Now define a "meta families" of $\langle keys \rangle$ to access from \setenumext.

```
\keys_define:nn { enumext / meta-families }
       enumext-1 .code:n =
                    {
                      \keys_set:ne { enumext / level-1 }
                            _enumext_filter_first_level:n {#1}
5253
5254
                    },
       enumext-2 .code:n = { \keys_set:nn { enumext / level-2 } {#1} } ,
       enumext-3 .code:n = { \keys_set:nn { enumext / level-3 } {#1} } ,
       enumext-4 .code:n = { \keys_set:nn { enumext / level-4 } {#1} } ,
5258
       keyans
                  .code:n = { \keys_set:nn { enumext / keyans } {#1} } ,
       enumext*
                  .code:n =
5261
                    {
                      \keys_set:ne { enumext / enumext* }
5262
                        {
```

```
\__enumext_filter_first_level:n {#1}
                                                                                      }
                                                                              } ,
                                                                           .code:n = { \keys_set:nn { enumext / keyans* } {#1} } ,

                                                     { \msg_error:nnn { enumext } { invalid-key } {#1} {#2} }
                                            (\textit{End of definition for} \setminus \texttt{setenumext}, \setminus \_\texttt{enumext\_set\_parse:n}, \textit{and} \setminus \_\texttt{enumext\_set\_error:nn}. \textit{ This function is documented on the property of t
                                            page ??.)
                                                           The command \setenumextmeta
                                             13.49
```

The command \setenumextmeta will be responsible for adding new "meta-keys" for the enumext and enumext* environments. The implementation code was given by Jonathan P. Spratte (@Skillmon) answer in Add .meta key to existing keys (l3keys).

©2024 by Pablo González L

132/??

First we will create a prop list \c_enumext_meta_paths_prop to handle the optional argument. \setenumextmeta

```
\c enumext meta paths prop
\__enumext_add_meta_key:nnn 5323
\__enumext_def_meta_key:nnn 5324
\__enumext_def_meta_key:Vnn 5325
```

```
_{\rm 53^{22}} \prop_const_from_keyval:Nn \c__enumext_meta_paths_prop
        {enumext,1} = level-1,
        {enumext,2} = level-2,
       {enumext,3} = level-3,
        {enumext,4} = level-4,
5327
        {enumext*} = enumext*
5328
```

Now we create the user command taking care that unknown cannot be passed as an argument.

```
\NewDocumentCommand \setenumextmeta { s O{enumext,1} m +m }
      \str_if_eq:eeTF { \tl_trim_spaces:n {#3} } { unknown }
        { \msg_error:nn { enumext } { prohibited-unknown } }
        {
          \bool_if:nTF {#1}
            {
5336
             \int_step_inline:nn { 4 }
               { \__enumext_add_meta_key:nnn { enumext, ##1 } {#3} {#4} }
                { \__enumext_add_meta_key:nnn {#2} {#3} {#4} }
5341
        }
5342
5343
```

The internal functions __enumext_add_meta_key:nnn and __enumext_def_meta_key:nnn will check the optional argument and create the "meta-key".

```
\cs_new_protected:Npn \__enumext_add_meta_key:nnn #1
5345
       \tl_set:Nn \l__enumext_meta_path_tl {#1}
5346
       \tl_replace_all:Nnn \l__enumext_meta_path_tl { ~ } {}
5347
       \prop_get:NVNTF
5348
         \c__enumext_meta_paths_prop \l__enumext_meta_path_tl \l__enumext_meta_path_tl
5349
         { \__enumext_def_meta_key:Vnn \l__enumext_meta_path_tl }
            \msg_error:nnn { enumext } { unknown-set } {#1}
           \use_none:nn
         }
   \cs_new_protected:Npn \__enumext_def_meta_key:nnn #1#2#3
5356
       \bool_lazy_or:nnTF
5358
         { \keys_if_exist_p:nn { enumext / #1 } {#2} }
5359
         { \keys_if_exist_p:nn { enumext / enumext* } {#2} }
5360
         { \msg_error:nnn { enumext } { already-defined } {#2} }
5361
5362
            \keys_define:nn { enumext / #1 }
             {
               #2 .meta:n = {#3},
                #2 .value_forbidden:n = true
5367
         }
5368
5370 \cs_generate_variant:Nn \__enumext_def_meta_key:nnn { V }
```

(End of definition for \setenumextmeta and others. This function is documented on page ??.)

13.50 The command \foreachkeyans

The command \foreachkeyans will execute a loop over the prop list and return its contents. The implementation code is adapted from the answer provided by Enrico Gregorio (@egreg) in Expand a .cs defined by key inside the function.

```
We define a set of \(\lambda \text{keys}\rangle\) for command and we will save the default values of these in \(\lambda \text{g_enumext_-}\)
           \foreachkeyans
                                foreach_default_keys_tl to avoid the use of group.
\__enumext_parse_foreach_keys:nn
\__enumext_parse_foreach_keys:n
                               5371 \keys_define:nn { enumext / foreach }
```

```
\__enumext_foreach_keyans:nn
                                    {
                              5372
       \__enumext_foreach_add_body:n
                                      before
                                               .tl_set:N = \l__enumext_foreach_before_tl,
                              5373
                                      before
                                               .value_required:n = true,
                                      after
                                               .tl_set:N = \l__enumext_foreach_after_tl,
                                      after
                                               .value_required:n = true,
```
